"My earliest recollection is the appeal made by Clay and Webster in behalf of Greece, in 1824, when they so eloquently declaimed in that behalf, on this floor and in the other branch of Congress. Whether it was Greece or the States of South America, or Poland, or Hungary, or Italy, or Ireland, the fact that a large country, for any cause, demanded a distinct and separate Government, always received the warmest sympathy and support of the American people, irrespective of party. Even as late as December, 1860, after Mr. Lincoln was elected, and after the preliminary steps for secession had been taken, the paper having the largest circulation of any in the Republican party, and having more influence than any other in the formation of Republican opinion, declared that it could see no reason why, if three million colonists could separate from the British Crown in 1776, that five million southerners could not separate from us in 1861. I have been as much puzzled as the distinguished Republican editor, Mr. Greeley, to find—looking at it as a revolutionary right—the difference in position. Ought we to shrink from the application of a doctrine to ourselves which we have been so willing to apply to other nations, such as Austria, Russia, and Spain? If we do, what will be the judgment of impartial history?"

"How much better it would have been for us and for the cause of Democracy throughout the globe, what a splendid tribute it would have been to a republican Government, if we had parted in peace with our dissatisfied sister States, as Mr. Everett recommended as late as February, 1861, sustained by such leading Republican journals as the 'Cincinnati Commercial,' 'New York Tribune,' 'Indianapolis Journal,' 'Chicago Tribune,' 'New Haven (Connecticut) Palladium,' 'Columbus Journal,' and Salmon P. Chase, now Secretary of the Treasury, and many others of that school. What in monarchical countries had required a long and bloody war, would have been accomplished by

democratic principles and a republican sense of justice. What a splendid proof it would have afforded of the capacity of the people for self-government! What a noble lesson it would have conveyed to the whole civilized world! The fact that we could rise superior to all prejudices and passions, and to have conquered ourselves, would have been the highest triumph that we had ever achieved.

"I regret as much, Mr. Chairman, as any gentleman upon this floor, that any of our sister States should have desired to cut asunder the ligaments that bound them to us. None would be more willing than myself to make any reasonable sacrifice to induce them to return to their partnership with us; but still recognizing the truth of the doctrine taught by the fathers of the Republic and so fairly expressed by Mr. John Quincy Adams, that our Government was, after all, in the heart, and that it would be better, severe as would be the pang of regret, to part in friendship rather than to hold sovereign States pinned to us by the bayonet, as Mr. Greeley expressed it in 1861. What advance have we made in the science and principles of government?"

"Mr. Chairman, if we cannot rise above the Austro-Russian principle of holding subject provinces by the power of force and coercion, what becomes of the Declaration of Independence, and of all our teachings for eighty years? After all, Mr. Chairman, it is not the extent of territory which should be the object of our desires. Better sacrifice even nine-tenths of the territory than destroy our republican form of government. What our people desired in 1861, and which I honored, though I regarded as mistaken, was the preservation of the Government and the retention of our jurisdiction of the whole territory. They were rightly willing to sacrifice every material consideration for that purpose. Land is nothing, Mr. Chairman, compared to liberty. We existed as a Republic when the mouth of the Mississippi was held by a foreign Power, when we had nothing west of that river; when Florida was held against us; and we could exist again, if by the chastisement of Heaven we should be curtailed to our old territorial dimensions. For \$15,000,000 we purchased the whole of that immense territory; and were it a hundred thousand times as valuable, its preservation would not be worth our admirable form of government.

"Pride of territorial ambition is a vulgar and low ambition of national greatness. Russia, and even China, can vie with us in that, but who would not rather reside in one of the cantons of Switzerland, or in Great Britain, than in those countries? It is not in the extent of territory we possess, but in the manner in which we govern it, that renders us respectable. Many gentlemen seem rather to look at the quantity than the quality. All republics have been destroyed by the thirst of territorial aggrandizement and the lust of conquest. The

great object of our Government should be to develop and cultivate the internal resources of those friendly to its jurisdiction, rather than to extend it over hostile and foreign peoples. It is in that character that true patriotism is to be cultivated and true national glory found. Especially should all republics cultivate the arts of peace, since it is by the war power that free Governments are commonly overturned.

"The charge has been made that democracy is turbulent, warlike, and aggressive; but if so, it is a terrible misconception of its true interests, for upon the people fall the awful calamities of armed collisions. An eminent poet (Lord Byron) has said that war was a game which, if the people were wise, kings and princes would never play at. The venerable Dr. Franklin, at the close of his illustrious career, remarked that there never was a good war and a bad peace. We have made, Mr. Chairman, by this war, eight million bitter enemies upon the American continent. While time shall last the recollections of this bloody strife will never fade from the memories of the people, North and South, but will be handed down to the latest generation. The words Shiloh, Antietam, Gettysburg, Murfreesboro', Richmond, Vicksburg, and Fort Donelson, are words of division and disunion, and will serve to bring emotions of eternal hate. If it was true, as was suggested by a distinguished Senator from Ohio (Mr. Wade) in a speech in Portland in 1855, that he believed 'that no two nations on earth hated each other as much as the North and South,' how much more true is the remark now after they have been arrayed in such bloody contests.

"It is the object of the sword to cut and cleave asunder, but never to unite. What union is there between Russia and Poland, between Austria and Hungary, between England and Catholic Ireland, where the sword and the bayonet for centuries have been employed? Instead of conferring national strength, they are sources of weakness to the countries that hold them in subjection; and which would this day be stronger without them than with them.

"Mr. Chairman, these lessons of history are full of warning and example. Much better would it have been for us in the beginning, much better would it be for us now, to consent to a division of our magnificent empire and cultivate amicable relations with our estranged brethren, than to seek to hold them to us by the power of the sword.

"Here let me advert to the common yet perfectly glaring and apparent error, that to part with our jurisdiction over eleven States involves the destruction of our Government. The statement of the proposition demonstrates its absurdity. As well might one say, who had a farm of two hundred acres of land, that he had lost his title-deed to all of it because by some misfortune he had parted with fifty. In losing the South, not one function of our Government

over us is surrendered. It remains over us as completely sovereign as it ever did. Here let me say on the experience of my individual belief, that if it had been understood in the North as in the South that by the terms of the Federal compact a State had a right to secede from the Union, this disruption would never have occurred. Had the North so understood the matter, there would have been upon its part a forbearance from the exercise of extreme measures, and a desire not to force the Southern States to the wall that would ever have maintained the confederacy unbroken. It was the prevalence of the idea of the consolidationists in the North, that the Southern States had no right to and would not secede, that tempted them into that fatal policy that has sundered the confederacy.

"It is said that no confederacy can exist by a recognition of this principle; but such was not the view of the fathers of the Government. It was not the view of Jefferson and Madison in their immortal resolutions of 1798 and 1799.

"It has been said, Mr. Chairman, that it would make a confederacy a rope of sand; but if so, it is strange that the southern confederacy, where it is recognized, should hold together through such a bloody pressure as we have applied to it for the last three years. It is a strange rope of sand that endures all that.

"But to return, Mr. Chairman. As will be judged, perhaps, by the tenor of these remarks, I am reluctantly and despondingly forced to the conclusion that the Union is lost never to be restored. I regard all dreams of the restoration of the Union which was the pride of my life, and to restore which even now I would pour out my heart's blood, as worse than idle. I see, neither North nor South, any sentiment on which it is possible to build a Union. Those elements of Union which Mr. Adams described, have, by the process of time, been destroyed. Worse, yea, worse than that, Mr. Chairman, I am reluctantly forced to the conclusion that in attempting to preserve our jurisdiction over the Southern States we have lost our constitutional form of government over the northern. What has been predicted by our wisest and most eminent statesmen has come to pass; in grasping at the shadow we have lost the substance; in striving to retain the casket of liberty in which our jewels were confined we have lost those precious muniments of freedom. Our Government, as all know, is not any thing resembling what it was three years ago; there is not one single vestige of the Constitution remaining; every clause and every letter of it has been violated, and I have no idea myself that it will ever again be respected; revolutions never go backward to the point at which they started. There has always been a large party in this country favorable to a strong or monarchical Government, and they have now all the elements upon which to establish one; they have a vast army, an immense public debt, and an irresponsible Executive. Ambitious to re-

tain power, he is a candidate for reelection, and, as Commander-in-Chief, it is charged (whether true or false I shall not undertake to decide) that he has already used the army in the Florida expedition, to advance his chances of success. One of the generals he has decapitated (General Fremont) has entered the field to dispute his claim to a continuance in power; and if the 'Chronicle' of this city, the President's organ, is correct in its construction of the suggestions of the 'New York Herald,' speaking of Lieutenant-General Grant, the question is already mooted whether he, in certain contingencies, at the head of the army, would not be justified in assuming the reins of Government.

The very idea upon which this war is founded, coercion of States, leads to despotism. To preserve a republican form of Government under any constitution, under the prevalence of the doctrine now in vogue, is clearly impossible. These convictions of the complete overthrow of our Government are as unwelcome and unpleasant to me as they are to any member of this House. Would to God the facts were such that I could cherish other convictions! I may be denounced as disloyal and unpatriotic for entertaining them, but it will only be by shallow fools and arrant knaves, who do not know or will not admit the difference between recognizing a fact and creating its existence. A man may not desire to die, but nevertheless his belief will not alter the fact of his mortality.

"I shall not, in these remarks, recur to the unpleasant and acrimonious controversy of who is responsible for the death and destruction of our Republic. I do not see that any such discussion now would be productive of good. I entertain clear and strong convictions upon that point, convictions that I have no doubt will be shared in by the impartial historian of the future; for the present I am willing to let the past with all its recollections rest, provided we can snatch from the common ruin some of our old relics of freedom.

"I do not share in the belief entertained by many of my political friends on this floor and elsewhere, that any peace is attainable upon the basis of union and reconstruction. If the Democratic party were in power to-day, I have no idea, and honesty compels me to declare it, that they could restore the Union of thirty-four States. My mind has undergone an entire change upon that subject; and I now believe that there are but two alternatives, and they are either an acknowledgment of the independence of the South as an independent nation, or their complete subjugation and extermination as a people; and of these alternatives I prefer the former.

"Mr. Chairman, I take little or no interest in the discussion of the question which many of my political friends would make an issue, as to how this war shall be prosecuted, its manner and object. I regard that as worse than trifling with the great question. I do not believe there can be any prosecution of the war

against a sovereign State under the Constitution, and I do not believe that a war so carried on can be prosecuted so as to render it proper, justifiable, or expedient. An unconstitutional war can only be carried on in an unconstitutional manner, and to prosecute it further under the idea of the gentleman from Pennsylvania (Mr. Stevens), as a war waged against the confederates as an independent nation, for the purpose of conquest and subjugation, as he proposes, and the Administration is in truth and in fact doing, I am equally opposed.

"I say further, Mr. Chairman, that if this war is to be still further prosecuted, I, for one, prefer that it shall be done under the auspices of those who now conduct its management, as I do not want the party with which I am connected to be in any degree responsible for its result, which cannot be otherwise than disastrous and suicidal; let the responsibility remain where it is, until we can have a change of policy instead of men, if such a thing is possible. Nothing could be more fatal for the Democratic party than to seek to come into power pledged to a continuance of the war policy. Such a policy would be a libel upon its creed in the past, and the ideas that lay at the basis of all free government, and would lead to its complete demoralization and ruin. I believe the masses of the Democratic party are for peace; that they would be placed in a false position if they should nominate a war candidate for the Presidency, and seek to make the issue upon the narrow basis of how the war should be prosecuted.

"For my own part, as I have already indicated, I fear that our old Government cannot be preserved, even under the best auspices, and with any policy that may be now adopted, yet I desire to see the Democratic party, with which I have always been connected, preserve its consistency and republican character unshaken.

Mr. Garfield, of Ohio, immediately followed, saying: "Mr. Chairman, I should be obliged to you if you would direct the Sergeant-at-Arms to bring a white flag and plant it in the aisle between myself and my colleague who has just addressed you.

"I recollect on one occasion, when two great armies stood face to face, that under a white flag just planted I approached a company of men dressed in the uniform of the rebel confederacy, and reached out my hand to one of the number and told him I respected him as a brave man. Though he wore the emblems of disloyalty and treason, still underneath his vestments I beheld a brave and honest soul.

"I would reproduce that scene here this afternoon. I say, were there such a flag of truce—but God forgive me if I should do it under any other circumstances!—I would reach out this right hand and ask that gentleman to take it; because I honor his bravery and his honesty. I believe what has just fallen from his lips is the honest sentiment of his

heart, and in uttering it he has made a new epoch in the history of this war; he has done a new thing under the sun; he has done a brave thing. It is braver than to face cannon and musketry, and I honor him for his candor and frankness.

"But now I ask you to take away the flag of truce; and I will go back inside the Union lines, and speak of what he has done. I am reminded by it of a distinguished character in 'Paradise Lost.' When he had rebelled against the glory of God, and 'led away a third part of heaven's sons, conjured against the Highest,' when after terrible battles in which mountains and hills were hurled by each contending host 'with jaculations dire,' when at last the leader and his hosts were hurled down 'nine times the space that measures day and night,' and after the terrible fall lay stretched prone on the burning lake, Satan lifted up his shattered bulk, crossed the abyss, looked down into Paradise, and, soliloquizing, said:

'Which way I fly is hell; myself am hell.'

"It seems to me in that utterance he expressed the very sentiment to which you have just listened; uttered by one no less brave, malign, and fallen. This man gathers up the meaning of this great contest, the philosophy of the moment, the prophecies of the hour, and, in sight of the paradise of victory and peace, utters them all in this wail of terrible despair: 'Which way I fly is hell.' He ought to add, 'Myself am hell.'

"But now, when hundreds of thousands of brave souls have gone up to God under the shadow of the flag, and when thousands more, maimed and shattered in the contest, are sadly awaiting the deliverance of death; now, when three years of terrific warfare have raged over us, when our armies have pushed the rebellion back over mountains and rivers, and crowded it back into narrow limits, until a wall of fire girds it; now, when the uplifted hand of a majestic people is about to let fall the lightning of its conquering power upon the rebellion; now, in the quiet of this Hall, hatched in the lowest depths of a similar dark treason, there rises a Benedict Arnold and proposes to surrender us all up, body and spirit, the nation and the flag, its genius and its honor, now and forever, to the accursed traitors to our country. And that proposition comes—God forgive and pity my beloved State!—it comes from a citizen of the honored and loyal Commonwealth of Ohio.

"I implore you, brethren in this House, not to believe that many such births ever gave pangs to my mother State such as she suffered when that traitor was born. (Suppressed applause and sensation.) I beg you not to believe that on the soil of that State another such growth has ever deformed the face of nature, and darkened the light of God's day. (An audible whisper, 'Vallandigham.') But ah, I am reminded that there are other such. My zeal and love for Ohio have carried me too far. I retract.

I remember that only a few days since a political convention met at the capital of my State, and almost decided to select from just such material a Representative for the Democratic party in the coming contest; and to-day, what claim to be a majority of the Democracy of that State say that they have been cheated or they would have made that choice. I therefore sadly take back the boast I first uttered in behalf of my native State.

"But, sir, I will forget States. We have something greater than States and State pride to talk of here to-day. All personal or State feeling aside, I ask you what is the proposition which the enemy of his country has just made? What is it?

"For the first time in the history of this contest it is proposed in this Hall to give up the struggle, to abandon the war, and let treason run riot through the land! I will, if I can, dismiss feeling from my heart, and try to consider only what bears upon the logic of the speech to which we have just listened.

"First of all, the gentleman tells us that the right of secession is a constitutional right. I do not propose to enter into the argument. I have expressed myself hitherto upon State sovereignty and State rights, of which this proposition of his is the legitimate child.

"But the gentleman takes higher ground—and in that I agree with him—namely, that five million or eight million people possess the right of revolution. Grant it; we agree there. If fifty-nine men can make revolution successful, they have the right of revolution. If one State wishes to break its connection with the Federal Government, and does it by force, maintaining itself, it is an independent State. If the eleven Southern States are determined and resolved to leave the Union, to secede, to revolutionize, and can maintain that revolution by force, they have the revolutionary right to do so. Grant it. I stand on that platform with the gentleman.

"And now the question comes, is it our constitutional duty to let them do it? That is the question, and in order to reach it I beg to call your attention, not to an argument, but to the condition of affairs which would result from such action—the mere statement of which becomes the strongest possible argument. What does this gentleman propose? Where will he draw the line of division? If the rebels carry into successful secession what they desire to carry, if their revolution envelops as many States as they intend it shall envelop, if they draw the line where Isham G. Harris, the rebel Governor of Tennessee, in the rebel camp near our lines, told Mr. Vallandigham they would draw it—along the line of the Ohio and of the Potomac—if they make good their statement to him that they will never consent to any other line, then I ask what is this thing that the gentleman proposes to do?

"He proposes to leave to the United States a territory reaching from the Atlantic to the

Pacific, and one hundred miles wide in the centre! From Wellsville, on the Ohio River, to Cleveland on the lakes, is one hundred miles. I ask you, Mr. Chairman, if there be a man here so insane as to suppose that the American people will allow their magnificent national proportions to be shorn to so deformed a shape as this?

"I tell you, and I confess it here, that while I hope I have something of human courage, I have not enough to contemplate such a result. I am not brave enough to go to the brink of the precipice of successful secession and look down into its damned abyss. If my vision were keen enough to pierce to its bottom, I would not dare to look. If there be a man here who dare contemplate such a scene, I look upon him either as the bravest of the sons of women, or as a downright madman. Secession to gain peace! Secession is the twin-sin of eternal war. There can be no end to such a war as will be inaugurated if this thing be done.

"Suppose the policy of the gentleman were adopted to-day. Let the order go forth; sound the 'recall' on your bugles, and let it ring from Texas to the far Atlantic, and tell the armies to come back. Call the victorious legions back over the battle-fields of blood, forever now disgraced. Call them back over the territory which they have conquered. Call them back, and let the minions of secession chase them with derision and jeers as they come. And then tell them that that man across the aisle, from the free State of Ohio, gave birth to the monstrous proposition.

"Mr. Chairman, if such a word should be sent forth through the armies of the Union, the wave of terrible vengeance that would sweep back over this land could never find a parallel in the records of history. Almost in the moment of final victory the 'recall' is sounded by a craven people not deserving freedom! We ought every man to be made a slave should we sanction such a sentiment.

"The gentleman has told us there is no such thing as coercion justifiable under the Constitution. I ask him for one moment to reflect, that no statute ever was enforced without coercion. It is the basis of every law in the universe—God's law as well as man's. A law is no law without coercion behind it. When a man has murdered his brother, coercion takes the murderer, tries him, and hangs him. When you levy your taxes, coercion secures their collection; it follows the shadow of the thief and brings him to justice; it accompanies your diplomacy to foreign courts, and backs the declaration of the nation's rights by a pledge of the nation's power. But when the life of that nation is imperilled, we are told it has no coercive power against the parrioides in its own bosom! Again, he tells us that oaths taken under the amnesty proclamation are good for nothing. The oath of Galileo, he says, was not binding upon him. I am reminded of another oath

that was taken; but perhaps it too was an oath on the lips alone to which the heart made no response.

"I remember to have stood in a line of nineteen men from Ohio, on that carpet yonder, on the first day of the session, and I remember that with uplifted hands before Almighty God those nineteen took an oath to support and maintain the Constitution of the United States. And I remember that another oath was passed around and each member signed it as provided by law, utterly repudiating the rebellion and its pretences. Does the gentleman not blush to speak of Galileo's oath? Was not his own its counterpart?

"I said a little while ago that I accepted the proposition of the gentleman that the rebels had the right of revolution; and the decisive issue between us and the rebellion is, whether they shall revolutionize and destroy, or we shall subdue and preserve. We take the latter ground. We take the common weapons of war to meet them; and, if these be not sufficient, I would take any element which will overwhelm and destroy; I would sacrifice the dearest and best beloved; I would take all the old sanctions of law and the Constitution and fling them to the winds, if necessary, rather than let the nation be broken in pieces, and its people destroyed with endless ruin.

Mr. Long: "Mr. Chairman, I desire but a very few minutes to reply to my colleague who has seen proper to call in question very seriously what I have said this afternoon. I stated, sir, very distinctly, when I commenced, that I spoke for myself, and that I alone would be responsible for what I said. I am well aware of all that I did say. I have said it deliberately. I have said it because my conscience told me it was right, and my judgment approved it. I have said it because when I walked down with my colleague to the front of that desk to take the oath required of me in becoming a member of this House, I held up my hand, as he raised his, before Heaven and took upon myself a solemn oath to support the Constitution of the United States, and so help me God, fearless of all the charges that can be made against me by that gentleman or any other, or by all the minions of power in the land, I never will violate that oath, or shrink from the responsibility which I then assumed.

"I have never, sir, belonged to a party which took that oath with a mental reservation. I never took the oath with a determination not to obey a part of the laws of the land. I remember the district of country from which my colleague hails, the conventions that have been held there, and the forcible resistance to the enforcement of the law that have been made there. I remember when the party now in power undertook to set aside a solemn act of Congress, and appealed to the supreme court of our State to override the Constitution of the United States. Sir, I have never been

guilty of that crime. I have never, I repeat, belonged to a party that takes this oath with a mental reservation. It seems to me that, if my colleague had desired to stand right before the House and before the country, before he assumed the responsibility of charging me individually with being disloyal, he should have remembered the authorities that I brought before the House, and when he branded me as disloyal would have recollected that the leaders of his own party, and the organs of his own party, from the 'New York Tribune' down to the 'Columbus Journal' of the State in which he and I live, have advocated the doctrines that I have promulgated here to-day, and that the Secretary of the Treasury, hailing from our State too, advocates this identical doctrine.

On the next day, April 9th, the Speaker, Mr. Colfax, took the floor and offered the following resolution:

Whereas on the 8th of April, 1864, when the House of Representatives was in Committee of the Whole on the state of the Union, Alexander Long, a Representative from the second district of Ohio, declared himself in favor of recognizing the independence and nationality of the so-called confederacy now in arms against the Union; and whereas the said so-called confederacy, thus sought to be recognized and established on the ruins of a dissolved or destroyed Union, has as its chief officers, civil and military, those who have added perjury to their treason, and who seek to obtain success for their parricidal efforts by the killing of the loyal soldiers of the nation who are seeking to save it from destruction; and whereas the oath required of all members, and taken by the said Alexander Long on the first day of the present Congress, declares "that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility to the United States," thereby declaring that such conduct is regarded as inconsistent with membership in the Congress of the United States; therefore,

Resolved, That Alexander Long, a Representative from the second district of Ohio, having, on the 8th of April, 1864, declared himself in favor of recognizing the independence and nationality of the so-called confederacy now in arms against the Union, and thereby "given aid, countenance, and encouragement to persons engaged in armed hostility to the United States," is hereby expelled.

"Mr. Speaker, before presenting this resolution I reflected, as it was my duty to do, seriously on the obligations under which, in consequence of my position, I feel I am placed. I recognize that there is a double duty incumbent on me; first to the House of Representatives whose kindness has placed me in its principal chair, to administer the duties of that chair and the rules of the House faithfully and impartially to the best of my ability and judgment. That, I can say sincerely and conscientiously, I have endeavored to do, and shall so endeavor until this Congress expires by its constitutional limitation. But I feel that I owe still another duty to the people of the ninth congressional district of Indiana, who sent me here as their Representative to speak and act and vote in their stead. It is in conformity with this latter duty to those who cannot speak here for themselves, and who, I believe, would indorse the

sentiment of this resolution, that I have felt it my duty to rise in my place as a member of Congress from the State of Indiana and offer this resolution.

"I rise to offer this resolution in the performance of a high public duty which I felt I could not myself shirk or evade. It is a duty I owe, not only to those of my constituents who are at home, but to the many thousands of them who are in the tented fields meeting the armies of the confederacy in deadly conflict, and exposing their lives for the safety and perpetuity of this imperilled Union. Nay, more, sir, I owe it to the many widowed and orphaned families in my district whose natural protectors have been stricken down by the bloody hand of treason, and lost to them in this world forever.

"I believe in the freedom of speech. I have not heard any thing on this floor during this Congress that would have prompted me to offer this resolution except the remarks made yesterday by the gentleman from Ohio (Mr. Long). He declared distinctly, in so many words, that he was in favor of the recognition of this so-called confederacy, and recognition is the recognition of its independence and its nationality as one among the nations of the earth. The flag of this confederacy was thus boldly unfurled here by a gentleman who had taken the oath at the opening of Congress—and I have no doubt truthfully—that up to that time he had not given any aid, countenance, or encouragement to those who are engaged in armed hostility against the United States. Believing that oath shows that those who do thus give aid and countenance and encouragement to those engaged in armed hostility against the United States are not worthy of membership here in a Congress of the United States, I felt it my duty at least to ask the House of Representatives to pass their judgment upon it.

"I have offered this resolution not as the result of a consultation with any persons upon the floor of this House, but upon my sole and entire responsibility; and I say here deliberately and solemnly that if what fell from the lips of the gentleman from Ohio (Mr. Long) yesterday is to pass unrebuked by this House, then you have no right to complain of any foreign Government on the face of this earth that recognizes the independence and nationality of this confederacy, which, within your own walls, under your own flag, by one associated with you in the Government of this country, was publicly avowed as his preference and his conviction.

"Now, sir, if by the quiet and tacit assent of this House, as a House of Representatives, this sentiment is to go unquestioned by the Representatives of the United States of America here assembled, then I say you should stop shooting your deserters from the army, for they have not turned their backs upon the obligation which they have assumed any more influentially by their leaving the flag which they had bound themselves to sustain, than has a gentle-

man who will rise in his place in Congress and state that he is in favor of the men who seek the destruction of this land and the dissolution of the Union by recognizing them as one of the nations of the earth. Nay, more. You should call no more soldiers into the field to endeavor by the peril of their lives to save this country, because it is a solemn mockery to do if from this Hall shall go forth words of encouragement to strengthen those arrayed against them in an unholy and parricidal work. If we allow this to pass here unquestioned and unrebuked, how can we deny to others abroad the right to recognize the establishment of the so-called southern confederacy among the nations of the earth? Can you propose to go to war with any foreign nation who may do this, and yet, by opposing this resolution, justify and indorse the open avowal of a similar desire in this Hall?

"Mr. Speaker, we have seen since this rebellion opened the other branch of the Federal Congress, at the opposite end of the Capitol, expelling a Senator from my own State. What for? For sending a letter of introduction by a gentleman to the rebel chief who presides at Richmond. For that letter of introduction, thus giving aid and comfort to those in armed hostility to the United States, the Senate of the United States expelled him by a two-thirds vote. I have nothing to say in regard to the politics of my own State, but I have this to say, that a Legislature sat afterward in my State of the same political views with the expelled Senator, and they had the power to elect two United States Senators, one for the long term and another for the short term. A majority of that Legislature, sir, recorded their votes of approval of the action of the Senate by refusing to send—although they had the power—that Senator back to his seat in the United States Senate.

"One or two years ago, perhaps less than one year ago, Ohio was excited by the arrest of a former member of Congress for declaring in strong language his hostility to a military order. His friends went before the people in that State on the issue of the injustice done him, and by a majority of one hundred thousand they declared their approbation of that act of military authority, and the highest court of judicature in our land, the Supreme Court of the United States, refused the other day to reopen or review that judgment.

"Mr. Speaker, I have but a word more to say, when I will leave the floor to the gentleman from Ohio (Mr. Cox), who seeks it. If this bold and frank avowal, for bold and frank it was, by a member of Congress representing a free district in a loyal State, if this is to go unrebuked by this House, I ask you how you are to close these doors against those who are now sitting at Richmond in the confederate congress, those who have not been in arms against the United States but have been sitting in that congress giving aid and comfort to the arms of the rebellion against the United States?

Their hands are stained with no blood, perhaps; they could come here with no blood, as soldiers, upon their skirts; but they may seek to come here, if this is to be the law of this Congress, fresh from the conclave of this confederate congress, saying to us: 'We have done no more at Richmond than has been done upon this floor by the member from the second district of Ohio in your presence, unrebuked upon the floor by Congress.'

"But it is because of its effect abroad that I have offered this resolution. If there is any danger threatening our imperilled Union after the valor of our soldiers has caused the area of the rebellion to become 'small by degrees and beautifully less,' it is the recognition of the confederacy by foreign nations. On a motion of the gentleman from Maryland (Mr. Davis) the other day, this House, by a unanimous vote, in which I believe the gentleman from the second district of Ohio participated, declared that we would not allow any foreign country to plant a nation on the prostrate ruins of a republic anywhere upon the American continent; and yet, sir, when we assent by our silence to a proposition to recognize this confederacy, we not only assent to the planting of a foreign nation upon the soil of this continent, but one upon the soil of our own beloved Union. Nay, more than that, when he has seen, when I have seen, when you have seen, and every member upon this floor has seen the emissaries of this rebel confederacy bowing the knee to every sovereign in Europe, asking an alliance with them, and saying in their confederate congress that they would prefer allegiance to a foreign prince than to remain part and parcel of this Union, do not we know that when their independence is acknowledged and recognized there will be an alliance, in their weakness, to make them stronger, with any foreign nation, power, or potentate that sees fit to enter into treaties with them, and then upon that soil, once belonging to the United States, foreign armies will be landed and their forces joined to that of those traitors to invade our own country and destroy our armies and even the liberties of our people? You have no right to pass resolutions like that offered by the gentleman from Maryland, warning foreign nations, if upon your own floor and by your deliberate assent and vote you declare and avow the sentiments uttered here yesterday by refusing to rebuke and condemn them. I have now performed my duty, and leave the rest to the House."

Mr. Cox, of Ohio, followed, saying: "I approach this matter with becoming seriousness. The extraordinary spectacle is presented of our Speaker descending from the chair to make a motion to expel one of the members of this House for words spoken in debate. The occasion calls for more than the usual gravity of deliberation. I was not present when my colleague (Mr. Long) made the remarks which have called out this resolution. I am told by members around me that his remarks do not

bear the interpretation given to them by the speech and resolution of the honorable Speaker. Before a resolution of this startling nature was introduced we should have had the official report of those remarks in the 'Globe.' If action be demanded for the expulsion of a Representative of the people, for the exercise of his constitutional right of free debate, we should have the most authentic record of that debate. As I am informed, the language of my colleague was so qualified as to make it far less objectionable than the statement of it in the resolution. Still, sir, it may be obnoxious, and yet there may be no just ground for this proceeding of expulsion.

"Had I been in my seat yesterday, with all due respect to my colleague, I should have promptly risen and disavowed, on behalf of all the delegation from Ohio with whom I have conversed, any sentiments uttered by him or any one else, looking to the recognition of the confederate government as an independent Power. So far as I can learn, there is not a member acting with this side of the House, unless it be my colleague, who is not opposed in every conceivable view, directly or indirectly, to such recognition.

"Now, I propose to show that if the sentiments attributed to my colleague are unpatriotic and treasonable, the prominent men of the Republican party are amenable, for similar sentiments, to the same condemnation. There is scarcely a leading member of the opposite party, from the Executive down, who is not committed in doctrine if not in practice to the separation of these States."

Mr. Allen, of Illinois, said: "I believe that the resolution of the gentleman from Indiana (Mr. Colfax) is based upon the ground that the speech of the gentleman from Ohio gives aid and encouragement to the enemy. Well, sir, that may be so, and yet an act which violates the privileges of a member upon this floor will also be calculated to give aid and comfort to the enemies of the Government, since they will see in it that revolutionary spirit which portends the overthrow of the constitutional liberties not only of members of Congress, but of the people of the Northern States. Suppose his remarks are calculated to give aid and comfort to the enemies of our Government, to the rebels in arms against it, are we for that reason by a resolution to exclude him from this House in contempt of its rules, in contempt of his constitutional rights and the constitutional rights of his constituents? By so doing we bring into contempt to that extent the Constitution, the rules of the House, and the law by which he holds a seat upon this floor. We surrender up these constitutional guarantees and place ourselves at the mercy of a remorseless majority, who would override the rules of the House, override the Constitution, and wreak their vengeance on members of the Opposition on this floor."

Mr. Harris, of Maryland, in opposition to the

resolution, said: "Mr. Speaker, when I came here at this session of Congress I was solitary and alone. I could not say for some time whether anybody sympathized with me; I felt myself solitary and alone. Those who were here around me were war Democrats. They never invited me to their caucus. Those I knew would never let me go into their caucus, and I never intended to apply. I would starve among them. I am a peace man, a radical peace man; and I am for peace by the recognition of the South, for the recognition of the southern confederacy; and I am for acquiescence in the doctrine of secession. Laugh as you may, you have got to come to it. I thought I was alone. I began to take the advice of Cato to his son,

*'When vice prevails and impious men bear sway,
The post of honor is a private station.'*

I felt like giving up my seat and leaving this place. I stood here solitary and alone on this floor; but now, thank God! there is another soul saved. I feel that we can baptize my honorable friend from Ohio (Mr. Long), and I am glad to have such able aid. I shall not go home now. When Cato gave that advice he had fought his last battle, and had yielded to the fortunes and ambition of Julius Cæsar, great as he was. He was about to take a victory over himself by a Roman's death, because he saw his cause was hopeless. Not so ours. I feel yet there is a hope in this House. I feel through the rustling of the winds there is a tornado coming that will sweep away the present majority from power and give it into the hands of men who will settle the affairs of this country; men who have something like humanity; men who have regard for the principles of our forefathers. Ay, I recollect how my blood curdled when I heard the discussion on the confiscation bill. The gentleman from Ohio (Mr. Garfield) said, let them be expatriated like the Tories of the Revolution. The Tories of the Revolution had the mother country to run to, and were protected there. But where would the gentleman send those whom he would expatriate from the South, as gallant and noble a race as ever walked upon the earth; noble in every thing that constitutes men of honor and men of principle—gentlemen? Sir, you would expatriate those people, their wives and children, and send them among strangers to starve. Another member from Ohio (Mr. Spalding), was not only for confiscating their property in fee; he, sir, went through the catalogue. He was for confiscation, he was for expatriation, and he was for extermination. He emphasized every syllable of that word; and when he did so, I looked at his countenance, and I felt as if I were in a den of hyenas.

"I am not here for war, and will not be here for war, so long as I have a heart humane and Christian, when war is carried on upon such principles. No, sir, war never did and never will bring your Union together in such a manner as to be worth one cent. I am for peace, and I am for Union, too. I am as good a Union

man as any of you. I am a better Union man than any of you. I am a Union man, and have thrown up my head—no, I have not lost that yet—I have thrown up my hat for the cause of the Union, and cheered at its success. I felt as anxious for its success as any man upon this floor. I look upon war as disunion. I look upon continued war as actually keeping off the Union to a still later period, and I scarcely believe that peace would accomplish a Union. And surely, if any thing will, it is that sweet angel of peace. She may unite the cords which have been severed by the hand of war, and may tie them more tightly together than ever before; but if we are to have dissolution, in the name of God let us have it. Let us have it, and instead of having one great consolidated Government, one imperious Government, one splendid Government, let us at least have on this continent two happy Governments. But, as I said before, I look to peace as the harbinger of the Union, if there is any harbinger for it.

"Sir, the Union is dissolved, and there is a gulf of blood lying between the two sections; but upon my honor, upon my soul, I repeat that every drop in that gulf is on the souls of the northern people. I do not think that any candid man who looks at the history of this affair can come to any other conclusion. From the beginning of the Government, from the time of the adoption of the Constitution down to the time of the election of Abraham Lincoln, you have been using terms of insult and terms of irritation, and you have been doing every thing you could to bring about the very result which is now upon you. Look at the history of this matter. I shall not repeat it; it is too familiar and has been too often repeated. At first you only cultivated the ground, but when that old scold and wrangler, the worst man that ever lived in this country, even not excepting Aaron Burr; when that old scold and wrangler, John Quincy Adams, declared that by the war power you could emancipate all the slaves and sell the States which had slaves to a foreign power, that was the day when you commenced to exert all your powers to excite this people to rebellion. Then it was, you said you would not live with them, that the Government was a compact with hell, and that one of the most agreeable things in the world would be to part with the South and slavery. That was the announcement of your public men everywhere, that they could not live with you in peace. Well, they separated from you, and asked to live on terms of peace with you. What did you do? You immediately howled out, 'They are traitors; we will hang them all; and when we have hung them we will take all their property and divide it among us.' And, sir, all this was to be done, according to your great 'higher-law' apostle, William H. Seward, in the course of sixty days? No doubt the facility with which he thought it could be done was a great incentive to begin the work, especially as there were lands in the South and many other benefits that

they expected to get hold of very easily down there.

"Mr. Speaker, in the early part of this secession movement there was a resolution offered pledging men and money to carry on the war. My principles were then and are now against the war. I stood solitary and alone in voting against that resolution, and whenever a similar proposition is brought here it will meet with my opposition. Not one dollar nor one man, I swear by the Eternal, will I vote for this infernal, this stupendous folly, more stupendous than ever disgraced any civilized people on the face of God's earth. If that be treason, make the most of it.

"It is the right of the commoner of England to say that he will not intrust the money to carry on a war to the king, who has the entire war power. I do not know that a commoner of the American House of Representatives ever lost that right. That proposition meets with my approval. If you will not make peace in any other way, and if I have the casting vote here against furnishing the sinews of war, you shall not have them.

"The South asks you to let her go in peace. But, no; you said you would bring them into subjugation. That is not done yet, and God Almighty grant that it never may be. I hope that you will never subjugate the South. If she is to be ever again in the Union I hope it will be with her own consent; and I hope that that consent will be obtained by some other mode than by the sword. 'If this be treason, make the most of it.' I am as good a Union man as you are, but we differ as to the best means of preserving the Union."

Mr. Wood, of New York, thus explained his views: "I came into the Hall this morning, making my appearance for the first time in many days, having been confined to my bed by severe sickness. I applied personally to the gentleman from Ohio to know what he did say, and whether I could stand up and indorse the sentiments which he had uttered, or be compelled to agree to a vote of censure upon him. He gave me the identical paper from which he made the speech which has called forth this most extraordinary resolution. He asked me after I had read the manuscript whether I was ready to vote for his expulsion. I said no. The only recognition of the southern confederacy was this. It was presented as an alternative of evils to the country. The gentleman from Ohio said as the choice of alternatives he would accept recognition. That is all there is of it. The language is:

I now believe there are but two alternatives, and they are either the acknowledgment of the independence of the South as an independent nation, or their complete subjugation and extermination as a people; and of these alternatives I prefer the former.

"Sir, as a choice of evils, rather than see the whole southern people exterminated, men, women, and children put to the sword, he would accept a recognition as an alternative of

these two unfortunate and dreadful results. And, sir, I desire to say that if he is to be expelled for the utterance of that sentiment, you may include me in it, because I concur fully in that sentiment."

Mr. Washburne, of Illinois, rising to a privileged question, offered the following resolution:

Whereas Hon. Benjamin G. Harris, a member of the House of Representatives of the United States from the State of Maryland, has on this day used the following language, to wit: "The South asked you to let them go in peace. But, no; you said you would bring them into subjection. That is not done yet, and God Almighty grant that it never may be. I hope that you may never subjugate the South." And whereas such language is treasonable, and is a gross disrespect of this House; therefore,
Be it resolved, That the said Benjamin G. Harris be expelled from this House.

The vote was taken, and it failed of a two-thirds vote, as follows:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Arnold, Ashley, Bailey, John D. Baldwin, Baxter, Beaman, Blaine, Francis P. Blair, Boutwell, Boyd, Broomall, William G. Brown, Ambrose W. Clark, Freeman Clarke, Cobb, Cole, Henry Winter Davis, Thomas T. Davis, Dixon, Donnelly, Driggs, Dumont, Eckley, Eliot, Frank, Garfield, Gooch, Grinnell, Hale, Higby, Hooper, Hotchkiss, Asahel W. Hubbard, John H. Hubbard, Jenckes, Julian, Kasson, Kelley, Francis W. Kellogg, Orlando Kellogg, Loan, Marvin, McBride, McClurg, McIndoe, Samuel F. Miller, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Odell, Orth, Patterson, Pike, Pomeroy, Price, William H. Randall, Edward H. Rollins, Schenck, Scofield, Shannon, Smithers, Spalding, Starr, Thayer, Thomas, Tracy, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Webster, Whaley, Williams, Wilder, Wilson, Windom, and Wood—81.

NAYS—Messrs. James C. Allen, Ancona, Augustus C. Baldwin, Bliss, James S. Brown, Chanler, Clay, Cox, Cravena, Dawson, Dennison, Eden, Eldridge, English, Finck, Ganson, Grider, Harding, Harrington, Herrick, Holman, Hutchins, Philip Johnson, William Johnson, Kernan, Law, Lazear, Le Blond, Long, Mallory, Marcy, McAllister, McDowell, McKinney, Middleton, Wm. H. Miller, James R. Morris, Morrison, Nelson, Odell, Pendleton, Pruyn, Samuel J. Randall, Robinson, Rogers, James S. Rollins, Ross, Scott, John B. Steele, William G. Steele, Strouse, Sweat, Voorhees, Ward, Chilton A. White, Joseph W. White, Winfield, and Fernando Wood—58.

Mr. Schenck, of Ohio, then offered the following:

Resolved, That Benjamin G. Harris, a Representative from the fifth district of the State of Maryland, having spoken words this day in debate, manifestly tending and designed to encourage the existing rebellion and the enemies of this Union, is declared to be an unworthy member of this House, and is hereby severely censured.

It was adopted by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Arnold, Ashley, Bailey, Augustus C. Baldwin, John D. Baldwin, Baxter, Beaman, Blaine, Francis P. Blair, Boutwell, Boyd, Broomall, James S. Brown, Ambrose W. Clark, Freeman Clarke, Cobb, Cole, Cox, Henry Winter Davis, Thomas T. Davis, Dixon, Donnelly, Driggs, Dumont, Eckley, Eliot, English, Frank, Ganson, Garfield, Gooch, Grinnell, Hale, Harrington, Higby, Holman, Hotchkiss, Asahel W. Hubbard, John H. Hubbard, Jenckes, Julian, Kasson, Kelley, Francis W. Kellogg, Orlando Kellogg,

Kernan, Loan, Marvin, McAllister, McBride, McClurg, McIndoe, Middleton, Samuel F. Miller, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Nelson, Odell, Orth, Patterson, Pike, Pomeroy, Price, William H. Randall, Edward H. Rollins, Schenck, Scofield, Shannon, Smithers, Spalding, Starr, John B. Steele, William G. Steele, Thayer, Thomas, Tracy, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Webster, Whaley, Williams, Wilder, Wilson, Windom, and Winfield—93.

NAYS—Messrs. James C. Allen, Ancona, Bliss, Chanler, Dennison, Eden, Eldridge, Law, Le Blond, William H. Miller, Morrison, Pendleton, Pruyn, Samuel J. Randall, Ross, Strouse, Chilton A. White, and Fernando Wood—18.

The debate was continued on the resolutions of Speaker Colfax.

Mr. Wood, of New York, said: "I will not vote to abridge the expression of sentiment in this House. I am willing to accord to every man, even to those on the other side of the House, the largest liberty of debate. But, sir, I am not in favor of a dissolution of this Union. I am not in favor of recognition. I am not in favor of secession. But I am in favor of peace. I am in favor of doing justice to the southern people. I am in favor of making an effort, through negotiation, for a final determination and adjudication of this question in some way, as the Government has always done under like circumstances.

"This war cannot restore the Union. I believe the Democratic party, as far as this immediate question is concerned, cannot be an abolition war party. There can be no such thing as a war Democrat; because when a man is in favor of the war, he must be in favor of the policies of the war as it is prosecuted by the party in power, with its unavoidable tendency to destroy the Constitution and the Union. He cannot be a Democrat and be a disunionist also. I do not want to see the Democratic party brought into power under such policies or on any such platform as that. If the war is to go on, I want the Republican party to carry it on. They caused it, and let them take the responsibility. They get the plunder, let them take the consequences.

"Now, sir, can there be such a thing as a conservative Republican? No, sir, a man cannot be a modern Republican and be conservative. Republicanism, as now understood practically, is destructive, fanatical, and ruinous. Conservatism is to protect and preserve life and property. Therefore I say there can be no such thing as a war Democrat or a conservative Republican. Until the American people return to the sober second thought, and realize the inevitable tendency and conclusion of the war, I believe that the disease will run its course, and that the Republican disunionists in power may carry out their doctrines to their bloody and relentless results.

"George Thompson was sent an emissary by the British Government thirty years ago to sow the seeds of dissolution in America. He now returns as the guest of his fellow-disunionists, the ruling party, to see the reaping of the

bloody harvest. Union, sir, Union with this doctrine of fell destruction and annihilation, where every man, woman, and child is to be put to the sword, where their country is to be laid waste, where their State institutions are to be subverted, where freemen under your Constitution, standing with equal rights with ourselves, are to be made slaves or die! Why, sir, men who talk of such a Union under our system have never read the Constitution. In the elegant language to-day of the gentleman from Pennsylvania (Mr. Stevens), they are 'either fools or knaves.'

"Sir, there can be no such Union. Civil war is dissolution, destruction, extermination, and therefore I am opposed to it, and in favor of making a peaceful effort for the settlement of this great question. I am in favor of bringing back the southern States into a condition of fraternity and brotherhood with the North. I am in favor of the compacts and compromises of the Constitution. I am in favor of this galaxy of beautiful, independent powers being once more gathered under a common Government, entitled to equal rights, equal privileges, and equal exemption from central usurpation and tyranny."

Mr. Schenck, of Ohio, followed in reply, saying: "Sir, I was not present when my colleague (Mr. Long) delivered his speech. I was in my room, unable by reason of illness to be in my place. But I have a full, official, and authorized report of that speech; and to satisfy me that he deserves the heavy punishment proposed, I do not need to look any further than to passages in it which strike my eye now as I hold it here in my hand. I will read:

Mr. Chairman, I have deemed it proper thus to advert to the charges of encouragement to the confederates so repeatedly made upon this floor, and I again recur to the consideration of the Union. Can the Union be restored by war? I answer most unhesitatingly and deliberately, No, never; "*war is final, eternal separation.*"

"Again, in speaking of the remarks of the gentleman from Pennsylvania (Mr. Stevens), and in trying to ally those opinions to his—with what want of success the gentleman from Pennsylvania has most triumphantly shown—he says:

The confederate States are out of the Union, occupying the position of an *independent Power de facto*, have been acknowledged as a belligerent both by foreign nations and our own Government, maintained their declaration of independence for three years by force of arms, and that the war has cut asunder all the ligaments and abrogated all the obligations that bound them under the Constitution.

"Here, sir, I propose to make one single remark in reference to my own view of this subject—of the rights of these seceding States and of the people of those States. I belong to that class of theorists—for we all have theories on these subjects—who believe that the rebels by their insurrection and making war on their Government have forfeited, if we choose to enforce that forfeiture, all their rights as citizens

of this country, and yet have not released themselves from a single one of their obligations. And I hold, therefore, that we must press them with fire and sword in order to bring them back again into subjection to the law of the land, and to their places as good and law-abiding citizens, as if they were foreigners; and at the same time we have the right, because they are not foreigners and have not rid themselves of their obligations under the Constitution, to treat them as traitors under the law. In other words—to use a homely figure—we pursue them with a double-barrelled gun. We may shoot them as belligerents, or we may shoot them as traitors. They are subjects, on the one hand, for the sword, because they have themselves taken the sword and brought the curse thus upon themselves; and they are, on the other hand, the subjects also of hemp, to be raised to the elevation which only properly belongs to such traitors."

Mr. Davis, of Maryland, said: "Mr. Speaker, if it be said that a time may come when the question of recognizing the southern confederacy will have to be answered, I admit it; and it is answering the strongest and the extreme case that gentlemen on the other side can present. I admit it. When a Democrat shall darken the White House and the land; when a Democratic majority here shall proclaim that freedom of speech secures impunity to treason and declare recognition better than extermination of traitors; when McClellan and Fitz John Porter shall have again brought the rebel armies within sight of Washington city, and the successor of James Buchanan shall withdraw our armies from the unconstitutional invasion of Virginia to the north of the Potomac; when exultant rebels shall sweep over the fortifications and their bomb-shells shall crash against the dome of the Capitol; when thousands throughout Pennsylvania shall seek refuge on the shores of Lake Erie from the rebel invasion, cheered and welcomed by the opponents of extermination; when Vallandigham shall be Governor of Ohio, and Bright Governor of Indiana, and Woodward Governor of Pennsylvania, and Seymour Governor of Connecticut, and Wall be Governor of New Jersey, and the gentleman from New York city sit in Seymour's seat, and thus, possessed of power over the great centre of the country, they shall do what they attempted in vain before in the midst of rebel triumphs—to array the authorities of the States against those of the United States; to oppose the militia to the army of the United States; to invoke the *habeas corpus* to discharge confined traitors; to deny to the Government the benefit of the laws of war, lest it exterminate its enemies; when the Democrats, as in the fall of 1862, shall again, with more permanent success, persuade the people of the country that the war should not be waged till the integrity of the territory of the Union is restored, cost what it might, but that such a war violates the spirit of free institutions, which

those who advocate it wish to overthrow, it should stop, for the benefit of the Democratic party, somewhere this side of absolute triumph, lest there be no room for a compromise; when gentlemen of that party in New York shall again, as in November, 1862, hold illegal and criminal negotiations with Lord Lyons, and avow their purposes to him, the representative of a foreign and unfriendly Power, and urge him to arrange the time of proffering mediation with a view to their possession of power and their preparation of the minds of the people to receive suggestions from abroad; and when mediation shall appear, by the event, to be the first step toward foreign intervention, swiftly and surely followed by foreign armed enemies upon our shores to join the domestic enemies; when the war in the cars shall begin, which was menaced at the outbreak of the rebellion, and the friends of Seymour shall make the streets of New York run with blood, on the eve of another Gettysburg less damaging to their hopes; when the people, exhausted by taxation, weary of sacrifices, drained of blood, betrayed by their rulers, deluded by demagogues into believing that peace is the way to union and submission the path of victory, shall throw down their arms before the advancing foe; when vast chasms across every State shall make apparent to every eye, when too late to remedy it, that division from the South is inauguration of anarchy at the North, and that peace without union is the end of the Republic—then the independence of the South will be an accomplished fact, and gentlemen may, without treason to the dead Republic, rise in this migratory House, wherever it may then be in America, and declare themselves for recognizing their masters at the South rather than exterminating them! Until that day, in the name of the American nation; in the name of every house in the land where there is one dead for the holy cause; in the name of those who stand before us in the ranks of battle; in the name of the liberty our ancestors have confided to us, I devote to eternal execration the name of him who shall propose to destroy this blessed land rather than its enemies.

"But until that time arrive, it is the judgment of the American people there shall be no compromise; that ruin to ourselves or ruin to the southern rebels are the only alternatives. It is only by resolutions of this kind that nations can rise above great dangers and overcome them in crises like this. It was only by turning France into a camp, resolved that Europe might exterminate, but should not subjugate her, that France is the leading empire of Europe to-day. It is by such a resolve that the American people coercing a reluctant Government to draw the sword and stake the national existence on the integrity of the Republic, are now anything but the fragments of a nation before the world, the scorn and hiss of every petty tyrant. It is because the people of the United States, rising to the height of the occasion, dedicated this

generation to the sword, and pouring out the blood of their children as of no account, and avowing before high Heaven that there should be no end to this conflict but ruin absolute or absolute triumph, that we now are what we are; that the banner of the Republic still pointing onward floats proudly in the face of the enemy, that vast regions are reduced to obedience to the laws, and that a great host in armed array now presses with steady step into the dark regions of the rebellion. It is only by the earnest and abiding resolution of the people that whatever shall be our fate, it shall be grand as the American nation, worthy of that Republic which first trod the path of empire and made no peace but under the banners of victory, that the American people will survive in history."

Mr. Pendleton, of Ohio, replied as follows: "The gentleman from Maryland (Mr. Davis) told us last night, in terms of eloquence which I cannot emulate, that when Lord Chatham, aged, feeble, wrapped in flannel and suffering from disease, came resting upon the arm of his still greater son, to address for the last time the British House of Lords, and to die upon the floor, he came to speak against the dismemberment of the British empire. It is true, and what did he say? 'I told you this war would be disastrous; I predicted its consequences; I told you you could not conquer America; I begged you to conciliate America; you would not heed my advice. You have exhausted the country; you have sacrificed its men; you have wasted its treasures; you have driven these colonies to declare their independence; you have driven them into the arms of our ancient and hated enemy, and now, without striking a blow, without firing a shot, cowardly under difficulties as you were truculent in success, you propose to yield through fear to France what you have refused as justice to America.' Did it not occur to the gentleman from Maryland that possibly at a future day when the history of that civil strife shall have been reproduced in this land, another Chatham may come to this House and hurl against those who are now in power these bitter denunciations because they have shown themselves unable to make an honorable peace even as they have been unable to make a victorious war?"

"The gentleman from Maryland besought the House never to be swerved from its fixed purpose to prosecute the war 'with the last dollar and the last man.' Sir, his reading told him such stinging exhortation would full soon be needed. In November, 1781, after Cornwallis had surrendered Yorktown and the last battle of the Revolution had been fought, the House of Commons in its address to the throne assured his Majesty that it would vote all the resources of the empire to suppress rebellion in America. In March of the next year, in the early spring, in less than six months, that same House of Commons voted those were enemies to the realm who advised the further prosecution of the war. And here this House this

morning voted down the Crittenden resolution, which less than three years ago was passed with only two dissenting votes.

"The gentleman from Maryland paid a splendid tribute to the power of public opinion. He compared it to the sea, whose tidal waves obey the fickle bidding of the moon, and roll and swell and sway with restless and resistless force, and yet constitute the level from which all height is measured. 'But, like the ocean,' said he, 'it has depths whose eternal stillness is the condition of its stability. Those depths of opinion are not free.' Did he forget what

— "Wood the almy bottom of the deep
And mocked the dead bones which lay scattered by?"

"What sights of ugly death within mine eyes!
Methought I saw a thousand fearful wrecks!"

"All scattered in the bottom of the sea!"

"Sir, if there be depths of public opinion where eternal stillness reigns, there gather, even as festering death lies in those ocean depths, the decaying forms of truth, and right, and freedom. Eternal motion is the condition of their purity. Did he think this resolution would for one instant retard its progress? Did he not know that the surging waves would wash away every trace of its existence? Did he suppose this puny effort would avail him? The rocks of the eternal hills alone can stay the waves of the ever-rolling sea. Nothing but the principles of truth and right can stay the onward progress of public opinion in this our country, as it swells and sways and surges in this mad tempest of passion and seeks to find a secure resting place.

"The gentleman exhorted his friends to accept the issue, absolute victory or absolute ruin; and then he painted the absolute ruin of this Government. Even he could conceive it possible. He described this home of liberty deserted; this temple reared by our fathers destroyed; its grace and symmetry and beauty gone; its pillars fallen; its walls thrown down; and amid 'this chaos of ruin' those who accept this issue, brave, determined, tearful, sorrowing, overwhelmed with it in a common fate. He exhorted his friends in this House and in the country—he expressly excluded you, my fellow Democrats, and your constituents—to accept this alternative. Do it, he exclaimed, and let the world know that this age has produced heroic children upon whom Heaven has visited the sins of their fathers.

"Sir, I trust in God the catastrophe may never come. I trust that the ages, as they roll on, will not thus be called to pass judgment on the men of these days. But if it must be so, my imagination pictures another scene. When your work shall be accomplished, when your mission shall be executed, when our Constitution is dead, when our liberties are gone, when our Government is destroyed, when these States—no longer held secure in their proper position by the power of our matchless Constitution, so that they emulate in accordant

action the stars, as by the divine decree they encircle in their mysterious courses the footstool of the eternal throne, and extract from the harmony of conflicting elements the true music of the spheres—shall have given place to 'States discordant, dissevered, belligerent, to a land rent with civil feuds and drenched in fraternal blood,' history will hold its dread inquest, and in the presence of appalled humanity will render judgment that base and degenerate children, deserting the teachings of their fathers, deserting the teachings of the past, departing from the ways of pleasantness and peace, rebelling against the wisdom and beneficence of the Almighty, with hearts filled with pride and souls stained with fanaticism and passion, struck the matricidal blow, and at the same moment indignant and outraged Heaven wreaked upon them the just retribution of their terrible and nameless crime."

The resolutions of Speaker Colfax were subsequently modified. The first resolution was made as follows:

Resolved, That said Alexander Long, a Representative from the second district of Ohio, be, and he is hereby, declared to be an unworthy member of the House of Representatives.

It was adopted by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Arnold, Ashley, Bailey, John D. Baldwin, Baxter, Beaman, Blaine, Boutwell, Boyd, Broomall, Ambrose W. Clark, Cobb, Cole, Creswell, Dawes, Deming, Driggs, Dumont, Eckley, Farnsworth, Frank, Garfield, Gooch, Grinnell, Higby, Hooper, Hotchkiss, John H. Hubbard, Jenckes, Julian, Casson, Kelley, Francis W. Kellogg, Orlando Kellogg, Loan, Longyear, Marvin, McBride, McClurg, McIndoe, Samuel F. Miller, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Norton, Charles O'Neill, Orth, Patterson, Perham, Pike, Pomeroy, Price, William H. Randall, Alexander H. Rice, John H. Rice, Edward H. Rollins, Schenck, Shannon, Sloan, Smith, Smithers, Starr, Stevens, Thayer, Thomas, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Webster, Whaley, Wilder, Wilson, Windom, and Woodbridge—80.

NAYS—Messrs. James C. Allen, William J. Allen, Ancona, Augustus C. Baldwin, Francis P. Blair, Bliss, James S. Brown, William G. Brown, Chanler, Clay, Coffroth, Cox, Cravens, Dawson, Dennison, Eden, Eldridge, Finck, Ganson, Grider, Hall, Harding, Harrington, Benjamin G. Harris, Herrick, Holman, Hutchins, William Johnson, Kalbfleisch, Kernan, King, Knapp, Law, Lazar, Mallory, Marcy, McDowell, McKinney, William H. Miller, James R. Morris, Morrison, Nelson, Noble, Odell, John O'Neill, Pendleton, Perry, Pruyn, Radford, Samuel J. Randall, Robinson, Rogers, James S. Rollins, Ross, Scott, Stebbins, John B. Steele, William G. Steele, Strouse, Stuart, Sweat, Voorhees, Ward, Wheeler, Chilton A. White, Joseph W. White, Winfield, Fernando Wood, and Yeaman—69.

The second resolution was laid on the table—yeas, 71; nays, 69. The preamble was adopted—yeas, 78; nays, 68.

The session of Congress closed on the 4th of July. Acts were passed relating to the enrollment and draft (*see* ARMY U. S.); the internal revenue (*see* FINANCES); reviving the grade of Lieutenant-General in the army; establishing a uniform system of ambulances in the army; en-

abling the people of Nevada, Colorado, and Nebraska, to form a constitution and State government; amending the Homestead Law; also amending the act relating to the coinage of cents; regulating the admeasurement of tonnage of ships and vessels; establishing a postal money order system (*see FINANCES*); providing a national currency secured by United States bonds; providing for the instruction of youths in the District of Columbia; increasing the duties on imports; providing for the more speedy punishment of guerrillas; to aid the construction of a railroad and telegraph line from Lake Superior to Puget's Sound, on the Pacific coast; to encourage immigration; joint resolutions of thanks to the following persons were passed, to wit: Gens. Grant, Banks, Burnside, Hooker, Meade, Howard, Capt. Rodgers of the navy, Cornelius Vanderbilt, and to the volunteer soldiers who had enlisted.

The measures adopted by the preceding Congress, and during the first session of the present one, that is, from July, 1861, to the adjournment in July, 1864, relative to slaves and slavery, were as follows: Slaves used for military purposes by the enemy were declared to be free; an additional article of war dismissed from service all officers who should surrender escaped fugitives coming within the lines of the armies; three thousand slaves in the District of Columbia were emancipated, and slaveholding forbidden; it was enacted that colored persons in the District should be tried for the same offences, in the same manner, and be subject to the same punishment as white persons, and that such persons should not be excluded as witnesses on account of color; and that colored schools should be provided, and the same rate of appropriation made to them as to schools for white children; and that there should be no exclusion from any railway car in the District on account of color; slavery was forever prohibited in all territory of the United States; a joint resolution was passed pledging the faith of the nation to aid non-seceding States to emancipate their slaves; all slaves of persons aiding the enemy, who should take refuge within the lines of the army, were declared free; it was enacted that no slave should be surrendered to any claimant until such person had made oath that he had not given aid and comfort to the rebellion; the President was authorized to receive into the military service persons of African descent, and such person, his mother, wife, and children, owing service to any person giving aid to the rebellion, were declared free; the mutual right of search was arranged within certain limits with Great Britain, in order to suppress the slave trade; the independence of Hayti and Liberia were recognized, and diplomatic relations with them authorized; colored persons, free or slave, to be enrolled and drafted the same as whites, the former to have the same pay as the latter, and the slave to be free; all fugitive slave acts were repealed; the coastwise slave trade was

declared illegal; colored persons enabled to testify in all the courts of the United States; colored persons were authorized to carry the mails of the United States. Other measures were introduced but failed to pass.

CONNECTICUT. The Republican and Democratic conventions of Connecticut met in February, 1864, to nominate candidates for State officers in the ensuing election. The Republicans renominated for Governor, William A. Buckingham; for Lieutenant-Governor, Roger Averill; for Secretary of State, J. Hammond Trumbull; for Treasurer, Gabriel W. Otis, and for Comptroller, Leman W. Cutler. The Democratic candidates for the same offices were Origen S. Seymour, Thomas H. Bond, James H. Hoyt, Andrew L. Kidston, and Lloyd E. Baldwin. The election took place on April 4th, and resulted in the election of the Republican candidates, by majorities ranging from 5,588 to 5,810. The vote for Governor was: Buckingham, 39,820; Seymour, 34,162; total vote, 73,982, being 5,949 less than at the election in the previous year. The following was the result of the election for members of the Legislature:

	Senators.	Representatives.
Republicans.....	18	173
Democrats.....	8	79

Republican majority on joint ballot, 109. There was no election in 1864 for members of Congress.

The Legislature convened at New Haven on May 4th, when Governor Buckingham and the other State officers elect were inaugurated. The Governor's annual message to the Legislature was delivered at the same time. The receipts and disbursements of the State for the year ending March 31st, 1864, were as follows:

<i>Receipts.</i>	
Balance in treasury, April 1, 1863.....	\$106,170 04
Dividends on bank stocks owned by the State.....	51,000 00
Miscellaneous sources.....	2,546 01
Taxes paid by agents of foreign insurance companies.....	3,003 41
Taxes paid on stocks owned by non-residents.....	20,614 47
Taxes paid by railroad corporations.....	71,200 25
Taxes paid on cash capital of mutual insurance companies.....	15,000 00
Taxes paid on deposits in savings banks.....	164,940 30
Taxes paid by towns.....	222,204 00
State bonds sold.....	2,000,000 00
Premium and interest on State bonds.....	164,004 00
Temporary loans.....	207,200 00
Taxes paid by telegraph companies.....	100 41
Forfeited bonds.....	5,500 00
Avals of courts.....	2,500 00
Total.....	\$4,917,000 00
<i>Disbursements.</i>	
Debenture and contingent expenses of the General Assembly.....	\$54,520 00
Account of salaries.....	24,000 00
Contingent expenses, including grants.....	72,100 00
Judicial expenses, including grants.....	77,000 00
Expense of supporting the State paupers.....	1,400 00
Expense of superintending common schools.....	2,300 00
Salary of the director of the State Prison.....	28,610 00
Account of public buildings and institutions.....	120,000 00
Expense of families of volunteers.....	15,000 00
Advances made to the quartermaster-general.....	2,640,000 00
Advances made to the paymaster-general.....	2,640,000 00
Total.....	\$4,900,000 00
Interest paid on temporary loans.....	\$39,000 00
Interest paid on State bonds.....	\$69,160 00
Total.....	\$308,160 00
Total.....	\$4,938,160 00

leaving a balance in the treasury, on April 1st, 1864, of \$49,714.04.

The funded debt of the State, in July, 1864, as stated by the finance committee of the Senate, was \$6,000,000, and the unfunded debt \$3,400,000. The sinking fund for the reduction of the public debt amounted, in May, 1864, to \$1,016,846.68. The estimates for the civil and military expenses of the State for the year ending March 31, 1865, were \$2,750,000, of which \$3,000,000 was to be raised by the issue of State Bonds, at 6 per cent. interest, redeemable at the pleasure of the State after ten years, and the remainder by taxation.

The school fund on May 1, 1864, amounted to \$3,049,426.77, the same as in the previous year, and the income, including the balance on hand in April 1, 1863, was \$164,559. The number of children entitled to the benefit of the income was 112,098, an increase of 1,607 over the previous year, and a dividend of one dollar and twenty cents for each child was paid therefrom, leaving a balance of \$23,270.87, to be carried to the next year's account. From the report of the Superintendent of Common Schools, it appears that during the year ending March 31, 1864, 76,307 scholars attended 1,819 schools, taught by 2,087 teachers, at an expense of more than \$400,000, nine-tenths of which is derived from the income of the school and town deposit funds, and from the direct taxation of property. As a result of the war now in progress, the number of young men and older boys in the higher classes was greatly diminished, while the number of female teachers materially increased. The State Reform School was reported in a flourishing condition with 203 inmates, whose earnings in the mechanical department amounted to about \$7,000 during the year. During the ten years that the school has been in operation it has received 664 boys, some of whom have been rendered useful members of society. The number of convicts in the State Prison was 139, being 20 less than in the previous year; and of State Beneficiaries in the Retreat for the Insane, 126. Sixty-one of this class of patients were admitted during the year, and 49 discharged, 38 of whom had recovered or improved.

The railroad interest during the year was benefited by a large increase in the number of passengers and in the quantity of freight transported. The transportation of troops, government freight, &c., caused an increase in the gross earnings of the several roads over the previous year, of \$1,112,959.00; the total of gross earnings being \$4,786,250.70 against \$3,673,291.70 for the year ending March 31, 1863. The net earnings on a capital of \$19,043,379.31, amounted to \$1,694,730.18, being a gain of \$548,168.55 over the previous year, or nearly 48 per cent.. Nearly a million more of passengers were carried, and 19 per cent. more of tons of freight. The total expenditure for running the roads, exclusive of interest, was \$2,643,941.83; the total number of miles run

2,660,969, and of passengers carried, 8,789,588. Thirty-eight passengers were killed, and seven injured, by accidents during the year. The number of banks of discount and deposit amounts to 72, of which three were organized during the year under the National Banking Act. The total amount of capital is \$20,606,962; circulation, \$11,869,701; total liabilities, \$47,868,197.53; specie, \$1,198,872.46; loans and discounts, \$28,569,876.48; total resources, \$47,868,197.53; deposits, \$9,996,643.13; loans to persons out of the State, \$10,497,474.13. There were, on Jan. 1, 1864, forty-eight Savings Banks in the State, which, the commissioners say, "are managed with great prudence and wisdom." The united deposits in these institutions amount to \$26,954,802.73, being an increase during the year of \$3,807,865.78; number of depositors, 116,681 against 103,728 the year previous; average amount of deposit for each person, \$231. The investments are as follows: Loans on real estate, \$12,850,258.83; on stocks and bonds, \$1,994,657.11; on personal security, \$1,806,026.18; on bank stock, \$1,598,014; on railroad stocks and bonds, \$868,715; on United States securities, \$6,481,530; on real estate and other securities, \$1,666,500.64.

The quota of troops assigned to Connecticut under every requisition made by the President down to May 1, 1864, was 39,214, and the number of men actually furnished to that date was 42,789, including 1,474 drafted men who paid commutation, and did not enter the service. In his annual message, Gov. Buckingham announced that the State then had a credit of 3,172 men to apply toward any future call for a service of three years; also, that the number of veteran volunteers who had re-enlisted amounted to 3,347. Two colored regiments, the 29th and 80th, were organized during the year. The disbursements by the Paymaster-General of the State during the year ending March 31, 1864, were as follows:

To officers in the nine months' regiments, post commanders, assistant surgeons and chaplains.....	\$47,010 00
To the State militia.....	21,000 25
To volunteers for State bounties.....	8,498,890 00

Making a total of..... \$3,566,890 25

For the purpose of providing State bounties for troops who might be called for in future requisitions, the Legislature passed a law similar in its provisions to that enacted at the extra Session of November 1863.

At the extra Session of the Legislature in 1863, a resolution, embodying the following amendment to the Constitution, was adopted by the House of Representatives:

Every elector of this State who shall be in the military service of the United States, either as a drafted person or volunteer during the present rebellion, shall, when absent from this State because of such service, have the same right to vote in any election of State officers, representatives in Congress, and electors of President and Vice-President of the United States, as he would have if present, at the time appointed for such election, in the town in which he resided at the time of his enlistment into such ser-

vice. This provision shall in no case extend to persons in the regular army of the United States, and shall cease and become inoperative and void upon the termination of the present war.

The General Assembly shall prescribe by law, in what manner, and at what time, the votes of electors absent from this State, in the military service of the United States, shall be received, counted, returned, and canvassed.

In accordance with the constitutional provision this resolution was published with the general laws and continued to the next Session of the Legislature, by which it was again passed by a two-thirds vote, and submitted to the people for ratification. At a special election held on Aug. 15th, the amendment was adopted by the following vote:

For the amendment.....	24,390
Against the amendment.....	14,287
Majority.....	10,043

By a proclamation of the Governor, dated Sept. 2, the amendment was declared to be a part of the Constitution of the State.

At the Session of 1864, another resolution was adopted by the House of Representatives, with reference to the elective franchise, embodying the following amendment to the Constitution:

Every male citizen of the United States who shall have attained the age of twenty-one years, who shall have resided in this State for a term of one year next preceding, and in the town in which he may offer himself to be admitted to the privileges of an elector, at least six months next preceding the time at which he may so offer himself, and shall be able to read any article of the Constitution, or any section of the statutes of this State, and shall sustain a good moral character, shall on taking such oath as may be prescribed by law, become an elector.

This was ordered to be continued to the Session of 1865, when it will come up for final action, and if readopted, be submitted to the people.

After an exciting political canvass the following Presidential electors were chosen by an average majority of 2,898, in a total vote of 86,974; John T. Wait, John P. Elton, James G. Batterson, Samuel C. Hubbard, Sabin L. Sayles, Frederic A. Benjamin. Mr. Elton having died previous to the meeting of the State Electoral College, Oliver F. Winchester was chosen by the College in his place. The vote of the State was cast for Abraham Lincoln, President, and Andrew Johnson, Vice-President.

COOK, REV. RUSSELL S., an American Congregational clergyman, and Secretary of the American Tract Society, born in New Marlborough, Berkshire County, Mass., March 6th, 1811, died at Pleasant Valley, near Poughkeepsie, N. Y., September 4th, 1864.

He made a diligent improvement of his early opportunities for obtaining an education, and at length entered a lawyer's office in Syracuse, N. Y.; but soon changed his choice of a profession, and entered the Theological Seminary at Auburn. Soon after the close of this course

of study, he was ordained pastor of the Congregational church in Lanesboro, Mass., in 1836, when 25 years old. His experience as a pastor soon convinced him of the importance of religious books and tracts as aids to the ministry; he sent to the tract society for supplies for his own people, and, his voice failing within a year, his growing interest in this work led him, in 1838, to devote himself wholly to the service of the American Tract Society, especially in visiting cities and large towns as an agent, to promote the systematic sale of good books.

In May, 1839, he was elected one of the society's corresponding secretaries, and in this office he labored with great success eighteen years, till, in 1856, the failure of his health obliged him to retire. During this period the society received from him a very powerful impulse in all its departments, and its sphere of operation and usefulness was greatly enlarged.

His first efforts were directed to the expansion of the enterprise of volume circulation; and with such success, that in three and a half years preceding May, 1841, 800,000 volumes were put in circulation. This work, however, was mainly done in connection with well-established congregations, though with constant efforts to reach the destitute.

In 1841, the urgent wants of the more remote and unevangelized neighborhoods and sections of the country gave rise to deliberations, in which Mr. Cook took a most eager interest, and which resulted in the system of *American colportage*. This system aimed to provide a body of Christian colporteurs, to offer religious books at every dwelling in the land, by sale or by gift, in connection with Christian counsel and prayer when practicable. With this great work Mr. Cook was wholly identified, devoting to it his untiring and concentrated energies; and so successfully, that in 1856, after fifteen years, the society had on its list 547 colporteurs, besides 115 students who labored only during vacations; its current receipts having increased from \$131,000 in 1839, to \$415,000 in 1856.

Early in this period the necessity of a monthly paper, to be at once a powerful direct means of good, and the society's organ of communication with the Christian public, gave rise to the establishment of the "American Messenger," in 1843. To Mr. Cook this paper is greatly indebted for the counsels that determined its origin, aims, and character, and for its far-reaching influence. Month by month he enlivened and enriched it by able editorials on topics of deep and general interest. In the "Child's Paper," subsequently started—the foremost of illustrated papers for children—and in the "*Botschafter*, or German Messenger," he took the deepest interest; and the three papers together have reached a monthly issue of 500,000 copies.

In the prosecution of his work, Mr. Cook had frequent occasions to journey in almost

every part of the United States, visiting the chief cities, presenting the claims of the society in the churches and in ecclesiastical meetings, holding colporteur conventions, transacting business with the society's friends, and with agents, superintendents, and colporteurs. In these labors his great energy and vitality were well employed; and his tall, erect form, his countenance so expressive of thought and resolution, his vivacity, his dignified, courteous, and pleasing manners, secured him ready access to the good will of strangers. He was gifted with a mind of great comprehensiveness, versatility, and inventiveness, and with remarkable executive powers.

Few men have so well understood the *power of the press*, advocated its right use more eloquently, or employed it for good more effectively. Besides writing for the society's own issues, he exerted a wide influence through the principal religious and secular periodicals, adapting to each fresh and striking editorials, which the publishers gladly adopted as the expression of their own views.

Mr. Cook made two visits to Europe, in 1858 and 1856; and during these visits labored to interest British Christians in the colporteur enterprise. The result of these efforts appears in the present active prosecution of that work, especially in Scotland. At the time of his second visit his health had been very seriously impaired by his incessant and exciting home labors; and having been again prostrated in Switzerland, by a pleuritic attack threatening life, he was led to ask relief from the service of the Tract Society, and in May, 1857, his labors as Secretary ceased.

Returning to America in September, 1857, with partially restored health, he soon engaged, with characteristic energy, skill, and perseverance, in promoting the better observance of the Sabbath, as Secretary of the Committee organized for this object in New York City; and his sagacity, prudence, and industry, in this important work, secured valuable results.

In the spring of 1868 he added to his Sabbath work several weeks of exhausting labors in organizing and energizing the Christian Commission in New York. These double cares and labors broke down his health, and he never rallied, though visiting the coast of Florida and of Maine, and combating his disease with unabated resolution to the last.

COOKE, Rev. PARSONS, D. D., an American Congregational clergyman, editor, and author, born in Hadley, Mass., in 1800, died in Lynn, Mass., February 12th, 1864. He was educated at Williams' College, where he graduated with distinction about 1821, and immediately com-

menced a course of theological study with Rev. Dr. Griffin, at that time President of Williams' College. He completed his preparatory theological studies in 1825, and, on the 26th of June, 1826, was ordained as pastor of a newly-organized Congregational Church in Ware, Mass. He continued in this pastorate for ten or eleven years, and then removed to Portsmouth, N. H., and after a ministry of a few months there, became pastor of the First Congregational Church in Lynn, Mass., with which he remained until his death—a period of twenty-eight years. Not long after he had entered upon his pastorate at Lynn, he became editor of a denominational paper in Boston, at first to relieve his Church, which had become greatly embarrassed in building a church edifice, from a part of the burden of his support, and subsequently from the conviction that he could be most useful by continuing in that work. He was at first editor of the "New England Puritan," and when that paper was united with the "Recorder," of the "Puritan and Recorder;" and some years later, when the paper returned to its original title of the "Boston Recorder," he was its senior editor. This connection was maintained till his death. Dr. Cooke (he received his degree, we believe, from his *Alma Mater*, Williams' College) was, by the constitution of his mind, argumentative and logical, and from an early period of his ministry he became an active controversialist. His first published controversy grew out of a sermon which he preached in Ware, and published in 1829, on "The Exclusiveness of Unitarianism;" and after he became connected with the religious newspaper press, being strongly Calvinistic in his views, and declaring his sentiments in vigorous and pungent language, he was for many years involved in almost constant controversy with the New School, or Moderately Calvinistic Congregationalists, giving and receiving very heavy blows. By way of diversion from this protracted theological warfare, he would occasionally break a lance with the Baptists, the Episcopalians, the Universalists, or the Catholics. Most of his published works, and they number several volumes, besides occasional sermons, addresses, &c., are controversial in character. In private life he was frank, generous, high-minded, and eminently genial and kindly; a man of strong affections and sympathies, though also of bitter dislikes. As a pastor he was much beloved, and was popular as a preacher, though inclined rather to doctrinal than hortatory preaching. His last illness was protracted, and his sufferings much of the time were exceedingly acute.

D

DAHLGREN, Col. ULRIC, an officer in the United States Volunteer service, born in 1842, killed in a skirmish at King and Queen's Court House, Virginia, March 4, 1864. He was the son of Rear Admiral John A. Dahlgren, and had received a very thorough education, and especially a careful training in the science of gunnery, which was his father's specialty. He had entered the navy as midshipman before the breaking out of the war, and at the time of the attack on Fort Sumter was travelling in the Southwestern States. Great efforts were made to induce him to join the rebels, but he refused indignantly; and hastening home, he assisted his father in the Ordnance Department; and when General Saxton was in command at Harper's Ferry, and the place was first threatened, Commodore Dahlgren, having received orders to place a naval battery on Maryland Heights, sent his son Ulric to place the guns in position, and take charge of the battery. He executed this duty with great skill, and when Gen. Sigel relieved Gen. Saxton of his command, he found young Dahlgren at his post as captain of artillery, and took him at once upon his staff. Subsequently Gen. Sigel solicited and obtained his appointment as additional aide-de-camp with the rank of captain. He served in this capacity in Frémont's mountain campaign, distinguishing himself particularly at Cross Keys, and served through Pope's campaign, acting as chief of artillery under Sigel at the second battle of Bull Run, where he was specially commended by his general. During the movements in the autumn of 1862 he was actively engaged under Gen. Stahel in all his reconnoissances and raids, and when the Army of the Potomac moved down into Virginia, in November, 1862, he made that attack upon Fredericksburg at the head of Gen. Sigel's bodyguard, which has become famous in the history of the war. For this gallant act Gen. Burnside detailed him as special aid upon his staff. At the crossing of the Rappahannock, at the unfortunate battle of Fredericksburg, he was one of the first to land in that city. When the army went into winter quarters he rejoined Gen. Sigel, and when that general was relieved of command, Gen. Hooker applied to have Capt. Dahlgren transferred to his staff, which was done. He again distinguished himself at the battle of Chancellorsville, was with General Pleasanton in all the cavalry fights in the Bull Run Mountains and Aldie, joined Gen. Stahel's expedition to Warrenton as a volunteer, and led the most important reconnoissances then made. When Gen. Meade succeeded Gen. Hooker, he requested Capt. Dahlgren to remain on his staff. Before the battles at Gettysburg he obtained from Gen. Pleasanton a

hundred picked men, with a roving commission, and among other distinguished services rendered the Union cause, scoured the country in search of a bearer of despatches, whom he knew to be on his way from Jefferson Davis to Gen. Lee, captured him and his escort, secured the despatches, and, by the most skilful manoeuvring, succeeded in reaching Gen. Meade's tent after the first day's battle, and laid these important papers before him. Not waiting for thanks, he returned to his men, and harassed the enemy at every point, destroying their wagon trains, and attacking their rear-guard. On their retreat he led the famous charge into Hagerstown, when of five officers in the charge two were killed, he was wounded, and one of the remaining two was saved by the ball striking his scabbard. He was brought to Washington, and his leg amputated, and, owing to the severe inflammation which had set in, five operations were required before the wound would heal, and his life was despaired of. For his gallantry in this campaign he was made colonel, and as soon as he was able to move he was anxious to return to active service. In concert with Gen. Kilpatrick he planned the raid toward Richmond, fired with the hope of being able to release the Union prisoners then suffering so terribly at Libby Prison and Belle Isle. Accepting with delight the most dangerous part of the duty, he was led into the midst of the enemy by his treacherous guide, and brutally murdered when endeavoring to fight his way out. His body was stripped and treated with indignity, and the rebels published, with abundant comments, papers which they asserted were found upon his person, giving instructions to his men to burn Richmond, and even photographed these papers, and sent copies to England. His friends asserted that they were base forgeries.

DALLAS, GEORGE MIFFLIN, an American statesman, Ex-Vice President of the United States, and more recently U. S. minister to the Court of St. James, born in Philadelphia July 10, 1792, died in the same city December 31, 1864. He was the second son of Alexander James Dallas, a distinguished jurist and Secretary of the Treasury from 1814 to 1817. He received his collegiate education at Princeton, graduating in the year 1810, and then studied law in his father's office, being admitted to the bar of Philadelphia in 1813. The same year he received the appointment of private secretary to Mr. Gallatin, and accompanied that gentleman on his mission to Russia to negotiate a treaty of peace with England through the mediation of the Emperor Alexander. On his return to this country in the following year, he assisted his father, for some months, in his duties as Secretary of the Treasury, and then commenced the

practice of law in this city, and was solicitor of the United States Bank. In 1817 he was appointed Deputy Attorney-General for Philadelphia County. Taking an active part in politics, Mr. Dallas was, in 1829, elected Mayor, and, on the elevation of General Jackson to the Presidency, in 1829, he was appointed United States Attorney for that district. He retained this position till 1831, when he was elected to the United States Senate, and took a prominent part in the debates of that body until the expiration of his term, in 1838, when he declined a reelection, and returned to the practice of the law. In 1837 President Van Buren appointed him Minister to Russia, which position he retained till October, 1839, when he was recalled, at his own request, and again returned to legal practice. In May, 1844, the Democratic Convention at Baltimore nominated Mr. Dallas for Vice-President of the United States, in connection with James K. Polk for President. The Democratic candidates were elected by an electoral vote of 170 out of 275. The questions of the time were the tariff and the annexation of Texas. Mr. Polk's election caused the admission of Texas to the Union just before the close of Mr. Tyler's term of office, and the subject of the tariff was left for the new Administration. A bill which levied duties on imports for the purpose of revenue only, and abandoning the protective policy, was passed by the House of Representatives in 1846, but when it reached the Senate that body was so evenly balanced upon the question that the decision was left to Mr. Dallas, who gave his casting vote for the new bill. In giving his vote Mr. Dallas stated that though the bill was defective, he believed that "ample proof had been furnished that a majority of the people of the States desired a change to a great extent in principle, if not fundamentally." His Vice-Presidential term expired in 1849, when he was succeeded by Mr. Fillmore. In 1856 Mr. Dallas succeeded Mr. Buchanan as Minister to Great Britain, and continued in that post until the appointment of Mr. Adams by President Lincoln. At the very beginning of his diplomatic service in England, he was called to settle two questions which were in dispute between Great Britain and the United States, and which were believed by many of our diplomatists to threaten war. These were the Central American question then very much embarrassed by impolitic measures on both sides, and the request made by the United States to the British Government that Sir John Crampton, the British minister to the U. S., should be recalled. Both these delicate questions were managed by Mr. Dallas in a conciliatory spirit, but without any sacrifice of our national dignity, and both were settled amicably. At the close of his diplomatic career Mr. Dallas returned once more to private life; and though past the age of active service, he manifested publicly on all suitable occasions his abhorrence of the Rebellion and its abettors. In all his public career, Mr. Dallas exhibited

rare ability both as a statesman and diplomatist; in his profession he was highly successful, and exerted a wide influence; in private life he was ever the refined and cultivated gentleman of amiable manners, unspotted, reputation and exemplary character.

DAYTON, WILLIAM LEWIS, an American statesman and diplomatist, born at Baskingridge, New Jersey, February 17, 1807, died in Paris, France, December 1, 1864. His father, Joel Dayton, was a farmer, but a man of high intelligence and sound judgment. The son was educated at the College of New Jersey, graduating in 1825. Soon after his graduation he commenced the study of law, and was admitted to the bar in 1830. In 1837 he was elected a member of the council or senate of New Jersey, and made chairman of the judiciary committee. In February, 1838, he was chosen one of the associate justices of the supreme court of New Jersey, which position he resigned in November, 1841. In 1842 he was appointed by the governor to fill the vacancy in the United States Senate caused by the death of Hon. Samuel L. Southard, United States Senator from New Jersey. This appointment was subsequently confirmed by the Legislature, and he was elected for the succeeding full term from 1845 to 1851. His political position in the Senate was that of a free-soil Whig, advocating freedom in the Territories, and the right of Congress to legislate on the subject of slavery in the Territories and the District of Columbia, the admission of California as a Free State, and the abolition of slavery in the District of Columbia. He also voted against the fugitive slave bill. He was a warm friend and trusted counsellor of President Taylor. In 1851 Commodore Stockton was chosen United States Senator by the Democrats, who had then a majority in the New Jersey Legislature, and Mr. Dayton returned to the practice of his profession at Trenton. In 1856 he was nominated by the National Republican Convention for the Vice-Presidency on the ticket with John C. Fremont. In March, 1857, he was appointed Attorney-General of the State of New Jersey, and held that office until 1861, when he was nominated by Mr. Lincoln ambassador and minister to France, which position he held until his decease. Mr. Dayton was a man of high personal integrity, modest and conciliatory in his deportment, of polished and winning manners, clear and accurate in his perceptions, of sound judgment, earnest in his convictions, and eloquent in debate. He had won the entire confidence of the French emperor and his court; and though ever firm and decided in his maintenance of the rights of the country he represented, and prompt in foiling all schemes for its injury, his whole diplomatic conduct was so courteous and manly, that one of the first and most commendatory notices of him published in the Parisian papers after his death was from the pen of John Slidell, the Confed-

erate commissioner to Paris, the man whom Mr. Dayton had constantly and powerfully opposed for more than three years. His death occurred at the Hotel de Louvre, from apoplexy.

DELAWARE. The vote of the State at the Presidential election in November was, Lincoln 8,155; McClellan 8,767. Majority for the McClellan electors, 612. The vote for member of Congress was Smithers, Republican; 8,253; Nicholson, Democrat, 8,762; majority for Nicholson, 509. The Legislature of the State was divided as follows:

	Senate.	House.
Republican.....	8	7
Democrats	6	14
	9	21

There were two sessions of the Legislature during 1864. One in January and a special one in August. The seat of Mr. Bayard as a Senator in Congress which was vacant by his resignation, *see* CONGRESS, UNITED STATES, was filled by the election of Geo. R. Riddle. The Legislature adopted a resolution complimentary to Mr. Bayard for the course he had pursued during his Senatorial career, and especially for his speech in the Senate, setting forth the reasons which induced him to resign his seat.

The Governor urged the Legislature, in his message, to adopt measures for the emancipation of slaves held in the State. As arguments he stated, that Delaware is connected with the free States by geographical position and commercial necessity; that her products find their markets in the North, and that from thence come the immigrants who give increased value to real estate; that the result of constant intercourse with the North is gradually to assimilate the institutions of the State to those of the free States as it had already identified their interests; that slavery in Delaware, being merely nominal, was worthless as an element of labor; that emancipation in Maryland had surrounded Delaware with free soil, inviting the escape of slaves on all sides, as there was now no law requiring their rendition.

Some efforts were made to enlist negroes in the State under orders of the President of the United States and the Governor, but the Legislature having refused to pay such recruits a bounty, the number of them was quite small. A commission was also appointed to estimate the value of such as were slaves. Upon a claim being made and title proved, those who were considered or known to be loyal, received full compensation.

An association which had been formed in the previous year to promote immigration in the State met with considerable success. Several thrifty colonies were formed, and the number of settlers from the North increased. The cheapness of the lands and the profits from its cultivation were regarded as inducements. Cultivated lands were sold from fifteen to thirty dollars per acre within one to three

miles of a railroad depot. The most profitable crop is the peach, yielding annually a hundred dollars per acre for many years. For the institutions of the State see previous volumes of this work.

DEMBINSKI, HENRYK, a Polish General, born in the palatinate of Cracow, Jan. 16, 1791, died in Paris, June 13, 1864. Imbued by his parents with strong antipathies for Russia, he left the Vienna academy of engineers in 1809 to enrol himself as a private soldier in the national army of the newly-created Duchy of Warsaw. Entering the French service in 1812, as a lieutenant, he was made a captain by Napoleon on the battle field of Smolensk, distinguished himself at the battle of Leipsic, and after the overthrow of the French Empire returned to his native country and engaged in agricultural pursuits. He was one of the first to take up arms in the Polish revolution of 1830, and in the spring of 1831, as commander of a cavalry brigade, fought with distinguished bravery at Dembe and Liw, at the obstinately contested battle of Kufew, and at the passage of the river Narew. He subsequently took part in the ill-fated expedition under Gielgud and Ohlapowski to Lithuania, and, by a series of skilful manoeuvres, succeeded in bringing his command in safety to Warsaw, where, for a short time, he held the position of Governor of the city and general-in-chief of the Polish forces. The revolution was by this time, however, too far quelled to enable him to oppose effectual resistance to the Russians, and in September he escaped, with other leaders, into Prussia, whence he went to Paris. In 1832 appeared his *Mémoires sur la Campagne de Lithuanie*, and in the succeeding year he accepted an offer to assist in organizing the Egyptian army, which Mehemet Ali was preparing to send against the Porte. Hatred to Russia, which upheld the Porte, mainly impelled him to this step. When all hope of bearing arms against his hereditary enemies had been dispelled he returned in 1835 to France, where he lived in retirement until the stirring events of 1848 called forth the latent revolutionary spirit of Europe. After participating in the so-called Slavic Congress of Prague, he accepted a command in the Hungarian national army. On February 5th, 1849, he was appointed by Kossuth Commander-in-Chief of the revolutionary forces, but having lost the great battle of Kopolna (Feb. 26, 27) and been forced to retreat across the Theiss to Fured, in consequence of the stubborn disobedience and intrigues of Görgey, who was jealous of serving under a foreigner, he was compelled, early in March, to resign. A few weeks later he received command of a corps in the north of Hungary, but being unable to agree with the ministry regarding the plans for the campaign, he was superseded by Wysocki. In July, however, Kossuth, alarmed by the continued disobedience of Görgey, was induced to restore

to Dembinski the command of the main Hungarian force. The armies of Russia and Austria were now closing in upon the Hungarians, and the orders for a concentration of the latter were disregarded by Görgey. On August 5th Dembinski was defeated at Szöreg and forced to give up the lines of the Theiss and Maros; but distrusting Görgey too much to attempt a junction with him at Arad, he retreated to Temesvar, and gathering up the remnants of his army risked the battle at that place of August 9th, which sealed the fate of the revolution. Avoiding the surrender at Világos, four days later, Dembinski escaped, with Kossuth and other leaders, into Turkey, whence in 1850 he returned to France. He passed the remainder of his life in comparative obscurity, occupied, it was said, in preparing his memoirs of the Hungarian campaign.

DENMARK, a kingdom in Europe. King Christian IX., born April 8th, 1818, appointed to the succession of the crown of Denmark by the protocol of London, signed on May 8th, 1852, by the representatives of Great Britain, France, Russia, Prussia, Austria, Sweden, and Denmark, succeeded to the throne on the death of King Frederick VII., November 15th, 1868.

The duchies of Schleswig, Holstein, and Lauenburg, were separated from the crown of Denmark, with which the two former had been connected for several centuries, in consequence of the Schleswig-Holstein war and by virtue of the peace of Vienna, August 1st. Henceforth the territory of the kingdom consists of the following provinces and colonies:

	Geographical square miles.	Inhabitants Feb. 1, 1860.
1. KINGDOM OF DENMARK.		
Seeland	134.00	574,511
Bornholm	10.50	23,304
Funen and Langeland	60.50	
Lolland-Falster	30.50	205,826
Jutland	460.50	86,797
	694.00	708,818
2. COLONIES.		
Færöer—17 inhabited islands	24.35	8,923
Iceland	1,967.36	66,967
Greenland	186.36	9,890
W. I. { St. Croix	8.05	88,180
{ St. Thomas	1.01	
{ St. John	1.00	
	2,082.06	128,919

By the peace concluded between Denmark, Prussia, and Austria it was provided that some districts belonging to the province of Jutland and situated within Schleswig, with the exception of the district of Ripen, should be united with Schleswig, and an equivalent portion of the frontier of Schleswig, inclusive of the island of Arroe, should be annexed to Jutland. The territory to be united with Schleswig is estimated at from 6 to 7 geographical square miles. The island of Arroe, $1\frac{1}{2}$ square miles, leaving about 5 square miles of Schleswig to be annexed to Jutland. The aggregate of the ter-

ritory and population of Denmark will be but slightly affected by this change.

The population of Denmark proper was, on February 1st, 1855, 1,499,850 souls. The increase from 1855 to 1860 was, consequently, 100,701, or 6.71 per cent., and the annual average increase 1.842 per cent. With a proportionate increase from 1855 to 1860 the kingdom of Denmark, without the colonies, would have counted, on 1st of February, 1864, about 1,681,000 souls.

As regards the religious denominations of the inhabitants, there were, in 1860, in Denmark proper and Schleswig-Holstein and Lauenburg, in a total population of 2,605,024, only 21,822 individuals, forming less than 1 per cent. of the total population, who did not belong to the National Evangelical Lutheran Church. Of this number 8,177 were Israelites, 8,187 Catholics, 3,038 Reformed, 2,667 Mormons, 2,642 Baptists, 420 Moravians, 312 Anglicans or Episcopalians, 284 Mennonites, 202 members Apostolical Free Church, 162 members the Free Evangelical Church; the rest were divided in small numbers among different sects.

The largest cities, in 1860, were Copenhagen, 155,148 souls (among whom were 2,858 Jews, 749 Catholics, 549 Reformed); Odense, 14,255 souls; Aarhus, 11,009 souls; Aalborg, 10,069 souls.

The budget of the Danish monarchy—inclusive of the duchies—for the financial year, April 1st, 1862, to March 31st, 1863, was as follows, in rix dollars:

	Income.	Expenditures.
	Rix dollars.	Rix dollars.
For the entire monarchy.....	15,123,749	15,123,748
For the Kingdom and the duchy of Schleswig.....	58,256	58,256
For Denmark alone.....	11,294,879	7,593,114
For Schleswig.....	1,561,979	1,388,068
For Holstein.....	1,867,119	1,662,790
Total.....	29,870,484	26,720,968

The public debt, on March 31st, 1863, was as follows:

	Rix dollars.
Common debt of the entire monarchy.....	95,734,337
Particular debt of Denmark Proper.....	8,973,668
Particular debt of Holstein.....	240,000

In December, 1863, the Government contracted, at London, a loan of £1,500,000, and in June, 1864, it presented to the Landsting a bill relative to a new loan of 20,000,000 rix dollars, which subsequently, however, was fixed at only 8,000,000. The common debt of the monarchy, with the exception of the English loan of December, 1863, and the expenses of the war, is, according to the treaty of Vienna of August 1st, 1864, to be divided between Denmark proper and the ceded duchies, in proportion to their population.

Before the beginning of the war the army of Denmark, inclusive of the duchies, consisted of 22,652 men, with 96 pieces of artillery, on the peace footing. During the war this number was raised to about 60,000. The fleet, at

the end of 1863, consisted of 29 steamships, 9 sailing vessels, and 50 gunboats; total, 88 vessels, with 819 guns.

The movement of commerce, during 1862, was as follows:

	Importations.	Exportations.
	Rix dollars.	Rix dollars.
Kingdom of Denmark.....	88,968,879	17,722,484
Schleswig	9,804,794	4,571,681
Holstein.....	17,198,564	16,158,904

On December 23d, 1863, the Federal troops of Germany marched into Holstein, in compliance with a resolution of the Federal Diet of Frankfort. On February 1st, 1864, the troops of Prussia and Austria crossed the Eider into Schleswig, when the war between Denmark and the allied troops began, which continued, with a temporary suspension, during the session of the London conference, until August 1st. On that day the preliminaries of peace were agreed upon at Vienna, in consequence of which the duchies of Schleswig, Holstein, and Lauenburg were ceded by Denmark to Austria and Prussia. For the history of the war, and the conclusion of peace, see SCHLESWIG-HOLSTEIN WAR.

In the latter part of the year the Rigsdag was engaged in revising the Danish constitution. In its essential points the new constitution is the same as the fundamental law of the 5th of June, 1849. It guarantees the same liberty to the citizen, maintains the principle of universal suffrage for the elections of the Folkething, and as regards the Landstthing, differs only in the manner of voting, the estimates, and in the establishment of an interval of two years between the ordinary meetings of the Rigsdag.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. Several events tending to disturb the friendly relations of the United States with other countries occurred during 1864. Raiding parties were organized in Canada by persons claiming to be in the service of the Confederate States, for the purpose of liberating the prisoners of war confined on Johnson's Island, and depredating on the property of citizens of the United States. One of these parties, organized by one Bennet G. Burley, consisting of some twenty men, seized the steamer *Philo Parsons*, running between the city of Detroit and Sandusky, after she had left Kelly's Island in the State of Ohio. They then captured the *Island Queen* at Middle Bass Island, Ohio, where they put ashore all the passengers. While here they forced Walter O. Ashley, the clerk of the *Philo Parsons*, at the peril of his life, to deliver over his money. Burley was arrested, charged with robbery, and claimed under the Extradition treaty; and surrendered after a hearing before the Recorder of the city of Toronto.

On the 19th of October a party of men from Canada, twenty to thirty in number, well armed, entered the village of St. Albans, in

Vermont, robbed the bank in the place of fifty thousand dollars, stole horses enough to mount all the party, fired on a crowd of unarmed citizens, wounding three men, one mortally, and setting fire to one of the hotels. The whole transaction occupied only three-quarters of an hour, and the band immediately started for Canada, where thirteen of the marauders were arrested and confined at St. John's. As soon as the outrage was reported to the Canadian authorities they did every thing in their power to arrest the perpetrators; and Mr. Seward, on the 21st of October, expressed to Mr. Burnlew, of the British Legation at Washington, his "sincere satisfaction" with their proceedings. Mr. Seward regarded the outrage as a deliberate attempt to embroil the governments of England and the United States, and involve them in a border war. But he rejoiced that the officers and agents on both sides of the frontier had acted together in good faith, and with due respect on each side for the lawful rights and authority of the other. This, he adds, "is in entire conformity with the wishes of the United States." It should be added, that a great proportion of the stolen money was found on the persons of the raiders captured, and was taken possession of by the Canadian police. Lord Lyons, when the transaction occurred, was at New York, but immediately returned to Washington. The legal proceedings in the case of the prisoners were not very rapidly despatched, and early in November Mr. Seward speaks rather angrily of the requisitions for the offenders whose crimes were committed on Lake Erie, and for the burglars and murderers who invaded Vermont remaining unanswered. In fact, the latter were discharged by Judge Coursol on a supposed technical defect in the instrument under which they were tried, released from custody, and the money restored to them. They were thus discharged on December 14th, and again apprehended. The moment the intelligence of their release reached New York, Gen. Dix issued the following order, and the public feeling on both sides the St. Lawrence became unfortunately irritated:

HEADQUARTERS DEPARTMENT OF THE EAST, }
NEW YORK CITY, Dec. 14, 1864. }

General Orders No. 97.

Information having been received at these Headquarters that the rebel marauders who were guilty of murder and robbery at St. Albans, have been discharged from arrest, and that other enterprises are actually in preparation in Canada, the Commanding General deems it due to the people of the frontier towns to adopt the most prompt and efficient measures for the security of their lives and property.

All military commanders on the frontiers are, therefore, instructed, in case further acts of depredation and murder are attempted, whether by marauders or persons acting under commissions from the rebel authorities at Richmond, to shoot down the perpetrators if possible while in the commission of their crimes; or if it be necessary with a view to their capture to cross the boundary between the United States and Canada, said commanders are hereby directed to pursue them wherever they may take refuge, and if captured they are, under no circumstances, to be

surrendered, but are to be sent to these headquarters for trial and punishment by martial law.

The Major-General commanding the Department will not hesitate to exercise to the fullest extent the authority he possesses, under the rules of law, recognized by all civilized States, in regard to persons organizing hostile expeditions within neutral territory, and fleeing to it for an asylum after committing acts of depredation within our own, such an exercise of authority having become indispensable to protect our cities and towns from incendiarism, and our people from robbery and murder.

It is earnestly hoped that the inhabitants of our frontier districts will abstain from all acts of retaliation on account of the outrages committed by rebel marauders, and that the proper measures of redress will be left to the action of the public authorities.

By command of Maj.-Gen. DIX.

D. T. VAN BUREN, Col. and A. A. G.

This order was modified by the President, as appears by the following:

HEADQUARTERS DEPARTMENT OF THE EAST, }
NEW YORK CITY, Dec. 17, 1864. }

General Orders No. 100.

The President of the United States having disapproved of that portion of Department General Order No. 97, current series, which instructs all military commanders on the frontier, in certain cases therein specified, to cross the boundary line between the United States and Canada, and directs pursuit into neutral territory, the said instruction is hereby revoked. In case, therefore, of any future marauding expedition into our territory from Canada, military commanders on the frontier will report to these headquarters for orders before crossing the boundary line in pursuit of the guilty parties.

By command of Maj.-Gen. DIX.

D. T. VAN BUREN, Col. and A. A. G.

On the same day the following order of the President was issued, requiring all persons entering the United States from the British provinces to produce a passport:

DEPARTMENT OF STATE, WASHINGTON, Dec. 17, 1864.

The President directs that, except immigrant passengers directly entering an American port by sea, henceforth no traveller shall be allowed to enter the United States from a foreign country without a passport. If a citizen, the passport must be from this Department, or from some United States minister or consul abroad; and if an alien, from the competent authority of his own country; the passport to be countersigned by a diplomatic agent of the United States. This regulation is intended to apply especially to persons proposing to come to the United States from the neighboring British provinces. Its observance will be strictly enforced by all officers, civil, military, and naval, in the service of the United States, and the State and municipal authorities are requested to aid in its execution. It is expected, however, that no immigrant passenger, coming in manner aforesaid, will be obstructed, or any other persons who may set out on their way hither before intelligence of this regulation could reasonably be expected to reach the country from which they may have started.

WILLIAM H. SEWARD.

This order was a cause of much embarrassment to the passengers travelling from the West over the Grand Trunk Railway to New York, and very seriously diminished the number of them. It also diminished the number of those passing from Canada to the United States by all the public routes. It was suspended as to the Canadas in March ensuing.

The instructions of Her Majesty's government to Lord Monck, the governor-general of

Canada, directed him "to be guided by the decision of the proper legal authorities in the province, whether the persons in custody ought or ought not to be delivered up under the Treaty of Extradition. If that decision shall have been that they ought, Her Majesty's government would entirely approve Lord Monck's acting on this decision. But if, on the contrary, the decision shall have been that they ought not, Her Majesty's government consider that the opinion of Lord Monck's legal advisers should be taken, whether, upon the evidence, and other information in the possession of the Canadian government, these persons may not properly be put upon their trial on a charge of misprision and violation of the Royal prerogative, by levying war from Her Majesty's dominions against a friendly power."

The fugitives were recaptured, some on the British side of the St. Lawrence, and some in the State of New Hampshire. Those in the custody of the Canadian authorities have been again put on their trial. Evidence was presented showing that the leader, Young, was a duly commissioned officer of the Confederate army, his commission bearing the signature of Jefferson Davis.

On May 11th, early in the morning, Don José Augustin Arguelles an officer of the Spanish army, who with his wife was sojourning in the city of New York, was seized by authority of the President, and secretly conveyed to a steamer in that port bound for Havana, Cuba, and which immediately sailed for the place of its destination. Some days elapsed before the fact was known even to his wife, who at that time learned that he had been arrested and sent to Havana. Great interest was taken in the case, and an official statement was published, setting forth that Col. Arguelles was formerly the Lieutenant-Governor of the district of Colon, in the Island of Cuba, and that he effected the capture of a large cargo of African negroes illegally landed within that district on the 20th of November last. The Captain General, it is said, was highly pleased with his zeal, and paid him fifteen thousand dollars for his share of the prize-money usually allowed to captors of such expeditions. Arguelles subsequently obtained a leave of absence of twenty days, upon his representation that the object of his journey to New York was to purchase the Spanish journal published in that city called "La Cronica."

It is represented by the Captain General that after the departure of Arguelles from Cuba it was discovered that he and other officers of the district of Colon had retained and sold into slavery one hundred and forty-one negroes captured by them. Some of these negroes, it is said, were sold at seven hundred dollars, and others at seven hundred and fifty dollars each. It is further represented that the Superior Court of the island, having exclusive jurisdiction over such causes, had taken cognizance of this case, and required the presentation of Don

José Augustin Arguelles before it to insure the prompt liberation of those one hundred and forty-one victims. Without Arguelles's presence it would be very difficult, or at all events it would require a long time, to attain that humane object.

Mr. Thos. Savage, the U. S. Vice-Consul General at Havana, when approached on the subject of the reclamation of Col. Arguelles, stated to the Captain General of Cuba that, "in the absence of an extradition treaty between the two Governments, or of any law, public or municipal, authorizing the rendition, our Government could not grant the request," but promised to lay the matter, in a confidential way, before the Department of State.

In like manner, Señor Don Gabriel G. Tassara, the Spanish Minister at Washington, in communicating the facts of the case to our Government, took care to state that he was "well aware that no extradition treaty exists between the United States and Spain, in virtue of which the surrender of Arguelles to the authorities of Cuba might be obtained; yet, considering the gross and scandalous outrage which has been committed, as well as the interests of humanity at stake in the prompt resolution of this matter," it was added, "he has not hesitated in submitting the case in this confidential way to the consideration of the United States Government, in order to ascertain whether an incident so exceptional could not be met with exceptional measures."

Thus addressed on the subject, the President ordered the "exceptional measure" of arresting and surrendering Col. Arguelles on his sole responsibility, in the absence, as Mr. Savage phrases it, "of any extradition treaty, or of any law, public or municipal, authorizing the rendition" of the alleged fugitive from justice.

On the other hand it was asserted that the arrest was procured by the Cuban authorities for the purpose of suppressing their complicity in the very crime of which Arguelles was charged. That Dulce, the Captain General of Cuba, while declaring his intention to stop the importation of negroes, was really assisting those engaged in the traffic—that one Zulueta, the most intimate friend of Dulce, and by him made Alcalde, and who had a line of iron steamers running regularly between Cuba and Congo, was expecting the arrival of two expeditions from Africa, applied to Dulce for assistance in landing the cargoes.

Every negro has or must have in his possession a ticket, or kind of passport, mentioning where he comes from, who his ancestors were, where he has been living of late, &c., &c., so as not to be taken for a *bozales* or newly imported negro.

These tickets, it is said, are not given up to the authorities on the decease of a negro, but kept and used with the newly landed slaves. The supply not being sufficient Zulueta applies to Dulce, who in turn applies to Navasquez, the Civil Governor of Cuba, and who was

authorized to issue such tickets; he refuses to sign them, and is forced to leave Cuba secretly for Spain. Arguelles becomes acquainted with the facts of the case, and comes to New York, where he, in letters published, distinctly charged the Captain General with advancing a notorious slave-dealer to high municipal office in Havana, for the purpose of more comfortably sharing with him the gains of his traffic. This is the statement of those who claimed that the arrest was sought for by the Cuban authorities for the purpose of disposing of material testimony—and subsequent events seemed to give a color of truth to the statement. It is said by a correspondent from Havana, that "the whole expedition are to be returned to Zulueta as slaves, it being asserted that it was an illegal capture (*mala presa*). Thirty-six men from the neighborhood of Cienfuegos have come on and sworn that Zulueta had nothing to do with the expedition, &c.; that he bought the negroes on the beach, &c.; and an old law or clause in some treaty is raked up to show that when the negroes are so many miles inland from the shore they are not liable to capture. These negroes will be given up to the worst taskmaster, the most brutal of slaveholders, and Arguelles will, at least, be condemned to the accursed chain-gang, which is worse than death."

The action of the Government at Washington in giving up Arguelles excited much comment, independently of the facts connected with the case itself, as being a violation of the right of asylum and without warrant of law, as no treaty of extradition had been entered into between the United States and Spain. Mr. Seward, in reporting the transaction to Congress, is frank to avow that the "exceptional measure" was taken in obedience only to general considerations of international comity. To this effect he writes:

There being no treaty of extradition between the United States and Spain, nor any act of Congress directing how fugitives from justice in Spanish dominions shall be delivered up, the extradition in the Arguelles case is understood by the State Department to have been made in virtue of the law of nations and the Constitution of the United States. Although there is a conflict of authorities concerning the expediency of exercising comity toward a foreign Government by surrendering, at its request, one of its own subjects charged with the commission of crime within its territory, and although it may be conceded that there is no national obligation to make such a surrender upon a demand therefor, unless it is acknowledged by treaty or by statute law, yet a nation is never bound to furnish asylums to dangerous criminals who are offenders against the human race; and it is believed that if, in any case, the comity could with propriety be practised, the one which is understood to have called forth the resolution of inquiry of the Senate furnished a just occasion for its exercise.

The position here assumed by the Secretary of State that the extradition had been made by virtue of the law of nations and the Constitution of the United States was earnestly resisted. It led to the incorporation of resolu-

tions into the platforms of the Radical Presidential Convention at Cleveland and the Democratic Convention at Chicago. An able review of the history and law of the case is summed up in the Washington "National Intelligencer" as follows:

From the history we have given it appears that while the obligation of nations not to grant asylum to criminals, but to deliver them up for trial, receives the general assent of civilized nations, it is one subject to many limitations and modifications. It is a duty of "imperfect obligation," so called, like those interwoven with the private life of individuals, and the neglect of which destroys the reputation of the man without rendering him amenable for violating the law. It is a duty resting upon the conscience of the nation, to be discharged under such circumstances, in such cases, and in such manner as in the judgment of the nation, expressed through the constituted authorities, may seem best adapted to subserve the cause of virtue and the interests of humanity.

In some political systems the monarch is the authority who at once determines the question and executes the judgment; but in those countries where the principles of constitutional government obtain—in other words, where the rights of the person are recognized—the maxims of law limit the otherwise absolute power of the Executive authority, and in performing their obligations to the human race, the Legislature, in such countries, is careful not to overlook their obligations to the individual. Thus in Great Britain, while the sovereign may make treaties he cannot fulfil a treaty binding him to surrender fugitive criminals without the express sanction of that part of the Government which is charged with the guardianship of the life and liberty of the individual. He may make war or conclude peace without the consent of Parliament; but without its consent he cannot deprive the humblest individual of liberty, though that individual be charged with the deepest crimes.

In our own political system we find the same careful process for reaching the ends of justice. The treaty-making power determines what offences the nation will lend its aid to punish, and into what hands it is willing to deliver offenders for punishment. The tenth article of the Treaty of Washington, concluded between the United States and Great Britain on this subject, shows by the catalogue of crimes it embraces that we are willing to trust the enlightened criminal jurisprudence of England in a wider class of offences than we would remand to some other countries whose creeds are less conformed to the humane spirit of the age. When the treaty-making power has ascertained the extent of the obligation of surrender and assumed the corresponding duty, the legislative power comes forward to provide for the fulfilment of that duty, and in so doing Congress has thought proper to omit none of those safeguards which have been found essential to protect the accused against baseless charges, and which, necessary as they are in cases where the accused is to be tried in the jurisdiction where he is found, are doubly and trebly necessary where the charges are put forward, not for trial here, but as the means of obtaining possession of the accused and carrying him abroad.

It is not improbable that factitious accusations should be brought for the mere purpose of procuring the arrest and surrender of a fugitive. Hence it is that the careful provisions of the statute, regulating extradition in this country, commit to the judiciary—versed as that department already is in all the proceedings preparatory to a trial—the duty of arresting the fugitive and of ascertaining whether in fact a crime has been committed, and whether there is sufficient evidence to hold the accused for trial. When these questions have been settled by the judiciary, and not till then, does the nation con-

sent to deny the right of asylum to the fugitive who has sought its protection and deliver him into the hands of the alien prosecutor.

It is needless to add that in the case of Arguelles the Executive has assumed all the authority which by the Constitution is distributed among the treaty-making power, the law-making power, and the judiciary. Without treaty, without law, and without judicial action, the Executive has assumed to do what only all three combined could lawfully empower him to do.

And in making this statement as a proposition of law, we indulge in no personal crimination of the President's motives. As he makes no legal defence of his conduct, but bases that defence on his good intentions, we make all due allowance for such good intentions while bringing his proceedings to the bar of the law he has transcended. It is one of the inconveniences which attach to such errors of judgment, and which illustrate their practical dangers, that all punishments visited on criminals outside of the laws array a certain sympathy in favor of the culprit, however guilty he may be. Col. Arguelles may be the criminal he is represented to be by the Cuban authorities, but as these authorities are now seized of his person in a way not authorized by our laws, the penalty he may be called to pay for his alleged crime is one which concerns the honor of the nation in the eyes of the civilized world. It is to be hoped, for the sake of our own credit on the score of humanity, that the proceedings of Spanish jurisprudence in his case may be such as to show that only justice has been done him in the forum to which we have remitted him, even if something less than justice, as justice is understood in this country, has been done him by our authorities in the circumstances under which they have delivered him up for trial. The civilized world sits in judgment not only on the crimes of men, but on the processes by which these crimes are redressed, and when redress is inflicted against the received rules of justice, men never fail to resent the wrong done to the latter, whatever may be their abhorrence at the wickedness of the criminal. It was thus that all Europe thrilled with indignation and horror at the conduct of the king of Saxony when, in the early part of the 18th century, he delivered up the person of the unhappy Fatkul to the vengeance of his sovereign, Charles the XIIth of Sweden, who broke him on the wheel. Men refused to consider the provocations which that nobleman had offered to his king, or the offences he had committed against his country, in their resentment at the wrong done to the "right of asylum" in his person. And so, whatever may be the crimes of Col. Arguelles (about which we know nothing personally, as the President of the United States knows nothing legally), the civilized world, in its respect for the principles of public law and private right violated by his clandestine arrest and deportation, will not hesitate to deplore the process by which this Spanish subject has been brought to justice.

U. S. Marshal Robert Murray, who effected the arrest, was indicted by the Grand Jury of New York for kidnapping Col. Arguelles, and on May 20th was arraigned, pleaded not guilty, and gave bail in the sum of \$1,000 to appear for trial.

On the 15th of August the seizure of the privateer Georgia by the United States frigate Niagara attracted much comment in England, but the general impression of the English press was to the effect that the seizure was legal, and that the purchaser of an enemy's vessel of war when said vessel is blockaded in port without means of escape, must take the risk of subsequent seizure.

The Georgia is an iron vessel of about 600 tons register, with engines of 300 horsepower. She left Greenock in April, 1863, under the name of the Japan. Proceeding to the coast of France, the Georgia received her armament and stores from a British steamer, and then hoisting the rebel flag commenced her cruise against American commerce. On the 25th of April the Georgia captured and burned the ship Dictator, and between that date and the 10th of July she captured and bonded or destroyed the ships George Griswold, Amazonia, Good Hope, Constitution, City of Bath, and Prince of Wales. On the 30th of October, 1863, she arrived at Ocherbourg, France. On the 9th of April, 1864, she was at Bordeaux, and was next heard from in England, where she is said to have been sold for £15,000, her crew paid off, and her stores sold at auction. It is claimed that the Georgia was subsequently taken up by the Portuguese Government for the conveyance of mails from Liverpool and Lisbon to the Azores and back, and it appears she was in transit to those ports when her capture was made with her cargo. She was insured at Lloyd's on a policy of not free from capture.

The Dover correspondent of the London "Times," writing August 24th, gives the particulars of the seizure:

The Federal steam frigate Niagara brought up in Dover Roads this morning, having on board Capt. Withycombe and thirty-three men belonging to the screw steamer Georgia, which is the property of a British merchant resident in Liverpool, and was captured by the Niagara while sailing under the British flag, on Monday, the 15th of August, about twenty miles off Lisbon.

The capture was made by the commodore in command of the Niagara on the ground that the Georgia was formerly a belligerent ship, and in the service of the Confederate States as the celebrated cruiser of the same name. It seems, however, that the Georgia was purchased some few months ago by Mr. E. Bates, a ship-owner of Liverpool, and some nice questions of an international character will therefore probably arise out of this proceeding on the part of the Niagara.

The Georgia, it appears, was under orders for Lisbon, having been chartered by the Portuguese Government for the purpose of conveying passengers between that place and the African coast or the West Indies. This was her first voyage under her new ownership, and her crew had all received a month's pay in advance.

Nothing unusual occurred till she arrived about twenty miles off Lisbon, when the Niagara was seen apparently waiting for her. Capt. Withycombe did not deviate from his course until brought to by a couple of shots fired across his bows. He was shortly afterward boarded by an armed boat's crew in command of an officer of the Niagara, who requested his attendance before the commodore. Upon getting on board the Niagara the commodore explained that it was his duty to seize the Georgia, but that he desired to cause Capt. Withycombe and his crew as little discomfort as possible. The ship's papers were then taken possession of and the crew detained as prisoners till the Niagara reached Dover, when they were landed and conveyed to the Dover Sailors' Home, where they were kindly received. Thence they will be forwarded to Liverpool.

The London "News" editorially quoted a

decision by Lord Stowell in a case exactly similar to that of the Georgia, as conclusive evidence that the seizure by the Niagara was perfectly legal. It said:

Some excitement seems to have been caused in Liverpool by the announcement that the notorious Confederate cruiser Georgia had been seized on the high seas, about twenty miles from Lisbon, by the Federal man-of-war Niagara. The history of the Georgia is well known.

The question is whether, according to the recognised doctrine of international law, the captain of the Niagara was justified in seizing the Georgia—a vessel which at the time of the seizure was sailing under British colors, but which only a few weeks before had been a vessel of war commissioned by the Confederate Government. It is said that the custom-house officers at Liverpool had warned the owners of the Georgia that they could not legally transfer the property in her. But whether the Confederate officers or agents did or did not receive any such warning is immaterial, for the law on the subject is clear beyond discussion. Fortunately the question has been decided in this country more than half a century ago by that eminent judge, Lord Stowell, in the case of the Minerva, which is reported in the sixth volume of Sir Christopher Robinson's Reports, and therefore any legal speculation on the subject would be superfluous.

It is impossible to draw any distinction between the case decided by Lord Stowell and that of the Georgia, and therefore the commander of the Niagara was clearly justified by the judgment of that eminent lawyer. It is true, as Lord Stowell points out, that if the vessel sold is a merchant vessel the sale is valid; and in this the law of England agrees with that of America, though it differs from that of France and other continental powers. The practice, says Dr. Twiss, of the French tribunals, is to refuse to recognize as neutral property any vessel of enemy-built, or which has even been enemy-owned, unless the sale of it to a neutral merchant has taken place before the commencement of hostilities. But the courts of England and America hold the opposite doctrine, although even they restrict the right of purchase by neutrals to merchant vessels; for, as the Queen's Advocate says: "The purchase of a ship of war belonging to enemies is held to be invalid." And the distinction between merchant ships and ships of war is founded on common sense. The thing objected to is not the purchase of belligerent property; but it is the purchase of an enemy's vessel of war lying imprisoned in a neutral port, whence she is unable to escape. A vessel under such circumstances is not an object fairly within the range of commercial speculation. If it were, consider the consequences. Within a few days the Georgia might be rearm'd—might again be transferred to some Confederate—might again hoist the Confederate colors and resume her career of devastation. And the same shift of escaping from a neutral port into which she had been driven might be practised as often as she found it either necessary or convenient.

The London "Post" also argued that, admitting the Georgia to have been a Confederate war vessel, the sale which took place at Liverpool was inoperative, and the British Government had no ground for interference. Those who deny the validity of the capture must make good their title in the prize court where the case will be adjudicated. The seizure occasioned no difficulty between the Governments of the two countries.

The Confederate war steamer Florida arrived at Bahia Bay, off San Salvador, Brazil, Oct. 5th, having captured and burned the bark Monda-

mon, from Rio, off Pernambuco, on the 28th of September. The United States steamer Wachusett, Capt. Napoleon Collins, had been lying several days in the port of Bahia, and the Florida at first anchored in the offing. The Brazilian admiral immediately sent the Florida a message, requesting her to come inside, which she did, anchoring in the midst of the Brazilian fleet, and close under the guns of the principal fort, which is located upon an island in the middle of the harbor. Certain parties in Bahia, which is a commercial city of considerable importance, with one of the best harbors in the world, being interested in American affairs, bestirred themselves to bring about an engagement between the Wachusett and the Florida, firmly confident that the result of such an encounter would be another Union victory as complete as that won last summer in the British Channel. All efforts on the part of outside parties to bring on a naval battle in open water between the two vessels proved unavailing. At about three o'clock in the morning of Friday, Oct. 7th, the cables were slipped, and the Wachusett bore down upon the rebel vessel under full head of steam. So little expectation was there of such a proceeding, that one-half the officers and crew of the Florida, seventy in number, and including Capt. Morris, were on shore, and the remainder, having just returned, were in no condition to repel an assault. The Florida's officer of the deck supposed the collision which he saw to be imminent to be merely accidental, and cried out, "You will run into us if you don't look out." The design of Capt. Collins was simply to strike the Florida amidships with full steam on, crush in her side, and send her at once to the bottom beyond the possibility of causing further trouble to any one. The Wachusett, however, did not strike her adversary fairly, but hit her in the stern, carrying away the mizen mast and main-yard. The Florida was not seriously injured by the collision, but the broken spar fell across the awning over her hatchway in such a manner as to prevent her crew from getting on deck from below. The recoil which followed the shock carried the Wachusett back several yards. In the confusion which ensued several pistol-shots were fired from both vessels, chiefly at random and entirely without effect. Two of the guns of the Wachusett were also discharged, by accident according to one report, and as another version has it, by order of one of the Union lieutenants. The shots did not strike the Florida.

Capt. Collins, of the Wachusett, immediately thundered out a demand to the rebel craft, "Surrender, or I will blow you out of the water!" The lieutenant in charge of the Florida may be excused for considerable amazement, but had still presence of mind to reply, "Under the circumstances I surrender." Without the delay of an instant, dozens of gallant tars boarded the prize, and made fast a hawser connecting her with their own vessel, and the Wachusett turned her course seaward, moving at the top

of her speed and towing the Florida in her wake.

The fleet of Brazilian vessels, which entirely surrounded the little space of water on which the brief battle had been fought, was so situated that the two American steamers were obliged to pass under the stern of one of the largest in order to penetrate their line. The Wachusett was challenged, but did not deign a word of reply; and the Florida, when hailed and commanded to halt a moment after, replied that a pause was impossible, as she was towed by the vessel in front. The Brazilians soon guessed the state of affairs, and in another moment or two the heavy guns of the fort, under the very muzzles of which the capture had been made, opened fire on the Wachusett, as she disappeared in the morning darkness. Three shots were fired after her, all passing harmlessly far above her pennant, and striking the water beyond.

The Brazilian naval commander in Bahia harbor acted with all the promptness which could have been expected, and in a few moments the dawn of day disclosed two vessels of the Brazilian fleet doing their utmost to pursue and overhaul the Wachusett and her prize. They were a heavy sloop of war and a small armed steamer, neither of them any match in point of speed for the handiwork of New England mechanics, and soon gave up the chase, as the Union and rebel steamers disappeared below the horizon.

The Florida was subsequently brought to Hampton Roads, where she sunk on the 28th of Nov. On the arrival of the Florida at Bahia on the 5th of Oct., Mr. Thomas F. Wilson, the American consul, addressed the President of the Province, protesting against the admission of the vessel to free practice, and against any assistance being conceded to her. To this protest the President replied, that all the assistance required by humanity would be furnished the Florida, which, as he contended, did not constitute assistance for warlike purposes, or conflict with the neutrality of his Government. After the seizure, the President of the Province, on the 7th, addressed Mr. Wilson, the consul, protesting against the act, and suspending official relations with him.

On the 11th of Nov. Mr. Seward addressed Mr. Webb, instructing him to inform the Minister of Foreign Affairs that the Government of the United States was not indisposed to examine the subject upon its merits carefully, and to consider whatever questions might arise out of it in a becoming and friendly spirit, if that spirit was adopted by His Imperial Majesty's Government. A correspondence ensued between Mr. Seward and Sen. Barboza, the Brazilian Representative at Washington. The latter gentleman addressed Mr. Seward Dec. 12th, giving his version of the seizure with the attendant circumstances. He cites the case of the capture of the English ship *Grange*, in Delaware Bay, in 1798, by the French frigate *l'Ambuscade*, in which

the American Government remonstrated against the act, and required from the Government of the French Republic not only the immediate delivery of the captured vessel, but also the liberation of all persons found on board, which "reclamation was promptly satisfied." The letter closes with the expression of belief, that the Government of the United States will give the explanations and reparation which, in conformity with international laws, are due to a power which maintains friendly and pacific relations with it.

Mr. Seward, Dec. 26th, answers the communication of Sen. Barboza, and from which answer the following extracts are taken:

DEPARTMENT OF STATE,
WASHINGTON, Dec. 26th, 1864.

SIR: I have the honor to acknowledge the receipt of your notes, which sets forth the sentiments of the Imperial Government of Brazil concerning the capture of the Florida by the United States war steamer Wachusett, in the port of Bahia.

Jealousy of foreign intervention in every form, and absolute non-intervention in the domestic affairs of foreign nations, are cardinal principles in the policy of the United States. You have, therefore, justly expected that the President would disavow and regret the proceedings at Bahia. He will suspend Capt. Collins, and direct him to appear before a court-martial. The consul at Bahia admits that he advised and incited the captain, and was active in the proceedings. He will therefore be dismissed. The flag of Brazil will receive from the United States navy the honor customary in the intercourse of friendly maritime powers. It is, however, not to be understood that this Government admits or gives credit to the charges of falsehood, treachery, and deception which you have brought against the captain and the consul. These charges are denied on the authority of the officers accused. You will also be pleased to understand that the answer, now given to your representation, rests exclusively upon the ground that the capture of the Florida was an unauthorized, unlawful, and indefensible exercise of the naval force of the United States, within a foreign country, in defiance of its established and duly recognized government.

This Government disallows your assumption that the insurgents of this country are a lawful, naval belligerent, and, on the contrary, it maintains that the ascription of that character by the Government of Brazil to insurgent citizens of the United States, who have hitherto been, and who still are, destitute of naval forces, ports, and courts, is an act of intervention in derogation of the law of nations, and unfriendly and wrongful, as it is manifestly injurious, to the United States.

So, also, this Government disallows your assumption that the Florida belonged to the aforementioned insurgents, and maintains, on the contrary, that that vessel, like the Alabama, was a pirate, belonging to no nation or lawful belligerent, and, therefore, that the harboring and supplying of these piratical ships and their crews in Brazilian ports were wrongs and injuries for which Brazil justly owes reparation to the United States, as ample as the reparation which she now receives from them. They hope and confidently expect this reciprocity in good time, to restore the harmony and friendship which are so essential to the welfare and safety of the two countries.

In the positions which I have just assumed, the Imperial Government will recognize an adherence to rights which have been constantly asserted, and an enduring sense of injuries which have been the subject of earnest remonstrance by the United States during the last three years. The Government of Brazil is again informed that these positions of this Government are no longer deemed open to argument.

It does not, however, belong to the captains of ships of war of the United States, or to the commanders of their armies, or to their consuls residing in foreign ports, acting without the authority of Congress, and without even executive direction, and choosing their own time, manner, and occasion, to assert the rights and redress the wrongs of the country. This power can be lawfully exercised only by the Government of the United States.

The disposition of the captured crew of the Florida is determined upon the principles which I have laid down. Although the crew are enemies of the United States, and, as they contend, enemies of the human race, yet the offenders were, nevertheless, unlawfully brought into the custody of this Government, and, therefore, they could not lawfully be subjected here to the punishment which they have deserved. Nor could they, being enemies, be allowed to enjoy the protection of the United States. They will, therefore, be set at liberty, to seek a refuge wheresoever they may find it, with the hazard of recapture when beyond the jurisdiction of this Government.

The Florida was brought into American waters, and was anchored under naval surveillance and protection at Hampton Roads. While awaiting the representation of the Brazilian Government, on the 26th of November, she sunk, owing to a leak which could not be seasonably stopped. The leak was at first represented to have been caused, or at least increased, by a collision with a war transport. Orders were immediately given to ascertain the manner and circumstances of the occurrence. It seemed to affect the army and the navy. A naval court of inquiry, and also a military court of inquiry, were charged with the investigation. The naval court has submitted its report, and a copy thereof is herewith communicated. The military court is yet engaged. So soon as its labors shall have ended, the result will be made known to your Government. In the mean time, it is assumed that the loss of the Florida was a consequence of some unforeseen accident, which cast no responsibility upon the United States.

I avail myself of this opportunity to renew to you, sir, the assurance of my high consideration.

WILLIAM H. SEWARD.

Senhor IGNACIO DE AVELLAR BARBOZA DA SILVA, &c.

DUNCAN, Rev. WILLIAM CECIL, D. D., an American Baptist clergyman, professor and author, born in New York City, Jan. 24, 1824, died in New Orleans, La., May 1, 1864. Mr. Duncan's father was a native of Glasgow, Scotland, but emigrated to this country in his youth, and during the childhood of his son, removed to Grenada, Miss., where young Duncan remained, attending the best schools of that vicinity, till he entered the Sophomore class of Columbia College, N. Y., in 1841. He graduated with honor in 1843. In 1844 he united with the Amity Street Baptist Church in New York, then as now under the pastoral care of Rev. William R. Williams, D. D. In the autumn of the same year he entered Hamilton Theological Seminary, Hamilton, N. Y., and having passed through the full course of theological study, he returned to the South in 1847, and established at New Orleans the "Southwestern Baptist Chronicle," a religious paper which he conducted with marked ability, and which attained a remarkable success. He was ordained in the spring of 1848, but though preaching almost constantly, did not enter the pastorate, but continued in charge of his paper. In 1851 his health, never robust, gave way completely, and abandoning his editorial and clerical labors he

sailed for Europe, and spent about nine months in Italy. Returning to New Orleans, convalescent, he was chosen to the Professorship of the Greek and Latin Languages in the University of Louisiana, a position for which he was admirably adapted from his high classical attainments and his fondness for teaching. Three years later he became pastor of the Coliseum Place Baptist Church in New Orleans, and continued in that relation for six years though twice compelled to spend some months in Texas for the improvement of his health. Amid his other duties, Dr. Duncan (he received the degree of D. D. from his Alma Mater in 1857) found time to write several books of decided merit and scholarly research; the principal of them were, "The Life of John the Baptist," based on a monograph of Von Rohden of Lubeck, (N. Y. 1858); "The Pulpit Gift Book," a collection of sermons preached at the Coliseum Place Church (N. Y. 1855); "The History of the Baptists for the First two Centuries of the

Christian Era," (N. Y. 1857), and "The Tears of Jesus" (N. Y. 1859). The last-named work is one of remarkable genius and eloquence. In the summer of 1861 his loyalty to the national government alienated the feelings of his people from him, and he was compelled to leave New Orleans and come to the North, his family being unable to accompany him. In the summer of 1862, after the occupation of the city by the Union forces, he returned, and engaged in secular duties endeavoring to the utmost of his ability to promote a return to the Union on the part of the citizens of Louisiana. Though already suffering from the fatal malady, consumption, which eventually destroyed his life, he was active both with pen and voice, by public orations, patriotic odes (he possessed fine poetic abilities), and newspaper essays in his efforts to lead his fellow-citizens to renew their fealty to the Federal Government. These earnest labors in which he persisted so long as his failing strength would permit, were not in vain.

E

ENFANTIN, BARTHELEMY PROSPER, a French social theorist, and the successor of St. Simon in the leadership of the St. Simonians, born in Paris, Feb. 8, 1796, died in that city of apoplexy, Sept. 1, 1864. He was the son of a banker, and became a student in the Polytechnic school in 1818. In March, 1814, he, with his fellow students, was dismissed for having fired on the allied troops at Montmartre. Being thus compelled to abandon the profession of arms, he became travelling clerk for a wine merchant at Romans, till 1821, when he entered a banking house in St. Petersburg, where he remained two years. In 1823 he returned to Paris, and obtained employment as cashier of a mercantile firm, at the same time joining the Carbonari, a secret revolutionary association extending over nearly the whole of Europe. In 1825 he made the acquaintance of Olinde Rodriguez, one of two brothers of Jewish extraction, who had become followers of St. Simon. Through Rodriguez, Enfantin was introduced to St. Simon, and soon became a convert to his doctrines, and an active promoter of them. The cardinal doctrine of St. Simon in relation to property was stated in his formula: "All social, political, and religious institutions should have henceforth as their direct end the amelioration of the moral, physical, and intellectual condition of the poorest and most numerous class," a sentiment, perhaps, better expressed in our own formula of "the greatest good of the greatest number." On the death of St. Simon, May 19, 1825, Rodriguez and Enfantin, who aspired to the leadership of the community of St. Simonians, commenced the publication of a journal advocating social and political reforms, called *Le Producteur*, and Enfantin soon began to

broaden in its new doctrines, both social and religious, which displeased many of those who at first supported it, and it was abandoned near the close of 1826. Enfantin continued, however, to make his views public by lectures and public meetings in the Rue Taranne. He soon gathered among his followers many of the young but gifted men of the time, among them Bazard and the brothers Rodriguez, who, indeed, had been followers of St. Simon before he had embraced his doctrines. Duveyrier, Buchez, Blanqui, Halevy, Artaud, Pereire (now the banker of the Credit Mobile), Laurent de L'Ardeche, Carnot, Augustus Comte, Michel Chevalier, Jean Regnaud, Pierre Leroux, Desmoulins, Seguin, &c., a list which embraces almost every man of mark of the present empire. Having enlisted these enthusiastic and gifted young men in his schemes, Enfantin soon began to put forth new and bolder propositions. At the period of the Revolution of July 1830, he issued a proclamation, demanding, among other things, the community of property, the formal abolition of the right of inheriting, and the liberation of women from their social, intellectual, and moral disabilities. He now gave up his cashiership, established central points of propagandism of his doctrines in the principal cities of France, and organized a system of preaching in Paris. He also secured the services of the "Globe" newspaper, of which Pierre Leroux, Guizot, Remusat, and others were the principal contributors, and Michel Chevalier the editor, and distributed a large number of copies gratuitously. The modest quarters in the Rue Taranne were abandoned for spacious halls in the Rue Taribout, on the Boulevard Italien, and the wealthy followers of Enfantin

contributed money in large sums. Enfantin was now elected "head" or "Father" of the Association, Bazard, head of Dogma, and Rodriguez, head of Worship. Enfantin's commanding presence and great conversational powers exercised a wonderful fascination over the thousands who attended these conferences. But with his elevation to the headship he began to propound new dogmas and formulas which did not meet the approval of all his associates. He proposed to substitute for the formula of St. Simon already quoted, this: "To each one according to his capacity, to each capacity according to its works." Against this new doctrine Bazard protested with great earnestness, as an entire abandonment of the doctrines of St. Simon, and involving a principle wholly at war with them. He even denounced him as a traitor to the great cause of human rights, for the avowal of such a doctrine. Enfantin insisted that this principle was necessary for the overthrow of the right of inheriting, whether public or private. Equally abhorrent to Bazard was Enfantin's doctrine of the liberation of woman, which he proposed to accomplish by the abrogation of all legal and social restraint in the sphere of love and affection, and by giving to the confessor or priest (of the St. Simonian, not the Catholic Church) full command over the body and soul of his disciples for the purpose of enabling him to control their passions. He adhered firmly to these doctrines, and Bazard quitted him together with a considerable number of his followers who did not recognize in this new social order, based, as they believed, on licentiousness, the system of St. Simon. A considerable number, however, still adhered to him, and he indulged daily in new extravagances, wearing a badge with "Père" (Father) in large letters, upon his breast, preaching, writing articles in defence of his new doctrines, composing mystic hymns, and dictating mystical propositions to his followers, which both they and he must have found it difficult to comprehend. He addressed about this time a series of communications to his disciples, of whom he assumed that he had about forty thousand in France alone, informing them that he was a superior being, set apart by Providence to inaugurate a new era for humanity by the emancipation, and through the agency of woman. He desired them to search for a female Messiah who was predestined to bear to him a new Saviour of Mankind. Meantime he himself made great efforts to find this wonderful woman, and spent, it is said, \$50,000 in giving entertainments, at some of which he hoped she might appear. The search, however, proved in vain; and yet, despite the attacks of some of his former associates, the number of his adherents increased rapidly in all parts of Europe. His meetings in Paris were prohibited by the government, in consequence of the disorder which prevailed among those in attendance (though Enfantin's disciples were not disorderly), in May, 1832, but Enfantin withdrew with

forty of his followers, among whom were Michel Chevalier, Pereira, and others, to some land belonging to him near Menilmontant, in the neighborhood of Paris, where he established a community who spent six hours of every day in manual labor, and the remainder of their waking hours in their forms of worship, amusement, &c., over all which Enfantin presided. But this did not last long. In August, 1832, he was arrested and appeared before the courts, bringing with him two women (Océile Fournel, and Aglaé St. Hilaire) whom he demanded should be allowed to defend him as his counsel. The demand was not granted. After two days' trial he was found guilty and sentenced to a year's imprisonment, but was pardoned by Louis Philippe, after a few months' confinement. He then went to Egypt with a dozen or so of his disciples, but three years later returned to France, and engaged in agricultural pursuits, establishing himself also as a postmaster near Lyons. In 1841, through the influence of some of his former disciples, he was appointed member of a Scientific Commission to Algeria, and in 1845 became the Director of the Lyons Railway. In Nov. 1848, in connection with M. Duveyrier, one of his former disciples, he founded a daily journal, *Le Crédit*, with the view of reconciling political reform with his old Utopian views. This journal lingered for about a year and a half and then expired. From 1850 till his death he had been largely engaged in the extension of railway communication between France and Italy. Till his last days he held to his doctrines, though he had long ceased to attempt to reduce them to practice. His "*Doctrines de Saint Simon*," a joint production of himself and some of his disciples, has passed through a number of editions. In 1859 he published a work entitled "Knowledge of Man and Religious Physiology," in which he battled vigorously for his old views, and shortly before his death he had a sharp correspondence with M. Michel Chevalier and M. Pereira, in regard to their abandonment of his doctrines.

EUROPE. The territorial division of Europe was changed in 1864, by the separation from Denmark of the three duchies of Schleswig, Holstein, and Lauenburg, which, by the treaty of Vienna, were ceded to Prussia and Austria (see SCHLESWIG-HOLSTEIN). At the end of the year, it was not yet decided what would be the fate of these three duchies.

The Polish insurrection, which constituted the chief European complication in 1863, drew rapidly toward a close after the beginning of the new year. It never rose again beyond the character of a guerilla warfare. No important engagements between the Russian and the Polish troops took place, and gradually and almost imperceptibly died out. (See POLAND.)

The most important question which agitated Europe during the year 1864 was the Dano-German war. In compliance with a resolution of the Federal Diet of January, the troops of Austria, Prussia, Hanover, and Saxony marched into

Holstein, in order to enforce the "execution" of the federal laws. Denmark evacuated Holstein, but declared that the entry of German troops into Schleswig, a duchy not belonging to the German confederation, would be regarded by them as a declaration of war. The governments of Austria and Prussia, being anxious to take the management of the question out of the hands of the Federal Diet, entered into special negotiations with Denmark, and when these negotiations led to no result, assumed an aggressive policy against Denmark, not as members of the German Diet, but as Grand Powers of Europe who had the right to compel the Danes to execute all the stipulations of the London Treaty of 1852. The entry of their troops into Schleswig began the war, in which the Danes were soon expelled from the whole mainland of Schleswig. An attempt at conciliation was made by the London Conference, consisting of the plenipotentiaries of England, France, Russia, Austria, Prussia, Sweden, Denmark, and the German Confederation. The belligerents were induced to agree upon an armistice, and also upon the proposition that the whole of the duchy of Holstein and a portion of Southern (German) Schleswig should be forever separated from Denmark, and be made an independent state. But the inability to agree upon a line of demarcation led to the breaking up of the Conference, and the renewal of the war. The allied armies soon forced a passage into the island of Alsens, and in a rapid march occupied the whole of Jutland. The Danes still hoped for aid from England, but when the discussion of the Danish question in the English Parliament revealed the fact that neither the actual ministry nor the Tories intended to engage in war on any conditions whatever, and it became equally apparent that no other foreign aid was to be expected, the Danes began to see that their case was hopeless, and made overtures for peace. Plenipotentiaries of the three belligerent powers met at Vienna in conference, and agreed upon the cession by Denmark of the whole of the three duchies of Schleswig, Holstein, and Lauenburg. (See SCHLESWIG-HOLSTEIN, and LONDON CONFERENCE.)

No other wars of importance took place in Europe during the year 1864. Insurrectionary outbreaks against Austrian rule in Venetia and Hungary were easily suppressed, and in Galicia an intended outbreak was prevented by the declaration of the state of siege. Russia was carrying on war in Circassia and Central Asia, France in Algeria and Mexico, England in India, Spain in San Domingo and Peru, England, France, and Holland in Japan; but all these wars did not directly affect Europe.

Next in importance to the Schleswig-Holstein war is the convention concluded on the 15th of September between the Governments of France and Italy, concerning the solution of the Italian and especially the Roman question. It is provided by this treaty that Rome shall

be evacuated by the French troops within two years, and the Government of Italy engages not to allow any army, either of regular troops or of volunteers, to enter the Papal territory. No provision, however, is made in case that the Romans, of their own accord, should rise against the Papal rule, and annex themselves to Italy. The majority of the Italian Parliament accepted the treaty, with the unconcealed expectation that it would soon lead to the annexation of both Rome and Venetia, and the consummation of the political unity of Italy. With regard to Venetia, the Italian Government has the open support of France in its endeavors to force Austria into a transfer of this province to Italy. The Prime Minister of Italy, Gen. La Marmora, made in the Italian Parliament the important remark, that the Government would be able to adduce in favor of a transfer of Venetia to Italy arguments which even Austria would be unable to resist. It was believed that this referred to diplomatic negotiations which would give to Austria ample indemnification for ceding Venetia, by means of an annexation of some of the Christian Provinces of Turkey. (See ITALY.)

The movement in favor of liberal reforms in the administration of the European states was very active. The Government of Russia has especially distinguished itself by the inauguration of reformatory measures. In Prussia Proper the effects of emancipation became more and more apparent in every province of the empire. The same boon of freedom which had been granted to the Russian peasants in 1861 was conferred upon those of Poland in February, 1864. The army and the administration of justice were thoroughly reorganized. A decree on public instruction in the state colleges was designed to place these institutions on a level with those in the most advanced countries of Europe. The preparations for introducing elective representative assemblies were completed, and the inauguration of these assemblies will be one of the marked features in the history of Russia during 1865. (See RUSSIA.)

Prince Couza, of the Danubian principalities, is getting the reputation of being the most radical reformer among the princes of Europe. He has consummated the political union of the two principalities of Moldavia and Wallachia, and thus constituted a new Christian country which, though remaining tributary to Turkey, is strong enough to resist any encroachments and aggressions of the Mohammedan Government. He has introduced general suffrage. He has separated the Greek Church of the principalities from the Patriarchate of Constantinople, and introduced sweeping reforms into the educational and judicial organization of the country. He has made the peasants owners of the soil which they have for centuries tilled, and which until recently belonged to a limited number of aristocratic families. All this has been accomplished within the

short space of five years, and it is therefore not surprising to learn that the prince is very popular. (*See TURKEY.*)

In Germany the Schleswig-Holstein war considerably diminished for a time the interest in the reform agitation; but the proceedings of the representative assemblies clearly showed that the progressive party is fully as strong as ever. In England a new effort was made to organize a National Reform Union, which commenced its operations with great vigor. In France the progressive party not only remained as strong as it had shown itself at the elections of 1863, but it seemed to make slow progress. The progressive party of Spain met with considerable success at the municipal elections, but they were divided on the question whether, under the present illiberal law, they should take part in the election for the Cortes or not. In Belgium the liberal party gained at the reelection of the Second Chamber a complete triumph.

A considerable sensation was produced in Europe by a Papal encyclical of the 8th of December, 1864, condemning the chief errors of the present age, and among them some opinions which have gradually received an almost general adoption in Catholic as well as Protestant countries, as the toleration of other forms of worship than the Roman Catholic. Nearly every Catholic Government of Europe appeared to be more or less discontented with the encyclical. (*See ROMAN CATHOLIC CHURCH.*)

The great wars of 1863 and 1864, as well as most of the revolutions and disturbances which have taken place in Europe since 1815, are no isolated events, but can all be traced to two sources—the democratic aspirations of the people for a larger amount of self-government, and the comparatively new question of nationality. The history of these two questions constitutes an important portion of the history of Europe. The nationality question, in particular, is obtaining every year a greater influence, and seems to be destined, ere long, to change the entire map of Europe. The years 1863 and 1864 have removed some of the greatest obstacles to a reconstruction according to the principles of nationality. The Polish insurrection has opened the eyes of the Russian Government as to the importance of

this principle, and they are consequently making use of it for assimilating the provinces of Western Russia and the Grand Duchy of Finland to the remainder of the empire. In the former, the largest portion of the soil has hitherto been in the hands of a small number of noble Polish families, while the bulk of the population belong to another Slavic race. As long as the peasants were serfs the Polish nobility found it easy to use their power in favor of the agitation for reestablishing the independence of Poland. But by the ordinance of emancipation and by repressing the use of the Polish language, the Russian Government is now succeeding in destroying the influence of the Polish nobility, in making these provinces homogeneous portions of the Empire, in drawing a marked line of frontier between the Russian and the Polish nationalities, and thus facilitating the ultimate solution of the Polish question. In the Grand-duchy of Finland the use of the Finnish language rapidly extinguishes the Swedish, and with the Swedish language all sympathies with Sweden. The issue of the Schleswig-Holstein war puts an end forever to the feud between the German and Danish nationalities, which would certainly have continued as long as the German population in Holstein and Schleswig remained subject to Danish rule. That the Kingdom of Italy will soon be co-extensive with the Italian nationality admits hardly any longer of a doubt. In European Turkey the great progress of the Christian provinces of Serbia and the Danubian principalities is hastening either the dissolution or the temporary reconstruction of the Turkish Empire on the basis of the nationality principle. The existence of an Austrian Empire remains the great obstacle to a reconstruction of Europe in accordance with the national aspirations of the several races, but even in Austria these national aspirations obtain a greater influence than ever before. Throughout Europe there is a manifest tendency toward giving to every state a national unity, and to accomplish this either the remnants of weak nationalities will soon disappear before the prevailing one, or where there are, as in Austria, a number of strong nationalities co-existing, they will force the dissolution of the empire.

F

FAIRBANKS, ERASTUS, an American manufacturer and statesman, twice Governor of Vermont, born at Brimfield, Mass., October 28, 1792, died at St. Johnsbury, Vermont, November 20, 1864. His early means of education were confined wholly to the common school. In the beginning of 1812, at the age of nineteen, he left his home in Brimfield, and entered

as a student in the law office of his maternal uncle, the late Judge Ephraim Paddock of St. Johnsbury. A serious affection of the eyes soon obliged him to abandon his studies and engage in other pursuits. After several years, variously employed in teaching school and other pursuits in St. Johnsbury, he engaged in mercantile business in company with Frederick

Phelps, at Wheelock, Vt. Subsequently, in 1818, having formed a partnership with Messrs. John and Luther Clark, then the leading merchants at St. Johnsbury Plain, he removed to East St. Johnsbury, and from thence the following year to Barnet, where he remained in business until 1825. His success in the mercantile business had been very moderate. With his small capital, but with a very high character for probity and business ability, he returned to St. Johnsbury, and formed a partnership with his younger brother in the manufacture of platform scales. To this partnership were subsequently added a younger brother, and eventually his own three sons. The enterprise proved extraordinarily successful, and the scales of E. & T. Fairbanks & Co. attained and still hold a world-wide reputation. In 1836 he was elected to represent St. Johnsbury in the Legislature of the State, and reelected to the same office for the two succeeding years. In 1844 he was chosen by the people of the State an elector of President and Vice-President of the United States, and rechosen to the same office at the next Presidential election in 1848. In 1849, on the organization of the Passumpsic and Connecticut Rivers Railroad Corporation he was chosen its President, and continued in that office until his private business constrained him to decline a reelection. In 1852 he was nominated to the office of Governor of the State by the Whig party, but owing to the party divisions at the time, failed of an election by the people. On the assembling of the Legislature, upon whom was devolved the choice of Governor from the three unsuccessful candidates before the people, he was elected upon the first ballot. The next year he was again a candidate for the same office, but owing to party complications failed of a reelection to the chair of state. In 1860, through the partiality of his numerous friends, he was once more a candidate for the same office, and was triumphantly elected by the freemen of the State. Governor Fairbanks had been from his early youth a man of high religious principle, and for many years had been identified with the promotion of Missionary and other benevolent enterprises, both at home and abroad. He was also a zealous but judicious friend of popular education, and sought to the utmost of his ability to elevate the character of the public schools of his adopted State. His death was the result of a complicated affection of the heart.

FINANCES. The Secretary of the Treasury (Mr. Chase) in his report to Congress, December 10th, 1863, presented a statement of the actual and estimated receipts and expenditures of the Government for the fiscal year ending June 30th, 1864. The actual receipts for the first quarter of that year, ending September 30th, 1863, were from the ordinary sources of the revenue, with the balance \$5,829,044 on hand at the beginning of the quarter, \$46,268,500. He then estimated the receipts from ordinary sources of revenue for the remain-

ing three quarters ending June 30th, 1864, at \$115,800,000. Total actual and estimated receipts, \$161,568,500. In addition, he estimated the amount of receipts from extraordinary sources of revenue, as loans for the year ending June 30th, 1864, at \$594,000,000; thus making the receipts from both sources of revenue to June 30th, 1864, \$755,568,500.

The actual receipts, however, during this fiscal year, from the ordinary sources of revenue, with the balance on hand, amounted to \$265,961,761; thus exceeding the estimate by more than a hundred millions of dollars. The details were as follows:

<i>Receipts.</i>		
	<i>Estimated.</i>	<i>Actual.</i>
From customs.....	\$72,562,018 43	\$102,316,159 99
Lands.....	436,189 00	568,888 29
Miscellaneous.....	5,641,543 04	47,511,448 10
Direct tax.....	000 00	475,648 96
Internal revenue.....	77,509,718 59	109,741,184 10
Total.....	156,239,456 14	260,632,717 44
Add balance, July 1, 1863.....	5,329,044 21	5,329,044 21
Aggregate.....	161,568,500 35	265,961,761 65
Estimated receipts from loans.....	594,000,000 00	618,114,884 92
	\$755,568,500 35	\$884,076,646 57

The item of receipts from miscellaneous sources was disproportionately large, and was derived from the following sources:

From captured and abandoned property.....	\$2,146,715 09
Premium on gold shipped from San Francisco to London.....	2,799,920 64
Sales of prizes and due to captors.....	4,068,111 43
Internal and coastwise intercourse fees.....	5,898,287 20
Premium on sales of gold coin.....	16,498,975 49
Commutation money.....	12,451,896 15
All other sources.....	2,716,543 11
Total.....	\$47,511,448 10

The premium on gold shipped from San Francisco to London resulted from the fact that in March, 1863, it became necessary to transmit a considerable amount of funds to London for a special purpose, for which an appropriation had been made by Congress, and an amount of securities, viz., ten million five-hundred bonds was deposited in London, against which bills might be drawn. The negotiation of these securities failed, and six of the ten millions were returned to the Treasury and disposed of. Bills of exchange were drawn, and it became necessary to provide funds to meet the bills at maturity, which was accomplished by shipments of gold from San Francisco.

The increase in the receipts from customs above the estimates, was in consequence of the legislation of Congress. On June 30th, an act was passed which greatly increased the rate of duties, and in anticipation of this measure large amounts were withdrawn from bond, and the duties paid. The operation of the act has greatly diminished the importation of dutiable goods, and in the fiscal year of 1865 there will probably be a considerable decline in the receipts from customs.

The receipts from internal revenue were also much larger than the estimate of the Secretary. This was ascribed to a more perfect execution of the law. A new law was passed on June 30th, which went into operation on the next day. It largely increased the duties: and in connection with a special income tax of five per cent., imposed by a joint resolution of July 2d, was expected to produce the sum of \$250,000,000 in the fiscal year of 1865.

The receipts from loans were estimated at \$594,000,000, but the actual receipts from this source were \$618,114,884. The details of these loans were as follows:

From fractional currency, exceeding amount redeemed.....	\$2,702,431 25
Five-twenty bonds, act of Feb. 25th, 1862.....	\$31,557,268 41
Six per cent. bonds, act of July 17th, 1861.....	\$0,565,575 45
Ten-forty bonds, act of March 3d, 1864.....	73,887,690 60
Twenty years 6 per cent. act of March 3d, 1863.....	42,141,771 05
United States notes, act of Feb. 25th, 1862.....	43,359,321 46
One year 5 per cent. notes, act of March 3d, 1863.....	44,590,000 00
Two years' 5 per cent. notes, act of March 3d, 1863.....	152,964,800 00
Three years' 6 per cent. compound interest notes.....	15,000,000 00
Certificates of indebtedness exceeding amount redeemed.....	4,098,758 85
Whole amount.....	\$780,642,410 97
Of which amount there was applied to repayment of public debt.....	112,527,526 05

Which deducted, it leaves applicable to expenditures \$618,114,884 92

The act of Congress of March 3d, 1864, gave to the Secretary authority to issue six per cent. bonds to the amount of two hundred millions, in lieu of so much of the loan authorized by the act of March 3d, 1863, redeemable after any period not less than five years, and payable not more than forty years from date in coin. At a subsequent period of the session, June 30th, 1864, the authority conferred by the first section of the act of March 3d, 1863, was repealed, except so far as it affected an amount of seventy-five millions then advertised, and power was given to borrow four hundred

millions of dollars on bonds redeemable after five years, and payable not more than forty years from date. By the second section of the same act authority was conferred to issue, in lieu of the same amount of bonds, two hundred millions in Treasury notes, which might be made a legal tender at their face value, bearing interest at a rate not exceeding seven and three-tenths per centum, payable in lawful money, and convertible, at the pleasure of the Secretary, into bonds issued under the authority of the said act. The Secretary was further empowered to substitute for Treasury notes issued under former acts an equal amount of notes, such as were therein authorized.

The expenditures, as estimated and actual, during the fiscal year ending June 30th, 1864, were as follows:

<i>Expenditures.</i>		
	<i>Estimated.</i>	<i>Actual.</i>
For civil service.....	\$24,267,511 52	\$27,505,590 46
Pensions and Indians..	7,840,514 81	7,517,290 97
War Department.....	688,479,511 11	690,791,543 97
Navy Department.....	112,979,186 60	85,788,229 77
Interest on debt.....	59,165,126 38	58,965,421 69
	\$1,009,781,900 42	\$865,584,097 56
Deduct estimated balances undrawn.....	850,000,000 00	
	\$149,781,900 42	
Estimated balance.....	5,886,599 88	\$18,943,593 71
From actual receipts from loans.....		\$618,114,884 92
Deduct balance on hand July 1, 1864..		18,943,593 71
It shows amount received from loans applied to service of year ending June 30th, 1864.....		\$599,171,296 21

The following statement presents in detail the amount of the receipts from the various sources of ordinary revenue during the respective quarters of the fiscal year ending June 30th, 1864. It is through these sources that the receipts are finally to be obtained with which to pay the public debt:

<i>From Customs, vis. :</i>		
During the quarter ending September 30th, 1863.....	\$22,503,018 42	\$102,216,125 90
During the quarter ending December 31st, 1863.....	28,211,520 86	
During the quarter ending March 31st, 1864.....	27,489,654 18	
During the quarter ending June 30th, 1864.....	29,102,959 58	
<i>From Sales of Public Lands, vis. :</i>		
During the quarter ending September 30th, 1863.....	184,189 09	583,885 29
During the quarter ending December 31st, 1863.....	170,508 45	
During the quarter ending March 31st, 1864.....	121,869 92	
During the quarter ending June 30th, 1864.....	149,764 83	
<i>From Direct Tax, vis. :</i>		
During the quarter ending December 31st, 1863.....	14,085 06	475,648 96
During the quarter ending March 31st, 1864.....	307,196 68	
During the quarter ending June 30th, 1864.....	64,447 22	
<i>From Internal Revenue, vis. :</i>		
During the quarter ending September 30th, 1863.....	17,599,718 59	108,741,124 10
During the quarter ending December 31st, 1863.....	27,202,681 26	
During the quarter ending March 31st, 1864.....	27,685,313 45	
During the quarter ending June 30th, 1864.....	37,196,576 80	
<i>From Miscellaneous and Incidental Sources, vis. :</i>		
During the quarter ending September 30th, 1863.....	641,549 04	47,511,445 10
During the quarter ending December 31st, 1863.....	1,912,529 09	
During the quarter ending March 31st, 1864.....	12,867,251 39	
During the quarter ending June 30th, 1864.....	32,480,095 58	

878

[illegible]

In the expenditures of the fiscal year ending June 30th, 1864 (see page 372), are the following items for the War and Navy Departments—\$690,791,842.97 and \$85,733,292.77. The details of these expenditures were as follows:

<i>Under the direction of the War Department.</i>	
For pay of the army proper.....	\$4,360,915 00
" pay of volunteers.....	504,047,917 48
" subsistence of volunteers and regulars.....	85,360,415 43
" Quartermaster's department.....	869,078,752 79
" arms, ordnance, &c.....	85,333,743 47
" forts, arsenals, armories, &c.....	5,733,630 28
" Military Academy at West Point.....	40,754 50
" medical and hospital department.....	11,044,368 13
" expenses of recruiting.....	303,309 71
" collecting and drilling volunteers.....	5,838,190 08
" draft and substitute fund.....	5,303,941 00
" bounty to volunteers and regulars.....	12,353,847 09
" refunding to States expenses incurred in raising volunteers.....	1,390,563 57
" miscellaneous.....	1,304,689 68
Total War Department.....	\$690,791,842 97

<i>Under the direction of the Navy Department.</i>	
For pay of the navy.....	\$1 78
" provisions and clothing.....	98
" contingencies of the navy.....	38
" prize money to captors.....	61
" medicine and surgery.....	78
" construction and repairs.....	85
" steam machinery.....	19
" equipment and recruiting.....	97
" ordnance, &c.....	09
" yards and docks.....	79
" marine corps.....	17
" navigation, &c.....	74
" Naval Academy.....	51
" relief of sundry individuals.....	29
Total Navy Department.....	\$35,733,292 77

The public debt on July 1st, 1864, was as follows:

Amount on December 10th, 1863.....	\$1,099,793,131 87
Evidence of debt subsequently issued for amounts paid into the Treasury before July 1st, 1863.....	26,733,426 30
Loans expended and balance on hand July 1st, 1864.....	619,144,364 92
Total, July 1st, 1864.....	\$1,740,690,492 49

Under the acts of Congress by which the indebtedness (see table on preceding page) had been incurred, there still remained authority to borrow, on July 1st, 1864, the following amounts:

1. Under the act of March 3d, 1863, so much of seventy-five millions, advertised previously to June 30th, 1864, as had not been awarded to bidders.....	\$23,453,709 00
2. Under act of March 3d, 1864, so much as had not been subscribed for, and paid into the treasury, viz:.....	127,000,000 00
3. Under the act of June 30th, 1864.....	400,000,000 00
4. Amount of Treasury notes issued under former acts, which had been redeemed and cancelled, and which the Secretary was authorized to replace by notes issued under the act of June 30th, 1864.....	68,181,400 00
Total available resources under laws authorizing loans.....	\$608,634,909 00
To this may be added the actual balance in the Treasury, July 1st, 1864.....	15,343,588 71
Total.....	\$641,137,315 71

These were the resources of the Treasury at that time, together with the ordinary revenue, for the fiscal year 1865.

The actual receipts and expenditures for the

quarter ending September 30th, 1864, together with the estimated receipts and expenditures for the remaining three quarters of the fiscal year ending June 30th, 1865, are given below:

For the quarter of the year ending September 30th, 1864, the actual receipts were as follows:

<i>Receipts.</i>	
From customs.....	\$19,371,091 96
From lands.....	342,130 84
From direct tax.....	15,079 86
From internal revenue.....	45,582,308 99
From miscellaneous sources.....	9,030,171 44
Add actual balance in the Treasury July 1st, 1864.....	16,942,533 71
Receipts from all sources excepting loans.....	\$94,064,947 73
For the three remaining quarters, ending on the 30th of June, 1865, the estimate is:	
From customs.....	\$51,000,000 00
From internal revenue.....	308,000,000 00
From lands.....	300,000 00
From miscellaneous sources.....	15,000,000 00
Total receipts from ordinary sources, actual and estimated, with balance on hand, July 1st, 1864.....	\$428,354,947 73

The expenditures for the first quarter, ending September 30th, 1864, were as follows, viz.:

<i>Expenditures.</i>	
For civil service.....	\$8,713,423 51
For pensions and Indians.....	4,085,179 81
For War Department.....	968,200,238 52
For Navy Department.....	33,293,216 49
For interest on public debt.....	19,231,054 48
Total, exclusive of principal of public debt.....	\$993,061,961 31
For the three remaining quarters the estimated expenditures, based upon appropriations and estimated deficiencies, are:	
For the civil service.....	\$23,233,459 47
For pensions and Indians.....	6,516,593 73
For War Department.....	677,479,234 99
For Navy Department.....	109,230,544 16
For interest on public debt.....	71,389,180 70
Total of expenditures, actual and estimated.....	\$1,245,720,185 76
These estimates include all unexpended appropriations from former years, and there may be deducted, as a probable unexpended balance at the close of the year.....	
Leaving total amount, actual and estimated, for the current year.....	\$395,739,185 76
Deducting from the total of expenditures the total of receipts, actual and estimated.....	
There will remain.....	\$29,374,133 93
If Congress should adopt measures for increasing the internal revenue at an early day, the Secretary believes there may be added to the receipts from that source.....	
Which being deducted, there would remain to be provided.....	\$0,000,000 00
Total.....	\$428,374,183 93

The public debt, matured and maturing, during the year, is, as before stated,....	\$108,828,890 00
From this may be deducted, as likely to be provided by new certificates of indebtedness.....	76,000,000 00
4	\$32,828,890 00
Add this sum to balance to be provided for expenditures of the year, viz:.....	493,874,186 00
It makes whole amount to be provided from loans.....	\$570,797,806 11
But as this would include so much of the existing public debt as would be redeemed, exceeding certificates issued within the year, viz:.....	58,858,890 00
This sum is to be deducted from the amount to be obtained by loans, viz: \$570,797,806 11, showing the probable increase of the public debt during the year to be.....	\$493,874,186 00
Which added to.....	1,740,660,489 48
Would make the public debt on July 1st, 1866.....	\$3,238,064,877 51

subject to such increase as may be occasioned should Congress not provide for additional revenue, or should the income from ordinary sources fall short of the estimates submitted.

The increase of duties on imports has had the effect to decrease importations to a considerable extent; this effect will be likely to continue. In view of this circumstance, the Secretary estimates the receipts from customs for the fiscal year ending June 30th, 1865, at only \$70,000,000. This disadvantage he considers more than counterbalanced by the stimulus afforded to domestic industry and the consequent increased revenue from internal taxes. The amount from this source, he says, will be at least \$250,000,000, and should be made to reach \$300,000,000. He therefore recommends that a commission be properly constituted for the purpose of inquiring as to profitable sources of revenue, and devising improvements in the mode of its collection. A commission of this character in a country of such varied production and among a people of such diverse industrial pursuits, would elicit much information suitable to materially assist the deliberations of Congress and lighten its labors on a subject so new to legislative experience in this country.

The total amount of internal revenue received from all sources to June 30th, 1864, according to the report of the Commissioner, was as follows:

Received by collectors.....	\$102,314,165 10
Receipts from banks, railroad companies, &c., paid directly to commissioner.....	7,017,547 00
Receipts from salaries.....	1,705,124 68
Receipts from sale of stamps.....	5,864,945 13
Receipts from passports through Department of State.....	10,518 00
Receipts from suits on account of office.....	493 28
Receipts from warrants of distress.....	7,987 22
Total receipts.....	\$114,860,673 44

The amount of collections from each specific source of revenue in each State, as compared with the ten months ending June 30th, 1863, is given as follows:

STATE.	Total collections for fiscal year ending June 30, 1864.	Rebated.	Net Total.
Maine.....	81 84	\$7,885 85	86 50

The total amount of taxes collected on incomes other than that derived from being an officer of the Government, was \$14,918,272.58. Of this New York paid \$4,918,369.67; Pennsylvania, \$2,085,166.08; Massachusetts, \$1,904,782.08; Ohio, \$1,117,691.18; Illinois, \$586,435, and California \$580,327.01. The

balance of the States, with the exception of Maryland, which is returned \$501,785.27, paid less than \$500,000 each. The District of Columbia paid \$146,689.24, which is more than the revenue derived from the same sources in New Hampshire, Vermont, Minnesota and Kansas combined.

Licenses.—The total amount derived from licenses for business, exhibitions, &c., was \$7,178,305.26. From retail liquor dealers' licenses the amount collected was \$1,612,786.25; from retail dealers, \$1,836,845.95; from wholesale dealers, \$21,229,787.01; from wholesale dealers in liquor, \$176,764.76; from commercial brokers, \$204,098.26; manufacturers, \$471,091.45; physicians, \$292,774.04; from peddlers of all descriptions, \$264,111.54; lawyers, \$129,186.20; hotels, \$238,081.82; brokers of cattle, \$106,337.29; and money brokers, \$98,678.05. The amount derived in the District of Columbia from this source of revenue was \$104,937.47.

Manufactures and Productions.—The gross amount of taxes received from manufactures and productions was \$75,408,886.60. Of this New York contributed \$18,814,455.90; Pennsylvania, \$9,585,964.65; Ohio, \$9,453,335.95. Illinois, \$8,398,949.88; Massachusetts, \$8,250,873.92; Kentucky, \$3,061,482.64; Indiana, \$2,549,890.66; Louisiana, \$1,893,911.41; Maryland, \$1,842,728.42; Rhode Island, \$1,340,337.28; Maine, \$882,980.14; and the District of Columbia, \$71,841.88.

Slaughtered Animals and Gross Receipts of Steamers, Express Companies, &c.—The total amount of revenue derived from slaughtered animals was \$695,201.68; from gross receipts of steamers, express companies, &c., \$2,895,998.68; from sales by auction, &c., \$188,082.48; from legacies, \$310,886.18.

From Fermented Liquors.—The receipts from fermented liquors, such as ale, beer, cider, &c., was \$2,223,719.78. To this sum New York contributed \$780,355.78; Pennsylvania, \$810,287.98; Ohio, \$209,685.97; Illinois, \$155,570.21; and District of Columbia, \$3,216.18. The First District of Illinois paid a tax on fermented liquors of \$100,879.64, a greater amount than was paid by any other district in the country.

Cigars.—The amount derived from cigars was \$1,255,424.79. Of this sum New York paid \$865,461.47; Pennsylvania, \$292,784.07; Ohio, \$115,650.60; and Massachusetts, \$97,547.27.

Iron.—In the manufactures of iron Pennsylvania takes the lead. The total amount collected in that State on this article was \$955,890.97. New York paid \$606,988.49; Massachusetts, \$480,180.51; and Ohio, \$208,546.46. The Twenty-second District of Pennsylvania, on its manufactures of iron, was taxed \$212,231.98—a larger sum than was paid by any other district of the country.

Rock and Coal Oil.—The revenue derived from these two kinds of oil was \$2,255,328.60.

Of this Pennsylvania paid \$1,835,156.66; New York, \$243,480.39; Ohio, \$241,136.62.

Distilled Spirits.—From distilled spirits there was received \$28,431,797.83. Illinois contributed the largest amount, \$7,262,433.15; Ohio comes next, \$6,442,408.08; New York next, \$3,194,425.94. The Fifth District of Illinois paid a tax of \$2,601,849.62, a larger sum than was paid by any other district.

Paper and Manufactures of Paper, Leather, &c.—The amount derived from paper and manufactures of papers was \$901,914.17; from leather, \$3,697,433.87; from all kinds of tobacco, \$7,086,684.74; from manufacturers of wool, \$3,007,885.73; from manufacturers of wood, \$1,679,940.25; from sugar produced directly from the sugar cane, \$1,267,616.38; from manufacturers of cotton, \$1,835,027.75; from raw cotton, \$1,268,412.56; from cotton cloths and all textile fabrics before they are prepared, \$1,718,148.76; from cigars, \$1,255,424.79; from gunpowder, \$155,802.07; from incomes on interest of United States securities, \$75,873.93; and for miscellaneous manufactures, \$6,285,076.82.

The increase in the number of National Banks based on Federal securities has been large during the year. From October 22d to December 17th the number increased seventy-five, and the circulation more than \$16,000,000.

The number of these banks, and the amount of their capital, circulation, and bonds deposited with the Treasury on November 25th, was as follows:

National Banks.

The conversion of the old State banks into National banks was becoming very rapid, and the prospect is that nearly all the former will merge themselves under the new laws. In the cities, these banks held stock enough to

lodge with the Comptroller of the Treasury for circulation, without purchasing any more. The old banks of New York City showed, at the end of the year, a decline in their circulation of \$2,646,397; in specie, \$4,298,167. The increase in loans was nearly \$30,000,000, caused by the Government loans taken during December.

The old banks of Philadelphia and Boston showed a decrease in specie at the end of the year as follows:

	Philadelphia.	Boston.
January 1.....	\$4,153,565	\$7,505,899
December 31.....	1,963,569	6,868,131
Decrease.....	\$2,175,995	\$4,160,768

The value of gold and bankers' sterling, as compared with legal tender notes at different periods during the year, has been as follows:

The total value of the bullion deposited at the mint and branches during the fiscal year 1884, was \$24,920,808.47, of which \$23,986,989.92 was in gold, and \$933,818.55 in silver. Deducting the redeposits, there remain the actual deposits, amounting to \$24,012,741.49. The coinage for the year was, in gold coin

\$21,649,845.00; gold bars, \$2,333,403.31; silver coin, \$543,214.10; silver bars, \$301,872.89; cents, \$453,800.00; total coinage, \$25,296,635.80. The number of pieces of all denominations coined was 46,983,396. Of this coinage \$3,560,436.80, in 45,114,276 pieces, was at Philadelphia; \$19,536,809.02, in 1,869,120 pieces, at San Francisco; and \$1,876,377.04, in gold and silver bars, at New York.

The advance in the price of nickel made the expense of coining the nickel cent greatly exceed its value. Congress, therefore, provided for the coinage of new cent pieces, and also two-cent pieces. The standard weight of the new cent is forty-eight grains, or one-tenth of one ounce troy, and the cent is composed of ninety-five per cent. of copper and five per cent. of tin and zinc, in such proportions as shall be determined by the Director of the Mint; and from time to time there is struck and coined at the mint a two-cent piece, of the same composition, of the standard weight of ninety-six grains or one-fifth of one ounce troy, with no greater deviation than four grains to each piece of the cent and two-cent coins. These coins are to be a legal tender in any payment, the one-cent coin to the amount of ten cents, and the two-cent coin to the amount of twenty cents; and these coins may be paid out in exchange for the lawful currency of the United States, except cents or half cents issued under former acts of Congress, in suitable sums, by the Treasurer of the Mint, and by such other depositaries as the Secretary of the Treasury may designate. A three-cent coin was subsequently authorized and made a legal tender to the amount of sixty cents.

FLIEDNER, THEODORE, a Prussian clergyman and philanthropist, founder of the Protestant order of Deaconesses, born in Rhenish Prussia, in 1798, died at Kaiserswerth, on the Rhine, Rhenish Prussia, October 4th, 1864. Of his early education and training nothing is known. At the age of twenty-two, having passed through his university course, he became pastor of Kaiserswerth, a small town on the Rhine, where, in 1812, a manufactory of cotton goods had been established and a considerable number of operatives employed. In 1822, two years after he entered upon his pastorate, the manufacturing company failed, and the people, far from being able to support their young pastor, were plunged in the deepest penury from the want of employment. Pastor Fliedner, unwilling to abandon them, set out in 1823 on a journey to Holland and England, to obtain a sufficient sum of money to endow with a moderate income the little parish church of Kaiserswerth. He succeeded in this, but this was the smallest part of the result of his journey, which was extended to nearly two years. In England he became well acquainted with Mrs. Elizabeth Fry, and interested in her efforts to reform the prisons and the female prisoners. Soon after his return he founded at Dusseldorf, in 1826, the first German society

for improving prison discipline, a society which contributed powerfully to reform the character of the prisons of Prussia, which had previously been only schools of vice. This led him to observe the condition of discharged convicts, especially females, who, when released, were left without the means of subsistence; and thus, shunned by the virtuous, were forced back into a life of crime. He commenced, therefore, a refuge for discharged female convicts in September, 1833, beginning with a single inmate, in his own house, assisted by his wife and a female friend. By the 1st of June, 1834, he had nine of these unfortunates in his refuge, and had found it necessary to employ a second assistant. In May, 1836, he added an infant school to his establishment, and in October of the same year rented the abandoned manufactory, and established a free hospital there, which grew in process of time to have one hundred and fifty beds. For service in this and his other institutions he received volunteer nurses, who were thus trained for service in other infant schools, hospitals, prisons, and the like. Gradually, from this volunteer service was developed the idea of a body of women bound by no life-long vows or adherence to any rigid system of rules, but who should be trained to benevolent labor among the sick, the wounded, the vicious, the ignorant, and the poor. To those who, after a period of training and instruction, religious as well as medical, desired to devote themselves for some years to the work of benevolence, he gave the name of Deaconesses, and sent them forth as he had calls for their services, to teach among the poor, to manage hospitals, infirmaries, and asylums, to be matrons of prisons, etc. They were required to assume a particular dress, to report at stated times to the institution, and were expected to remain in the work for five years, and longer if they chose. If sick, infirm, or disabled, they could return to Kaiserswerth, where he established a home for them. In process of time Pastor Fliedner added to his institutions a normal school, for the instruction of his neophyte deaconesses, an orphan asylum, and an insane asylum. These institutions are sustained by the Lutheran synods of Rhineland and Westphalia. The number of deaconesses in active service, in 1864, was four hundred and fifteen, and they were scattered in all parts of Europe, Asia, and America, and many of them have been instrumental in founding other similar institutions elsewhere. One thousand and seven schoolmistresses and teachers, not deaconesses, have been trained and sent out by the institute, and very many nurses for military hospitals and other establishments, who have not joined the sisterhood, have received their training here. Among these Florence Nightingale in England, and some of our own most efficient hospital nurses, may be named. The Deaconess' Institute forms one of the establishments which make up the "Inner Mission" in Germany, which, under

the direction of Wichern, Fliedner, Harms, and others, has been productive of so much good. Pastor Fliedner had prosecuted this great work under the pressure of constant ill-health, and finally died of bronchitis, the disease from which he had suffered from youth.

FLORIDA. With the exception of two or three points on the coast, Florida has been abandoned by the Federal forces during nearly the whole of 1864. The disastrous expedition of Gen. Seymour (*see* ARMY OPERATIONS), early in the year, resulted in retaining possession only of Jacksonville. Fernandina has been constantly occupied since its first capture. Pilatka was also held a short time. At all points, however, the enemy were found in some force. The organization of the State militia, as recommended by the Governor in 1863, brought every man and boy capable of bearing arms into the field for home defence. They were not subject to be ordered into the Confederate army, or to be sent away from their ordinary pursuits, except to repel invasions and to maintain suitable police regulations. During the spring the regular army force in the State was large. The body of the enemy near Jacksonville was estimated at ten thousand infantry and about four thousand cavalry. At the same time there was a large camp at Baldwin, the junction of the Florida and Cedar Keys Railroad.

During the winter of 1863-'64 the extensive salt works at Lake Ocola and in West Bay, in the neighborhood of St. Andrew's Sound, were destroyed by orders from acting Rear-Admiral Bailey. The works at Ocola made one hundred and fifty bushels per day, and those of the Confederate Government at West Bay four hundred bushels. The private works down the bay were also destroyed, and the entire damage was estimated at three millions of dollars.

About July 20th a raid was made by Gen. Birney, under orders of Gen. Foster, from Jacksonville to the mouth of Trent Creek. Two bridges over one of the forks of the creek were destroyed, and the force pushed forward to Callohan station, on the Fernandina Railroad, and destroyed two cars, a telegraph office, and other public property. A few days afterward, the same force with others embarked on transports at Jacksonville, and moved to Whitesville, a point on the south fork of Black Creek. Here a skirmish ensued with a body of the enemy, who disputed their passage, but were driven off and disappeared. At the same time another small body marched to the south fork of the St. Mary's River, and cut the trestlework, and destroyed a bridge about twelve miles in the rear of Baldwin. Subsequently a force from Jacksonville occupied Baldwin and Camp Milton, a point beyond which other movements of a similar character were made with some loss of life on both sides, but without any important military result.

On May 18th a convention was called by

persons in Jacksonville, on the ground "that Florida was still a State of the Union, and had a right to a voice in the great councils of the people," to appoint delegates to the Presidential Convention at Baltimore, on June 7th. The convention assembled on the 24th, and appointed as delegates: Buckingham Smith, of St. Augustine; John W. Price, of Jacksonville; O. L. Robinson, of Fernandina; John S. Sammis, of Jacksonville; Philip Frazer, of St. Augustine; Paron Moody, of Jacksonville.

The affairs of the State, as a member of the Confederacy, presented nothing of unusual importance during the year.

FLUSSER, CHARLES W., a lieutenant-commander in the United States navy, born in Maryland about 1832, killed near Plymouth, North Carolina, in a naval engagement, April 18th, 1864. Commander Flusser belonged to one of the oldest and best families in Maryland, but during his childhood his parents removed to Kentucky, from which State he was appointed a midshipman in the navy, July 19, 1847. His first cruise was made in the *Cumberland*. In 1849 he was sent to the *Raritan*, 40 guns, where he remained until the latter part of 1850. In 1851 he was ordered to the *Saratoga*, sloop-of-war, and in her made a cruise which lasted two years. In 1853 he was at the Naval Academy at Annapolis, preparatory to passing as passed midshipman. His warrant to that grade bore date of June 10, 1853.

At the close of the examination, after a brief recreation, he was ordered to the frigate *Savannah*, where he remained during the entire cruise, which ended on the 26th of November, 1856. During the cruise he was promoted to a lieutenancy, his commission bearing date September 16, 1855. In 1857 he was granted a leave of absence. Toward the close of the year, however, he was ordered to the Naval Academy as an assistant professor. He remained in that position until ordered to the brig *Dolphin*, in 1859. He made a cruise in her, returning late in 1860. He then was granted a leave of absence, in which position he was when the war broke out. He applied for active duty at once, when it was seen that war must ensue, and the Navy Department assigned him to the command of the purchased gunboat *Commodore Perry*, and with this vessel he took part in the naval attack by *Commodore Goldsborough* which preceded the capture of Roanoke Island on the 7th of February, 1862, by General Burnside.

On the 3d of October, 1862, he took part in the shelling of Franklin, Virginia. More recently he has been in command of the gunboat *Commodore Perry*, in the North Atlantic Blockading Squadron, being stationed in North Carolina waters. At the time of his death he was in command of the *Miami*, in Albemarle Sound.

He was a skilful and intelligent sailor, a thorough and gallant officer, and a genial, accomplished, and high-toned gentleman. In

habits he furnished an example of temperance and moderation.

He had been urgently besought by his Maryland friends, many of whom were secessionists, as well as by Commander Hollins, and other Southern officers, to join the South, and was offered a high command; but he refused firmly and indignantly, and threw his whole soul into the cause of the Union.

FORTIFICATIONS. The principles involved in the construction of masonry forts, and the immense expenditure required for their erection and arming, are very fully and satisfactorily treated in the *NEW AMERICAN CYCLOPEDIA*, vol. vii., p. 612, article **FORTIFICATION**. That article, which was exhaustive on the subject so far as military experience then extended, the readers of the *ANNUAL CYCLOPEDIA* may consult with advantage. But the war now existing has to a great degree revolutionized the whole science of offensive and defensive warfare, and in no department more completely than in the matter of fortifications. The newly-developed powers of modern artillery, both as respects the greatly enlarged calibres of siege and naval guns, and the application of the principle of rifling to guns of the largest calibres have proved destructive to masonry forts, even when so constructed as to be regarded as impregnable. Fort Sumter, one of the strongest forts of its class ever erected on this continent, and Fort Morgan in Mobile Bay, also a work of great strength, were both completely reduced by artillery fire, the one from land batteries at a distance of from two to three miles, and the other by the concentrated fire of the naval squadron of Admiral Farragut. In the case of Fort Sumter this result was the more remarkable as after its capture in 1861 it was strengthened by all the resources known to engineering art, and its gorge wall, which previously was more than ten feet in thickness, was protected by an inner brick wall of twelve feet, and for a considerable portion of its height by a covering of sandbags on its outside. All its casemates were also strengthened, the traverses on its terre-plain enlarged, and every precaution possible made use of to make it impregnable. Yet seven days' bombardment at the long distances named, were sufficient to reduce it to a ruin incapable of bearing any important part in the defence of the city or harbor. On the other hand, the sandwork Fort McAllister effectually resisted the assault of the three iron-clads in March, 1863, and the sandwork Fort Wagner, though badly located, and not judiciously defended, yet resisted two vigorous and well-conducted assaults, a severe and almost continuous bombardment from Admiral Dahlgren's squadron and a constant cannonade from heavy batteries on Morris Island, and was only abandoned when approached and mined by a regular siege, and was found to be but little injured. Fort Fisher, a more recent example of an earthwork of great strength, though situated too near the channel so as to be exposed to the fire of the monster guns of the Monitors at short

range, yet withstood with but slight injury the first assault of the squadron, which concentrated upon it a fire of 539 guns; and though it might have been silenced by the fire of the fleet at the second bombardment, would hardly have been captured but for the feint of a seaward attack, which called off the attention of the garrison from the actual assault by Terry's force.

From these and other trials of the comparative powers of resistance of masonry and earth-work fortifications, the ablest engineers of the country have come to the conclusion that the best material for fortifications in general is a pure quartz sand with natural slopes; and that where the batteries of fortifications are much exposed or can be approached within short range, they should be protected by heavy iron plating.

Major-General Gillmore, who ranks as one of the highest authorities on this subject, regards the erection of revolving iron turrets in the centre of the channels of approach to large cities as a very desirable addition to their means of harbor defence, as combining the advantages of long range and wide field of fire.

While there has been so marked a revolution in the minds of military men in regard to the subject of permanent fortifications, a change almost as marked has taken place in regard to the method of giving or receiving battle. Heretofore, when two armies have been opposed to each other in the field, and neither of them disposed to take advantage of the defences of a fortified town, they have met each other on the open plain or slope of hillside or valley without fortification, and the fortunes of the day have often been decided by a dashing charge of cavalry or the sudden assault of infantry with the bayonet. Such was the case in the earlier battles of the present war; but the troops on both sides have learned that a barricade even of the rudest character will stop many of the balls, shot, and shell which are sent on an errand of destruction toward them, and at every halt for the night or for a few hours the men, before attending to any other duty, run up barricades of rails which they cover with earth, and thus protect themselves in part from a sweeping assault like those at Shiloh and at Stone River, which would destroy or capture thousands. The primary barricade is thrown up with wonderful rapidity, and is tolerably complete within five or ten minutes. If not immediately assaulted, the men proceed to perfect it by digging a trench inside and throwing the earth outside, thus making the protection greater; by felling the trees and undergrowth in front and arranging it as an abatis; by palisades and wire entanglements, and by placing heavy logs on the top of the barricades for protection to the sharpshooters. During General Sherman's campaigns from Chattanooga to Atlanta, and from that city to Savannah, as well as in General Grant's campaigns in Virginia, these temporary fortifications were constantly erected; and in General Sherman's report of the Atlanta campaign he says of this practice: "The skill and

rapidity with which our men construct them is wonderful, and is something new in the art of war."

Though but remotely connected with the subject of fortifications, yet as pertaining to the matter of coast defences, the introduction of stationary torpedoes as a subaqueous protection merits attention. In no previous war have they been used to the same extent as in this. Various forms have been devised, and the contrivances for exploding them at the right moment for destroying the vessels which approached them, have displayed a rare ingenuity. Though considerable injury has been done by them, five or six vessels having been destroyed, yet they cannot, on the whole, be regarded as successful, as not one in five hundred, and perhaps hardly one in one thousand, have accomplished the purpose for which they were designed. Their use as a means of harbor defence seems to be conceded as justifiable by all military authorities; and if they can be made more certainly effective, they will form a very formidable addition to the means of protection to the approaches to large cities.

FOSTER, STEPHEN C., an American songwriter and musical composer, born in Pittsburgh, Pennsylvania, July 4th, 1826, died in New York City, January 13th, 1864. When seven years of age he exhibited musical precocity enough to learn to play the flageolet wall without instruction, and as he grew older he mastered most of the other musical instruments, but never sought or attained renown as a performer. He had studied music very thoroughly, and was familiar with the works of Mozart, Beethoven, and Weber. He was also a proficient in French and German, painted well, and, though a man of extreme modesty and a retiring disposition, possessed extensive and general intellectual culture. His taste in the composition of music was for simple, sweet, and unpretending melodies, and his earlier songs and airs were mostly for the negro minstrels, then so popular in this country.

George Willig, the Baltimore music publisher, published his first song in 1842. It was called "Open thy Lattice, Love," and was followed by "Old Uncle Ned" and "Oh! Sussanna," which were issued by Peters of Cincinnati. Then appeared "Louisiana Belle," "Nelly was a Lady," "Camptown Races," "My Old Kentucky Home," "Massa's in the Cold, Cold Ground," "Nelly Bly," "Oh, Boys, Carry Me 'Long," "Old Folks at Home," and others. With these Foster established his reputation as a writer of negro minstrelsy, and at the same time made considerable money, his New York publishers, Firth, Pond & Co., paying him over \$15,000 on "Old Folks at Home" alone—the most profitable piece of music ever published in this country. E. P. Christy paid Foster five hundred dollars for the privilege of having his name printed on one edition of this song.

During the past ten years Foster's compositions were of a more sentimental and refined character. He dropped the burlesque negro

words, and wrote and composed such pieces as "Willie, we have Missed You," "Ellen Bayne," "Maggie by my Side," "Come where my Love lies Dreaming," "Little Ella," "Jennie with the Light Brown Hair," "Willie, my Brave," "Farewell, my Lillie Dear," "Oh, Comrades, fill no Glass for Me," "Old Dog Tray," "Mollie, do You love Me?" "Summer Breath," "Ah! may the Red Rose live Alway," "Come with Thy sweet Voice again," "I see Her still in my Dreams," "Suffer little Children to come unto Me," "Ella is an Angel," "I will be true to Thee," and over a hundred others.

His ballads have been translated into most of the European and some of the Asiatic languages, and published with his music. His later works exhibit greater grace and tenderness than the earlier ones, and in these particulars he continued to improve until the close of his life. His best compositions have been collected in a volume since his death.

FOX, WILLIAM JOHNSON, an English preacher, author and politician, born in Wrentham, Suffolk, in 1786, died June 8, 1864. He was the son of a Norwich weaver, and being designed for a dissenting minister, was educated in the Homerton Independent College at London, an institution under the direction of the Orthodox Nonconformists. He soon broke loose from this connection, however, and became a Unitarian of a somewhat advanced type, passing rapidly "from Orthodox dissent through the various stages of a kindly and philanthropic but external Unitarianism, to the position of a deistical heresiarch, who preached more on politics than either on ethics or the religion called natural." For a number of years he preached in a chapel at Finsbury, London, where his remarkable eloquence and the unique character of the services drew large congregations; but finding politics and journalism a more congenial field of employment he gradually withdrew from the ministry, and became connected with various periodicals. For several years he edited the "Monthly Repository," and he was one of the chief writers for the "Weekly Dispatch," while that paper was at the height of its reputation and influence. He was connected with the "Westminster Review" from its foundation, having written the first article for the first number, and was also a regular contributor to the "Retrospective Review," and other periodicals. His pen was uniformly employed in behalf of the extreme liberal party, and as a speaker before popular bodies he was inferior to no political agitator of his day. His eloquence was of the rhetorical order, nervous and cultivated, abounding in fine phrases and humorous illusions, nicely adjusted to the comprehension of his hearers, and characterized by telling hits. These qualities commended him to the Anti-Corn Law League as an opponent of the protective system. He entered heartily into the cause, addressed meetings in all parts of the kingdom, and contributed powerfully to the success of the movement. The reputation he

thus acquired carried him into Parliament in the general election of 1847, as member for Oldham, formerly represented by William Cobbett. He was returned again for the same borough in 1852 and 1857, and held his seat until 1862, when failing health, combined with impaired eyesight, amounting almost to blindness, impelled him to resign. He spoke on comparatively few occasions in Parliament, his peculiar style of eloquence being less suited to a deliberative body than to a miscellaneous audience, and during the latter part of his legislative career he lapsed into almost complete silence, his spirit seeming to become singularly softened and cleared by old age. He was a man of fine literary tastes, possessed no mean acquaintance with old English authors and the ancient classics, and throughout his life was thoroughly honest and earnest, being described as one "who loved the people without feeling any passion for the aristocracy, though he made them food for his rhetoric." His publications, apart from his numerous contributions to the periodicals, comprise, "Letters of a Norwich Weaver-Boy," "Lectures to the Working Classes," a philosophical work on "Religious Ideas," &c., &c.

FRANCE, an empire in Europe. Emperor, Napoleon III., Louis Napoleon, born April 20th, 1808, the third son of Louis Napoleon, formerly King of Holland, and of Queen Hortense; elected President of the French Republic for four years by 5,562,384 votes; November 10th, 1848, dissolved the National Assembly by a *coup d'état*, December 2d, 1851; elected President of the Republic for ten years by 7,439,216 votes, December 20-21, 1851; chosen hereditary emperor by a "plébiscite" of 7,864,189 votes against 281,145 votes, November 21st, 22d, 1852; accepted the imperial dignity and assumed the title of Napoleon III., Emperor of the French, December 1st, 1852. Son: Napoleon Eugene Louis-John Joseph, born March 16th, 1856.

According to a decree of the Senate of Nov. 7th, 1852, the imperial dignity is hereditary in the male and legitimate line of descendants of the present emperor, in the order of primogeniture. Napoleon III. also reserved the right, in case he should leave no male children, to nominate as his successor a member of the family of Napoleon I., and he accordingly nominated his uncle Jerome, ex-king of Westphalia, and his male descendants, from his marriage with Catherine, Princess of Wurtemberg. The same right of nominating a successor does not, however, belong to any of the successors of Louis Napoleon. If this imperial line should become extinct, the members of the council of state, together with the presidents of the senate and the legislative chamber will elect an emperor, whose election must be ratified by the popular vote.

The present French constitution bears date of January 14th, 1852, and has subsequently been modified by Senate decrees of November 7th, 1852, February 2d, 1861, and December

81st, 1861, by an imperial decree of December 2d, 1852, and an "organic decree" of December 18th, 1852. According to the statutes there are five divisions in the state government: the Emperor, the Ministers, a Council of State, a Senate, a Legislative Body. The ministers, the members of the council of state and of the senate, are all nominated solely by the emperor. The cardinals, marshals and admirals of the empire belong, by right of their dignity, to the senate, whose total membership shall not exceed 150. The senate alone has the right to receive petitions, and no act of the legislative body is valid without the approval of the senate. The members of the legislative body are elected by general suffrage, at the rate of one member to every 85,000 electors. The legislative body, which was chosen in 1863, contains 388 members, of whom 85 belong to the opposition party, while all the other members were the official candidates of government. France is at present divided into 89 departments, with 378 arrondissements, 2,938 cantons, and 87,510 communes. The area amountsto 207,282 English square miles. The total population of France amounted, in 1861, to 87,882, 225 souls.

According to a Belgian paper, *La Discussion*, the following languages are spoken in France, besides the French: German, by 1,160,000; Breton, by 1,070,000; Provençal, by 14,000,000; Italian, by 200,000; Catalan, by 100,000; Flemish, by 200,000; Basque, by 160,000 persons. The area and population of the French colonies, in 1864, was as follows:

PROVINCES.	Hectares. *	Population.
I. Asia:		
India, Pondichery, Karikal, Yanam, Mahe, Chandernagor....	48,962	290,073
Lower Cochinchina; The Provinces Bien-Hoa, Gladinh, Mytho.....	2,000,000	1,500,000
Total in Asia.....	2,048,962	1,790,473
II. Africa:		
Senegal, Goree, and dependencies.....	25,000,000	972,900
Establishments on the Gold Coast.....	?	?
Gaboon.....	?	?
The island of Reunion.....	218,550	188,471
Islands of St. Marie and Nossebe.....	118,975	16,570
Island of Mayotte.....	80,000	6,000
Islands of Paul and Amsterdam.....	?	?
Adulls.....	?	?
Obook.....	?	?
Total in Africa.....	25,857,525	478,841
III. America:		
Martinique.....	98,788	125,991
Guadeloupe and dependencies..	108,580	183,089
Guyana.....	18,000,000	23,697
St. Pierre and Miquelon.....	21,928	2,011
Total in America.....	18,228,295	302,058
Oceania:		
Archipelago of Marquesas Islands.....	180,000	12,000
New Caledonia and Pine Islands.....	2,000,000	50,000
Loyalty Islands.....	?	15,000
Total in Oceania.....	2,180,000	77,000
Total of French Colonies.....	47,764,882	2,578,877

* 100 hectares = 1 geographical square mile.

Under the protectorate of France are the following countries:

COUNTRIES.	Hectares.	Population.
Asia: The kingdom of Cambodia.....	?	1,000,000
Africa: Porto Novo (Gold Coast).....	?	20,000
Oceania: Society Islands.....	150,000	9,000
The Islands of Pomotu, Wallia, Gambier, Troubouat.....	300,000	18,480
Total.....	350,000	1,047,480

The budget for 1865, as voted by the senate and the legislative body, was as follows:

	Expenses.	Receipts.	Deficit.
Ordinary Budget.....	fr. 1,980,415,618	fr. 1,961,522,097	fr.
Extraordinary Budget.....	118,852,000	108,015,226
	2,099,267,618	2,069,544,323	2,723,285

The Emperor has five times raised loans from the population at large. The loans thus created are specified in the following statement:

	Nominal Capital.	Capital Subscribed for.	Number of Subscribers.
First Loan, March 14th, 1854, (Crimean war).....	2,250,000	486,815,400	99,324
Second Loan, Jan. 3d, 1855 (Crimean war).....	500,000,000	2,196,856,170	180,460
Third Loan, July 18th, 1855 (Crimean war).....	750,000,000	3,652,734,125	816,978
Fourth Loan, May 7th, 1859 (Italian war).....	500,000,000	2,509,689,198	690,220
Fifth Loan (Jan. 12th, 1864 (Consolidation of the floating debt).....	800,000,000	4,847,000,000	542,061

The public debt of France, was, on January 1st, 1864, as follows:

Funded debt.....	8,719,000,000
Floating debt.....	1,350,000,000
Ancient special debts and annuities.....	50,000,000
Obligations, treaties, etc.....	150,000,000
Life rents and pensions, representing a capital of.....	788,000,000

Total..... 11,907,000,000.

According to the budget of the minister of war, for 1865, the army was composed as follows:

	Peace footing.		War footing.	
	Men.	Horses.	Men.	Horses.
Staff.....	1,778	160	1,841	200
Infantry.....	252,652	894	515,937	450
Cavalry.....	82,798	48,148	100,321	65,000
Artillery.....	89,883	16,646	66,183	49,838
Engineers.....	1,486	884	18,448	1,400
Gendarmes.....	24,535	14,769	25,658	15,000
Troops of the Administration.....	15,066	5,449	28,265	12,000

The navy, on January 1st, 1864, was, according to the Gotha Almanac for 1865, as follows:

VESSELS.	Number.	Guns.	Horse-power.
Iron-clad screw steamers (built or building).....	46	1,068	22,685
Screw steamers, not iron-clad.....	239	4,912	64,555
Side-wheel steamers.....	95	508	18,915
Sailing vessels.....	104	2,162

According to P. Barry (the Dockyards, Shipyards, and Marine of France, London, 1864), France possessed in the summer of 1864, the following iron-clad men-of-war, either afloat or about to be launched:

IRON CLADS.	Guns.	Horse-Power.	IRON CLADS.	Guns.	Horse-Power.
Magenta	52	1,000	Jaurean (cupola)	500
Solférino	52	1,000	Tonnante	15	225
Couronne	40	900	Devastation	16	225
Normandie	56	900	Lave	16	225
Invincible	56	900	Foudroyante	16	225
Gloire	56	900	Congrève	16	225
Provence	56	900	Saigon	14	200
Herolme	56	900	Païstro	14	200
Savoie	56	900	Peiho	14	200
Revanche	56	900	Païthans	14	200
Surveillante	56	900	Prospective	4	150
Flandre	56	900	Impregnable	4	150
Gulfenne	56	900	Embuscade	4	150
Gauloise	56	900	Refuge	4	150
Valreuse	56	900	Arrogante	4	150
Magnanime	56	900	Implacable	4	150
Jaurean (cupola)	500	Opiniâtre	4	150

The general and special commerce of France with the countries of America, during the year 1862 was as follows (value expressed in millions of francs):

COUNTRIES.	Imports.		Exports.	
	General Commerce.	Special Commerce.	General Commerce.	Special Commerce.
United States	92.5	94.2	121.2	99.9
Mexico	2.9	3.6	20.5	16.1
Guatemala	0.7	0.7	0.4	0.4
Haiti	28.0	21.1	12.1	2.1
Brazil	56.6	45.5	92.2	63.1
Argentine Republic	63.8	51.5	32.7	24.7
Uruguay	27.7	24.6	12.2	14.8
Chili	9.2	8.5	24.6	18.5
Peru	16.4	22.1	26.2	22.8
Bolivia	0.5	0.5
Ecuador	1.4	0.6	1.1	0.7
New Granada	1.1	1.0	2.2	2
Venezuela	9.8	6.4	4.7	2.9

The commerce with some of the leading countries of Europe was as follows:

Russia	94.8	92.9	42.2	51.5
German Zollverein	220.8	120.7	262.7	206.8
Great Britain	654.1	521.7	584.0	519.5
Belgium	321.3	259.8	229.9	206.4
Switzerland	228.8	56.6	205.0	127.8
Italy	226.4	191.8	274.6	175.8
Turkey	177.3	129.4	82.6	50.0

The total commerce of France, during the year 1862, was (value expressed in millions of francs):

Imports.—General Commerce	2,992.2
Special Commerce	2,198.6
Total Imports	5,190.8
Exports.—General Commerce	3,049.9
Special Commerce	2,242.7
Total Exports	5,292.6

The movements of shipping during 1863, were as follows:

VESSELS.	ENTERED.		CLEARED.	
	Ships.	Tonnage.	Ships.	Tonnage.
French	12,479	1,968,944	12,706	1,992,456
Foreign	18,367	2,779,492	18,571	2,858,575
Total	31,846	4,748,436	32,277	4,851,031

The merchant navy, on December 31st, 1826, consisted of

	Ships.	Tonnage.
Sailing vessels	14,794	908,570
Steamers	888	78,981
Coasting vessels	2,242	61,988
Total	28,874	1,044,484

The session of the Corps Législatif, which was opened in Nov., 1863, continued until May 28, 1864. The opposition, though small, embraced the first talents of France, and the masterly addresses by Jules Favre, Jules Simon, Thiers, Berryer, Emile Olivier, and many others, produced an immense sensation at home as well as abroad. They offered a series of amendments to the draft of an address to the emperor, in which they embodied the most important demands of the liberal party. Though unable to influence the votes of the majority of the Corps Législatif, they greatly improved the prospects of their party. The address, as finally adopted by the Corps Législatif, states that the people are profoundly attached to Imperial institutions, and applauds the resolution of the emperor to anticipate public opinion in the path of industrial and commercial liberty. It expresses a wish that the public works should not be diminished, and that interior reforms should be developed. The address then says that the Corps Législatif believes with the emperor that the most wisely governed nations cannot always escape foreign complications, and that they should regard them without illusion as without weakness. The document then proceeds:

"The distant expeditions to China, Cochinchina, and Mexico, have greatly disturbed the public mind of France on account of the obligations and sacrifices they entail. We acknowledge that these expeditions must inspire respect for our countrymen and for the French flag, and that they may also develop our mercantile commerce, but we should be happy to see realized shortly the good results for which your Majesty has led us to hope." On the Polish question the address says:—"The recollections of our history and the feelings of humanity which animate us excite the most earnest sympathies for Poland, and we have seen with grief the failure of the combined efforts of three great powers; neither can we, however, disregard that the sincere and cordial support of Russia has been useful to France on important occasions. We hope that the spirit of conciliation which animates the two sovereigns will succeed in removing all that can create any obstacle to the satisfactory relations between the two powers, and have therefore accepted with profound satisfaction the idea of a European Congress, which will be a lasting honor to your reign. France, on whom you have bestowed splendor and glory, is grateful to you for not having committed her treasures and the blood of her children in causes in which her honor and interests are not at stake. Leave without regret, Sire, the few unjust prejudices against accepting your loyal and pacific propositions. Noble and sound ideas make way in the world, and take root in the heart of the peoples. Await calmly the effect of your generous words. France, homogeneous, compact, strong, and confident in you, fears no aggression, and now has no other ambition than to assure her repose and develop her material welfare by labor and peace, and her moral welfare by the sincere and gradual practice of civil and political liberties."

The address was presented to the emperor on Feb. 1. The emperor, in reply, said, that the debates upon the confirmation of the members' elections and on the address had been long and profound, and though they had taken nearly three months from the legislative business of the House, they had not been useless. To an impartial mind the result had been to annihilate the accusations which had been skillfully spread. The Emperor then continued:

"The policy of the Government is better appreciated. We have a more compact majority, and one more devoted to our institutions. These are great advantages. After the fruitless efforts of so many forms of government, the first want of the country is stability. Nothing durable can be founded on an ever-shifting base without constistence. For sixty years liberty has become an army in the hands of parties to overthrow the existing Government; thence have resulted incessant fluctuations—power succumbing to liberty, and liberty succumbing to anarchy. This must no longer exist. The example of recent years proves the possibility of conciliating what has long appeared irreconcilable. Really fecund progress is the fruit of experience. Its advance will not be hastened by systematic and unjust attacks, but by the intimate union of government with a majority inspired by patriotism and unseduced by vain popularity. Let us await, from agreement and from time, such ameliorations as are possible. Do not let a delusive hope of chimerical future unceasingly compromise the present good which we have at heart to consolidate together. Let us each remain in our right sphere. You, gentlemen, enlightening and controlling the progress of the Government, I taking the initiative in all that may promote the greatness and prosperity of France."

The session of the Corps Législatif was closed on May 28, by its President, the Duke de Morny, who, in his closing speech, alluded to the conciliatory part he acted, and invited all parties to observe conciliation one toward another.

In January, 1864, a great excitement was produced by the discovery of a conspiracy against the emperor's life. The police arrested on Jan. 7th, four Italians,—Greco, Imperatori, Trabuco, and Scaglioni. At their residences were found a great quantity of English gunpowder, four poignards, four revolvers, four air-guns of a new and ingenious construction, phosphorus, percussion caps, fuses several metres in length, and eight hand-grenades, made on the Orsini pattern. They had entered France at Mulhouse, whence they were followed by the police to Paris. One of the prisoners, Greco, with a readiness which created a general distrust, avowed an intention to assassinate, and confessed all the details of the plot. According to his statements, he and his accomplices had, in September, 1863, been summoned to Lugano by Mazzini, with whom they had been for some time in correspondence. It was then and there arranged that they should proceed to Paris to assassinate the emperor. Mazzini gave them four shells, which he had received or brought from England; four shells of a similar description which he had caused to be made at Genoa, four revolvers, and four poignards. On leaving Lugano, Mazzini gave him 4,000 fr., telling him he was going to London, to await the result of the attempt, and then

send him more money. Mazzini was consequently included in the indictment, though he emphatically denied all the statements of Greco. Judgment on the conspirators was passed on February 26th. Greco and Trabuco were condemned to transportation for life, and Imperatori and Scaglioni to twenty years' imprisonment.

Supplementary elections for the Corps Législatif took place in two districts of Paris, and in several provincial districts, in the month of March. At most of the elections the Opposition was successful. It gained, in particular, a signal victory in Paris, where its candidates were two members of the provisional government of the French Republic in 1848, Carnot and Garnier Pages. Carnot received 9,988 votes against the government nominee, Pinard, for whom only 8,878 persons voted. Garnier Pages had 11,721 votes recorded in his favor, while Levi, one of the Paris maires put forward to oppose him, only received 4,641. At Cambrai, Stievant, the Opposition candidate, obtained 16,159 votes, and Boitele, the government candidate, 13,425 votes. In July, elections for the renewal of the Councils-General were held, with a result similar to that of the general election in 1863. In a number of large cities, the opposition elected their candidates, and in some places, as Marseilles, the government even desisted from recommending official candidates; but on the whole, the government gained the official candidates in an overwhelming number of districts. At the opening of the Councils-General several of the ministers who had been appointed by the emperor presidents of the councils, delivered speeches in which they promised the introduction of liberal reforms. Mr. Rouher intimated that a new law would be promulgated affecting the Councils-General, which would have a largely decentralizing character. It would also be very liberal, and confer upon the Councils-General the most entire authority over departmental affairs, restraining their subordination to the State solely to the subjects affecting general interests, the unity of the territory or the right of political sovereignty. The speech of Mr. Rouland, at Rouen, expressed the same views. At St. Etienne, the Duke de Persigny, who presided over the Council-General for the Department de la Loire, gave a complete review of the theory of the imperial constitution. He called Louis Napoleon "the founder of liberty in France." The form of liberty he contended varied with every free people. "The present physiognomy of liberty, properly so called," said M. de Persigny, "may be recognized by the striking signs of the solidity and duration of government, which it founds, and above all by the passion it inspires for great things." M. de Persigny then demonstrated that the institutions of England are not suitable for France, "it not being possible, he continued, "for authority or liberty to remain in the hands of one class, as in England. Instead of subordinating one class to another,

It was natural to render them independent, and this is the fundamental principle of our institutions." The speaker further said, "In order that the liberty of the press may be a benefit, it is necessary, in a country newly constituted, that a new, vigorous, and independent political generation should arise to replace the minds enervated by revolutions." At Marseilles, M. Behic, minister of agriculture, commerce, and public works, announced that the time approached when custom-dues will be assessed, with a view to the financial interests of the country only. He also stated that the completion of the whole system of railways in France would be hastened. He likewise promised the establishment of a new code of commercial legislation, an extension of the right of association, and an organization for professional tuition. The hopes raised by these promises were, however, not fulfilled. The laws prohibiting more than twenty persons to assemble without previous permission, and those concerning the press were enforced with the usual rigor. The applications made for the authority to establish new papers were almost always denied to men known to belong to the Opposition. The Government also made an effort to undersell the independent papers, by the establishment of a cheap evening edition of the *Moniteur*.

Important reforms have been carried through in the postal department. The *Moniteur* states that in 1847, a few months before the postal reform of that period, the number of letters which passed through the French post-office was 126,000,000 a year. It is now nearly 800,000,000. In 1847 the receipts of the post-office were 53,287,190 fr. In 1863 they exceeded 72,000,000 fr. Hereafter all France will be divided into six districts, with a resident inspector in each, whose duty it will be to see that the postal service in his department is properly performed, and to take measures for ensuring the most rapid transmission of correspondence by railway and other conveyances. The *Moniteur*, in conclusion, says that it is a decentralizing measure, by which the improvement suggested by experience may be introduced without previous arrangement with the central administration.

The *Journal des Débats*, referring to an official blue-book lately published, with an account of the commercial transactions of France in 1863, congratulates the country on its rapid tendency, during the last three years, to approach the greatness of the commerce of Great Britain. The amount of England's commercial transactions in 1862 was stated at 9,500,000,000 of francs, while in 1863 that of France was 6,768,000,000. The difference is still about a third to the disadvantage of France, but ten years back it was more than one half. Compared with the preceding year, the increase in France during the year 1863, amounts to 814,000,000, and during the last five years the augmentation amounts to 1,286,000,000. The

commercial relations with the ports of Asia have made but little, and those with the French colonies hardly any progress. The greatest improvement has been in the commerce with England. Two years before the reforms the general commerce of France with the United Kingdom (of Europe) kept at the average of 1,000,000,000. The following is the progress it has since attained: in 1860, 1,261,000,000; 1861, 1,175,000,000; 1862, 1,490,000,000; and 1863, 1,752,000,000.

The most important events in the foreign relations of France during the year 1864 were the Convention of April 10th, which founded the throne of Mexico, and that of September 15th, by which France agreed to withdraw within two years her troops from Rome, while Italy, in return, took the solemn engagement not to attack it, and even to defend it against all aggression from without. (*See Mexico and Italy*.) The relations of France to the United States during the year 1864 were thus reviewed in the "Yellow Book" (volume of diplomatic correspondence), which was laid before the Corps Législatif in February, 1865: "War still continues in the United States, and the indomitable resolution of the two belligerents does not permit us now, any more than a year ago, to see the end of this bloody and disastrous struggle. The Government of the Emperor has not departed from those principles of strict neutrality which it has laid down as the rule of its conduct since the commencement of the war. Decided, so long as circumstances were not more favorable, not to renew our efforts to open a way to an understanding, we have remained inactive but not indifferent spectators of a conflict in which so much ruin is accumulated. We have thought it our duty to turn our attention solely to the condition of our French subjects, as worthy of our interest. Owing to the peculiar situation of the Confederate States of the South, with which we do not keep up official relations, we can often do nothing but register the claims of French subjects in those States, reserving to ourselves the right of enforcing them at some fitting opportunity. We have, at the same time, neglected no means to bring the Federal Government to admit that it ought, in strict equity, to distinguish between those damages suffered by our countrymen, resulting from military operations, and those which the authorities, by irregular and forced requisitions, have gratuitously inflicted upon them: and we have insisted that proper reparation should be granted for the latter injuries. We wish we could add that our efforts had obtained the result we were entitled to expect."

On April 8th, 1864, an insurrection broke out in the province of Oran, in Western Algeria, among the tribes of Ouled-Sidi-Sheikh, Fraras, Flittas, and others. The chief cause of it was said to be an old prediction that the year 1864 would be a momentous one for the Arabs—the date of the recovery of their inde-

pendence. The leader of the revolt was the great Marabout Si-Seliman-Ben-Hamza. The French believed at first that it would be checked at once, and that Si-Seliman would return to his allegiance. He had been invested with one of the highest dignities in Algeria, that of Bach-Agha; for in the hierarchy of the Arab chiefs, which counts six hundred and fifty-six Caidas and thirty-four Aghas, there are but nine Caliphats and eight Bach-Aghas. Two months after being raised to that rank, Si-Seliman, who had retired for some time to the desert, returned toward the north, followed by large numbers, and by easy marches advanced on Geryville. These movements left no doubt as to his intentions. The French sent reinforcements to Geryville; a column consisting of one hundred infantry, a body of Turcos, and soldiers of the Battalion of Africa, one hundred spahis, and a large force of regular cavalry, set out from Tiaret. Colonel Beauprêtre, commandant of the circle of Tiaret, left with the column for Geryville, with the object of maintaining tranquillity in the country he was to pass through, and punishing the emissaries of the rebel leaders, who were doing their best to raise the country. On the evening of April 7 he encamped about ten leagues from Geryville. At four o'clock in the morning of April 8th, the cry "to arms!" was heard close to his tent. He found that some of the irregular cavalry had gone over to the insurgents, and that he was furiously attacked on all sides. The chief of the insurgents was shot dead by the colonel, but, after a desperate fight, lasting seven hours, the French troops were overpowered. The colonel was cut in pieces; of the foot soldiers not one was left alive; only one of the spahis, about half a squadron, escaped and reached Geryville. The number of insurgents rapidly increased, and soon amounted to from 12,000 to 15,000 men. The French troops, however, reinforced by some 10,000 men, and numbering altogether some 54,000 men, defeated the natives in almost every engagement. On June 5th the Marabout Si-El-Azerey, was killed at the battle of Dar-Ben-Abdallah, where, supported by numerous insurgent tribes, he attacked the camp of Gen. Rose. His death was followed by dissension among the insurgents, and some tribes, as the Flottas with their chief, the Marabout Abd-el-Aziz, made their submission. For some time it was thought that the insurrection was nearly over, and on July 28d, a report of the minister of war, followed by an imperial decree, was published, modifying the administration of Algeria. The report says, the insurrection was not only caused by fanaticism, but still more by an unfounded hope of surprising the vigilance of the authorities, who were believed to have been disarmed because divided in their action. The report therefore proposes to increase the power and responsibility of the generals commanding divisions, making the prefects subordinate to them, and entrusting them with the administra-

tion of the natives established beyond the limits of the communal districts. Soon, however, the insurrection began again to spread, and although the natives were unable to gain any lasting advantages over the French, and most of the tribes were compelled to submit, the insurrection had at the end of the year not yet altogether ceased.

The *Moniteur* denies that the French Government has ever had the least thought of restricting French domination in Oochin China. On the contrary, every act of the Governor, Rear-Admiral de la Grandière, bears witness to the intention of maintaining authority and extending its influence. The treaty of protectorate concluded in 1863 by Rear-Admiral de la Grandière with the king of Cambodia, who applied to France for protection against the King of Siam, when the latter threatened to annex his territory, has been ratified by the French Government. It was reported, at the close of the year 1864, that another sovereign of Farther India, the King of Laos, had applied for a French protectorate.

FRANÇOIS, Hon. JOHN BROWN, was born in Philadelphia, during the temporary residence of his parents in that city, May 31, 1791, died at Spring Green, in Warwick, R. I., August 9, 1864. His father, who belonged to Philadelphia, died in his infancy, and he was reared mainly under the care of his maternal grandfather, John Brown, of Providence, R. I., one of the "Four Brothers" of that name, whose liberal enterprise laid the foundations of the commercial prosperity of that city. He was prepared for college in the schools of Providence, entered Brown University in 1804, where he graduated in the class of 1808. He spent a year in the counting-house of his kinsmen, Messrs. Brown and Ives, of Providence, in order to acquire a mercantile education, subsequently attended the Law School at Litchfield, Conn.,—though rather for the purpose of intellectual culture than with any intention of professional practice. In 1821, he went to live at Spring Green, a family estate on the shores of Narragansett Bay, a few miles from Providence, and here he passed his life engaged in agricultural pursuits, and in a long series of public services. In the same year he commenced his political career as a representative in the State Legislature, from the town of Warwick; and was annually chosen till 1829, when he resigned his seat. In 1831, he was a member of the Rhode Island Senate; and in the spring of 1832, he was elected Governor of that State by a coalition of the Anti-masons and the Democrats. Up to this time he had been a Federalist and a National Republican. Henceforward he was known as a Democrat. He was reelected Governor every year till 1838, when the State fell into the hands of the opposite party. In the free-suffrage troubles of 1842, he again appeared in the State Senate as a member of the "Law and Order" party, and in 1844 he was chosen by the Legislature of Rhode Island to fill the vacancy in the United States Senate

occasioned by the resignation of the late Hon. William Sprague. He held a seat in that body during the remainder of the long session then pending, and the whole of the short session of the succeeding winter, his time expiring March 4, 1845. He was subsequently, for eight or nine years, a Senator in the State Legislature, from the town of Warwick, and continued to wield an important influence in the politics of Rhode Island. In 1856 he declined a reelection and withdrew from public life. From 1828 to 1857 he was a member of the Board of Trustees of Brown University, and from 1841 to 1854 he held the office of Chancellor in that body. His character, his manners, and his social position, combined to give him unusual popularity and influence among all classes of his fellow-citizens.

FREEDMEN OF THE SOUTH. The question of the proper disposition to be made of the vast number of persons of African descent who by the operation of the Emancipation proclamation, by the progress of the Union armies in various parts of the South, or the acts of Emancipation passed by the Constitutional Conventions of several of the States, have become free, has continued to excite the anxious attention of the Government and of the citizens of the United States. While some progress has been made toward the solution of the difficulties, it cannot be said that any entirely satisfactory policy has yet been adopted. Different sections require differences in detail in the management of freedmen, but the general policy should be the same. Even this, however, does not seem to be settled. The number who have already obtained their freedom is not easily ascertained. In September last the Philadelphia "North American" published a carefully-prepared estimate for each State, making the aggregate amount 1,368,600. Mr. J. R. Gilmore (Edmund Kirke) had previously estimated the number at 1,555,225, while Jefferson Davis in the summer stated the number at 3,000,000, about three-fourths of the whole number in the country. Since that time, Sherman's march through Georgia, South and North Carolina, has resulted in setting at liberty hardly less than 200,000, and victories in other quarters have materially added to the number elsewhere. Whatever may have been the case last summer, it hardly admits of a doubt that, including those set free by the Emancipation acts in Maryland, Western Virginia, and Missouri, the whole number of freedmen now does not fall much if at all short of 3,000,000. Of these nearly 250,000 are in the army, either as soldiers or teamsters, and probably more than twice as many more women, children, or old men are employed as servants, cooks, washerwomen, etc., etc., in the various camps, military posts, hospitals, etc., throughout the country. Of the remainder a large number pick up a living, more or less precarious, in the larger cities and towns of the West and South. Very few of them come North, the severe climate

being disliked by the negro. Not far from a million and perhaps more than that number are employed upon plantations leased or permitted by the General Government, or work for wages for farmers and planters in Missouri, Maryland, or Western Virginia, or have themselves become lessees of plantations, or are gathered in Freedmen's Home Colonies if feeble, aged, or infirm, and there supported from the proceeds of the labor of those who are able-bodied.

It is in the management of and provision for these that there has been the greatest difficulty. In the *ANNUAL CYCLOPÆDIA* for 1868 the systems adopted during that year in the Mississippi Valley, in the Department of the Gulf, and in the Department of the South, were fully detailed. In general it may be said that these plans, though devised from humane motives, have proved unsuccessful. In the Mississippi Valley and the Department of the Gulf they very generally failed, for several reasons. The lessees, in many instances, were mere speculators, who obtained possession of plantations and the services of the freedmen without adequate means for carrying out their contracts, hoping to obtain such means by the profit on the cotton or sugar crops, and who did not pay their employes promptly; furnished food of poor quality, and clothing which was nearly worthless, and, in defiance of their contract, charged exorbitant prices for both; established no schools, and did not, as they had agreed, provide suitable cabins for their people or support the feeble and helpless. Under these circumstances the negroes worked unwillingly, were absent many days, and often procured their food by stealth. Thus dissatisfaction sprung up on both sides, and complaints were frequent. In addition to these causes of trouble, the army worm nearly destroyed the cotton crop on many plantations, and the guerrillas visited and plundered those not readily or fully protected by troops. Those who carried out in good faith the provisions of their agreement with the Government, as well as most of the loyal citizens who hired the services of the freedmen, did better, but in many cases the army worm greatly diminished their profits. In some hundred or more instances negroes themselves, either singly or in company, leased plantations and cultivated them or hired other freedmen to aid them. These, almost without exception, did well, notwithstanding the drought and the army worm. Some of them made but a few hundred dollars beyond their expenses and support; some two, four, or six thousand dollars, and one over ten thousand dollars. They were very desirous of having schools for their own instruction and that of their children, and contributed liberally to their maintenance. This plan would seem to have been capable of further extension, but no efforts were made to increase the number of this class of lessees.

Finding that the plan adopted in February,

1864, had failed of success, and that the system of Gen. Banks had also proved a failure, the new Secretary of the Treasury, Mr. Fessenden, prescribed, under date of July 29, 1864, a new Series of Regulations, which, however, were not expected to take effect till the winter of 1864-'5. These provided that the supervising special agents of the Treasury Department in each district should also have charge of the freedmen of their respective districts, and that one or more "Freedmen's Home Colonies" should be established in each special agency district, and that a superintendent of freedmen should be appointed for each colony, under the general direction of the proper supervising special agent. The duties of this superintendent were to provide temporary care and shelter for persons received there, and also such buildings as were proper for the permanent use of those retained there; and to obtain such working animals and other agricultural implements of labor and other supplies as might be necessary and proper for the economical conduct of these establishments. They were also to keep books of record, in which should be entered the name, age, and condition, former owner, residence, and occupation of each person received in these colonies; also the marriages, birth, and deaths occurring therein; also all departures, and by whom those departing are employed, for what purpose, at what place, and on what terms.

The freedmen who were able to labor were to be divided into three classes: 1st. Those between 18 and 40 and in sound health, who were to receive, males \$25, and females \$18 per month; 2d. Those between 14 and 18, and between 40 and 55, whose wages were to be, males, \$20, and females \$14; 3d. Those over 12 and under 14, and those over 55, who were to receive, males \$15, and females \$10. Persons suffering from any defect or infirmity but able to work, were to be classed as the superintendent thought proper. Mechanics and others who could on contract obtain higher wages were at liberty to do so. In addition to these wages it was stipulated that a tenement with good and sufficient rooms and an acre of ground should be furnished to each family, together with tools and a reasonable use of animals; that they should not be required to work more than ten hours a day, nor at all on Sundays or on Fourth of July, and that all extra work should be paid for on such terms as might be agreed. Good food and clothing to be furnished at cost. The superintendent was to see that all these persons were provided promptly with employment, and applications for laborers were to be received and recorded. A form of written agreement between employers and employés was provided, stating in full the conditions and obligations assumed by each, which they were respectively required to sign. Provision was also made that the freedmen might, where both parties agreed, receive an interest in the profits of their labor instead

of wages. The superintendent was made a judge between the parties when there was complaint on either side, and an appeal could be taken from his decision to that of the special supervising agent, whose decision should be final. Where civil courts were established within reach, redress might be sought there. Aged and infirm persons who could not otherwise be provided for, were to be retained and cared for by the superintendent, and provision was made for his retaining as many hands at regular rates as were necessary to cultivate the lands attached to the colonies, in order to secure the support of the aged and infirm, these themselves performing such labor as they were able. Freedmen's associations (i. e. such as were established to improve the condition of freedmen) were to have Freedmen's Home Colonies assigned to their care, where they could give satisfactory assurance of their ability to provide for them, and labor colonies were also to be assigned to these associations under proper guarantees for their good management. Penalties for ill usage of freedmen were provided, and the establishment of schools insisted upon. Monthly reports were required from each supervising special agent, with copies of all records, agreements, and other papers under his charge, and all expenses must be authorized and approved by him. The General Agent of the Treasury Department at New Orleans, W. P. Mellen, issued in connexion with these regulations a series of local regulations for the better enforcing those of the Secretary of the Treasury. The tendencies to fraud and dishonesty and the oppression of the poor and ignorant being what they are, it is hardly to be expected that these regulations will answer perfectly their purpose, for they necessarily leave too many points indefinite.

General Sherman and Secretary Stanton, soon after the arrival of the former at Savannah, had an interview with the leading men of color in that region to ascertain from them their views of what would be the best plan for providing for the freedmen of the Atlantic States, and their suggestions, that those who were not able to go into the army should be colonized, under proper protection, on the islands of the coast and allowed to provide for themselves, receiving in the beginning such supplies of food, clothing, and agricultural implements as were necessary, is to be acted upon. Its results will appear in our volume for 1865.

The Freedmen's Aid Societies, Commissions, and Associations, of which there are eighteen or twenty in the United States, have been active and efficient in furnishing supplies, teachers, and religious instruction to the freedmen. They have expended for these purposes during the three years ending January, 1865, nearly one million of dollars. Through their efforts a bill was introduced into Congress providing for the Establishment of a Freedman's Bureau in connexion with the War Depart-

ment. This bill passed Congress just at the close of the session of 1864-'65.

FREEDOM OF THE PRESS. Two of the prominent daily journals of New York were suddenly suppressed on the evening of May 18. This suppression was continued for two days, when they were restored to the proprietors. The following is the explanation of facts made by the editors at the time of the seizure, and published in the other city papers on the next morning:

To the Editor of the "Herald":

Will you oblige us by publishing in your columns the following statement of the proceedings of the Government this evening toward the "World" and the "Journal of Commerce," regarding the publication in our morning's issues of the forged proclamation, purporting to be signed by President Lincoln, appointing a day of fasting and prayer, and calling into the military service 400,000 men.

The document in question was written on their manifold paper, such as is used for all the despatches sent to the several newspapers of our association, and had every external appearance and mark to identify it as a genuine despatch arriving in the regular course of business.

It was delivered at our office late at night at the time of the receipt of our latest news, too late, of course, for editorial supervision, but, as it happened, not before our printing offices were closed.

It was delivered at all, or nearly all, of the newspaper offices, and published in a part of the "Journal of Commerce" and "World," and, as we are informed, in a part of the editions of one or more of our cotemporaries.

Early this morning the fact that the despatch had not been sent by the agent of the Associated Press became known to us, and its fraudulent character was at once announced upon our bulletin boards, and a reward of five hundred dollars offered by us for the discovery of the forger. The Executive Committee of the Associated Press also offered a similar reward of one thousand dollars, as the fraud had been attempted to be perpetrated upon all the journals composing our association.

We took pains in the afternoon to apprise Gen. Dix of the facts in the case, and gave him such information in regard to the circumstances of the forgery as might assist him in the discovery of its author. The Government was at once put in possession of the facts in the case. Nevertheless, this evening Gen. Dix, acting under peremptory orders from the Government, placed our offices under a strong military guard, and issued warrants for the arrest of the editors and proprietors of the "World" and "Journal of Commerce," and their imprisonment in Fort Lafayette. A vessel was lying, under steam, at one of the wharves to convey us thither.

Chancing to meet one of the officers of Gen. Dix's staff, charged with the execution of this order, we proceeded in his company to the headquarters of the Department of the East, and were informed by Gen. Dix that the order for our arrest had been suspended, but that the order for the suppression of the publication of the "World" and "Journal of Commerce" had not been rescinded, and that we could not be permitted to enter into our offices, which continue under the charge of the military guards.

We protest against this proceeding. We protest against the assumption of our complicity with this shameless forgery, implied in the order for our arrest. We protest against the suppression of our journal for the misfortune of being deceived by a forged not less ingenious nor plausible than the forged report of the Confederate Secretary of War, which Secretary Seward made the basis of diplomatic action. **PRIME, STONE, HALE & HALLOCK,**

Journal of Commerce.

New York, May 16, 1864. **MANTON MARBLE, World.**

At the same time the office of the Independent Telegraph Line, in New York, was occupied by a military force in the name of the Government. The operators were taken into custody and all business at once suspended. The offices of the company in Philadelphia and Pittsburg were also closed.

It was on Wednesday morning, the 18th, that the following spurious proclamation appeared in the above-named sheets, and it was only by superior vigilance, or some fortunate circumstances, that its appearance in nearly all the city papers at the same time, did not take place:

EXECUTIVE MANSION, May 17, 1864.

Fellow-Citizens of the United States:

In all seasons of exigency it becomes a nation carefully to scrutinize its line of conduct, humbly to approach the throne of Grace, and meekly to implore forgiveness, wisdom, and guidance.

For reasons known only to Him, it has been decreed that this country should be the scene of unparalleled outrage, and this nation the monumental sufferer of the nineteenth century. With a heavy heart, but an undiminished confidence in our cause, I approach the performance of a duty rendered imperative by my sense of weakness before Almighty God and of justice to the people.

It is not necessary that I should tell you that the first Virginia campaign, under Lieut.-Gen. Grant, in whom I have every confidence, and whose courage and fidelity the people do well to honor, is virtually closed. He has conducted his great enterprise with discreet ability. He has crippled their strength and defeated their plans.

In view, however, of the situation in Virginia, the disaster at Red River, the delay at Charleston, and the general state of the country, I, Abraham Lincoln, do hereby recommend that Thursday, the 28th day of May, A. D. 1864, be solemnly set apart throughout these United States as a day of fasting, humiliation, and prayer.

Deeming, furthermore, that the present condition of public affairs presents an extraordinary occasion, and in view of the pending expiration of the service of (100,000) one hundred thousand of our troops, I, Abraham Lincoln, President of the United States, by virtue of the power vested in me by the Constitution and the laws, have thought fit to call forth, and hereby do call forth the citizens of the United States, between the ages of (18) eighteen and (45) forty-five years, to the aggregate number of (400,000) four hundred thousand, in order to suppress the existing rebellious combinations, and to cause the due execution of the laws.

And, furthermore, in case any State or number of States shall fail to furnish by the fifteenth day of June next their assigned quotas, it is hereby ordered that the same be raised by an immediate and peremptory draft. The details for this object will be communicated to the State authorities through the War Department.

I appeal to all loyal citizens to favor, facilitate, and aid this effort to maintain the honor, the integrity, and the existence of the National Union, and the perpetuity of popular government.

In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington this 17th day of May, one thousand eight hundred and sixty-four, and of the Independence of the United States the eighty-eighth.

ABRAHAM LINCOLN.

By the President:

WILLIAM H. SEWARD, Secretary of State.

It was immediately contradicted by the Government as follows:

TO THE PUBLIC.

DEPARTMENT OF STATE, WASHINGTON, May 18, 1864.

A paper purporting to be a proclamation of the President, countersigned by the Secretary of State, and bearing date of the 17th day of May, is reported to this department as having appeared in the New York "World" of this date. This paper is an absolute forgery. No proclamation of this kind has been made, or proposed to be made, by the President, or issued, or proposed to be issued, by the State Department, or any other Department of the Government. WM. H. SEWARD, Secretary of State.

The excitement occasioned in the city was great, and gold advanced four or five per cent., and receded again when the spurious character of the paper was known. Its author was discovered and arrested during Friday, subsequent to which the journal and telegraph offices were surrendered to their proprietors.

The telegraph company received the following certificate from the Secretary of War:

WASHINGTON, May 24, 1864.

SIR: The investigation of this department relieves your company of all suspicion of being concerned with the transmission or publication of the recent forgery purporting to be a proclamation by the President, and countersigned by the Secretary of State. The satisfactory arrangements made by your company with this department will, I hope, do much toward inspiring the public with a just confidence in your telegraphic line, and the loyalty, prudence, and discretion of its management.

Your obedient servant,
EDWIN M. STANTON, Sec'y of War.

The author of the proclamation was ordered to be taken to Fort Lafayette, where he remained about three months, and was discharged without any public investigation or further punishment.

In relation to the seizure and suppression of the two newspapers, Governor Seymour, of New York, on May 22d, addressed the following letter to the District Attorney:

STATE OF NEW YORK,
EXECUTIVE DEPARTMENT, ALBANY, May 22, 1864 }
To A. Oakley Hall, District Attorney of the County of New York.

SIR: I am advised that on the 19th inst. the office of the *Journal of Commerce* and that of the *New York World* were entered by armed men, the property of the owners seized, and the premises held by force for several days. It is charged that these acts of violence were done without due legal process, and without the sanction of State or national laws.

If this be true, the offenders must be punished.

In the month of July last, when New York was a scene of violence, I gave warning that "the laws of the State must be enforced, its peace and order maintained, and the property of its citizens protected at every hazard." The laws were enforced at a fearful cost of blood and life.

The declaration I then made was not intended merely for that occasion or against any class of men. It is one of an enduring character, to be asserted at all times and against all conditions of citizens, without favor or distinction. Unless all are made to bow to the law, it will be respected by none. Unless all are made secure in their rights of person and property, none can be protected. If the owners of the above-named journals have violated State or national laws, they must be proceeded against and punished by those laws. Any action against them outside of legal procedures is criminal. At this time of civil war and disorder, the majesty of the law must be upheld, or society will sink into anarchy.

Our soldiers in the field will battle in vain for constitutional liberty if persons, or property, or opinions are trampled on at home. We must not give up home freedom, and thus disgrace American character, while our citizens in the army are pouring out their blood to maintain the national honor. They must not find, when they come back, that their personal and fireside rights have been despoiled.

In addition to the general obligation to enforce the laws of the land, there are local reasons why they must be upheld in the city of New York. If they are not, its commerce and greatness will be broken down. If this great centre of wealth, business, and enterprise is thrown into disorder and bankruptcy, the National Government will be paralyzed. What makes New York the heart of our country? Why are its pulsations felt at the extremities of our land? Not through its position alone, but because of the world-wide belief that property is safe within its limits from waste by mobs and spoliation by Government. The laborers in the workshop, the mine, and in the field, on this continent and in every other part of the globe, send to its merchants, for sale or exchange, the products of their toil. These merchants are made the trustees of the wealth of millions living in every land, because it is believed that in their hands property is safe under the shield of laws administered upon principle and according to known usages.

This great confidence has grown up in the course of many years by virtue of painstaking honest performance of duty by the business men of your city. In this they have been aided by the enforcement of laws based upon solemnly-recorded pledges that "the people's right to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures, shall not be violated, and that no one shall be deprived of liberty or property without due process of law." For more than eighty years have we as a people been building up this universal faith in the sanctity of our jurisprudence. It is this which carries our commerce upon every ocean, and brings back to our merchants the wealth of every clime. It is now charged that in utter disregard of the sanctity of that faith, at a moment when the national credit is undergoing a fearful trial, the organs of commerce are seized and held, in violation of constitutional pledges, that this act was thus done in a public mart of your great city, and was thus forced upon the notice of the commercial agents of the world, and they were shown in an offensive way that property is seized by military force and arbitrary orders. These things are more hurtful to the national honor and strength than the loss of battles.

The world will confound such acts with the principles of our Government, and the folly and crimes of officials will be looked upon as the natural results of the spirit of our institutions. Our State and local authorities must repel this ruinous interference. If the merchants of New York are not willing to have their harbor sealed up and their commerce paralyzed, they must unite in this demand for the security of persons and property. If this is not done, the world will withdraw from their keeping its treasures and its commerce. History has taught all, that official violation of civil law and disorder goes before acts of spoliation and other measures which destroy the safeguards of commerce.

I call upon you to look into the acts connected with the seizure of the *Journal of Commerce* and of the *New York World*. If these acts were illegal, the offenders must be punished. In making your inquiries and in prosecuting the parties implicated, you will call upon the Sheriff of the county and the heads of the police department for any needed force or assistance. The failure to give this by any official under my control, will be deemed a sufficient cause for his removal.

Very respectfully, yours, &c.,

HORATIO SEYMOUR.

On receiving these instructions the subject

was referred to the Grand Jury of the city and county, by the charge of the Judge of the court. This body reported that it was "inexpedient to examine into the subject." The Governor then further instructed the Attorney as follows:

EXECUTIVE CHAMBER, ALBANY, June 25, 1864.

A. OAKLEY HALL, Esq., *Dist. Att'y of the City and County of New York*:

SIR: In the matter of the seizure of the offices of the *World* and *Journal of Commerce*, the Grand Jury, in disregard of their oaths "to diligently inquire into and true presentment make of all such matters and things as should be given them in charge," have refused to make such inquiries, and declare that "it is inexpedient to examine into the subject referred to in the charge of the court," with respect to such seizures. It becomes my duty under the express requirements of the Constitution "to take care that the laws of the State are faithfully executed." If the Grand Jury, in pursuance of the demands of the law and the obligations of their oaths, had inquired into the matter given them in charge by the court and the Public Prosecutor, their decision, whatever it might have been, would have been entitled to respect. As they have refused to do their duty, the subject of the seizure of these journals should at once be brought before some proper magistrate. If you wish any assistance in the prosecution of these investigations it will be given to you.

As it is a matter of public interest that violations of the laws of the State be punished, the views or wishes of the parties immediately affected must not be suffered to influence the action of public officers. If through fear or other motives, they are unwilling to aid you in getting at facts, it will be your duty to compel their attendance as witnesses in behalf of the people.

Respectfully, yours,

HORATIO SEYMOUR.

On the 28th of June the District Attorney made an affidavit before A. D. Russell, a Judge of the City and County, by whom subpoenas for witnesses were issued. Upon hearing the testimony of the witnesses warrants were issued for the arrest of Maj.-Gen. John A. Dix, Capt. Barstow, Maj. Bowles, Capt. Cundy, and Lieut. Tuthill, and placed it in the hands of the sheriff.

The parties voluntarily appeared by their counsel on July 6th, and the argument on the case was set down for the 9th, and the parties were relieved from custody on the parole of Gen. Dix. Ex-Judge Pierrepont, who appeared for the defence, said: "Since this warrant was issued, the President of the United States has issued another order to Gen. Dix, which he came to see me upon late last night, which directs him that while this civil war lasts he must not relieve himself from his command or be deprived of his liberty for obeying any order of a military nature which the President of the United States directs him to execute." On the next day instructions were sent by Gov. Seymour to the district-attorney to enforce the laws of the State, irrespective of the alleged orders of the President to Gen. Dix to resist the process of the court.

On July 9th the argument was made before City-Judge A. D. Russell. The case was opened by ex-Judge Pierrepont, who made a statement of the facts, and read the order of the President

to Gen. Dix, directing the arrest of the editors of the *World* and *Journal of Commerce*, and the closing of their respective offices.

There was no question that Gen. Dix had performed his duty with delicacy and courtesy, and released the persons and premises as soon as notified of their innocence. Mr. Hall objected to the reception of the orders of the President as a defence on the part of Gen. Dix. They admitted such orders to be in existence, but claimed that they could not be used as a part of the case.

Mr. Evarts said that all they wanted was the fact to appear that these orders were the basis on which Gen. Dix acted.

The Judge remarked that he would note the objections, and pass upon their force at the conclusion of the case.

Ex-Judge Pierrepont said that if, after hearing all the facts in the case, his Honor came to the conclusion that an offence had been committed against the laws of the State, Gen. Dix would bow to the supremacy of the law. If, at his age, so loyal a man as Gen. Dix had been guilty of kidnapping and inciting to a riot, then it was time he was punished. When the grand jury had declined to indict, then the majesty of the law ought to have been satisfied. With respect to what the attorney-general had said respecting that these Northern States were in no state of war, he must differ. We were no separate sovereignties, but all part of a great nation, in whose midst it would be confessed there was no foreign war, but a great and vast civil war. Though there was no martial law in Pennsylvania, yet when the rebels were in Chambersburg would it be deemed that the State of Pennsylvania was in a state of war? "No state of war in the Northern States!" What meant then the trappings of woe on every third house in this great city? What meant then the sable weeds which clothed the forms of those who thronged Broadway? Did famine cause this woe? Did pestilence form this grief? No state of war! Let the learned attorney-general carry the glad tidings that New York was in a state of peace to one thousand of bereaved families. In whom did the great war-power exist if not in the President of the United States? "Ah," cried his learned friend, "but he is a dictator." That was a fanciful cry. If he usurped his power impeach him, remove him, assassinate him; but do not trammel this Government in their efforts to overcome this great, mighty, and stupendous rebellion. He had nothing to say about the action of the President—all he had to do was with Gen. Dix. All the court had to do was to determine whether Gen. Dix, in obeying the orders of the Chief Executive like a soldier and a patriot, had kidnapped his fellow man and incited a riot in this city. In a case growing out of the Dorr rebellion, the doctrine had been clearly laid down that the President had the war-power, and might use all his authority under that power.

After some further observations, Mr. District-Attorney Hall said he was glad to agree with his learned friend that they were before a fearless Judge. His Honor was not sitting there to find out whether the accused was guilty or not, but simply to find out whether probable cause existed to believe Gen. Dix had committed an offence against the State.

Mr. Hall, after referring to the facts in the case, and insisting they established—1. Inciting to a riot; 2. Forcible entry and detainer; 3. False imprisonment, proceeded to argue that the orders of President Lincoln were inadmissible in evidence. He read the section:

SEC. 4, March 3, 1863, chap. 61, laws of thirty-seventh Congress.—"And be it, &c., that any order of the President, or under his authority, made at any time during the exist-

ence of the present rebellion, shall be a defence in all courts to any action or prosecution, civil or criminal, pending or to be commenced, for any search, seizure, arrest, or imprisonment, made, done, or committed, or acts omitted to be done under and by virtue of such order," &c.

He remarked that this act might be entitled "An act to authorize the commission of wrongs;" for the very next section speaks of them *eo nomine*, as applied to the case at bar, thus:

Sec. 5. *And be it further enacted*, That if any "criminal prosecution" has been commenced in any State court against any military officer, for any wrong done by virtue of any authority derived from the President of the United States, &c., &c.

On the defence he argued: 1. It cannot be disputed that each of the acts complained of was a trespass at common law. 2. If Congress possessed the constitutional power, by express statutory terms, to direct the defendants to commit the trespasses in question, Congress cannot constitutionally delegate that power to the President in such general terms as are employed in the section quoted. 3. Each of the acts complained of in this prosecution is repugnant and odious to the common law of England and the constitution of the United States, and the President's command to commit them was, therefore, still the command of a trespasser and a superior wrong-doer, and quoted *Little vs. Barreme* (2 Cranch, 179). The effect of the defence proposed is to set the Executive "higher" than the fundamental law. The plea for the orders is probably to be found in the President's reply to the address of the Chicago clergy, 1862, viz.: "As Commander-in-Chief of the Army and Navy, in time of war I suppose I have a right to take any measure which may best subdue the enemy." But the plea is a bold defence of usurpation. Mr. Hall adroitly quoted from the Republican address at Pittsburg, February 22, 1856, which well says on this head: "All usurpations in countries professing to be free must have the color of law for its support. No outrage committed by power upon popular rights is left without some attempts at vindication. The partition of Poland, the overthrow of the constitution of Hungary, the destruction of Irish independence, &c., &c., were consummated with a scrupulous observance of the forms of law." The effect of the section is to delegate to the Executive the right to practically legislate the exception to an act else unlawful. Congress generally authorized him to perform unknown, illimitable, immeasured, boundless wrongs, and he is to select or create the specialities of them. Caligula wrote his laws, but hung them up so high they could not be read, and the citizen was punished when he could not know the law. But Congress does not even specify the law. It allows the President to frame it within his own breast, and apply it after an offence has been committed. Suppose the President should, by telegraph, order Marshal Murray to arrest Gov. Seymour, and if he resisted, shoot him. Suppose the Governor did resist, and the Marshal killed, and was tried in Albany for homicide, would that order absolve him? A legislative body, when it clothes with legality an act otherwise unlawful, must specify the act. A New York legislature might grant the corporation of this city power to legalize or permit an otherwise nuisance by specifying it. Could it grant such power by saying "may permit any nuisance"? When a legislative body acts specifically, but makes its enactments contingent upon an event beyond its control, that enactment is unconstitutional, because its power is *sub modo* delegated (quoting *Barto vs. Himrod*, 8 New York, 496). When the editor of the *Louisiana Courier* published (Friday, March 8, 1815) the famous article about Gen. Jackson—martial law prevailing—the latter did not suppress the paper, but, upon obtaining from the editor the name of the writer, arrested him. At that time "New Orleans was a camp, and 'Judge' Hall a soldier." (2 Parton's Jackson, 814.) These seizures and destruction of

May, 1864, were clearly in the light of punishments in advance of investigation or trial. At this time New York was not a camp, and none of the parties who were injured were soldiers. New York was in full possession of all her civil immunities. The case of Gen. Jackson was one occurring within warlike lines, and in the presence of an enemy. It was a case of military necessity, *per se*.

He further said: I understand our opponents to claim that the arrest and seizures were made by virtue of overruling military necessity, because New York was at war as an integral portion of the Union, and he claimed that this "overruling military necessity" cannot occupy a better vantage ground than that held by martial law; that as martial law cannot operate beyond the field of actual warlike operations, no more can "military necessity," and that both are unconstitutional unless in face of an enemy or of insurrectionists. (*Luther vs. Borden*, 7 Howard United States, 46.) "Even where there is martial law, and it is exercised for the purposes of oppression, or any injury is wilfully done to person or property, the party by whom, or by whose order it is committed, would undoubtedly be answerable." (*Ibid.*, p. 46.) But there is no ground for saying that New York city, in May, 1864, was in a legal condition to allow of military necessity. Can martial law and civil exist together? To be sure the President, in his recent Kentucky proclamation, assumes this legal coexistence; but in what treatise on international law is the assumption substantiated? Not in Halleck. Nor is it compatible with their nature. This is clearly indicated by the course of reasoning of the United States Supreme Court, in *Luther vs. Borden*, 7 Howard—a case under the Dorr rebellion. Will any one be bold enough to say, in view of the history of our ancestors and ourselves, that the President of the United States can extend martial law over the entire country or over any defined geographical part thereof, save in connection with some particular military operations which he is carrying on there? (Curtis [ex-Judge] on *Ex. Power*, p. 23.) The prize cases are relied upon by our opponents (2 Black, U. S. Rep., p. 685), to prove that the whole nation is in a state of war. But the prosecution claim that the decision in question expressly limits the lines of war within the lines of bayonets and blockading squadrons—leaving all beyond such lines within the unfettered exercise of the civil power. New York is no more at war than she was during the whiskey insurrection or the Dorr rebellion. But, suppose the point be conceded, then, it is argued that when we were engaged in war with England, the courts of this State decided that the law of military necessity could not constitutionally act upon the citizen, but only upon the soldier. During the last war with Great Britain Chief-Justice Kent discharged a military prisoner held by Gen. Morgan Lewis. The prisoner was named Samuel Stacy, Jr. Commodore Chauncey verbally ordered one Captain Smith to arrest Stacy for being treasonably connected with the enemy. Smith delivered him to Gen. Lewis, who confined him, through his provost marshal, under the following order: "Receive into custody, &c., Samuel Stacy, charged by the said commodore with an act of high treason against the Government of the United States, committed within the territory of the King of Great Britain. J. Chambers, Ass.-Adj.-Gen." In delivering the opinion (10 John. 381), Judge Kent recognized the fact that a commander-in-chief had no more lawful authority to hold all the citizens of the entire country outside of the sphere of his actual operations in the field amenable to his military edicts, than he had to hold all the property of the country subject to his military requisitions; that he is not the military commander of citizens of the United States, but of its soldiers. To the same effect has the argument of Senator Linn, on the bill to refund Jackson's fine (14 Ben., p. 627). In parity of illustration are *Huckle vs. Money* (2 Wilson, 206), and *Sir Chas. Gould's*

case (3 Hen. Bl. Rep., p. 98). Unless, therefore, the plea of military power overriding the fundamental law from the necessities of a present and overwhelming warlike force can be sustained, then the acts of the President were unconstitutional. Because he arrested "without due process," and "his seizures were unreasonable." But the constitutional question has been expressly determined in favor of the prosecution by the Supreme Court of Indiana. The court held the section in question unconstitutional. (*Griffin vs. Wilcox*, 21 Indiana; 870.) Mr. Hall read this case at length, especially emphasizing this passage: "If those sacred rights, among which are the liberty of speech, of the press, and freedom of elections—which are the three great bulwarks of free institutions—are to be stricken down and permanently destroyed by armed force; or if that force is not to be used to restore the just authority of our once glorious Government, but merely to establish, by wading through seas of blood, a single consolidated Government, having for its corner-stone certain chimerical ideas of philanthropy, fraternity, and equality, social and political, of all races of men without respect to color, then it might not be so readily conceded that imperative necessity would require that the force should be kept up solely for such purpose."

Attorney-General Cochrane, after a brief allusion to the importance of the case, proceeded in an elaborate argument to give his views upon the questions at stake. The order of the President having been interposed as a justification for the act of his agent, the question was whether the agent was justifiable for that act by virtue of the order of the President. Gen. Cochrane then quoted apposite passages from the Constitution of the United States, defining the duties of the President and the restrictions put upon him as to abridging the liberties of the press and the people by the amendments to that instrument. The passages which he quoted he contended had prohibited in language as strong as could be used the act which abridged the freedom of the press or which inhibited the liberty of the press without due process of law. He might be answered that the letter of the record was to that effect, but the spirit of the Constitution was to the effect that the President was empowered by the law of Congress, and that such authority was duly and properly exercised. He (General Cochrane) refused the suggestion, and denounced it as treasonable to the rights of the people and ruinous to general liberty. The speaker then gave a succinct history of the nature of martial law from the earliest period of English history down to our own time. He contended that as there was no power within the Constitution, and as the history of antecedent and contemporary time proved that it was not intended there should be any power, either in the Congress or in the President to declare martial law, the act of Mr. Lincoln, under which Gen. Dix justified himself, was unjustifiable, and had no foundation in law or warrant in the Constitution.

Gen. Cochrane passed to the consideration of the question whether the President in any other constitutional capacity than that of a civil officer, was endowed with the power, under any circumstances, of proclaiming martial law. He quoted reliable authorities to sustain his position that no martial law can prevail without proclamation, and that, in the language of the Duke of Wellington, martial law was no law at all.

In conclusion Gen. Cochrane contended that in order to justify the proclamation of martial law it was not sufficient that the country should be in a state of war, but that the particular district should be invaded and the courts suspended.

Wm. M. Everts made the closing speech, contending that the suspension of the writ of habeas corpus conferred upon the President ample power to do whatever he thought was necessary for the preservation of the country in time of war.

The decision of the Judge was delivered on Aug. 1st. After a careful examination of the matter, he concluded to hold Gen. Dix and those concerned with him in executing the mandates of the President subject to the action of the grand jury of the city and county. He said:

It is unnecessary for me, in deciding this matter, to rehearse the facts of this case. The defendants, through their counsel, place themselves under the protection of section 4 of the Act of Congress of March 8, 1868, entitled "An act relating to habeas corpus, and regulating judicial proceedings in certain cases." If that provision is constitutional, it assimilates the President of the United States, during the existence of the present rebellion, to an absolute monarch, and makes him incapable of doing any wrong. This is a very novel and startling doctrine to advance under a republican form of government.

I have given the case a most careful consideration; on the one hand, seeking to avoid an undue interference with the agents of the Government in the performance of their duty, and, on the other, keeping before me my own obligation to uphold and enforce the laws of this State. I do not deem it proper to state in detail the view I entertain upon the legal principles so ably discussed before me by the counsel on both sides. Such an exposition of the law would be more appropriate should the case come before the court for trial. It strikes me, however, as a fit occasion to enable the great questions of time involved in it to be brought up in such a shape as to admit of their being absolutely and finally settled.

No further proceedings have taken place in the case.

The defendants placed themselves under the protection of Section 4 of the Act of Congress of March 8d, 1868, entitled "An act relating to habeas corpus and regulating judicial proceedings in certain cases." (*See ANNUAL CYCLOPEDIA*, vol. 1868, p. 255.)

The following are some further incidents connected with the publication of newspapers during 1864:

Constitution and Union, Fairfield, Iowa. Destroyed February 8, 1864.

Crawford Democrat, Meadville, Penn. Mobbed February 5, 1864. Saved by editor's defense.

Northumberland Democrat, Penn. Destroyed by mob, February 7, 1864.

Volksblatt, Belleville, Missouri. Destroyed a second time, May 18, 1864.

Democrat, Sunbury, Penn. Mobbed January 18, 1864. Office destroyed. Property stolen.

Eagle, Lancaster, Ohio. Mobbed February 8, 1864. Partially destroyed.

Mahoning Sentinel, Youngstown, O. Mobbed January 28, 1864. Attempt to assassinate the editor. Office totally destroyed.

Crisis, Columbus, Ohio. Threatened February 15, 1864. Saved by being armed.

Statesman, Columbus, Ohio. Threatened February 15, 1864. Saved by being armed.

Democrat, Laporte, Indiana. Destroyed February 15, 1864.

Democrat, Wauson, Ohio, destroyed Feb. 20, 1864.

Advertiser, Lebanon, Penn., attacked March 15, 1864; defended successfully.

Dayton Empire, Dayton, Ohio, completely destroyed March 8, 1864.

Picket Guard, Chester, Ill., totally destroyed August 20, 1864.

Herald, Franklin County, Indiana, demolished March 20, 1864.

Democrat, Greenville, Darke County, Ohio, demolished March 5, 1864.

Union, Louisiana, Mo., destroyed March 6, 1864.
St. Mary's Gazette, Leonardtown, Ind., warned April 12, 1862.

Picayune, New Orleans.

Courier, New Orleans, suppressed May 23, 1864, and editors banished for republishing the bogus proclamation received via Cairo. The order was never revoked.

Metropolitan Record, New York, circulation forbidden at the West, March 26, 1864.

Transcript, Baltimore, Md., suppressed May 18, 1864, for publishing a despatch saying the loss of the Army of the Potomac was not less than seventy thousand, and crediting it to the Associated Press.

Democrat, Cambridge, Md., suppressed September 9, 1864.

Metropolitan Record.

Freeman's Journal, burned at Nashville, September 12, 1864.

Democrat, Gallatin County, Ill., editors seized and imprisoned August 19, 1864.

Crisis, Columbus, O., editor seized and imprisoned May 10, 1864.

Register, Wheeling, Va., editors seized, paper suppressed July 20, 1864.

Journal, Belfast, Me., editor seized August, 1864.

News, Memphis, Tenn., suppressed July, 1864.

Bulletin, Baltimore, Md., suppressed July, 1864.

Gazette, Parkersburg, Va., editor seized by Gen.

Hunter, July 27, 1864.

Kentucky, June, 1864, all Democratic papers excluded the State.

All Democratic newspapers excluded from Memphis (except the *Missouri Republican*) September 16, 1864.

On September 30th, the "*Loyalist*" at Baltimore was discontinued by order of Gen. Wallace, and on November 29th, the "*True Presbyterian*" at Louisville, by order of Gen. Burbridge.

FRY, WILLIAM HENRY, an American musical composer and editor, born in Philadelphia in August, 1815, died at Santa Cruz, W. I., December 21, 1864. He received his early education partly at the schools of his native city and partly at the Roman Catholic College of Mount St. Mary's at Emmitsburg, Md. His first orchestral compositions were four over-

tures performed by the Philharmonic Society of Philadelphia, for which he was complimented with an honorary medal. In 1845 he wrote the opera of "*Leonora*," which was produced by the Seguin company at the Chestnut Street Theatre in the month of June of that year, and an Italian version was performed at the Academy of Music in New York in the spring of 1858. After a connection of several years with the Philadelphia press, in 1846 Mr. Fry visited Paris and other European capitals, where he remained for six years. His correspondence from the former city with the "*N. Y. Tribune*" attracted not a little attention. After his return to this country in 1852, he delivered in New York a remarkable series of lectures on the history of music, illustrated by two new symphonies of his own composition, which, with two other symphonies, "*Santa Claus*" and "*Ohilde Harold*," were soon after played by M. Jullien's orchestra in many of the principal cities of the United States. His next original work was the music to an ode written for the opening of the Crystal Palace in New York in 1858. In 1855 he composed a "*Stabat Mater*" with full orchestral and vocal score for performance at the New York Academy. During the past year, his "*Leonora*" was produced with great splendor in Philadelphia for the benefit of the Fair of the Sanitary Commission. For the last twelve years Mr. Fry had been attached to the editorial corps of the "*Tribune*," and its columns richly attest his rare abilities as a critic. For several years he had been the victim of consumption, and had gone to Santa Cruz early in the autumn for the alleviation of his disease, though himself regarding his case as hopeless; but soon after arriving there his symptoms became alarmingly worse, and he finally succumbed to the fatal disease.

G

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES. The year 1864 has added less than some of the years which preceded it to our knowledge of the surface and productions of the earth. No great and long-concealed discovery has been made, no problem which had tasked the wisdom and research of ages has been solved; yet while so many active and enterprising students have been engaged in all parts of the world in investigating natural phenomena, in exploring unknown regions, and in examining carefully for new facts and new theories the already beaten paths of topographical research, many new facts have been gleaned, some new discoveries made, and the way opened for more.

Beginning, as usual, with our own CONTINENT, we notice the publication of Captain O. F. Hall's interesting narrative of his Arctic explorations. Allusion was made to some items of his discoveries in the volume of the ANNUAL

CYCLOPEDIA for 1863. He estimates the moral character and the intelligence of the Innuits or Esquimaux much higher than previous explorers have done, giving them credit for honesty, affection, quickness of perception, and docility. His experiences of arctic life were deeply interesting. In June, 1864, Captain Hall sailed again, and this time much better provided, for a further voyage and journey of exploration in the arctic regions. He has still strong hope of finding some of Franklin's men alive, believing that if they adopted the Innuitt mode of life, they might prolong their existence and even live in tolerable comfort for many years.

IN BRITISH AMERICA there has been little of geographical exploration to chronicle.

The British survey of Vancouver Island has been completed, and that of the coast of British Columbia vigorously prosecuted, and charts of the island survey published. Memoirs on both

were read before the Royal Geographical Society in 1864, that on Vancouver's Island being prepared by Dr. C. Forbes, Surgeon of the *Hecate*, H. M. Surveying ship, and that on British Columbia by Lieut. H. S. Palmer, R. E., who had been engaged in the survey. Dr. Forbes represents the climate of Vancouver as much like that of Great Britain, though rendered somewhat colder by the cold winds from the snow-clad hills of the Olympus range on the main land. The whole surface is reckoned at 12,000,000 acres, of which, however, only about 1,000,000 are suitable for culture or grazing. Coal is found in very considerable quantities, and of good quality. The timber is excellent, and the trees of immense size. There are several excellent land-locked harbors, the best being Esquimalt Bay, Nanaimo, and one in Tooke district abutting on San Juan de Fuca Straits. The harbor of Victoria, the present capital of the colony, is not so good, lacking depth, and having an unsafe anchorage. Nanaimo Dr. Forbes considered as destined to be the great centre of business. Lieut. Palmer, in his paper on British Columbia, described, with great clearness and beauty, the course of the Fraser River, the extensive mining region of Cariboo, with its confused congeries of hills of an altitude of 6,000 or 7,000 feet, thickly timbered, whence subordinate ranges radiated, and the gulches or streams descending from each in all directions. Gold was found throughout a district extending over 7° of latitude and 8° of longitude. The climate is disagreeable, the winter being long and the cold intense, and only two months in the year being bright and pleasant. A tract about 100 miles in breadth along the Fraser and its tributaries, is the only portion of arable land, but this is very fertile.

In the UNITED STATES the progress of the war has led to the production of some excellent maps and topographical charts of the regions traversed by the contending armies. The Cumberland range of mountains, and the spurs and auxiliary chains of mountains connected with it, have been more thoroughly explored than ever before, and their peculiar formation and characteristics carefully noted. These mountains are rich in mineral wealth. Iron (the hematitic ores), copper, gold, salt, and coal, are found in large quantities, and when peace returns they will doubtless prove attractive, from their mineral deposits, to a large and enterprising population. The geological and geographical survey of California has made progress during the year, under the energetic labors of Professor Whitney and his associates, and interesting discoveries have been made relative to the height of the peaks of the Snowy Range (the Sierra Nevada). It has been ascertained, very unexpectedly, that there are several of these peaks, some in California and others probably within the boundaries of Nevada, which exceed in height Mount Shasta, hitherto supposed to be the highest point in the United States. Of these Mount Tyndal, about lon. 118°, lat. 36° 30'

to 87°, is, according to the barometrical measurements of Messrs. King and Brewer, 15,090 feet high, Mount Shasta being 14,440. Mount Whitney, in the same vicinity, is over 15,000 feet, and perhaps a few feet higher than Mount Tyndall. The White Mountains, in the same meridian, but fifty or sixty miles further north, have one cone estimated at 14,600 feet.

Turning to Mexico, we find that the Franco-Austrian occupation of that country has been the means of inciting the publication of several treatises and maps, giving very full accounts of the topography, geography, soil, climate, and mineral productions of that country. None of these are narratives or charts of very recent explorations, but they possess considerable value from the thoroughness with which the investigations were prosecuted, and the minute and careful accuracy of the maps and charts. One of the most admirable of these works is a volume compiled by the Baron F. W. Von Egloffstein, and published by Messrs. D. Appleton & Company of New York, entitled "Contributions to the Geology and Physical Geography of Mexico, including a Geological and Topographical Map, with profiles of some of the principal Mining Districts, together with a graphic description of an ascent of the volcano Popocatepetl." The Topographical map was compiled by Charles de Berghes, and the Geological map and profiles by Frederick Von Gerolt, at the suggestion of Alexander Von Humboldt. The explanations were drawn up by Von Gerolt, and the account of the ascent of the volcano by him and his friend Baron L. Gros, who accompanied him. Views of the valley of Mexico from actual landscapes painted by Rugendas, also embellish the volume. The Geological and Topographical maps and profiles are inserted both plain and colored, according to the geological formations. These explorations were made in 1833 and 1834.

A series of interesting experiments made in 1863, by the late Raymond Thomassy, a Fellow of the French *Société de Géographie*, in regard to the saltiness of the Atlantic Ocean at different points, and also a memoir containing observations on the structure and geological character of the BAHAMA ISLANDS, were published in the November (1864) Bulletin of that Society. M. Thomassy ascertained, by careful exploration, that those islands are undermined by the ocean, and that the tides penetrate through the porous rocks (an Eocene chalk) which underlie them with every rise of the tide; and that at even a distance of a mile or more from the shores the wells rise and fall with the tide, and are either salt or brackish if of any considerable depth. M. Thomassy's observations on the saltiness of the ocean developed some remarkable facts. The saline constituents, instead of being constant in quantity, varied materially in different localities, and sometimes under circumstances which gave little clue to the diversity. It was of course to be expected that near the mouths of large rivers, or in the vicinity of harbors, the

water would contain less salt. His observations were made with Baumé's areometer. In lat. 27° N., lat. $74^{\circ} 10'$ west from Greenwich, the water showed $3^{\circ} 95'$ in the salometer. In lat. $31^{\circ} 17'$ lon. $66^{\circ} 21'$ W., or between 30 and 40 miles from the Bermudas, the salometer registered only $8^{\circ} 50'$. In lat. $51^{\circ} 10'$ N., lon. $14^{\circ} 47'$ W., the saltness was $4^{\circ} 10'$. In lat. $51^{\circ} 15'$ N., lon. $8^{\circ} 55'$ W., about eight miles from the lighthouse at Cork, it was $8^{\circ} 80'$, and when near the first floating light of Liverpool, at high tide, $8^{\circ} 20'$. These are but examples of thirty observations made in a voyage from Nassau to Liverpool.

The projects for an inter-oceanic canal to connect the Atlantic and Pacific Ocean, are still multiplying, and though some have been relinquished, others are taking their places. In all there have been eighteen distinct routes proposed for such a canal. Of these, eight have taken the river San Juan as their port of departure on the Atlantic side; the Pacific terminus being respectively the bay of Fonseca, the port of Realajo, the river Tamaruedo, Port Brito, San Juan del Sur, the bay of Salinas, the river Tampisque, and the Gulf of Nicoya, and the river San Carlos and the Gulf of Nicoya. The well-known Tehuantepec route proposed to cross higher up on the continent, west of the Peninsula of Yucatan, and the proposed route by the Gulf of Dulce and the river Ouyabon, coincided almost exactly with the boundary between Costa Rica and New Granada. Four routes have been surveyed across the Isthmus of Panama, two nearly parallel with the railroad, one taking advantage of the Chagres River, the other extending from Navy Bay to Panama Bay; one by the Trinidad and Cuyameto Rivers, and another near the 79th meridian west from Greenwich, from Port San Blas by the river Chepo. Three routes have been proposed, beginning in the Gulf of Darien; one by the Arquia and Tuyta Rivers, terminating in the Gulf of San Miguel; another by the Atrato and Truando Rivers, terminating in Humboldt Bay; and a third by the rivers Atrato and Tapipi, terminating in the bay of Cupica. Still another route in this vicinity, originally surveyed by Mr. Gisborne in 1852, has, during the year, been resurveyed by an eminent French engineer, M. Bourdiol, who reports very favorably upon it. This route, starting from the Pacific side in the Gulf of San Miguel, ascends the Savannah River to its confluence with the Lara, and thence crosses the Cordillera to the bay of Caledonia. The length of the canal would be about three miles, and the height to be surmounted about 500 feet.

IN SOUTH AMERICA, the greater share of interest, as connected with geographical exploration, centres in the more southern States of the continent. An effort is making by an American company, under the sanction of the U. S. Government, to establish navigation on the *Orinoco*, and to explore the higher waters of that river; and a prominent citizen of Venezuela, Don J.

M. Torres Caicedo, has attempted to interest the French Government in the enterprise. In his memorial, he states that the basin of the Orinoco has an extent of 800,000 square miles, that it has 400 navigable affluents, and that by way of its tributary the Meta, it not only connects with the entire river system of New Granada, east of the Andes, but also, through the Cassiquiare and Negro, with the Amazons and its navigable branches, and that a steamer can sail from the mouth of the Orinoco by its connections to southern Brazil or the centre of Bolivia. In the valley of the Orinoco, or its immediate vicinity, are found gold both in placers and veins, mines of copper, tin, coal, uranium, and quicksilver, petroleum springs, deposits of sulphur, sulphate of lime (plaster of paris), chalk, asphaltum, and jade, rock crystal, and garnets. The forests of this region abound in mahogany, ebony, rosewood, Brazil wood, guaiacum, fustic, vanilla, sarsaparilla, and all kinds of resins, balsams, and gums. The cotton of the country is of good quality, and the soil is admirably adapted to its cultivation. This region, as well as the upper tributaries of the Amazons, have been very fully explored by Mr. Richard Spence, an English geographer, who has spent fifteen years in investigating the commercial possibilities of the country.

Don Antonio de Raimondi, the Peruvian geographer, has communicated to the Royal Geographical Society some further memoirs relative to Loreto. The eastern slope of this province is drained by the Marañon, the Hualaga, and the Ucayali and their affluents, most of them navigable. The mineral products of the region are rock salt, sulphate of lime, alum, sulphur, iron ore, lignite, and some gold. The production of beeswax, and of straw goods from the Panama grass, are the principal industries carried on by the very sparse and scattered population which, with the exception of Moyabamba, the capital of the province, which has a population of about 8,000 souls, does not exceed one person to every four square miles.

Height of the principal Peaks of the Bolivian Andes.—On this question, Petermann's Mittheilungen for January, 1864, gives the following corrected table, which may be accepted as the latest and most accurate statement on the subject. Sir David Forbes, the English geologist, is its authority, though Ondarza's chart of the Andes has also been compared. The heights are given in English feet:

	Feet.
Illampu or Sorata.....	24,812
Illimani.....	24,156
Sajama (volcano).....	23,014
Chololo (in Apolobamba).....	22,874
Huayna Potosi.....	21,889
Cachacomani (volcano).....	21,558
Quennata { (volcanoes).....	21,222
Chepicaní } wood mountains of Tacora.....	22,957
Mururata.....	20,418
Callinani.....	20,580
Potosi.....	15,724
Tunari de Cochabamba.....	15,008
Hermoso de Aullagas.....	15,747
Portugaleiti.....	14,720
Espejo.....	9,287
Misti (a volcano of Arequipa, Peru).....	20,150

The scientific commission appointed by the Brazilian Government to explore the interesting mining region of Matto Grosso, and to report upon the best modes of access to it, have returned and sent in their report, which has not yet been published. It is understood, however, that they found it accessible through the Joinheima, an affluent of the Parana, and its tributary, the Brilhante, both navigable streams. The Government of Brazil, though now attempting to act with more liberality and a wiser policy than formerly, has hitherto pursued an extremely narrow and impolitic course in relation to the navigation of its great river, the Amazona, prohibiting in effect any maritime power from ascending it except in Brazilian vessels. There is reason to believe that the monopolies and restrictions hitherto maintained, and which have proved so injurious to its own prosperity, will ere long be removed.

A Brazilian engineer, Senhor da Silva Coutinho, has, during the year, explored the Purus, one of the larger affluents of the Amazona, and ascertained that it does not, as had been reported, communicate with the Madeira River. Mr. Nathaniel Plant, an English traveller, who has been exploring the Province of Rio Grande do Sul, has discovered the existence of extensive beds of excellent coal in the basin of the Jaguarao, and its two affluents, the Candista and the Tigre, navigable streams which discharge their waters into a lake near the Atlantic coast.

The Argentine Confederation has been for the past few years a favorite region of study with European and American geographers. No one has been more patient and indefatigable in his researches than the French geographer, Dr. Martin de Moussy, who has spent twenty-two years in the exploration of this country, and who during the past year has given to the public the results of his patient investigations in a work of three 8vo volumes, (accompanied by an atlas) entitled *Description géographique et statistique de la Confederation Argentine*, a work of great merit and interest, which fairly exhausts the subject of the physical geography, minerals, vegetable and animal productions, population, resources, government, and history of the Confederation in general, and of each of its provinces. The climate he regards as eminently salubrious, and the soil is rich and fertile. The pampas or prairies are, for the most part, productive of rich and nutritious grasses, though the clay lands are often covered with the mimosa and different species of cactus. The lack of forests in extensive districts he attributes rather to the dryness of the air, the constancy of the wind in a single direction, and the want of rain, than to any deficiency in the soil. Wherever trees are planted in any considerable numbers on the pampas they grow and flourish. The population of the confederation is largely European. Nearly 150,000 Italians have emigrated thither within the past twenty-five years, and they still continue to

come in large numbers. There are also considerable German colonies. In a memoir read before the French *Société de Géographie*, in June, 1834, M. de Moussy gave some account of a journey he had made a few months previous to the Indian frontier of Buenos Ayres (now again one of the States of the Confederation). This frontier now extends from near Cape Corrientes along the northern slope of the Vulcan Mountains to the foot of the Andes. It has only been within the past four or five years that the Indians have yielded the territory south of the Southern Salado River to the whites. The amalgamation of the white and red races, the awakened and developed intelligence of the Indians, who are really a race of high character and abilities, the desire for the education of their children, and the more winning manners of the Italians and Germans, whom they do not regard so much their hereditary enemies as the Spaniards, have tended to influence these independent and brave Araucanians, Querandis, and Guaranis, to abandon their predatory life, and settling down to the cultivation of the soil, to endeavor to vie with the whites in the arts of peace. The coming over of several of their chiefs to an alliance with the whites has greatly aided in this change. The Confederation has also planted some colonies and small forts far within their territory, as for instance at Bahia Blanca, Carmen, St. Matthias Bay, and Fort Villarino.

An enterprising Englishman, Mr. Wheelwright, has interested English capitalists in the matter of opening the remote provinces of the Confederation to a market, and by the assistance of the Government of the Confederation, has already constructed a railroad from Rosario to Cordova, and proposes to continue it through Tucuman, Salta, Jujuy, and into Bolivia, and also to extend a line westward from the La Plata to Mendoza, to cross the Andes there into Chile. In this connection the various enterprises recently undertaken to find a practicable route across the Andes, assume a greater significance. It is supposed that the pass south of Mendoza, about lat. 34° 40' south, will be the most feasible for railroad purposes. This pass, though having an altitude of 6,000 feet above the sea-level, is approached by a gradual slope, and in that latitude is not liable to serious or permanent obstruction by snow. It was known, though until recently it had been forgotten, that during the last century the Jesuit fathers succeeded in crossing the Andes at points still further south, in lat. 39°—41°, and that the passes by which they then crossed were much lower and more practicable. Since that time, however, the Indian tribes had jealously guarded these passes against the intrusion of white men, and it was not until 1868 that exploring parties have been able to obtain access to most of them. In 1856 an engineer and a German physician from Chili, MM. Fonck and Herz, made an attempt to cross by way of Lake

Llanquihue, Lake Todos los Santos, and Lake Naguelhuapi. They were successful, though encountering great difficulties, and passing over the mountain at an elevation of about 4,800 feet. On their return they found that by ascending the Rio Frio (a stream originating from the glacier of El Tronador, and feeding Lake Naguelhuapi) for a distance of nine miles, they could pass through the valley of Perez Rosales, and thus effect a passage at an elevation of not more than 2,780 feet.

A young Chilian, Don Guillermo Cox, determined to find a still more feasible route, but crossing first by the pass which Messrs. Fonck and Herz had discovered, descended the Rio Negro, a river 700 miles in length, discharging into the Atlantic, and having its source in Lake Naguelhuapi. The stream, though having considerable descent and some rapids, was navigable from the lake; but at a distance of about eighty-five miles from the lake his frail boat was shipwrecked by striking a rock, and he and his companion escaped only to be made prisoners by the Indians, who, however, were speedily pacified by his playing upon a flageolet, and suffered him to go back to Valdivia to obtain some presents to redeem himself and his friend. He availed himself of the opportunity to explore other routes, and to learn from his Indian companions particulars in regard to them. The most practicable he believed to be that of Bar-eloché, in about lat. 41°, passing south of El Tronador, but terminating in Lake Naguelhuapi. It is about seventy-five miles in length from the mouth of the Petrohue, where it commences, to the lake, but it is so easy that the Indians pass it daily with their beasts of burden. Its altitude is believed not to exceed 2,500 feet. He also obtained full information of three other passes. One from Lake Ranco, through the valley of Sifen, which eventually reaches through a considerable forest one of the affluents of the Rio Negro. This is a little below the line of 40° south latitude; another, the pass of Villa Rica, about lat. 39° south, follows the Tolten, a Chilean river, up to its source in Lake Villa Rica, thence passing through the narrow valley of Villa Rica, passes down the valley of the Huechum, a tributary of the Encarnacion, one of the affluents of the Rio Negro. This pass, a convenient one and not of great altitude, is carefully guarded by the Indians, and no white man has been allowed to pass through it during this century. The third pass, that of Rinihue, is very remarkable, and has been explored also by Mr. William Frick, a German engineer, but is too narrow to be of much service, and the streams which unite to form it are mere mountain torrents, and none of them navigable. The physical conformation of this pass is very peculiar. The Lake Rinihue is one of a chain of lakes lying along the western versant of the Andes, of which the principal are Lakes Villa Rica, Calafquen, Panguipulli, Rinihue, Ranco, Puyegua, Rupunco, and Llanquihue, nearly all

of them connected with each other, and at the same time with streams falling into the Pacific; but the Lake Rinihue is also connected with a chain of lakes crossing the Andes by a stream having a rapid descent; and while the principal outlet of that lake is the Valdivia River, flowing into the Pacific, it also finds an outlet through Lake Pachucico and Lacar, eastward, and it is said into one of the affluents of the Rio Negro, though this is somewhat uncertain.

In Chile, the eminent geographer M. Pissis, of Santiago, has continued to prosecute his geodesic investigations in regard to the summits of the Andes within that republic, and has developed recently two interesting facts, one that Aconcagua has wrongly been placed among the volcanoes, a fact which the English geologist Sir David Forbes has also ascertained concerning Sorata and Illimani in Bolivia. Neither of these three summits manifest any evidences of volcanic action. M. Pissis has also definitively settled the height of Aconcagua at 22,422 feet. The Chilean Government has continued to establish and strengthen its colonies in Southern Chile or Araucania, and has now new but strong settlements at Mulchen (mostly of German emigrants), at Lebu and Augol.

In Europe the geographical progress of the year has consisted mainly in the new and more complete geographic, geologic, and geodesic surveys of the principal States, in the fixing by new observations the height of some of the mountain summits, and in the measurement of several arcs of meridian of greater or less extent. Among the most admirable contributions made to geographical science during the year, are Petermann's series of Physical and Statistical Charts of the empire of Austria, nine in number, and comprising the hydrography, orography, geology, climatography, hyetography, ethnography, population, religions, agriculture, manufactures, and mines of Austria. By a skilful use of the colors of chromo-lithography he has succeeded in presenting all these points to the eye in the most interesting and impressive manner. Mr. Petermann has also executed a bird's-eye view of Switzerland, giving by variety of colors the comparative elevation of each section, and a still more distinct chart of the region of the Upper Rhine from Glarus to Todi and Vorab, in which each increase of elevation of 1,000 feet is designated by a different shade of green.

In an essay on the geography of Switzerland accompanying these charts, Mr. Petermann gives extended tables of the meteorology, temperature, pressure of the atmosphere and winds of Switzerland, as well as statistics of the height of the mountains, population, wealth, and resources of the little Confederation. His statement of the nationalities, or rather of the national affinities of the Swiss, is as follows: 1,681,000 may be reckoned as Germans, speaking that language ordinarily; 540,000 French; 129,800 Italians; 42,400 Roumanians or gypsies.

The Ordnance and Admiralty surveys of the United Kingdom of Great Britain and Ireland have been vigorously prosecuted, and the Government has ordered a large cadastral survey of England, Wales, and Ireland, to correspond with that already undertaken for Scotland, on the scales of 25 inches and of 6 inches to the mile. The Ordnance survey have made a new measurement of several of the mountains of the Cairngorm group in Scotland, and give the height of Ben Macdhui, which has hitherto been stated as 4,390 feet, as only 4,296 feet. This restores the title of Ben Nevis to rank as the highest mountain in Great Britain, being, according to one measurement, 4,378 feet, and according to another 4,406 feet in height. The estuary of the Thames, the Scilly Islands, Bristol Channel, the Western Hebrides, and a part of the Channel Islands, have been surveyed during the year; the principal triangulation and the initial levelling of the United Kingdom have been published, and the triangulation of Great Britain having been connected with that of France and Belgium, the Russian astronomers Forsch and Jilinski have been engaged in the measurement of an arc of parallel in latitude 52° N., extending over about 79° of longitude. Denmark has continued the publication of its topographical survey, which is most admirably executed. The surveys in the Mediterranean and the Grecian Archipelago, under Capt. Spratt, O. B., and Commander Mansell, were vigorously prosecuted during the year, and Malta Channel, the bay of Tripoli, and the Island and Channel of Corfu completed.

In Russia there has been great activity in geographical research. The surveys connected with the measurement of an arc of meridian by Struve and Tenner, from the North Cape to the Black Sea, have been completed, and though Struve has passed away (*see* STRUVE, WILHELM) late in the year, other kindred spirits remain to follow out his plans.

The Emperor Napoleon III. purchased, three or four years since, the Palatine Hill in Rome, and has since that time employed M. Pietra Rosa, an eminent Italian archaeologist, to superintend the exploration of the ruins of this celebrated locality. M. Rosa has recently published a photograph of the plan of the exploration, with full notes of the results attained. These may be briefly stated as follows: he has ascertained that an *intermontium* or ravine, as the ancient authors said, did exist, dividing the hill into a northern and southern portion; that the northern portion constituted the entire territory of *Roma Quadrata* the earliest city, and that portions of the walls of that city, 2,500 years old, still exist, and have been disintegrated by his direction. The southern portion of the hill was the ancient *Velia*. He has also discovered the two gates *Mugonia* and *Romana* of the time of the early empire, and beneath the imperial pavement, in nearly a perfect condition, the pavement of the time of the republic.

Turning to ASIA, we find much that is interesting in the explorations of geographers in its central zone, to which most of the discoveries have been confined. During the year 1864 several parties explored very fully portions of Palestine. The Duc de Luynes, a French nobleman of enterprise and high intelligence, organized an expedition early in the year to explore more fully than had yet been done the Dead Sea and the Jordan. Amply provided with boats, instruments, and apparatus for doing their work thoroughly, they spent four or five months (from March to July) in a careful investigation of the physical geography, geodesy, and geology of the entire region of the Jordan and the Dead Sea. They visited the sources of the Jordan, of which there are three principal ones, the Wady (or valley of) Hasbany, near Hasbeya, 1,847 feet above the sea level; the Wady Banias, 1,257 feet, and the Wady Tell-el Kady, 607 feet above tide water. The first of these is in the Anti-Libanus chain, and much above the valley of the Jordan, into which it falls in a succession of cataracts. The valley of the Upper Jordan at the waters of Merom (Lake Samechonitis) has an elevation of only 469 feet above the sea level.

From this upper valley the descent of the Jordan is very rapid to the Sea of Tiberias, which is 620 feet below the level of the sea, or 1,089 feet below the Valley of the Jordan above the waters of Merom. From the Lake of Tiberias its course is still rapid to the Dead Sea, which is, by the careful measurement of the French explorers, 1,286 feet below the level of the Mediterranean. The party also ascertained, with great accuracy, the latitude, longitude, and elevation of the city of Jerusalem. The latitude is $31^{\circ} 46' 30''$. The longitude E. (from Paris, probably) $32^{\circ} 58' 8''$; altitude above the Mediterranean, 2,556 feet; above the Dead Sea, 3,842 feet.

M. de Sanloy, a French explorer, has been examining the topography of the country to the north of the Dead Sea, and has prepared new charts and drawings of it. One of the most interesting contributions to geographical discovery for many years is the narrative and subsequent address before the Royal Geographical Society, of Mr. W. Gifford Palgrave, who after spending eighteen years in the East, and possessing so thorough a familiarity with Arabic as to be able to speak it like a native, resolved, in 1862, to penetrate into and traverse the entire interior of the *Arabian peninsula*. His journey, which, with the various delays, occupied somewhat more than a year, has resulted in a far more complete knowledge of the States in the interior of Arabia than we have hitherto possessed. It has been generally supposed that Central Arabia was a desert of moving sands, with its fertile patches or oases, scattered at intervals over it, and inhabited only, or mainly, by wandering tribes of Bedouins, often at war with each other, and always hos-

tile to all strangers. It was known, indeed, that there was, somewhere in the interior, a sect of Mohammedan purists, called Wahabites or Wahabites, but these, since their defeat and the destruction of their capital by Ibrahim Pasha in 1818, were believed to have resumed the nomad life, and to be practically Bedouins. Mr. Palgrave has been able, from actual observation, to confute these ideas. There are two extensive deserts on the peninsula: one the Syrian Desert, extending southward to about the 32d parallel north latitude; the other, in the south of the peninsula, extending from about the line of the tropic of Cancer to latitude 17° N., and known as the Desert of Ahkaf. The intermediate region is an elevated plateau, with deep fertile valleys and precipitous rocks, having few or no perennial streams, but watered by the torrents which flow in the rainy season from the hills and mountains. The Bedouins are not found in considerable numbers south of the Syrian Desert, and leaving the lower border of that desert in about latitude 32°, Mr. Palgrave, who travelled as a physician (which insured him kind reception), entered at once the kingdom of Jebel Shomer, on the mountains of Shomer. This kingdom lies between 32° and 26° 30' north latitude, and between 33° 40' and 44° E. longitude. Its inhabitants are part nomad and part stationary. About two-thirds of the area of the kingdom is barren and sandy. The defiles, which form a marked feature of the country, are fertile, and are inhabited by an agricultural population, who were Christians before Mohammed's time, and long resisted El Islam. The State religion is now Mohammedan, but except in the towns the adherence to it is merely nominal, the mass of the people being sun-worshippers, though some worshipped fire also, though not approximating in their other tenets to the Parsees. The sun-worshippers, also, paid homage to the North Star, and prayed to it by the name JAH, the title given in the Old Testament Scriptures to Jehovah. The capital of Jebel Shomer is Hail, where Mr. Palgrave and his companions remained for six weeks, being received very cordially by King Jelab or Zelal Ebn Rashed. The people were very finely formed, and the capital is the seat of a considerable amount of trade, and has about 20,000 inhabitants. This kingdom has existed about sixty years. The Government seemed to be vigorous and well organized and the people contented and happy. On the 8th of July, 1862, Mr. Palgrave and his associates, sixteen in number, left Hail, and the next day commenced crossing the Jebel (mountains of) Salma, which form the southern boundary of the kingdom of Jebel Shomer. These mountains were in pre-Islamite times the seat of Koleib Wa'il, a monarch whose sway extended over half Arabia. On the 13th the travellers entered the kingdom of the Wahabites, which extends from 26° 30' north latitude south to the Desert of Ahkaf, and from the Persian Gulf on the

East to the province of Hejaz (which contains Mecca and Medina) on the West. The Wahabites are the strictest of Mohammedans, adhering to the precepts of Mohammed in every particular, and rejecting all traditions or precepts of Mohammed's successors. They were organized as a nation and sect by Mohammed Ibn-abd-el-Wahab, a reformer, who flourished in the middle and latter part of the 18th century, and who established the Wahabite kingdom in 1770. He did not himself become the ruler, but while putting the temporal power into the hands of the Chief of Derayah, Abd-Allah-Ebn-Saoud, one of his earliest disciples, he retained the prophetic or priestly power in the hands of his own family. The people are intensely fanatical, and oppose with great bitterness all other sects of Mohammedans. They excited the hostility of the Egyptian viceroy early in the present century, and after a long series of battles, in which the Turco-Egyptian force was at first worsted, they were defeated in 1818 by Ibrahim Pasha, and their capital, Derayah, burned; but though crippled for a time Mr. Palgrave found them now stronger than ever. Their new capital, Riadh, is a very beautiful and populous town, surrounded on all sides by gardens, and the dwellings are mainly of sun-burned bricks, which make them a very solid and durable dwelling. Many of these dwellings possess considerable architectural beauty, and they are furnished comfortably and abundantly, in the oriental style, with carpets, cushions, &c. The Government is an absolute monarchy, very despotic and fanatical. Polytheism and smoking tobacco are, in their creed, the greatest and most unpardonable of sins, while murder, theft, perjury, &c., are merely venial offences. Any man, however high his rank, who is convicted of smoking tobacco, is publicly and severely beaten. Even the brother of the king and one of the ministers of state were beaten, the latter to death, for this offence. Mr. Palgrave remained fifty days in Riadh, but was finally compelled to leave because the king was offended at his refusal to give him strychnine, with which he wished to poison some of the members of the Court who were hostile to him. Mr. Palgrave had the opportunity of examining the stud of the Wahabite king, which consisted of between one and two hundred horses of the purest *Nejed* breed, and were, he says, remarkable for their beauty. Their average height was between fourteen and fifteen hands; none of them were above fifteen hands two fingers. The prevailing color was gray, but some were chesnut, a few mottled, very few white, and still fewer black. There were no bay horses among them. Leaving Riadh, and being obliged to avoid the large towns, the travellers concealed themselves in the small valley of Yamanieh, till Khalif, the chief guide of the Persian pilgrims to Mecca, who had already aided them, could rejoin them, they passed on, when he overtook them on fine and well-watered plains, till they came to

the Dohur Desert, an elevated plateau, an offshoot from the great Southern Desert, which they crossed in two days, and descending rapidly entered Hasa, the richest and most populous of the Wahabite provinces, where were workers in metals of great repute, and large quantities of textile fabrics were manufactured. Early in December the party reached El Khatif, a beautiful town on the Persian Gulf, surrounded with gardens, and having a network of rivers in its vicinity. Here Mr. Palgrave took boat, and, crossing the Persian Gulf twice, reached Sohar, the ancient capital of Oman, on the 8d of March, 1863. Coasting southeastward from this point, he was shipwrecked just as his voyage seemed at an end, and only nine out of twenty-one persons on board the boat were saved. Mr. Palgrave and his companions reached Watiejyeh on the 9th of March, where they visited the king of Oman at his country palace, in their forlorn condition, but were kindly received, and the next day went on to Muscat, crossing, with considerable difficulty, the Jebel Akhdar, where they remained twelve days, and proceeding up the Persian Gulf, arrived at Bagdad on the 19th of April after a severe access of fever and delirium, and on the 11th of July reached Beirut. Mr. Palgrave ascertained that the Wadi Aftan, which Jomard and some other geographers have regarded as a river, did not exist either as a river or a valley; and he states further, in all the Nejed (the mountainous plateau of Central Arabia) he saw but one running stream during the summer, and that flowed not more than thirty or thirty-five miles.

The progress of the telegraph lines to India by way of the Persian Gulf, has led to investigation of the capabilities of that gulf as an area the trade. The coast of the Persian Gulf is stated to be one of the best cotton-growing regions in the world. The Sea Island cotton can be produced there in great perfection.

Proceeding eastward, we find most worthy of note the expedition of Mr. Arminius Vambéry, a Hungarian geographer and philologist, through *Turkestan to Bokhara, Khiva, Samarcand, and Herat*. This journey was made in 1863-4, and Mr. Vambéry's narrative was published in England in the autumn of 1864, and in the United States by Messrs. Harper and Brothers in April, 1865. Though a young man, being but 31 years of age when he set out upon this journey, Mr. Vambéry had already attained a high reputation as a man of science, and especially as a philologist. He was especially familiar with Turkish and Arabic, and was desirous of investigating among the Turanian tribes the origin of his native tongue (the Magyar). The fate of Conolly and Stodart, and the narrow escape of Dr. Wolff, warned him that there was great peril to a European in penetrating among the savage and fanatical inhabitants of Bokhara, Khiva, and Herat, and he therefore determined to qualify himself to pass as a dervish through that region. He accordingly spent a considerable period in Constantinople in study-

ing the character and customs of the dervishes, and after spending a little time at Teheran joined a company of them, and assuming the appearance of the most extreme poverty, took his place in a caravan going from Teheran to Khiva. Their first stage was to Asterabad, from whence they crossed the Caspian Sea in a Turcoman corsair's vessel, landing at Gomush-Tépé. Having followed for a little distance the river Attreh, the caravan plunged into the Hyrcanian Desert, and after twenty-two days of terrible suffering from the want of water they reached *Khiva*, a smaller city than he had supposed, and in a miserable condition, as indeed was the entire Khanat of which it was the capital. The reigning prince, Said Mohammed, a bigoted and fanatical tyrant, takes great delight in the murder of hundreds of his subjects for the slightest departure from what he assumes to be the laws of Mohammed. Here a malicious Affghan who had accompanied the caravan, endeavored to excite suspicion against Mr. Vambéry as a spy; but by a bold and politic stroke, the traveller succeeded in winning to his protection the prime minister of the Khan, who had resided long in Constantinople, and who pronounced him an eminent Mollah of that city. Remaining a month in Khiva, Mr. Vambéry explored the adjacent country as far as Kongrad, which he represents as a region of great fertility, surpassing in this respect any portion of Central Asia. From Khiva, the *soi-disant* dervish and his companions followed the left bank of the Amoo Daria (the ancient Oxus), toward Bokhara, ten or twelve days' journey distant; but to escape a band of Turcoman robbers, were obliged to take refuge in the desert of Djan Batiran (*the destroyer of life*), where, not having been able to provide a sufficiency of water, they suffered horribly with thirst for six days, and two of their number died. The city of Bokhara, though larger in extent than Teheran, has not so many inhabitants. From a distance it has a fine appearance, but is, like most oriental cities, very filthy. The population of the Khanat is about two millions, a large number of whom are Persian slaves. The reigning Khan, Muzaffar ed-ed-Din, is the son of the murderer of Conolly and Stodart, a man naturally amiable, but compelled by the policy of his Government to commit barbarous and tyrannical acts. The dervishes were well received, but Vambéry was suspected of being a spy, and compelled to exercise great adroitness to repel the suspicion. After remaining here a month, he went with his companions to Samarcand, traversing a populous and well-cultivated region. Samarcand, the ancient capital of Timour, is a decaying city, and Mr. Vambéry believes that its past renown was greatly exaggerated. From Samarcand, Vambéry turned to the southwest and visited first Karshi, and afterward Herat, where he was again in peril of discovery from the young prince, who declared he was an Englishman. Evading this danger he returned to Teheran, and after suf-

fering from a severe illness, the result of the hardships he had undergone, made his way to Pesth and thence to England. His work is valuable for the information it imparts on the language, customs, and manners of the Turcomans, who have hitherto been comparatively unknown to the nations of the West. He was unable, in the character he assumed, to make any scientific observations, or to take any notes. To have attempted either would have led to his death by torture.

The Russian explorers have been very active, and have brought to light much that has hitherto been unknown in this central zone of the great Asiatic continent. With the prestige of the Russian Government (which is fast bringing these Tartar and Tungusian tribes under its sway) to sustain and protect them, they have been able to penetrate into regions hitherto inaccessible to civilized man. During the last year MM. Carl Struve, Babkof, and Zriakoff have visited Lake Tszaizan (the Saisan-nor of the old maps), which they ascertained to be the source of the river Irtysh. This lake, once frequented by the Chinese, as it is within the bounds of the Chinese Empire, is now visited only by the Aknaiman Kirghis, who come hither during the winter to fish. The lake is accessible only on the north side, being surrounded elsewhere with a marsh and a dense growth of reeds. Its bottom is sandy, and toward the south the Black and the White Irtysh both flow from it. The basin of the Black Irtysh is entirely distinct from that of the Ulanguir. East of this they found the Lake Marka, not inserted on the maps generally, which is the source of the river Koldjir. This beautiful lake is surrounded on all sides by high mountains covered with forests of birch. During the summer the Kara-Kirey Kirghis pitch their tents around it, and in the autumn Russian fishermen from the source of the Tarim succeed them, and obtain from its waters a supply of food for the winter. The Koldjir is a very rapid stream, having a descent in the space of ninety miles of 3,937 feet. They also ascended the mountain summit called by the Tartars Sara-Taou, and ascertained its height to be 9,842 feet. Coal, though not of the best quality, has been found in the mountains of Karatau by Colonel Tcherniaeff, and will prove of importance to Russia, as it can be brought down the Syr-Daria (ancient Jihon) to supply her new steam flotilla on the Sea of Aral, which has been supplied hitherto at immense cost from Donetz in South Russia, over 1,200 miles of transportation, a part of it a desert. Another expedition, organized under the direction of the Imperial Geographical Society of St. Petersburg for the exploration of *Eastern Siberia*, has accomplished its work. In this expedition the explorers, amply supplied with all that was necessary for their work, divided it among themselves; M. Schwartz, of Dorpat, and his assistants preparing all the topographical maps and drawings; M.M.

Schmidt and Glehn taking upon them the geological and mineralogical inquiries, and M. Radde and his assistants being responsible for the botanical and zoological departments. The great basin of the Upper Amoor and its affluents was found to be very incorrectly represented on all existing maps. The lofty *Yablonoy* Mountains, so long represented as forming the connecting link between the Altai range and the Stanovoy Mountains in N. E. Siberia are now found to have no existence, a low plateau to the north of Lake Baikal, from which the affluents of the Lena on the north and those of the Amoor on the south have their source, forming the real water shed of Eastern Siberia. The Amoor makes a sudden deflection southward from the Cossack station of Pashkoff, forcing its way through a profound fissure with precipitous cliffs on either side, in a mountain ridge, striking from east to west and not from north to south as has formerly been represented. The form of the Saian Mountains which range eastwardly from the Altai is materially different from previous representations. The Island of *Sakhalin* has also been explored by the expedition, and its physical geography ascertained. A chain of mountains extending from north to south without interruption along the eastern shore, forms its principal frame. In the streams which water the island as in those of Eastern Siberia, the right bank of the river is uniformly steep and precipitous, the left bank low and flat. The northeastern shore presents the flora of Kamtschatka and the Sea of Okhotsk, the southwestern that of Japan. The small fruits, the grape, raspberry, blackberry, whortleberry, and strawberry abound. The Gilanes people the north of the island and the Ainos the south. The latter are the original inhabitants. They are shy, timid, and simple, small of stature and badly formed, but possess great strength. Their complexion is white, and their hair and beard heavy. They are of mild and amiable disposition. Their language is peculiar, differing from that of the people of the adjacent coasts radically. It has never been reduced to writing. They are said to pay religious homage to the bear and to the different kinds of fish which furnish them food. Their dwellings are mere huts of poles covered with boughs.

The telegraph line from St. Petersburg west to the mouth of the Amoor, and thence across Sakhalin and the Kurile and Aleutian Islands, and down the coast of Russian America and British Columbia through Washington Territory and Oregon, to San Francisco, is in rapid progress from both ends. The mouth of the Amoor will be reached during the summer of 1865, and the connection made probably in 1866.

Passing southward we find less activity in geographical research in China than two or three years ago, though some new portions of it have been described. At the session of the American Geographical and Statistical Society

of Oct. 8, 1864, a paper was read, communicated by W. P. Jones, Esq., U. S. Consul at Macao, giving a narrative of a voyage which he had made in August, 1863, up the Pearl or North Canton River to Shan Chan Foo, a large city three hundred and thirty miles above Canton. He noted the great density of the population, large cities occurring at every few miles, one of them, Fat-Shan, having a population of 500,000 inhabitants, and another, Tsing-Une, 300,000, and the whole shores being lined with populous villages. The country was very fertile, and bore evidence of high cultivation. The scenery was beautiful, often grand, from the lofty mountains which approached the banks, and the narrow and abrupt passes through which the river forced its way. A little more than a hundred miles above Canton they came upon a remarkable natural bridge of blue limestone, called Pik Lank Ngam, of one hundred and twenty-five feet span, from fifty to seventy-five feet in height, and at least two hundred and fifty in length. Beneath this natural arch flowed a stream sixty feet broad and of great depth. Above this bridge the rocks rise in perpendicular walls on each side more than three hundred feet above the water. At one hundred and sixty miles above Canton, they found a cave of vast extent, opening at the base of a precipice eight hundred feet in height. This cave the Buddhists had converted into a temple to the Goddess of Mercy (Koon Yam). At several points the Chinese were burning marble, of excellent quality for lime.

Mr. Robert Swinhoe, H. M. Vice-Consul at Taiwan Foo, the principal city of the island of Formosa, communicated to the Royal Geographical Society a paper on that island in Dec., 1863. It is a district of a province of China, and its government is administered by a special governor, who is responsible only to the Emperor. The coast is considered dangerous, and shipwrecks are frequent, but there are good harbors on the southern end of the island, and the Tam Suy River on the northwest has excellent anchorage and a good depth of water. The capital, Foo Chow, is not far distant from the river. The western coasts of the island are peopled by Chinese, who have driven the aborigines back into the mountains and toward the eastern shore. The Malays and Japanese have also emigrated to the island to some extent. The aborigines are of doubtful origin, but are some of them ferocious and bear the reputation of being cannibals; while others, according to Mr. Swinhoe, understand most of the arts of civilization, and seemed to be a quiet and peaceful people. The principal productions of the island were tea, rice, sugar, barley, jute, grass cloth fibre, rice paper, rattans, wheat of good quality, camphor, petroleum, and dyewoods. In the northeast, at Coal Harbor, is an abundance of excellent lignite coal.

The progress of geographical discovery in Oceania has not been remarkable during the year. Two companies have been formed to effect

settlements of colonists in North Australia; one from South Australia to settle on the banks of the Adelaide in Arnhem's Land, the other from Queen's Land to occupy Point Somerset near Cape York. The British Government have also ordered the establishment of a naval station on Albany Island near Cape York. The inside of the Great Barrier reef has been thoroughly surveyed, and the navigation along the East coast rendered safe. It has been demonstrated that sheep will thrive in Australia up to 19° S. lat. The attempt to acclimatize the Alpaca there has proved a failure. Mr. H. M. Lefroy has penetrated into the interior of Western Australia, in search of new districts adapted to sheep farming, and found an immense tract with abundant and nutritious grasses, never before visited by Europeans. An interior chain of lakes was discovered, and fertile plains bordering on them.

Careful surveys have been continued of considerable portions of the Middle Island of New Zealand, by Drs. Hector and Haast, mentioned in the geological article in the *ANNUAL CYCLOPEDIA* of last year, and the Lake districts of the Otago province have been explored by Mr. McKerrow. Several of the mountains, as Mount Aspiring and Mount Richard, attain an elevation of over 10,000 feet; and the line of perpetual snow in that latitude is 8,000 feet. Several extensive glaciers in connection with these mountains have been surveyed. Both Dr. Haast and Mr. McKerrow have ascertained that an elevated mountain chain of an altitude of from 9,000 to 10,000 feet extends from northeast to southwest, through the whole length of the island, forming its watershed. The continuity of this chain is broken through only in a very few places, and elsewhere it presents high and abrupt walls of great altitude throughout its whole length in the Canterbury province. Of the few passes through this chain, one explored by Dr. Haast was unique in character, and only 1,062 feet in height. Gold is found in increasing quantities in the province of Otago.

We turn lastly to AFRICA, which during the past year has been more than ordinarily unfortunate in the loss of eminent explorers. Capt. Speke came to his death accidentally in England, Dr. Steudner, Mrs. Tinné and her sister, all belonging to the Tinné party, were victims to the fevers of the Upper Nile, and M. de Heuglin, M. D'Abail, and Miss Tinné, of the same party, narrowly escaped with their lives. The botanist Schubert also succumbed to this terrible paludal fever. M. Jules Gerard the lion-killer, who had undertaken to explore the region east of Sierra Leone, was drowned in the river Jong, or, according to other accounts, murdered by the natives; and Dr. Baikie, after completing his long and toilsome explorations in Soudan, and arriving in safety at Sierra Leone, fell a victim to fever there. It was reported that Dr. Livingstone was killed by the natives, but fortunately for geographical science, though wounded, he recovered, and is now in England.

M. Werner Munzinger, long a resident of Egypt, has contributed a valuable memoir to Petermann's Mittheilungen on the tribes of Upper Nubia, between the Atbara and the Red Sea. He enumerates four of these tribes: the Bogos, the Mensa, the Barea, and the Kounamas. The last named are called by the other Nubians *Changallas*, that is, *black savages*. They occupy the territory bounded by Dembella on the east, and Adrabo and the Takazza on the west. At the north they extend from the Mareb to Barca, and on the south occupy the wooded slopes of the Abyssinian plateau. They are black, but well formed, muscular, with curly but not woolly hair, a scanty beard, a fine mouth, and seldom any flattening of the nose. They are a grave and sedate people, but courteous and pleasant. Their religion seems to be an indifferent deism. They have no feasts or fasts. Their government is patriarchal, and the elders or aged men are greatly revered. The magician, or rain maker, is also much honored, but if he fails to bring rain he is put to death. The family, as we know it, does not exist among the Kounamas, and the property descends to the sister's son, in preference to any putative child of the owner of property, as in many of the African tribes. They are very industrious farmers, cultivating the various cereals of the country, tobacco and an oleaginous plant called *schebob*. Honey abounds, and they make a fermented drink from it. They live in bell-shaped huts covered with grass. No European had previously penetrated into their country in consequence of their alleged ferocity. Herr Munzinger has ascertained with certainty the identity of the rivers Mareb and Gache, long supposed to be distinct streams.

The question of the sources of the Nile, which was at first supposed to be settled by the discoveries of Captains Speke and Grant, is not yet quite cleared of mystery, inasmuch as they did not follow the Nile from its source to Gondokoro, and could not tell what affluents it might have received from other lakes. This is now the subject of further exploration by the Baron de Henglin and Mr. Samuel Baker, who have penetrated to Lake Nyanza, and have obtained information which confirms Capt. Speke's theory of the source of the Nile, and Consul Petherick is also pushing his inquiries in that direction.

The Baron Von der Decken, a well-known German geographer, who ascended Mount Kiliman'djaro, has undertaken his fourth exploring tour, having the geologist Karsten and two other eminent scholars as companions. He reached Zanzibar in the summer of 1864, intending to ascend either the Ozi or the Job River, and, climbing the northern slope of Mount Kenia, seek for a stream which he believes flows thence to join the White Nile above Gondokoro.

Mr. G. Sejeau, a French geographer, has penetrated into Abyssinia, and has prepared a very complete map of that country. Dr. Liv-

ingstone has returned to England after an extended exploration of the upper waters of the Shire, and the west shores of Lake Nyassa. He found in this region a chain of mountains running north and south (not east and west, as our maps have laid them down), and broad fertile valleys at an elevation of about 6,500 feet above the sea level, with a delightful climate, and admirably adapted to cotton culture. He also discovered two rivers, both named Loangwa; one discharging its waters into Lake Nyassa, the other turning toward the west, and after a great *detour* falling into the upper Zambesi. He also learned from the natives of another river, the Moitawa, which flows into a little lake called Bemba. This river, the natives say, is the source of the river Luapula, which flowing west and uniting at first with the Mofué, and passing through the city of Cazembe, falls into Lake Tanganyika. Dr. Livingstone was unable to explore this river, but he ascertained that Lake Nyassa did not communicate with Lake Tanganyika, a point of considerable importance. From the *Western Coast*, M. du Chaillu has undertaken another exploration of the interior of Africa. He has ascended the Femand Vas, and crossed the mountains to the interior, since which we have no information from him. Major Burton, well known as a traveller, made, late in 1863, an official visit to Dahomé, and spending two months there, has given an interesting though characteristic narrative of the people, customs, and human sacrifices of that degraded kingdom. Murder seems to be the principal amusement of the bloodthirsty wretch who rules it. His army of Amazons, Burton thinks, do not exceed 2,500 or 3,000, and he regards them as by no means formidable. Of their morals little can be said. The country is in a pitiable condition; agriculture neglected, no manufactures, and only war and plunder and the preservation of their own lives thought of.

We have already mentioned the death of Dr. Baikie, which occurred in November, 1864. He had added materially to his discoveries in the region of the Niger. Leaving Egga, 860 miles from the mouth of that river, he ascended the Wunagi River, a branch of the Niger, with Lient. Gambier, for 50 miles to the village of Wunagi, 7 miles from Beda the capital of King Massaba. Here they found an industrious agricultural population, who raise crops of grain, yams, and cotton. The region is healthy. The Christian settlements of Onitscha and Glébé founded by the colored Bishop Crowther, on the Niger, are prospering, as are also the station of Lukoja and the model farm established by Dr. Baikie at the confluence of the Niger and Benuwé. The Royal Geographical Society of London have extended assistance to M. Rohlf's Gerard, a young geographer who has undertaken to make a journey of exploration from Morocco to Timbuctú, and have received intelligence of his having accomplished the first stages of his journey.

GEORGIA. For military affairs in Georgia during 1864, see ARMY OPERATIONS.

As the armed hosts came within the northern limits of Georgia, which was the granary of the State, dissatisfaction with the Confederate Government and its conduct of the war began to appear and increase. Perhaps no person manifested more of this disaffection than the Governor of the State. In his message to the Legislature in March, Gov. Brown declared that the action of Congress in funding seven hundred millions of dollars in forty days at a less rate of interest than that pledged on the full notes resembled repudiation and bad faith, and that it had shaken the confidence of the people in the justice and capacity of that body. Its discussions in secret sessions, he declared to be a blighting course, convenient for canvassing what will not bear the light. The new military bill he considered to be unconstitutional, and that conscription would not fill the army. The act to suspend the writ of *habeas corpus* conferred powers on the president which were denied by the constitution, and he urged the Legislature to take prompt action to stamp it with the seal of their indignant rebuke. He reviewed the causes of the war, exonerated the northern democrats and moderate republicans, and declared that the responsibility rested exclusively with the "wicked republicans" who denied the compact of the constitution, and demanded an "anti-slavery bible and an anti-slavery God," and said: "We should keep before the Northern people the idea that we are ready to negotiate when they are ready, and will recognize our right to self-government and the sovereignty of the States."

A special message was sent to the Legislature at a later day, in opposition to the conscription act. The Supreme Court of the State had decided the act to be constitutional, but it had not declared, as the Governor said, that the Confederate Government had the power to enroll the whole population of the State who remain at home, so as to place all the people under its military control. He insisted that if all between the ages of seventeen and fifty were placed in the army a sufficient number would not remain to raise subsistence. At a later day he defended the State against attacks for permitting Gen. Sherman to march unmolested through it, by saying she was abandoned to her fate, and neglected by the Confederate authorities, while her army of able-bodied sons were held for the defence of other States, and thus she was compelled to rely only upon a few old men and boys.

The Legislature hardly responded to the sentiments of the Governor. They passed resolutions recommending, after every signal success, an official tender of peace to the Federal Government upon the principle adopted in 1776, and condemned the act suspending the *habeas corpus*, also the act turning over to the Confederate authority all persons between seventeen and eighteen and forty-five and fifty; they also ex-

pressed confidence in the president and thanks to the armies.

The militia law of the State called into service all between sixteen and sixty years of age, and divided them into two classes. The first was composed of those between seventeen and fifty years of age, constituting what is called the militia proper; and the second class, those between sixteen and seventeen years of age, and between fifty and sixty years of age, constituting what is to be known as the militia reserve. The only exemptions provided for in the bill were those created by the constitution in reference to all officers and members of the executive, legislative, and judicial departments of government.

On the march of Gen. Sherman through the State, an act was passed authorizing the conscription of every free white male inhabitant of the State for forty days. The Governor, however, exempted the clergy, who were in charge of parishes.

After Atlanta had been captured by Gen. Sherman, he sent a messenger, William King, to Vice-President Stephens and to Gov. Brown, inviting them to a conference with himself. The invitation, as received, was thus described by Gov. Brown:

Mr. William King, who represented himself as the bearer of a message from Gen. Sherman, called upon him and stated, in substance, that Gen. Sherman had requested him to say to the Governor that he would be pleased to receive a visit from him and other distinguished Georgians, with a view to a conference upon the state of the country and the settlement of our difficulties; that he would give the Governor a passport through his lines with an escort, if desired, to go and return at such time as might be agreeable to him; that he (Gen. Sherman) recognized him (Gov. Brown) as the Governor of the whole State, and as over one hundred miles of the territory of the State is now behind his lines, he (Gen. Sherman) would allow the Governor to go and visit his people in the rear if he desired to look after their condition, and return at his pleasure; that he would receive him and other distinguished Georgians at his headquarters, and treat them with the respect and consideration due their positions during the conference which he invited; that he did not wish to be compelled to overrun and desolate more of the territory of the State.

Mr. Stephens replied as follows:

CRAWFORDSVILLE (Ga.), Oct. 1, 1864.

William King, Sr., Esq.:

SIR: I have considered the message you delivered me yesterday from Gen. Sherman with all the seriousness and gravity due the importance of the subject. The message was a verbal invitation, by him through you, to me to visit him at Atlanta, to see if we could agree upon some plan of terminating this fratricidal war without the further effusion of blood.

The object is one which addresses itself with peculiar interest and great force to every well-wisher of his country—to every friend of humanity—to every patriot—to every one attached to the principles of self-government established by our common ancestors. I need not assure you, therefore, that it is an object very dear to me. There is no sacrifice I would not make, short of principle and honor, to obtain it; and no effort would I spare, under the same limitations, with any reasonable or probable prospect of success. But, in the present instance, the entire absence of any power on my part to enter into such negotiations, and the like absence of any such power

on his part, so far as appears from his message, necessarily precludes my acceptance of the invitation thus tendered.

In communicating this intention to Gen. Sherman, you may also say to him that, if he is of opinion that there is any prospect of our agreeing upon any terms of adjustment to be submitted to the action of our respective Governments, even though he has no power to act in advance in the premises, and will make this known to me in some formal and authoritative manner (being so desirous for peace himself as you represent him to have expressed himself), I would most cheerfully and willingly, with the consent of our authorities, accede to his request thus manifested, and enter with all the earnestness of my nature upon the responsible and arduous task of restoring peace and harmony to the country, upon the principles of honor, right, and justice to all parties. This does not seem to me to be at all impossible, if truth and reason should be permitted to have their full sway. Yours, most respectfully,

ALEXANDER H. STEPHENS.

The reply of Gov. Brown was as follows:

Please make to Gen. Sherman an acknowledgment of my obligation for the personal courtesies which you say he proposes to extend to me. But as he is only a general commanding an army in the field, and I the governor of a State, neither the constitution of his country nor of my own confers upon us any power to negotiate a treaty of peace. We probably hold but few sentiments in common; but if we should agree in every particular, we would have power to bind no one by any compact we might make. As our interview could therefore result in nothing practical, I must decline the invitation. While the portion of the State now in the rear of Gen. Sherman's army is held by him, and the execution of the laws of the State is suspended by armed force, I know of no service which I could render to the people of that section by a personal visit. If I could better their condition or mitigate their sufferings, I would, on their account, cheerfully go at the expense of any inconvenience or personal sacrifice which the trip might cost me.

To the remark that Gen. Sherman does not wish to be compelled to overrun and desolate more of the territory of Georgia, I reply that no compulsion rests upon him to attempt this, unless it be the cruel orders of his Government. If he makes the effort, he will find much greater difficulties in the way of his advance for the next hundred miles than those encountered during his march from Dalton to Atlanta. Georgia may possibly be overrun, but never can be subjugated, and her people will never treat with a conqueror upon her soil. As a sovereign State she had the undoubted right to dissolve her connection with the Government of the United States when the compact had been violated by the other States of the confederacy, and to form a new compact, which she has done. She is as sovereign to-day as she was the day she seceded from the old Union, and has the same power, by a convention of her people, which she then had to resume all delegated powers and all the attributes of sovereignty, and then to declare war, negotiate treaties of peace, and do all other acts which a sovereign State may do. While this power rests on her people, who are the original source of all sovereignty, her constitution, formed by them, has conferred no such power upon her Governor.

The fact must not be overlooked, however, that while Georgia possesses the sovereign power to act separately, her faith, which never has, and I trust never will be violated, is pledged by strong implication to her Southern sisters, that she will not exercise this power without consent on their part, and concert of action with them. In league with her Southern sisters, she entered into this contest with full knowledge of all the responsibilities which attached to the act; and come weal or woe, she will never withdraw from it in dishonor. However unequal

may be the proportion of suffering or sacrifice which her people may have to endure, she will never make separate terms with the enemy which may free her territory from invasion and leave her confederates in the lurch. Whatever may be the opinion of her people as to the injustice done her by the Confederate administration, she will triumph with her Confederate sisters, or she will sink with them in common ruin. The intelligent people of Georgia already understand, and our enemy will soon learn, that the independent expression of condemnation of the administration is one thing, and disloyalty to our sacred cause is another and quite a different thing. While the people of Georgia think for themselves, and will not blindly applaud the mismanagement of their rulers, they will never violate principle for expediency, nor accept dishonor for reward.

The foundation of our Government and the liberties of the people rest upon the sovereignty of the States as their chief corner stone. Destroy the sovereignty of the States and the whole fabric falls to the ground, and centralized power with military despotism takes the place of constitutional liberty.

When the passions of the people North and South have subsided we may make peace by negotiation, but never by the sword.

If Mr. Lincoln would have peace and prosperity reestablished upon a firm basis, let him stop the war, and, planting himself upon the principles of the Declaration of Independence of 1776, let him recognize the sovereignty of the States, and agree to leave each sovereign State to determine for herself, by a convention of her people, whose delegates shall be fairly chosen by the legal voters of the State, without military interference or intimidation, what shall be her future connection—whether she will remain in, or, if out, return to the old Union, or adhere to her present league.

There may be doubts whether Kentucky, Missouri, and probably other States, desire to continue their connection with the United States, or to cast their lot with the Confederate States. The only just mode of solving these doubts is the one above indicated. If these or any other of the Southern States should, in solemn convention, decide to go with the United States, neither the Confederate Government nor the other States can object. We cannot govern Kentucky, for instance, against her will, unless we can subjugate her. This we have no power to do with the Northern States at her back; and if we had the power we have no right to coerce a sovereign State into a connection which is not of her own choice. If this were done we must, in future, govern her people by the bayonet, which would convert our republicanism into the worst species of despotism. So it must be with the North if Mr. Lincoln should succeed in his policy of conquering us.

If we were overrun, and for a time subdued, our territory is so vast in extent, and our population so large, that it would take a regular army of two hundred thousand men to govern and hold us in subjection. The support of such an army would not only continue the country in bankruptcy, but in the hands of the Executive it would soon be used to subvert even the form of the Government, and change it from a republic to a monarchy. Thus to destroy our liberties must cost the Northern people their own, and the republicanism of America must in future be a reproach and a byword among all nations.

If President Lincoln and President Davis will agree to stop the war and transfer the settlement of the issues from the battle-field to the ballot box, leaving each sovereign State to determine for herself what shall be her future connection, and who her future allies, the present devastation, bloodshed, and carnage will cease, and prosperity will be restored to the whole country.

On the other hand, if this is not done the war will last for years to come, till both sides are exhausted and overwhelmed with debt and taxation, when it

may degenerate into a guerilla strife, the end of which may not be seen by the present generation, and the hate engendered by which will last through many future generations.

Neither General Sherman nor I can control this, however much we may deplore it.

If those on both sides who have the constitutional power of negotiation, from obstinacy or ambition, refuse to recognize the sovereignty of the States and to leave the settlement of the question to the States when they cannot themselves agree, and insist on continual effusion of blood to gratify their caprice, all the States, North and South, in their official capacity may then be justifiable in taking the matter into their own hands and settling it as sovereigns in their own way.

The views of the Governor on the manner of settling the difficulties were subsequently stated to the Legislature more briefly in his message at the session in November. The plan was openly advocated by several newspapers in Georgia and Alabama, which claimed most of the leading men in Georgia and several other States as favoring it.

From Chattanooga to Marietta, a distance of one hundred and fifty miles, the country was totally swept of its able male inhabitants. A few old and decrepit men, gaunt and half-starved women and children were occasionally to be seen. All along the railroad appear black and charred timbers, and chimneys standing alone that show where houses have been burned down. The few little villages are deserted, and fences and crops have disappeared. Large hotels and stores remain with doors off their hinges, the panes of glass broken, and the furniture removed, from cellar to garret. Appropriations were made by the Legislature to feed the destitute inhabitants of several counties.

GERARD, JULES, a French traveller, explorer, and lion-hunter, born at Pégan, in the Department of Var, France, June 14, 1817, and drowned in crossing the Jong River, in Upper Guinea, in September, 1864. He was the son of poor parents, but was fond of sport from his youth, being a hunter and somewhat of a pugilist when but sixteen years of age. He volunteered for the Algerian Campaign in 1841, and soon after his arrival in Algeria hearing of the terrible lion of the Archions he resolved to kill him. He was successful in this, and in subsequent years slew twenty-five other African lions of full size, besides leopards and panthers, though always badly equipped, and received from the Arabs the name of "the terrible Frank." In 1847 he returned to France, and was received with many honors. The Count de Paris gave him a brace of fine pistols. In 1855 he returned again to France with the rank of sub-lieutenant, and received the decoration of the Legion of Honor. Soon after he visited England where he was treated with much attention. In 1857-'8 he published an account of his adventures under the title of *Le Tireur de Lions* ("The Lion Killer"). Near the close of 1863 he went to the western coast of Africa, provided with instructions from the

Royal Geographical Society of London, and with the support of several members of the English nobility, for the purpose of exploring the interior of that country. He first landed at Whydah, and attempted to penetrate into the interior by way of the kingdom of Dahome, but failing in this, came to Sierra Leone, where the English citizens furnished him with the means for his journey, and he went to the neighborhood of the river Gallinas on board an English man-of-war. Soon after landing he was plundered of all his baggage and took refuge in Sherbro County, where the French residents gave him all the assistance in their power. He left the village of Begboun in May or June, but when at only two hours' distance was again completely pillaged and compelled to return to the village, where he remained till the close of the rainy season, when, his resources being exhausted, he determined upon returning to Sierra Leone, but was drowned in attempting to cross the Jong River, which had been much swollen by the rains.

GIDDINGS, JOSHUA REED, an American statesman and author, born in Athens, Bradford Co., Penn., Oct. 6th, 1795, died in Montreal, Canada East, May 27th, 1864. When he was ten years old his parents became settlers of Ashtabula Co., Ohio, in the Western Reserve, since famous by its devotedly anti-slavery politics. When 17 years old, in 1812, he entered the army as a substitute for his brother, and saw service against the Indians near Sandusky Bay. Subsequently he taught school, began the law in 1817, studying with Elisha Whittlesey, and was admitted to the bar in 1820. In 1826 his public political life commenced with his choice as a representative to the State Legislature. Declining a reelection, he pursued his profession till 1833, and in that year was chosen to Congress to succeed his instructor, Mr. Whittlesey. Henceforward his career became part of the history of the anti-slavery movement.

His principles were settled before he entered Congress. At the beginning of his service as a Representative he became identified with the champions of anti-slavery. By the side of John Quincy Adams, he defended the right of petition, declared for the abolition of slavery and the slave-trade in the District of Columbia, and espoused the cause of territorial freedom. Mr. Giddings's first attempt to be heard against the slave-trade, in 1839, was a vain one. In 1841 he found leave to speak against the Florida War as a pro-slavery contest. In 1842 came the celebrated Creole case, in which slaves on board a vessel of that name, sailing from Virginia for New Orleans, rose against their kidnappers, and carried the vessel into a British port. Mr. Webster, then Secretary of State, demanded indemnification from the British Government, and Mr. Giddings, on the 21st of March, gave notice of the following series of resolutions, which were read twice from the clerk's desk:

1. *Resolved*, That prior to the adoption of the Federal Constitution, each of the several States composing this Union exercised full and exclusive jurisdiction over the subject of slavery within its own territory, and possessed full power to continue or abolish it at pleasure.

2. *Resolved*, That by adopting the Constitution no part of the aforesaid powers were delegated to the Federal Government, but were reserved by, and still pertain to each of the several States.

3. *Resolved*, That by the eighth section of the first article of the Federal Constitution, each of the several States surrendered to the Federal Government all jurisdiction over the subjects of commerce and navigation upon the high seas.

4. *Resolved*, That slavery being an abridgment of the natural rights of man, can exist only by force of positive municipal law, and is necessarily confined to the jurisdiction of the power creating it.

5. *Resolved*, That when a ship, belonging to the citizens of any State of this Union, leaves the waters and territory of such State, and enters upon the high seas, the persons on board cease to be subject to the laws of such State, and thenceforth are governed in their relations to each other by, and are amenable to, the laws of the United States.

6. *Resolved*, That when the brig "Creole," on her late passage for New Orleans, left the jurisdiction of Virginia, the slave laws of that State ceased to have jurisdiction over the persons on board, and they became amenable to the laws of the United States.

7. *Resolved*, That the persons on board said ship, in resuming their natural rights to liberty, violated no law of the United States, incurred no legal penalties, and are justly liable to no punishment.

8. *Resolved*, That all attempts to regain possession of, or to reenslave said persons, are unauthorized by the Constitution or laws of the United States, and are incompatible with our national honor.

9. *Resolved*, That all attempts to exert our national influence in favor of the coastwise slave trade, or to place this nation in the attitude of maintaining a commerce in human beings, are subversive of the rights, and injurious to the feelings and interests of the people of the free States; are unauthorized by the Constitution and prejudicial to our national character.

The reading of these resolutions created great excitement in the House, and an attempt was made to compel an immediate vote on them, when Mr. Giddings, at the suggestion of some of his friends, withdrew them, stating that he should present them for action again on the day when resolutions should again be in order.

When they were withdrawn, Mr. J. M. Botts, of Virginia, offered a resolution to censure and condemn Mr. Giddings for offering such resolutions. Objection being made on technical grounds to a Virginian offering a resolution of censure, and a suspension of the rules being denied, Mr. Weller, of Ohio, renewed Mr. Botts's resolutions, which were passed the next day without allowing Mr. Giddings an adequate opportunity of defence, by 125 yeas to 69 nays. Mr. Giddings thereupon resigned his seat in the House at once, and returned to his home, but was reelected by the people of his district by an overwhelming vote, and in five weeks returned to Washington to resume his duties. He was reelected to each successive Congress till 1861, when he declined a nomination and was appointed by Mr. Lincoln Consul-General for Canada, the duties of which office he discharged at Montreal till his death, which was

the result of disease of the heart, by which he had previously been twice prostrated.

He was twenty-one years in Congress. He supported Gen. Harrison and Mr. Clay with great ardor, but opposed the election of General Taylor to the Presidency, and Robert C. Winthrop as Speaker of the House on anti-slavery grounds. In 1850 he opposed, with decided ability and great strenuousness, the compromise measures, and especially the fugitive slave law. In most other cases he voted with the Whigs while they existed as a party, and afterward steadily with the Republicans. Mr. Giddings published works consisting of a series of political essays, over the signature of "Pacifcus," published in 1843; an interesting narrative of the oppression exercised by the slaveholders of Florida over the negroes, Indians and mixed races of that peninsula, under the title of "Exiles of Florida," published in 1858; a volume of his speeches in Congress, issued the same year; and "A History of the Rebellion, its authors and causes," which is mainly a history of the anti-slavery struggle of the last twenty-five years in Congress, and was published just after his death.

GRATTAN, THOMAS COLLEY, a British author, born in Dublin, Ireland, in 1796 (according to some accounts in 1794), died in London, July 4, 1864. At the age of 15 he was articled to a Dublin attorney, but seems to have taken little interest in the law, his attention being absorbed by miscellaneous literature, of which he became a prodigious reader, and by the then all-prevailing enthusiasm for military life and adventure. Having obtained a commission in a British regiment of the line, he left England to enter upon his new duties, but was met at Valenciennes by the news of the battle of Waterloo, which terminated the war. But being still intent upon a military career he determined to join Bolivar in South America. Before this purpose could be accomplished he fell in love with a lady residing in the South of France, his subsequent marriage with whom reconciled him to more peaceful avocations. After living a year or two at Bordeaux, he made his first essay at authorship by the production of "Philibert" (1819), a metrical romance in Scott's manner, which proved a mortifying failure. Nothing daunted by this mishap, he tried his strength in the less ambitious field of magazine writing, and in 1823 reappeared before the public in a three volume book, entitled "Highways and Byways; or, Tales of the Roadside, Picked up by a Walking Gentleman," comprising tales of Continental adventure and wandering, the agreeable and picturesque style of which rendered them very successful. In 1824 he published a second series, and in 1827 a third, each in 8 vols., which were received with equal favor. About 1828 he changed his quarters from France to Belgium, residing principally at Brussels, and during the next ten years pursued a busy literary career. During this period he pro-

duced "Traits of Travel," "The Heiress of Bruges," "Jacqueline of Holland," "Agnes de Mansfeldt," "Legends of the Rhine," &c., &c.; also a "History of the Netherlands" for Lardner's Cyclopaedia, and a "History of Switzerland." His tragedy, "Ben Nazir, the Saracen," written for Edmund Kean, failed owing to the impaired memory and total loss of the power of study in the actor. Having taken an active part in supporting the pretensions of King Leopold to the throne of Belgium, he was at that monarch's special request appointed in 1839 British Consul to Massachusetts, and fixed his residence in Boston. He held this position until 1853, when he resigned in favor of his son. The last ten years of his life were passed in London, where appeared, in 1859, his "Civilized America," a spleenetic attack upon American society and institutions. Other works suggested by his residence in America were, the drama, "The Woman of Color," and "England and the Disrupted States of America." His latest contribution to literature was, "Beaten Paths, and Those who Tread them." Besides his acknowledged works he wrote an immense number of magazine and review articles, was a humorous and caustic speaker, and of excellent conversational powers.

GREAT BRITAIN; OR, THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. Area 112,406 square miles. Population, 1861, 29,884,788. Capital, London. Government, a Constitutional Monarchy. Parliament, two Houses, Lords and Commons. Queen Alexandra Victoria. Heir Apparent, Albert Edward, Prince of Wales, eldest son of the Queen. Cabinet, Viscount Palmerston, first Lord of the Treasury (Prime Minister); Earl Granville, Lord President of the Council; Lord High Chancellor, Lord Westbury; Lord Privy Seal, Duke of Argyll; Chancellor of the Exchequer, Right Hon. W. E. Gladstone; Secretary of State for the Home Department, Right Hon. Sir George Grey, Bart.; Secretary of State for Foreign Affairs, Earl Russell; for the Colonies, Right Hon. Edward Cardwell; for War, Earl de Grey and Ripon; for India, Right Hon. Sir O. Wood, Bart.; First Lord of the Admiralty, Duke of Somerset; Postmaster General, Lord Stanley, of Alderly; President of the Board of Trade, Right Hon. T. Milner Gibson; President of Poor Law Board, Right Hon. C. P. Villiers; Chancellor of the Duchy of Lancaster, Earl of Clarendon.

Aside from diplomatic questions (for which see **DIPLOMATIC CORRESPONDENCE**), there was but little of special interest in the relations of Great Britain and the United States, during the year 1864. The cases of the *Alexandra* and the rebel rams, built by Laird, of Liverpool, (alluded to in the **ANNUAL CYCLOPEDIA** for 1863, p. 457), being thrown out by the House of Lords on appeal, upon technical grounds, were finally settled by the return of the *Alexandra* to her owners, under bond that she should not be used for hostile purposes, and the

purchase by the English Government of the steam rams. In the English House of Lords on the 5th of April, the Marquis of Olanricarde moved for the correspondence with the Confederate States, in reference to the removal of the British consuls from Southern ports, and the enlistment of English subjects in the rebel army. Earl Russell agreed to the motion, after amending it by inserting the words "so called" before "Confederate States," lest it should be imagined that Parliament had recognized the Confederacy. On the 29th of April, a sharp debate took place in the House of Lords, in relation to the measures of the Government in seizing the rams alleged to have been built for the Confederate Government. The Earl of Derby, in a long and elaborate speech, condemned the entire action of the Government in the matter. Earl Russell replied at length, defending the course of the Government. He said that it was every way desirable to maintain relations of amity with the United States; that the Messrs. Laird, the builders of these vessels, had it in their power to commit Great Britain in hostilities with the Northern States, and that it was only the vigilance of the Government which prevented this from having been done. These men and some others, he said, in continuation, "have done every thing in their power, by fitting out ships, by engaging in contracts for supplying vessels of war to the other belligerent, to give to the United States a just cause of war against this country. What I have been apprehensive of, is giving the United States just cause of war; that we should commit such acts that the United States can truly say, 'You, professing to be neutral, are in fact at war with this country, and are carrying on hostilities with us under the guise of friendship and peace.' The only thing with which I should be disposed to reproach myself in the present case is the degree of credulity with which I received the assurances that were made that the iron-clads were not intended for the Confederate States."

On the 18th of May, Mr. Cobden presented to the House of Commons a petition from the ship-owners of Liverpool, praying that in case the existing laws (in regard to war vessels sold to belligerents) were insufficient for the preservation of a strict neutrality, Parliament would make such amendments to the Foreign Enlistment Act as would secure the end desired. Mr. Cobden, on presenting the petition, made a speech, in which he said that "the British Government had already done its worst against the American mercantile marine. The injury, considering merely the amount of property destroyed, amounted to fifteen millions of dollars, but this was not all; that which had not been destroyed, had been rendered useless. In 1860, one-third of the American commerce was carried on in foreign bottoms; in 1863, three-fourths; and this was owing to the privateers armed and equipped in English ports."

On the 19th of June, the naval battle be

tween the Alabama and Kearsarge took place, resulting in the sinking of the former (*see* NAVAL OPERATIONS), and the commander of the Alabama, Semmes, and a part of his crew, were rescued from capture by an English yacht, the Deerhound. The gunners on the Alabama were Englishmen, and Semmes and his officers were received with sympathy and honored with ovations in England. A strong pressure was brought to bear upon the English Government at this time to induce it to recognize the "so-called Southern Confederacy," and a great outcry was made without cause, as it afterward appeared, in relation to the great increase of emigration to the United States, it being alleged that men were fraudulently enlisted in England and Ireland for the United States Army. Mr. Lindsay gave notice of a motion in favor of interference in Parliament, and it was only postponed at the special request of the Cabinet. A deputation from a body, calling itself a "Society for obtaining a cessation of hostilities," had an audience with Lord Palmerston, and Mr. Mason, the Confederate Commissioner, also had an interview with him. Earl Russell, under a misapprehension of the facts, allowed himself to be betrayed into some harsh language in relation to the emigration, but the Cabinet as a whole maintained its position and dignity, in spite of the pressure. At the proroguing of Parliament on the 29th of July, the royal message held the following language relative to the war. "Her Majesty deeply laments that the civil war in North America has not been brought to a close. Her Majesty will continue to observe a strict neutrality between the belligerents, and would rejoice at a friendly reconciliation between the contending parties." During the autumn, the sympathizers with the Confederates opened a bazaar at Liverpool, in imitation of the sanitary fairs in the United States, to raise money for the purchase of food and clothing for Confederate prisoners in du-rance in the United States, who, it was falsely alleged were suffering for want of both. About seventeen thousand pounds sterling was raised, and Lord Wharncliffe applied to Mr. Adams for permission for an accredited agent to visit the military prisons within the Northern States, and distribute aid to their inmates. Mr. Adams replied, vindicating the Government of the United States against any imputation of having treated with unnecessary or vindictive severity any of the misguided individual parties in this deplorable rebellion, who had fallen into its hands in the regular course of the war; and after expressing a desire that their mental ailments, as well as their bodily sufferings might be ministered to, and thereby an end be put to a struggle which otherwise is too likely to be only procrastinated by their English sympathizers, informed him that he had referred his letter to Mr. Seward. The reply of the Secretary of State was as follows:

DEPARTMENT OF STATE, WASHINGTON, Dec. 5, 1864.
SIR: I have received your despatch of 16th No-

vember, together with the papers therein mentioned, viz.: Copy of a letter which was addressed to you on the 12th of November last by Lord Wharncliffe, and copy of your answer to that letter. You will now inform Lord Wharncliffe that permission for an agent of the Committee described by him to visit insurgents detained in the military prisons of the United States and distribute among them £17,000 of British gold, is disallowed. Here it is expected that your correspondence with Lord Wharncliffe will end.

That correspondence will necessarily become public. On reading it the American public will be well aware that while the United States have ample means for the support of prisoners as well as for every other exigency of the war in which they are engaged, the insurgents who have blindly rushed into that condition are suffering no privations that appeal for relief to charity either at home or abroad. The American people will be likely to reflect that the sum thus insidiously tendered in the name of humanity, constitutes no large portion of the profits which its contributors may be justly supposed to have derived from the insurgents by exchanging with them arms and munitions of war for the coveted productions of immoral and enervating slave labor. Nor will any portion of the American people be disposed to regard the sum thus ostentatiously offered for the relief of captured insurgents as too generous an equivalent for the devastation and desolation which a civil war, promoted and protracted by British subjects, have spread throughout the States which before were eminently prosperous and happy.

Finally, in view of this last officious intervention in our affairs, the American people can hardly fail to recall the warning of the Father of our country directed against two great and intimately connected public dangers, namely, sectional faction and foreign intrigue. I do not think the insurgents have become debased, although they have sadly wandered from the ways of loyalty and patriotism. I think in common with all our countrymen, they will rejoice in being saved by the considerate and loyal government from the fate which Lord Wharncliffe and his associates, in their zeal for the overthrow of the United States, have prepared for the victims of this unnatural and hopeless rebellion.

I am, sir, your obedient servant,

W. H. SEWARD.

In matters not connected with her relations to this country there have been some incidents of importance during the year. Her Royal Highness the Princess Alexandra gave birth, on the 8th of January, to a son, who was baptized on the 10th of March, by the name of Albert Victor Christian Edward. In the war between Denmark and Germany for the possession of Schleswig Holstein, Great Britain maintained a strict neutrality, as she was compelled to do from the relations of the reigning queen and the heir apparent to both belligerents. A conference on Danish affairs assembled in London on the 25th of April, which was attended by the representatives of France, Russia, Austria, Prussia, Denmark, Sweden, and the German confederation; but its proposals were rejected, on the 25th of June, by both parties. (*See* LONDON CONFERENCE).

On the 11th of March, the town of Sheffield, England, and its vicinity, suffered greatly by the bursting of the Bradfield Reservoir. The water rolled in a cataract upon the sleeping villagers in the valley below, into and through Sheffield itself, down to the Don, at Doncaster. Within the space of two or three hours, two

hundred and fifty human beings, from the man of eighty to the new-born babe, were drowned in their beds, or in trying to escape, or were crushed beneath the ruins of their dwellings.

On the 1st of June the Ionian Islands were finally made over to Greece. On the 6th of August the long and destructive warfare which had been maintained with the Maories (the aboriginal tribes) of New Zealand, was brought to a close by their almost unconditional submission. The revolt was punished only by a forfeiture of a small portion of their lands.

A terrible riot occurred in Belfast, Ireland, continuing, with an intermission of two days, from the 9th to the 19th of August. The riot occurred between the Orangemen and the Roman Catholics of that city, and was induced by the act of the Orangemen in burning the effigy of Daniel O'Connell, on the occasion of the installation of his statue in Dublin, and the next day burying the ashes with many solemnities in a Roman Catholic chapel. This exasperated the Catholic party, who retaliated by breaking the windows of Protestant chapels; and as the more violent of both parties became excited street fights occurred and houses were plundered and destroyed; and the police and soldiers, though there were one thousand of the former and three thousand of the latter in the city, were unable to stop the rioting, though many of the ringleaders were apprehended and the mobs fired upon repeatedly, and several killed and many wounded. There was a suspension of the riots from Saturday, Aug. 18th, to Tuesday the 16th, when they broke out more fiercely than ever, and continued till the 19th. Nine persons were known to be killed and one hundred and seventy-six of the wounded were attended in the General Hospital, beside many who were treated privately at their homes.

On the 1st of Oct. there was a terrific explosion of two gunpowder magazines in the Plumstead Marshes, near London, at a little before 7 A. M. The magazines contained from 120,000 to 150,000 lbs. of powder, and occasioned the death of ten persons and injured as many more. A gap of 100 yards was made in the river embankment, and fears were entertained of an extensive and disastrous inundation, but by great exertions on the part of engineers, sappers and miners, the breach was repaired sufficiently to keep out the rising waters. On the 5th of the same month there was a cyclone of extraordinary violence at Calcutta, by which two hundred ships were blown from their moorings in the Hooghly, some wrecked, and many driven ashore. The city was also greatly injured, its churches being greatly damaged, the trees blown down, and the botanic garden uprooted. It was computed that more than two thousand lives were lost in consequence of the storm.

During the autumn there were many heavy failures in Liverpool and London. These, in the former city, were largely connected with the

checking of the blockade-running by the efforts of the blockading squadron.

Some of the most important statistics of the United Kingdom for 1863 and '64 are subjoined. The revenue for the year ending Dec. 31, 1863, was £70,433,620 5s., and the expenditure for the same time £67,810,987 11s. 10d. For the year ending Sept. 30, 1864, the revenue was £70,873,944. The imports of the year ending Dec. 31, 1863, were in value £248,980,942; the exports for the same period £146,489,768. The shipping movements were, inward, British, 80,151 vessels, with a tonnage of 8,480,146 tons; and foreign, 24,757 vessels, tonnage 4,825,917. Outward, British vessels, 29,933; tonnage, 8,589,246; foreign vessels, 25,450, tonnage, 4,898,424.

The amount expended for poor relief in England, in 1863, was £6,527,036, and the number of paupers relieved was 1,079,382, or 5.3 per cent. of the estimated population. The amount expended in Scotland the same year was £786,027, and the number of persons relieved 197,329. In Ireland the expenditure was £716,523, and the number relieved 817,194. The number of births in England, in 1863, was 729,399, of which 373,077 were males, and 356,322 females. During the same year there were 173,888 marriages, and 475,582 deaths, of which 243,249 were males and 232,333 females. The number of persons who emigrated from the United Kingdom in 1863, was 223,758, of whom 129,480 were males and 94,278 females. Of the total number 61,243 were English, 15,230 Scotch, 116,891 Irish, 7,833 foreigners, and 23,061 not distinguished. Of the whole, 146,813, or 65.6 per cent., went to the United States; 18,033, or a little more than 8 per cent., to British North America; 53,000 or 54,000, or nearly 24 per cent., to Australia and New Zealand, and 5,808, or 2.6 per cent., to other places.

The expenditure for public education in England, in 1863, was £721,891; and the amount appropriated for 1864 was £705,404. For public education in Ireland £316,770 was appropriated, and about £290,000 was appropriated to other purposes of science and art, of which £92,127 was for the British Museum. The expenditure on the British Museum for the year ending March 31, 1864, was £95,500.

The amount of claims filed in the Foreign Office by the 1st of May, against the United States, amounted to 451.

They may be divided into two classes: one for injury to persons by imprisonment or other means, and the other for injury to property by seizure of ships or cargoes, chiefly on the ground of breaking the blockade.

The number of cases of personal injury complained of is 73. These include cases of imprisonment, unlawful arrest, ill-treatment on board vessels seized, ill-treatment in prison, alleged forced enlistment, ill-usage while serving on the New York police, murder—in the case of Gray, killed by Lieut. Donovan, of the United States navy, on board the Saxon—and

fil-usage at Hilton Head. In a good many of these cases redress seems to have been granted, and in some of them compensation; but in several of them the complaint is spoken of as under consideration.

The number of complaints of seizures of vessels or interference with their voyages is very great, and has rapidly increased during the last year.

Nearly the whole of the above vessels have been condemned by the American prize courts, or are still under trial. The number discharged is insignificantly small.

GREECE, a kingdom in Europe. King George I., born Dec. 24, 1845, elected "King of the Hellenes," by the National Assembly of Athens, March 18 (30), 1868; landed in Greece Nov. 2, 1868. The three great European powers gave their sanction to the election in the protocol of a conference, held at the British Foreign Office June 5, 1868, of which the following are the most important points:

"The plenipotentiaries of France, Great Britain, and Russia, announce the adhesion of their courts to the acts in virtue of which Prince William of Denmark, with the consent of his Majesty the King of Denmark, and of his father, Prince Christian, is called to the Hellenic throne, under the title of George I., King of the Hellenes. Desiring to facilitate the realization of the wishes of the Greek nation, the Courts of France, Great Britain, and Russia, have authorized their representatives to set forth the following resolutions:

"Sec. 1. The principal secretary of Her Britannic Majesty declared that if the union of the Ionian islands to the Hellenic kingdom, after having been found to be in accordance with the wishes of the Ionian parliament, should obtain the assent of the Courts of Austria, France, Prussia, and Russia, Her Britannic Majesty would recommend to the Government of the United States of the Ionian Islands to appropriate annually a sum of £10,000 for the purpose of augmenting the civil list of His Majesty George I., King of the Hellenes.

"Sec. 2. The plenipotentiaries of France, Great Britain, and Russia declare that each of the three courts was disposed to give up in favor of Prince William £4,000 a year, out of the sums which the Greek treasury has engaged itself to pay annually to each of them in pursuance of the arrangements proposed at Athens by the representatives of the three powers, and accepted by the Greek Government with the concurrence of the Chambers in the month of June, 1860. It is expressly understood that these three sums, forming a total of £12,000 annually, shall be destined to constitute a personal dotation of his Majesty the King, in addition to the civil list given by the law of the State.

"Sec. 8. In conformity with the principles of the Hellenic constitution, recognized by the treaty signed at London on the 20th of Nov., 1852, and proclaimed by the decree of the National Assembly of the 18th (30) March, 1868,

the legitimate successors of King George I. must profess the tenets of the orthodox church of the East.

"Sec. 4. In no case shall the crown of Greece and the crown of Denmark be united on the same head.

"Sec. 6. The courts of Greece, Great Britain, and Russia, shall, from this moment, use their influence in order to procure the recognition of Prince William, under the name of George I., by all the sovereigns and states with whom they have relations."

The population of the kingdom of Greece, without the Ionian Islands, amounted, in 1861, to 1,096,810 inhabitants. Since the annexation of the islands, the area of the kingdom is about 94,794 geographical miles, with a population of about 1,826,000 inhabitants.

The revenue and expenditures in the years 1861 and 1862 were as follows:

	1861. Drachmas.*	1862. Drachmas*
Revenue	21,780,000	24,894,762
Expenditures	24,987,487	24,787,583

The movement of shipping, in 1861, was as follows:

	Vessels.	Tonnage.
Arrivals	89,485	2,495,848
Departures	89,304	2,468,779

The movement of commerce, in 1861, was as follows:—Imports, 47,914,086 drachmas; exports, 28,107,185 drachmas.

For more detailed statistics of the population, as well as for the latest statistics concerning the army and navy, see ANNUAL CYCLOPEDIA for 1868.

A National Assembly, which was chosen to prepare a new constitution for the Greek kingdom, commenced its sittings on the 22d of December, 1868. It did not begin discussing the articles of the constitution until the 10th of August, 1864, and would hardly have finished its labors before the close of the year, unless the king had threatened it with dissolution. Then their progress became more satisfactory, and on the 28th of October its discussion upon the constitution was terminated. On Nov. 28th the king took the oath under the constitution, and the convention was dissolved. One of the notable features of the new constitution is the abolition of the senate and the transfer of the whole legislative power of the realm to a single chamber of deputies, which was resolved upon by 211 votes against 62, on Sept. 19, 1864. On Oct. 21 the convention adopted, however, by a majority of 186 to 124, a proposal made by the king to create a Council of State. The national convention, in October, 1864, consisted of 282 members, including 84 deputies from the Ionian islands, elected by general suffrage in June, 1864.

The English protectorate over the Ionian

* 5.78 drachmas are equivalent to \$1.

Islands came to an end on the 2d of June. On that day, at eleven o'clock, the last remaining regiment in this citadel marched out, and their guard at the main gate was relieved by a Greek guard of gendarmerie. At noon the commander of the English forces, Sir Robert Garrett, accompanied by his staff, mounted to the flag-staff of the citadel, and as the British red ensign was unfurled at the main of the *Marlborough*, the English colors at Cape Sidero, Fort Neuf, and Vido were simultaneously lowered, and the blue and white flag of Greece was hoisted in their place. A salute was fired by the Greek artillery from what but a minute before had been the English saluting battery. The *Marlborough* replied in splendid style, and the union of the Ionian Islands with Greece was consummated. The reports in most of the English papers intimated that the Ionians were regretting their severance from the English government; but this assertion is not borne out by facts. On the contrary, everywhere the event was celebrated with the utmost enthusiasm. The sentiments expressed in the following farewell address from the Municipal Council of Corfu to the parting English, may be regarded as the opinion of the immense majority of the Ionians.

By a generous decision of your august Queen, the wishes of this Grecian land have been granted, and you are about to leave this island, on which you have resided with us for half a century; and nobly have you behaved toward us. The Municipal Council of this island, under the influence of the unspeakable joy which it experiences in this memorable change in its destiny, at the moment of its entering a new career of national existence, cannot, without emotion, witness your departure and leave unexpressed the sentiments of sympathy that it entertains for the great nation to which you belong. As free citizens of a free nation you will not be indignant at the exuberant joy of a people passing from foreign protection to national liberty, nor will you consider it in any way connected with your departure, which affects us exceedingly, and causes us to express from our hearts the warmest wishes for your welfare, and for that of your ties of illustrious country to which we feel bound by gratitude and hope. Farewell, brave sons of England! Forget, as we do, whatever may tend to mar our mutual love. Love us, as we love you, and desire that we may imitate your national virtues.

On the 6th of June the King of Greece arrived at Corfu, and was enthusiastically cheered by the people. On July 30th the Ionian representatives arrived at Athens, and their reception may be described as a perfect national fête. The elections, after a short debate, were all declared valid, the oath of allegiance was taken, and the fusion of the two countries in the assembly was complete.

King George was too young to effect personally any marked influence upon the politics of the country; and his chief adviser, Count Spouneok, soon became extremely unpopular. The passionate conflict between the parties continued, and sometimes even turned against the new king, to whom, on August 26, a member of the National Assembly addressed the following insulting letter:

ATHENS, August 26.

SIRE: To expel Otho, a sovereign, who, as an individual, we acknowledged to be a worthy man, we Hellenes did not hesitate to stake the fate of our country, because the royalty under Otho had become a centre of intrigue. Sire, the whole of the capital of the kingdom is convinced, and within two days all Greece will be so likewise, that your court has descended in a mass into the political arena, and made use of your name in a scandalous manner on the occasion of the election of President for the National Assembly. Sire: the object of the contest for the presidency was evidently the correction of your court, which for some time past has been conspiring against the oath made by the constitutional king toward the nation—a court which a great national majority is endeavoring, by peaceful measures, to replace in its proper sphere. Corruption has, however, gained the day, and the victory of the courtiers is both prejudicial to the king and a misfortune to the nation. Sire: the policy now pursued alienates the king from the love of the people, a love on which you have based your strength and your authority. Greece cannot possibly tolerate such a course, and myself, the most humble of your subjects, moved by the grief which I feel, from my attachment to my king and to my country, supplicate your majesty to save from further embarrassment the land in which you have declared you wish to live and die a Hellenes.

Your Majesty's very sincere and very obedient subject,

EUTHIMIO PLASTERAS,

Representative of Lepanto.

The assembly expressed its indignation at this letter, on Friday, Aug. 26, by a majority of 193 to 27; twenty-eight members abstaining from voting.

GREEK CHURCH. The Greek Church is a kind of ecclesiastical confederacy, consisting, hitherto, of ten groups of churches which, while professing the same faith, were independent of each other in point of administration.*

The year 1864 has produced some important changes in the mutual relations of these groups of churches. The churches of the Ionian Islands were, in consequence of the union of the Islands with Greece, detached from the patriarchate of Constantinople, and connected with the Holy Synod of Athens. The Churches of the Danubian principalities were likewise detached from the Patriarchate of Constantinople and proclaimed to be an independent Church. In Austria, where, hitherto, all the Greek churches were subordinate to the Archbishop of Carlowitz, they have now been separated into two distinct organizations, one of which is formed by the dioceses of the Serbian nationality, which remain under the jurisdiction of the Archbishop of Carlowitz, while the other will embrace the dioceses of the Roumanian nationality, for which a new Archbishopric has been established in Transylvania.

The most important event in the Greek Church is the movement toward intercommunion with the Anglican Churches. This movement is greatly enlisting the interest of the Russians. An interesting account of the disposition of the heads of the Russian Church with regard to this subject was published last

* For a full account of these ten groups see ANNUAL CYCLOPEDIA for 1868, p. 464.

year by the Rev. Mr. Young, the Secretary of the Russo-Greek Committee, appointed by the last General Convention of the Protestant Episcopal Church of this country, who during the first months of the year had visited Russia and conversed with some of the prominent men of the Church. We take the following extracts from Mr. Young's account, which gives more detailed information on this subject than can be derived from any other source:

After making the acquaintance of the Russian chaplains, resident in London and Paris—both of whom were deeply interested in the movement, and anxious to further it to the utmost in their power—Mr. Young arrived in St. Petersburg, and waited first upon the Vice-Procureur-Général, Prince Ourousoff, through whom and in whose presence he obtained an interview with the Procureur-Général. These gentlemen are the Emperor's representatives in the Holy Synod, without whom nothing can be done—being equivalent to what is called with us the "lay element." The Procureur-Général said that, being laymen, it was not for them to express an opinion upon the theological aspects of the question. He therefore referred Mr. Young to the aged and truly venerable Philaret Metropolitan of Moscow, as being preeminently the man whose utterances on such a point might be regarded as the voice of the whole Russian Church, and whose opinion touching this matter, when communicated to the Holy Synod after an interview with Mr. Young, would, in all probability, very greatly influence the action of the Synod.

At Moscow Mr. Young enjoyed two interviews with the Metropolitan Philaret, of some three hours each, the vicars of the metropolitan (Bishop Sabas and Bishop Leonide), together with the rector of the Spiritual Academy of Moscow, and two interpreters, being present on both occasions. (Bishop Leonide, by the way, was in his youth a classmate at the naval school of the Admiral Lessoffsky, who left us the other day; and he entered most heartily and thoroughly into the movement.) The metropolitan's reception was most courteous and cordial, and throughout the interviews nothing was said on either side that in the least degree ruffled or disturbed the friendly tone. The substance of the conversation was chiefly the asking and answering of questions as to the state of facts touching the doctrine and ecclesiastical position of the Anglican Communion on the one side, and of the Russian Church upon the other. It was arranged that the chief portions of our prayer-book should be translated into the Russian language and published, so as to give a more definite idea of the doctrine and worship of our Church. The metropolitan, at the close of the final interview, expressed his gratification at the letters which Mr. Young had brought from the American bishops, asking Mr. Young in return to "bear the kiss of peace from him to the whole venerable hierarchy of the American Church, assuring them of his warmest sympathy and love, and of his earnest prayer and hope that we may soon be one in mind, as we are already one in heart in Christ Jesus." At parting, he gave Mr. Young his episcopal benediction, together with the most cordial adieus. During his stay in Moscow Mr. Young found that the movement was already well known among the leading circles of the laity, and the warmest desires were expressed for a successful issue. So much interest was shown, indeed, that Mr. Young found it simply impossible to accept all the invitations that were so kindly pressed upon him from every side.

On his return from Moscow to St. Petersburg, he had an interview with the Metropolitan of St. Petersburg, who is also President of the Holy Synod, the Archbishop of Moghileff, a member of the Synod,

being also present. His reception here was no less warm and cordial than by the venerable Philaret. He expressed great gratification for himself and on behalf of the Russian Church, at the movement thus begun, and assured Mr. Young that any steps which our Church might see fit to take, would be met by the Russian Church in the spirit and love of Christ. He thought it very judicious that a Committee of Inquiry should have been appointed in the first instance, as it would afford the opportunity for a better knowledge of one another before more formal negotiations should be begun. He read the letters from the American bishops with ease and evident interest, noting the expressions they contained, and testifying his gratification at the tone which pervaded them. He said that the sentiments and wishes of the American bishops in these letters, could not but meet with warm sympathy on the part of the Russian Church, which ever prays for the reunion of Christendom, and is ever ready to negotiate with those who desire to stand on the ground of apostolic truth and order, and are willing to admit the apostolic dignity of the Russian Church. He stated that he would lay these letters of the American bishops before the Holy Synod on the following day, and invited Mr. Young to visit the Synod at the same time; remarking, also, that replies to these letters would be sent to the American bishops. At the close of the interview the metropolitan expressed the sincere hope that the movement begun by the American Church might prove to be the work of our blessed Lord himself, and that through His grace it might result in the great consummation so much desired by both Churches. In parting he also gave to his visitor the episcopal benediction.

The next day, in accordance with the invitation given, Mr. Young visited the Holy Synod, and was introduced by Prince Ourousoff to the several members of it, by all of whom he was most courteously and cordially received. At the request of the Procureur-Général he left the letters of the American bishops to be deposited in the archives of the Holy Synod; and at the request of the President of the Holy Synod he wrote a note to accompany the letter, giving an epitome of the origin and aim of the movement.

The Russians are also beginning to acquaint themselves better with the literature of the Anglican churches. An association of ladies has been formed for the dissemination of theological and general reading matter. The Association has been in operation about a year, and has its depository at Moscow. The books kept at the depository and destined for circulation are:

1. Church books (all the books indispensable for the service of the church), Bibles, testaments, prayer-books, etc.
2. The writings of the fathers of the Church, popular sermons, explanations of the Bible, and in general books relating to the history, doctrine, and the rites of the Church.
3. Books concerning the history and geography of Russia, travels, descriptions of the country, biographies, popular songs, and standard works of the most eminent writers.
4. Juvenile literature, books for instruction, and entertaining books for children, carefully selected.
5. Books on various subjects, but particularly adapted for popular reading, tales, stories, descriptions of foreign countries, engravings, etc.

This society, through the Rev. Mr. Young, expressed a desire to the Church Book Society of the Protestant Episcopal Church of New York for material to help in their work, and in compliance with this request the Book Society, on June 18th, 1864, passed a resolution authorizing Mr. Young to forward to the Russian association at his discretion copies of any of the publications of the Society, or of any books on its approved list, and to convey to the Association assurances of fraternal and cordial sympathies, bidding them most heartily "God speed" in their labors of love.

In England an association has been formed, called "the Eastern Church Association," which numbers among its patrons the Archbishop of Belgrade, of Serbia. It was announced that in the early part of the year 1865, several Eastern ecclesiastics would come to England, commissioned by the Synod of Moscow to make definite inquiries regarding the present position of the Church of England, with a view to restored intercommunion.

We have given in the Annual Cyclopædia of 1863 an account of the missions of the Russian Church in Asia. Outside of Russia the Church had hitherto sustained only one mission in Pekin, China, which was established in the reign of Peter the Great, more than one hundred and fifty years ago. Its object was strictly limited to the welfare of a colony of Russian subjects who had been captured on the Amoor and planted near Pekin. A treaty between China and Russia authorized the Russian Government to keep six Russian missionaries at Pekin, changing them once in ten years, with the right of having a few students to learn the Chinese and Manchoo language, with a knowledge of Chinese affairs. Hitherto the character and the fruits of this mission have not been well spoken of by the Protestant missionaries in China. But in the "Missionary Herald" for February, 1865, is a letter from Mr. Blodgett, missionary of the American Board at Pekin, who writes, Sept. 8, 1864, that "the Russian missionaries in Pekin now labor devoutly for the Chinese," in the country as well as in the city. And he adds in behalf of the Russians this testimony: "It is an interesting fact, and one which marks a difference between them and the Roman Catholics, that they translate and use the Sacred Scriptures. Their version of the New Testament into Chinese is now in print in this city. They have obtained also, from the English missionaries, the version of the Bible by Messrs. Swan and Stallybrass, and published by the British and Foreign Bible Society, for the use of their ministers to the Mongolians, and the version of the New Testament published by the same society for the use of their missions in Russian Manchuria. It is hopeful to see this regard for the Word of God. Their terms and usages coincide mostly with those of the Roman Catholics."

Other interesting statements on the missionary work going on in the Russian Church are

derived from the report of the Rev. J. Long, an English clergyman, who recently spent several months in travelling in Russia for the special purpose of studying the religious and social condition of the country. Mr. Long was informed by the bishop of Viborg, who is at the head of the academy of St. Petersburg for training priests, that the Russian Church has about a hundred missionaries and missionary agents at work in Siberia and the adjacent districts. A Russian noble, who is one of the emperor's chamberlains, and favorable to missions, gave him much information on what the Russian Church is doing for the missionary cause; they have missionaries located in the Altai Mountains, at Kamtschatka and the Caucasus, near Lake Baikal, and have also a number who labor among the Buriats, who are Buddhists. The Russians intend shortly to found a missionary seminary, to be located either at Kazan or Irkutsk, as St. Petersburg is unsuited for it, and they wish to have it in a place where the Oriental languages can be taught to the students. Another nobleman, member of the Council of State, much interested in missions, wished to introduce Mr. Long to the emperor's physician, who is a devout man, and for this purpose took him to the palace of Tsarko Celso, twenty miles from St. Petersburg, when the physician promised to speak to the emperor in favor of the proposal to form a general Russian Missionary Society to remove obstacles and secure the support of the Imperial family. He afterwards spent several days at the monastery of Troitza, near Moscow, in company with a Greek monk, who is going out as a missionary to the Caucasus, where the Russian Church is prosecuting its missions vigorously in Siberia and Eastern Asia. The principal of the Russian Academy at Moscow gave him an interesting work on the "History of the Missions of the Russian Church." Mr. Long speaks of Mr. Yussouff as warmly in favor of missions; also of Bishop Leontides, as one who speaks English, and is the only bishop of the Russian Church who has not been brought up a monk, having formerly served as an officer in the Russian navy. He is a man of enlightened views, anxious for a reform, as is also Philaret, the Archbishop of Moscow.

The same Mr. Long also makes some interesting statements on the circulation of the Bible in Russia. The Holy Synod of the Greek Russian Church has itself put in circulation a new and improved version of the Gospel in Russ. Mr. Long was told by Kasim Beg, a professor of Persian at the University of St. Petersburg, that he had translated the New Testament into the Tartar language, at the express request and with the aid of the Archbishop of Kazan, whom he described as a man ready for every good word and work. Russian friends at St. Petersburg resolved last year to send a colporteur to the fair of Nijni Novogorod for the sale of Bibles; but before he got half way there was such a demand that he sold all his stock, and had to write back to St. Petersburg to get a fresh sup-

ply for the fair. The increase of schools among the peasantry is also rapidly increasing the circulation of the Bible. When Mr. Long was in Russia the Holy Synod was publishing a new edition of eighty thousand copies of the Testament, which will be sold at fifteen copecks a copy, or about sixpence.

The new constitution of the kingdom of Greece (*see* GREECE) makes the following provision concerning the legal position of the Greek Church: "1. The orthodox Eastern Church of Christ is the established religion in Greece. Every religion is tolerated, and may be freely exercised under the protection of the law. Proselytism, and all interference with the established religion, is prohibited. 2. The orthodox Church of Greece, acknowledging as its head our Lord Jesus Christ, is in doctrine indissolubly united to the great Church of Constantinople, and to every other orthodox Church of Christ, observing with the same exactitude the apostolic and synodic canons, and the holy traditions. But it is independent of every other church, and exercises all sovereign rights under the government of a holy synod."

GRIDLEY, PHILO, an American jurist, born in Paris, Oneida County, New York, September 16, 1796, died in Utica, N. Y., August 17, 1864. He entered Hamilton College, Clinton, at the opening of that Institution in 1812. Here he graduated in 1816, in the first full class which graduated, having among his classmates the late Prof. Edward Robinson, Hon. Chas. P. Kirtland, &c. After leaving College he studied law at Onondaga and Waterville, and was admitted to the bar in 1820. He commenced the practice of his profession at Waterville, removing after a few years to Hamilton, Madison Co. Here he soon attained a high reputation for the thoroughness with which he investigated his cases, the profundity of his legal attainments, and the vivid, impetuous eloquence of his advocacy of the interests of his client. For several years he was District Attorney for Madison County, and in 1838 was appointed Circuit Judge of the Fifth Judicial Circuit made vacant by the resignation of Judge Denio. In 1839 he removed to Utica. In 1846, on the adoption of the New Constitution, the Circuit Court was abolished, and a Supreme Court created with 82 Judges, and Judge Gridley was elected one of these. His term of service was six years, and his health being impaired he declined being a candidate for further office at its expiration. He continued, however, the practice of his profession, though in feeble health, and suffering from paralytic attacks, until within about ten days of his death. He was a man of vast judicial learning, and of great firmness and independence. It was in his court that McLeod was tried for murder and making war upon Great Britain, the case being transferred from Niagara County in consequence of the excitement on the border. No wiser selection of a judge could have been made.

GRIGG, JOHN, an eminent American publisher, born in Cornwall, England, in 1792, died in Philadelphia, August 2d, 1864. He was left an orphan at the age of six years, and was soon after placed in a farmer's family to earn his living. At twelve years of age he went to sea, and after making several voyages found his way to Richmond, Virginia, where he had some relatives, and applied himself for more than a year to study. When eighteen or nineteen years of age he removed to Ohio, where he obtained a clerkship in the judiciary court of Warren, Ohio, and devoted himself so sedulously to the work of his office that his health suffered, and in 1815 he resigned, and became superintendent of the woollen factory of Mr. Joel Scott in Scott Co., Ky. The next year he removed to Philadelphia, and entered the publishing and bookselling house of Messrs. Warner & Johnson as a clerk. Mr. Warner died in 1821, and in his will directed that his business should be wound up by competent persons, and suggested Mr. Grigg for the purpose. Accordingly, during the next two years Mr. Grigg was engaged in this duty, and in 1823 commenced business on his own account. He was remarkably successful; acquiring a very large business, especially in the South and West, and finding a ready market for his numerous publications. In 1831 he took Mr. Hugh Elliot as partner, and in 1847 Messrs. Grambo, Claxton & Remsen were added to the firm. In 1850 the property of the firm as well as the private fortunes of the senior partners having become very large, Messrs. Grigg & Elliot withdrew from it, disposing of their interest to the junior partners and to Messrs. Lippincott & Willis, who had been for some years engaged in business in Philadelphia, and the new firm, at first Messrs. Lippincott, Grambo & Co., and later, Messrs. J. B. Lippincott & Co., continued the business, which has for some years been one of the largest if not the largest in the general trade in the United States. After withdrawing from this firm Mr. Grigg commenced business as a private banker, being also much occupied in the management of his own extensive property, which comprised extensive landed tracts in Illinois and Mississippi as well as considerable real estate in Philadelphia. He was a man of great liberality, and gave constantly and largely, though without ostentation and with a wise discrimination. He was always a friend and helper to the members of the book-trade, often assisting them by loans and counsel. In private life he was social, genial, and hospitable, and readily won the confidence and regard of those with whom he was brought in contact. In business he was remarkable for energy, sound, practical sense, and sterling integrity.

GRINFIELD, Rev. E. W., an English clergyman, author and Biblical critic, died at Brighton, England, July 9, 1864, aged 79 years. He was educated at Lincoln College, Oxford, and

commenced his career as an author while a young lawyer in the Temple, by writing pamphlets on the topics of the day. In 1818 he published a work of considerable merit on the "Connection of Natural and Revealed Theology." The next year he wrote against the materialism of Laurence, and soon after took orders in the Church of England, and became minister of Laura Chapel, Bath, and in addition to his clerical labors, rendered important service to the Society for Promoting Christian Knowledge. While at Bath, he published a volume of Sermons and a Reply to Bishop Coplestone, entitled, "Vindiciæ Analogicæ." In 1823 he removed to London, and devoted himself mostly to literary pursuits, publishing several works, and writing articles for magazines and reviews. From 1827 to 1843 he was devoted assiduously, working seven hours a day, to the great work of his life, the "Novum Testamentum Hellenicæ," in two volumes, intended to show the close connection between the Septuagint and the New Testament. This work contains 40,000 quotations, all verified by the original authorities. The next five years were spent in preparing the "Scholia Hellenistica," also in two volumes, supplementary to his New Testament. He was deeply impressed with the value of the Septuagint, and made a collection of all the known editions of it, and all the literature relating to them, which he presented to Lincoln College, Oxford. He also established a Lectureship on the Septuagint at Oxford, at his own expense.

GUN COTTON. The improvements in the preparation of gun cotton have been such that it is now manufactured in England either for purposes of mining, engineering, or for artillery use. Its nature and uses since the improvement in its preparation have been very fully discussed before the British Royal Institution. The statements and explanations of Mr. John Scott Russell on the subject are particularly instructive and valuable. In his opinion gun cotton is a new power coming under the same category as steam and gunpowder. It is highly dangerous to those who do not possess the necessary knowledge and skill; but, like them, it enormously extends human power, and, like them, the skill to use it can be rightly and certainly acquired.

1. Is gun cotton stronger than gunpowder? The answer to this is, Yes, sixfold stronger.

By this we mean that if we take a given weight of gun cotton, say four ounces, if we bore a hole $1\frac{1}{4}$ in. in diameter and 8 ft. deep, into hard rock or slate, in a quarry, and put 4 oz. of gun cotton into it, it will occupy about 1 foot of its length, and the aperture being closed in the usual manner, and a match-line led from the charge to the proper distance from which to fire it; and if we next take 24 oz. of the best gunpowder, bore a similar hole, and charge it similarly with gunpowder, and close it in the same way; it has been found that, on these being exploded, the 4 oz. of gun cotton have

produced greater effect in separating the rock into pieces than the 24 oz. of gunpowder. The answer is, therefore, that in disruptive explosion the strength of gun cotton is sixfold that of good gunpowder.

But the disruptive or bursting power of gunpowder is not always the quality for which we value it most, nor the service we require of it. In mining rocks, in exploding shells, in blowing up fortresses, this property is what we value, and this work is what we require. But we do not want to burst our fowling-pieces, our rifles, our cannon. On the contrary, we want to use a force that shall project the projectile out of the gun without bursting the gun, without straining the gun beyond a given moderate limit which it shall be able to endure. We want, therefore, a service from gun cotton which shall be the contrary of destructive to, or disruptive of, the chamber in which it does the work of giving motion to the projectile.

This moderated and modified work gun cotton can also perform; and it is the modern discovery of General Lenk which has enabled us to moderate and modify gun cotton to this gentler service. He discovered how to organize, arrange, and dispose mechanically of gun cotton in such a way that it should be three times stronger than gunpowder. Accordingly, one of his charges of gun cotton, weighing 16 oz., projected a 12-lb. solid round shot with a speed of 1,426 ft. a second, while a charge of gunpowder of 49 oz. gave the same shot a speed of 1,400 ft. a second. One-third of the weight of gun cotton exceeded, therefore, the threefold weight of gunpowder in useful effect.

2. Is gun cotton more convenient than gunpowder? This is a larger and more various question than the former, and divides itself into various subdivisions.

It is well known to sportsmen, to soldiers, and to artillery-men, that gunpowder fouls a gun. A foul residue of soot, sulphur, and potash soils the inside of the gun after every charge. The gun must, somehow, be cleaned after a discharge; if not, it fires worse, recoils more, and ceases to do its best. If the gun be a breech-loading gun, its mechanism is dirtied, and works less easily. Gun cotton deposits no residue, leaves the gun clean and clear, and the utmost it does is to leave a gentle dew of clear water on the inside of the bore, this water being the condensed steam which forms one of the products of its decomposition. Gun cotton is, therefore, superior to gunpowder in not fouling the gun, a result favorable both to quicker and more accurate firing.

It is further a matter of no slight convenience that gun cotton makes no smoke. In mines, the smoke of gunpowder makes the air unbreathable, and for some time after explosion the miners cannot return to their work. In boring the great tunnel of Mont Cenis through the Alps, the delay from smoke of powder alone will postpone the opening of the line for many months. After a properly-conducted explosion

of gun cotton, the workmen may proceed in their work at once without inconvenience.

In casemates of fortresses, gunpowder fills the casemates with foul smoke, and the men speedily sink under the exertion of quick firing. By using gun cotton it was ascertained that the men could continue their work unharmed for double the quantity of firing. This is partly attributed to the greater heat, and partly to the foulness of the air produced by gunpowder.

But it is under the decks of our men-of-war that the greatest benefit is likely to arise from gun cotton. Not only does the smoke of a broadside fill the between decks with hot and foul air, but the smoke of the windward gun blinds the sight, and hinders the aim of the leeward. When there is no smoke, as with gun cotton, the aim of every gun may be precise and deliberate. The diminished heat between decks will also tell powerfully in favor of gun cotton. In our armour-plated ships also there is more value in breech-loading guns than in any other use of artillery. It is one of the necessities of breech-loading mechanism that it be kept clean, and nothing tends more to derange its perfect action than the greater heat which gunpowder imparts to the gun from which it is fired.

That gun cotton has the convenience of not heating the gun has been thus proved: 100 rounds were fired in 34 minutes with gun cotton, and the temperature of the gun was raised 90 deg. 100 rounds were fired with gunpowder, and triple the time allowed to cool the gun, which nevertheless was heated so much as to evaporate water with a hissing sound, which indicated that its temperature was much above 212 deg. Under these circumstances the firing with gunpowder had to be stopped, while that with gun cotton was comfortably continued to 180 rounds.

It is also a matter of practical convenience that gun cotton, inasmuch as it is lighter, can be carried more easily and further than gunpowder; and it may be wetted without danger, so that when dried again in the open air, it is as good for use as before.

8. We have now to ask, Is it cheaper? The answer to this question must be qualified—pound for pound it is dearer; we must, therefore, judge of its cheapness by its effect, not by weight merely. But where it does six times as much work, it can then be used at six times the price per pound, and still be as cheap as gunpowder. As far as we yet know, the prices of gun cotton and gunpowder are nearly equal, and it is only, therefore, where the one has advantages and conveniences beyond the other, and is more especially suited for some specific purpose, that it will have the preference. Effective cheapness will therefore depend mainly on which of the two does best the particular kind of duty required of it.

To illustrate how curiously these two powers, gun cotton and gunpowder, differ in their nature, and how the action of gun cotton may be changed by mechanical arrangements, we

may take one kind of work that is required of both:—If a General wants to blow open the gates of a city, he orders an enterprising party to steal up to the gate, with a bag containing 100 lbs. of gunpowder, which he nails to the gate, and by a proper match-line he fires the gunpowder and bursts open the gate. If he nailed a bag of gun cotton of equal weight in the same place and fired it, the gun cotton would fail, and the gate would be uninjured, although the 100 lbs. of gun cotton is sixfold more powerful than the gunpowder. Here, then, gunpowder has the advantage—both weight and effect considered.

But the fault here lies not in the gun cotton, but in the way of using it. If, instead of 100 lbs. of gun cotton in a bag, 25 lbs. had been taken in a proper box made for this purpose, and simply laid down near the gate and not even nailed to it, this 25 lbs. would shiver the gate into splinters. The bag which suits the powder happens not to suit the gun cotton.

Gun cotton is, therefore, a power of a totally different nature from gunpowder, and requires complete study to know its nature and understand its use. It appears that both gunpowder and gun cotton have special qualities, and may be peculiarly suited for peculiar uses. It is the duty of a wise people to make use of both to the ends they each suit best, without prejudice arising from the accident of novelty or antiquity.

The nature of gun cotton requires a double study, chemical and mechanical. It is not like steam, the same substance, whether in the form of ice, or water, or steam. It is one substance when as gun cotton it enters the gun, and quite a different one when it has exploded and leaves the gun. Not only are the solids which enter converted into gas, but they form totally new combinations and substances. So that the marvellous changes which the chemist effects by the magic of his art take place in an instant of time, and during that almost inconceivably minute period of time, in a laboratory intensely heated, old substances are dissolved, their material atoms are redistributed, each atom released selects by natural affinity a new partner, these new unions are cemented, and at the end of this prolific instant totally new combinations of matter, forming what we call new substances, issue from the gun. It so happens that of these new substances, formed out of gun cotton, all are pure transparent gases, while in the case of gunpowder there remain 68 per cent. of solid residue, and only 32 per cent. are pure gases.

Mechanical Applications of Gun Cotton.—The mechanical application of gun cotton may be considered to be due exclusively to Major-General Lenk, of the Austrian service. Pure gun cotton becomes either a powerful explosive agent, or a docile performer of mechanical duty, not according to any change in its composition, or variation in its elements or their proportions, but according to the mechanical structure which is given to it, or the mechani-

cal arrangements of which it is made a part. It was Gen. Lenk who discovered that structure was quality, and mechanical arrangement the measure of power, in gun cotton; and in his hands, a given quantity of the same cotton becomes a mild, harmless, ineffectual firework, a terrible, irresistible, explosive agent, or a pliable, powerful, obedient workman.

The first form which Gen. Lenk bestowed on gun cotton was that of a continuous yarn or spun thread. Gunpowder is carefully made into round grains of a specific size. Gun cotton is simply a long thread of cotton fibre, systematically spun into a yarn of given weight per yard, of given tension, of given specific weight. A hank of a given length is reeled, just like a hank of cotton yarn to be made into cloth, and in this state gun cotton yarn is bought and sold like any other article of commerce.

This cotton yarn converted into gun cotton may be called, therefore, the raw material of commerce. In this form it is not at all explosive in the common sense of the word. You may set fire to a hank of it, and it will burn rapidly with a large flame; but if you yourself keep out of reach of the flame, and keep other combustibles beyond reach, no harm will happen, and no explosion or concussion will result. If you lay a long thread of it round your garden walk at night, disposing it in a waving line with large balls of gun-cotton thread at intervals, and light one end of the thread, it will form a beautiful fire-work, the slow lambent flame creeping along with a will-o'-th'-wisp-looking light, only with a measured speed of 6 inches per second, or 30 feet a minute; the wind hastening or retarding it as it blows with or against the line of the thread. This is the best way to commence an acquaintance with this interesting agent.

Care must be taken not to become too familiar with gun cotton even in this harmless and playful guise; cotton dresses will readily catch fire from it, and it should not be treated with less care to keep fire from it than gunpowder. In one respect it is less liable to cause danger than gunpowder. Grains of powder are easily dropped through a crevice, and may be sprinkled about in a scarcely noticeable form, but a hank of gun cotton is a unit, which hangs together and cannot strew itself about by accident.

The *second* form of gun cotton is an arrangement compounded out of the elementary yarn. It resembles the plaited cover of a riding-whip; it is plaited round a core or centre, which is hollow. In this form it is match-line, and, although formed merely of the yarn plaited into a round hollow cord, this mechanical arrangement has at once conferred on it the quality of speed. Instead of travelling as before only 6 inches in a second, it now travels six feet a second.

The *third* step in mechanical arrangement is to enclose this cord in a close outer skin or

coating, made generally of india-rubber cloth; and in this shape it forms a kind of match-line, that will carry fire at a speed of from 20 to 30 feet per second.

It is not easy to gather from these changes what is the cause which so completely changes the nature of the raw cotton by mechanical arrangement alone. Why a straight cotton thread should burn with a slow creeping motion when laid out straight, and with a rapid one when wound round in a cord, and again much faster when closed in from the air, is far from obvious at first sight; but the facts being so, deserve mature consideration.

The cartridge of a common rifle in gun cotton is nothing more than a piece of match-line in the second form enclosed in a stout paper-tube, to prevent it being rammed down like powder. The ramming down, which is essential to the effective action of gunpowder, is fatal to that of gun cotton. To get useful work out of a gun-cotton rifle, the shot must on no account be rammed down, but simply transferred to its place. Air left in a gunpowder barrel is often supposed to burst the gun; in a gun-cotton barrel, it only mitigates the effect of the charge. The object of enclosing the gun-cotton charge in a hard strong pasteboard cartridge is to keep the cotton from compression and give it room to do its work.

It is a *fourth* discovery of Gen. Lenk, that to enable gun cotton to perform its work in artillery practice, the one thing to be done is to "give it room." Don't press it together—don't cram it into small bulk: give it at least as much room as gunpowder in the gun, even though there be only one-third or one-fourth of the quantity (measured by weight). 1 lb. of gun cotton will carry a shot as far as 3 or 4 lbs. of gunpowder; but that pound should have at least a space of 160 cubic inches in which to work.

This law rules the practical application of gun cotton to artillery. A cartridge must not be compact, it must be spread out or expanded to the full room it requires. For this purpose, a hollow space is preserved in the centre of the cartridge by some means or other. The best means is to use a hollow thin wooden tube to form a core; this tube should be as long as to leave a sufficient space behind the shot for the gun cotton. On this long core the simple cotton yarn is wound round like thread on a bobbin, and sufficiently thick to fill the chamber of the gun; indeed, a lady's bobbin of cotton thread is the innocent type of the most destructive power of modern times—only the wood in the bobbin must be small in quantity in proportion to the gun cotton in the charge. There is no other precaution requisite except to enclose the whole in the usual flannel bag.

The artillerist who uses gun cotton has therefore a tolerably simple task to perform if he merely wants gun cotton to do the duty of gunpowder. He has only to occupy the same space as the gunpowder with one-fourth of the

weight of gun cotton made up in the bobbin as described, and he will fire the same shot at the same speed. This is speaking in a general way, for it may require in some guns as much as one-third of the weight of gunpowder and eleven-tenths the bulk of charge to do the same work; a little experience will settle the exact point, and greater experience may enable the gun cotton to exceed the performance of the gunpowder in every way.

The *fifth* principle in the use of gun cotton is that involved in its application to bursting uses. The miner wants the stratum of coal torn from its bed, or the fragment of ore riven from its lair; the civil engineer wishes to remove a mountain of stone out of the way of a locomotive engine; and the military engineer to drive his way into the fortress of an enemy, or to destroy the obstacles purposely laid in his way. This is a new phase of duty for gun cotton—it is the work of direct destruction. In artillery you do not want to destroy directly, but indirectly. You don't want to burst your gun, nor even to injure it; and, we have seen, in order to secure this, you have only to give it room.

The fifth principle, therefore, is, to make it destructive—to cause it to shatter every thing to pieces which it touches, and for this purpose you have only to deprive it of room. Give it room, and it is obedient; imprison it, and it rebels. Shut up without room, there is nothing tough enough or strong enough to stand against it.

To carry this into effect, the densest kind of gun cotton must be used. It must no longer consist of fine threads or hollow textures wound on roomy cores. All you have to do is to make it dense, solid, hard. Twist it, squeeze it, ram it, compress it; and insert this hard, dense cotton rope or cylinder or cake in a hole in a rock, or the drift of a tunnel, or the bore of a mine; close it up, and it will shatter it to pieces. In a recent experiment, 6 oz. of this material set to work in a tunnel not only brought down masses which powder had failed to work, but shook the ground under the feet of the engineers in a way never done by the heaviest charges of powder.

To make gun cotton formidable and destructive, squeeze it and close it up; to make it gentle, slow, and manageable, ease it and give it room. To make gunpowder slow and gentle, you do just the contrary; you cake, condense, and harden it to make it slow, safe for guns, and effective.

To carry out this principle successfully, you have to carry it even to the extreme. Ask gun cotton to separate a rock already half-separated, it will refuse to comply with your request. Give it a light burden of earth and open rock to lift, it will fail. If you want it to do the work, you must invent a *ruse*—you must make believe that the work is hard, and it will be done. Invent a difficulty and put it between

the cotton and its too easy work, and it will do it. The device is amazingly successful. If the cotton have work to do that is light and easy, you provide it with a strong box, which is hard to burst, a box of iron for example; close a small charge, that would be harmless, in a little iron box, and then place that box in the hole where formerly the charge exploded harmless, and in the effort it makes to burst that box, the whole of the light work will disappear before it.

The first trial of English-made gun cotton was made at Stowmarket in the spring of 1861. A charge of 25 lbs. not only destroyed a tree-stockade, but shattered it into matchwood.

It is, therefore, the nature of gun cotton to rise to the occasion and to exert force exactly in proportion to the obstacle it encounters. For destructive shells this quality is of the highest value. You can make your shell so strong that nothing can resist its entrance, and when arrived at its destination no shell can prevent its gun-cotton charge from shivering it to fragments.

These are the main principles in the mechanical manipulation of gun cotton which will probably render it for the future so formidable an instrument of war. Resistances too great for gunpowder only suffice to elicit the powers of gun cotton. On the other hand, in its elementary state as the open cotton yarn, it is playful, slow, gentle, and obedient; there is scarcely any mechanical drudgery you can require of it that it is not as ready and fit to do as steam, or gas, or water, or other elementary power.

As to the nature and source of this amazing power of gun cotton, Mr. Russell, as a mechanic, thus undertakes to reply: "Who shall say what takes place in that pregnant instant of time when a spark of fire enters the charge, and one-hundredth part of a second of time suffices to set millions of material atoms loose from fast ties of former affinity, and leaves them free every one to elect his mate, and uniting in a new bond of affinity, to come out of that chamber a series of new-born substances? Who shall tell me all that happens then? I will not dare to describe the phenomena of that pregnant instant. But I will say this, that it is an instant of intense heat—one of its new-born children is a large volume of steam and water. When that intense heat and that red-hot steam were united in the chamber of that gun and that mine, two powers were met whose union no matter yet contrived has been strong enough to compress and confine. When I say that a gun-cotton gun is a steam-gun, and when I say that at that instant of intense heat, the atoms of water and the atoms of fire are in contact atom to atom, it is hard to believe that it should not give rise to an explosion infinitely stronger than any case of the generation of steam by filtering the heat leisurely through the metal skins of any high-pressure boiler."

H

HABEAS CORPUS. The proclamation of the President of Sept. 15, 1863, declared the privilege of the writ of *habeas corpus* suspended throughout the United States, "in cases where, by the authority of the President of the United States, military, naval, and civil officers of the United States, or either of them, hold persons under their custody, either as prisoners of war, spies, or aiders or abettors of the enemy, or officers, soldiers, or seamen, enrolled, drafted, or mustered, or enlisted in, or belonging to the land or naval forces of the United States, or as deserters therefrom, or otherwise amenable to military law, or to the rules or articles of war, or the rules and regulations prescribed for military or naval service by the authority of the President of the United States, or for resisting a draft, or for any other offence against the military or naval service." (See ANNUAL CYC., 1863, p. 489.) Subsequently modified, so as to permit its allowance and operation in cases of minors improperly enlisted, &c. (*Ib.*, 491.)

Military commissions were from time to time convened, to which was given cognizance of the offences enumerated and referred to in the proclamation, and by which the large majority of persons charged with such offences were tried. These tribunals, called into being by the order of some commanding officer, do not appear to have been restricted either in the extent of their jurisdiction or the manner of their procedure by any rule, except the direction of the officer commanding the department in which they exercised their powers.

There is a difference between "courts-martial" and "military commissions." The former are tribunals known to the law, and are instituted for the trial of military persons—persons charged with some breach of military obligation; the latter, unknown to the law, are for the trial of persons who have fallen under suspicion of the Government. The former, like the civil courts, are presumed to be always in session; their rules of evidence and rules of decision are fixed by law and precedent; and the offences of which they take jurisdiction are accurately defined; the latter only sit under special orders, is limited to a particular case, or class of cases, has no rules of evidence nor any rule of decision.

In order to give jurisdiction to the first, some particular person must be charged with some particular offence; in order to afford a reason for the action of the last, all that is required is that somebody is suspected of something. Courts-martial are always in being—their existence not depending upon any special civil or military condition; while military commissions are only now and then called into activity, to meet some real or imaginary state of political circumstances.

It seems obvious from this that the true end of military commissions, if they are allowable for any purpose, is to inquire and develop, not to judge or convict. It always, however, unfortunately happens, that the same state of political or party agitation which brings the commission into existence, creates a sort of demand that it shall deal finally and vindictively with some who come under its notice. It is treated by its creators, and is apt to conduct itself, as if its functions were purely executive.

It is not to be understood that persons tried are always convicted; on the contrary, many are allowed to escape. The difficulty is that in many cases it is impossible to penetrate the curtain which conceals from the observer the power behind the court, and supplies the undeclared rule which determines the result.

The foregoing is under the admission that military commissions may be, in certain cases, allowable. If they are so, it is desirable for the sake of those who compose them and the Government under which they are instituted, as well as for that of the people, that their functions should be confined within their proper province—that of inquiry and development. Trial and punishment may be based upon that which they discover, but trial and punishment should only follow specific charges, and legitimate proof of acts by law forbidden. Strictly no one is before a commission for trial.

Did they confine themselves purely to the work of partial inquiry and development, leaving to the courts of justice—civil or military, as the case should warrant—that which exclusively belongs to them, the work of prosecution, trial, and punishment, they might, in the hands of dignified and conscientious men, perform a respectable part in furtherance of justice and the protection of the community, and would merit to escape, if they did not escape, much of the odium which they have encountered.

The persons to be brought before these military commissions were usually arrested without process, and retained in custody without the privilege of the writ of *habeas corpus* under the provisions of the proclamation; and the War Department issued an order prohibiting, under pain of dismissal from the army, officers from giving information concerning the sentence of civilians by military commissions before the execution of the sentence. Upon the representation of the facts, a number sentenced to the penitentiary had been pardoned by the President, and this order was calculated to get the prisoners fully incarcerated before their friends could be able to ascertain the necessity of appealing to the Executive.

Early in the year Col. William G. Fish, military provost-marshal of the city of Baltimore, and who had been conspicuous in that city in

causing the arrest of persons suspected of sympathizing with the rebellion, and of offences against the Government, was himself subjected to the summary process of arrest without warrant, and confinement without benefit of *habeas corpus*, on a charge of selling Government horses, for his individual benefit. He was tried by court-martial, found guilty, and sentenced to be cashiered, to forfeit all pay and allowances, to pay a fine of five thousand dollars, and be imprisoned for at least one year and until the fine was paid.

During the year a large number of newspapers were suppressed by military orders on charges of encouraging the enemy, discouraging enlistments, advising resistance to the conscription or the publication of articles of a similar tendency. In some cases the editors of these papers were arrested by the civil authorities and tried by the courts; in others the arrest was summary, and the trial by military commission; while in others after arrest and imprisonment the parties were released without investigation or trial.

On Thursday, the 21st of July, Major-Gen. Dix directed United States District Attorney A. Q. Keasbey, of Newark, N. J., to arrest and prosecute the editor and proprietors of the "Newark Evening Journal." The offence for which the prosecution was made was the publication of an article on the draft.

The arrest was made under the twenty-fifth section of the act of March 8d, 1863, entitled "An act for enrolling and calling out the national forces, and for other purposes."

Mr. E. N. Fuller, the editor, was arrested on Friday, on two warrants—one for inciting to insurrection, and the other for discouraging enlistments. He was released on bail by United States Commissioner Morris on giving bonds in the sum of \$7,000.

Mr. Fuller was afterwards indicted in the United States District Court for the district of New Jersey under the section of the law stated, and at a subsequent term of the court pleaded *non vult contendere*, and was sentenced to pay a fine.

The obnoxious articles were copied from the "Newark Evening Journal" into the "Somerset Messenger," published in Somerville, N. J., which led to the arrest on the 10th of August of Mr. O. O. Cone, the editor, on a process issued by United States Commissioner Whitehead on the complaint of the United States District Attorney, made at the request of Gen. Dix. Mr. Cone was also held to bail to appear.

On August 18th, W. H. Simpson, editor of the "Republican Journal," was arrested and carried before the United States District Court at Bangor, to answer to an indictment for giving aid and comfort to the rebellion by publishing an article on the draft. He pleaded not guilty, and through his counsel demanded an immediate trial. This was resisted by the United States Attorney, upon whose motion the matter was continued, and Mr. Simpson's personal recog-

nizance taken for his appearance at the next term of the court.

On August 18th, Mr. John Mullaly, editor and proprietor of the "Metropolitan Record," New York, was arrested and brought before United States Commissioner Osborn, on a charge of opposing and counselling resistance to the conscription. The charge was made by United States District Attorney E. Delafield Smith, who, it seems, took some of the papers published by Mullaly to the commissioner, and desired a warrant of arrest. Commissioner Osborn desired him to state his complaint in writing, which was done.

Upon this affidavit, Commissioner Osborn issued a warrant of arrest. Mr. Mullaly was therefore brought before the commissioner, and Mr. Charles Downing became his surety in the sum of twenty-five hundred dollars.

On November 18, Dr. John McElwee, editor of the Hamilton "True Telegraph," was arrested on an indictment found by the Grand Jury of the United States for the Southern District of Ohio, charging the said John McElwee with treason. The indictment was found under the provisions of the act of July 17th, 1862, and charges the accused with giving aid and comfort to the rebels. Three several editorial articles were specified, contained in the "True Telegraph" of July 21st, 1864. Judge Leavitt held him to bail for his appearance in the sum of \$3,000.

Mr. Flanagan, an editor of a paper in the West, was tried and sentenced to six months imprisonment at hard labor by a military commission. The offence for which he was tried was the publication of an article in a newspaper of which he was the proprietor. The article was copied from another paper, and it is a curious fact that the author of the article and proprietor of the paper in which it originally appeared had been previously arrested for its publication, and discharged by a military tribunal. Some thought this inconsistent, others argued otherwise, and the commission before which Mr. Flanagan was tried agreed with the latter. The commission which tried the original author of the obnoxious article let him go; that which tried Mr. Flanagan shut him up.

Oct. 5th, J. J. Bingham, editor of the Indianapolis "Daily Sentinel," was arrested by order of Maj.-Gen. Hovey, the military governor of Indiana, and confined in a military prison. The reason said to be alleged for Mr. Bingham's arrest was the publication of an article in the "Sentinel" regarded as derogatory to a military commission then in session in that city engaged in the trial of Mr. Dodd, on a charge of disloyalty or conspiracy.

In addition to the arrest of editors of papers, large numbers of citizens were arbitrarily arrested, of which the N. Y. "Journal of Commerce" says:

A mere list, with the briefest mention possible in each case, would fill not less than eighteen columns of our paper. This tremendous list is exclusively

made up of arbitrary seizures of individuals who were dragged from their families without indictment, without warrant, without form of law, without being confronted with witnesses against them, without being informed of the nature of the charges against them, immured for weeks and months in dungeons often a thousand miles from the State in which they were seized, and finally turned loose without trial or apology. The list includes no military offenders. It is made up entirely of the names of citizens of the loyal States, in which the courts of justice have never been suspended, where every crime, whether treason or other, could have been punished in due form of law. The catalogue of orders made in relation to these victims of autocratic power is a terrible book for history.

Pending the canvass for the election of President, numerous arrests were made of persons charged with attempting to defraud soldiers of their votes, and of making false returns of the votes of the soldiers of those States whose laws permitted them to vote while in the field. The most noticeable of these cases was that of Col. Samuel North and his associates, who were the agents of the State of New York to procure and forward returns of such votes. These parties were summarily arrested, their papers seized, and they confined in the Old Capitol Prison, where they were retained until after the election, when they were tried by a military commission and acquitted, on the ground that there was no evidence to show guilt on the part of either defendant. Immediately after the return of Col. North, his home friends, by a spontaneous movement, united in soliciting him to permit some public demonstration, in order to manifest their regard and sympathy, and also to express their abiding faith in his incorruptibility. In pursuance of this a banquet was given to him, at which, after congratulatory remarks by the chairman, Col. North related the hardships of his imprisonment, the injustice of the charges against him, and the delays interposed to prevent the speedy investigation of the alleged offences.

In connection with the case of Col. North, the *Elmira* (N. Y.) "Advertiser" presents a case of similar outrage in the person of James A. Creed, Esq., of that place, who, on the 8d of November, was summarily arrested on the authority of a telegram from Washington, hurried off to that city, and there kept in prison. After having been imprisoned some time it seems that Mr. Creed ascertained that his arrest was based upon charge or suspicion respecting the alleged forged votes of soldiers. He therefore made a statement denying any complicity in the matter, and his counsel, Mr. Gillett, presented it to Judge Advocate Holt, who said that no charges had been preferred against Mr. Creed, but that he was held to give testimony. After the conclusion of the North trial, Mr. Creed's unconditional release was ordered, and shortly after he was set at liberty. Instead of being detained to be a witness, Mr. Creed, it is said, was imprisoned to prevent his giving testimony.

During the summer there were numerous

arrests, but in no State was the personal liberty of the citizen so generally violated as in the State of Kentucky. Civil and judicial officers of the State, as well as private citizens, were arrested and imprisoned. Lieutenant-Governor Jacobs, Chief Justice Bullitt, John W. Leathers, and J. R. Buchanan, delegates from the State to the Chicago Convention—Col. Woolford, who had been in the service, were seized, and with others placed in confinement. The Louisville "Journal" gives the following general account of these proceedings:

In the course of the last three or four weeks the military agents of the Government amongst us have arrested a very unusual number of citizens, some of whom, as they themselves allege, are totally ignorant of the charges against them, and all whom are held in confinement, with the prospect of suffering banishment, indefinite imprisonment, or some other severe punishment, without the privilege of a trial of any description. Several of these citizens, as we are assured, are notoriously conservative Union men, strong, true, self-sacrificing friends of the Union, who are conscious of no offence except that of opposition to Mr. Lincoln as a candidate for the Presidency. (See KENTUCKY.)

Lieutenant-Governor Jacobs was banished, and sent beyond the lines, but was subsequently permitted to return.

In Missouri Congressman Hall was arrested at a place called Mexico, for using language in reference to the President, and sent to St. Louis on the 11th of August, under guard.

The House of Representatives instructed their committee to investigate whether the act of Congress requiring the trial of those arrested and confined had been carried into effect.

The Military Committee of the House made a personal inspection of the Old Capitol Prison, for the purpose of carrying into effect the resolution. The committee found that officers, even of high rank, and "having honorable scars," were and had been constantly confined there for months without any official notification, as required by law, of charges preferred against them, and sometimes put into close confinement. In some instances those incarcerated were totally ignorant of the causes which led to their apprehension. In many cases the commitments were signed by L. C. Baker, purporting to act as agent of the War Department, and his oral directions were sufficient to make the terms of imprisonment more or less rigid, according to his ideas in the premises.

These violations of personal rights were not allowed to go entirely unrebuked by the courts and people. A suit was brought by Albert W. Patrie, a respectable farmer of Greene County, against Robert Murray, U. S. Marshal for the Southern District of New York, and William Buckley, his deputy, for an "arbitrary arrest."

It appeared on the trial that in August, 1862, Murray sent Buckley from New York to Cairo, Greene County, to arrest the plaintiff. Buckley had no legal process to justify the arrest, though he had in his possession a paper supposed to be a representation made to Murray against Patrie by some political opponents.

When Buckley arrived at the house of Patrie, he learned that Patrie was in a distant field on the farm, at work, and he took the little son of Patrie to conduct him to the field, where the arrest was made. After returning with Patrie to his house, in answer to an inquiry of Patrie's wife as to the probable fate of her husband, Buckley said he supposed that he would be sent to Fort Lafayette. Patrie was taken by Buckley to the city of New York, and delivered up to Murray, by whose order he was imprisoned in the Elm Street prison for nearly a week.

Some of Mr. Patrie's friends from Greene County and his father from Schoharie County went to New York in his behalf during his imprisonment, but were unable to procure his release on bail or otherwise. In answer to Mr. Patrie's application to be bailed, Mr. Murray told him that all Greene County could do him no good. A bail-bond was afterwards executed by two of Mr. Patrie's friends residing in New York, and he was permitted to return home.

Mr. Patrie then commenced his action for the false imprisonment, but the defendants succeeded in keeping off the trial till the June circuit. At the November circuit, 1863, a postponement was procured by the defendants on various pretences of the absence of witnesses and otherwise. At the February circuit, 1864, it was again sworn off to enable the defendants to procure the testimony of the Secretary of War. But none of these witnesses were present at the trial, nor did it appear that any steps had been taken to procure their attendance or obtain their testimony, or even that their attendance was desired.

The cause was tried at Catskill, before Judge Ingalls and a jury composed of men of both political parties. The jury, after about two hours' deliberation, found a verdict for \$9,000.

Messrs. J. A. Griswold, D. K. Olney, and Amasa J. Parker appeared for plaintiff. Messrs. Vail and Sedgwick and P. C. Mattoon for defendants.

Judgment having been perfected on the verdict, the defendants applied to remove the cause to the United States Circuit Court, for the purpose of having it tried *de novo*, as if originally commenced there, under the 5th Section of the Act of Congress, known as the "Indemnity Act," passed March 8, 1863. The defendants moved, on notice, for an order of the Supreme Court staying proceedings and removing the cause into the United States Circuit Court. The motion was resisted on several grounds. The plaintiff's counsel claimed that the section of the act of Congress, under which the removal of the cause was attempted, was unconstitutional, for two reasons: First, because it went beyond the 8d article of the Constitution of the United States, in proposing to give the United States Circuit jurisdiction of a cause in which a case had not arisen under the laws of the United States, for it appeared by

affidavits that no question involving the validity of an act of Congress had been raised or decided on the trial; and secondly, because to remove the cause to another court and try it *de novo* would be a violation of the seventh amendment of the Constitution of the United States, which declares that "No fact tried by a jury shall be otherwise reexamined in any court of the United States, according to the rules of the common law." The counsel for the plaintiff contended that the only mode by which a re-examination of a question of fact could be had at the common law was of obtaining a new trial in the same court in which the verdict was rendered.

After a full discussion the Court took the papers for further consideration, and the decision was rendered in August.

The Judge denied the motion, holding that the case did not fall within the act, and that the act, so far as it extended to cases after a verdict has been rendered, is invalid and unconstitutional.

Suit was also brought against Marshal Murray and deputy by Libbeus H. Berry. The case came up in October before Judge Scrogham, at a special term of Supreme Court in Kings County, on a question to remove the case to the U. S. Courts.

It appears that in August, 1864, the plaintiff, who resides in Dutchess County, whilst engaged in the business of farming, was arrested by the defendants on the charge of disloyalty. The defendants, without process, took him to New York city, and caused him to be there imprisoned for three days, and without having any charge whatever preferred against him, he (the plaintiff) was discharged. The action was, therefore, brought to recover damages, which were fixed at \$10,000, for this illegal arrest.

The defendants justified under the act of Congress protecting all acts done under the "order" of the President or any of his subordinates, and claimed that they are protected by the provisions thereof.

In the Supreme Court at Washington, on Tuesday, Dec. 20th, in the case of the United States *vs.* Col. Baker, upon the indictment for the arrest of Dr. Gwynne, the Court decided that neither the order of the Secretary of War nor of the Secretary of the Treasury would be justification to the defendant.

The liberty of the press and of the person seems also to have been violated in the insurgent States by those in power. Mr. De Bow, a financial writer, wrote an article upon cotton which was displeasing to Mr. Davis, and the consequence was that it was suppressed and the author sent to prison for writing it. Here is a paragraph from the article which Mr. Davis snatched from the eyes of his countrymen:

Cotton has failed or will fail us; the negro has failed or will fail us; it is idle to hope longer to enjoy peacefully the proceeds of his labor when at this moment eighty thousand of his color are organized, and hold arms in their hands to free their fellows.

The longer the war is protracted the more violently will slavery be destroyed. For two years and a half we have waged war, and lost more than half the territory over which we asserted jurisdiction; the supply of cattle no longer comes from Texas, nor does cotton escape longer from the frontier to furnish us supplies. The Mississippi bears a hundred gunboats, half of them iron-clads, that effectually prevent our occupation of any point along its entire course, or even the passage of it except under cover of darkness, and by stealth.

HADLEY, HENRY HAMILTON, an American Professor and Hebraist, born in Fairfield, Herkimer Co., N. Y., July 19, 1826, died in Washington, D. C., August 1, 1864, aged 38 years. He was the youngest of six children, four of whom were sons. His father, James Hadley, was Professor of Chemistry in the Medical College at Fairfield from 1812 to 1840, and from that time until 1853 held the same chair in the Medical College at Geneva, N. Y. His son Henry pursued a course of preparatory study, chiefly at the Fairfield Academy, and in 1842 entered the Hobart Episcopal College of Geneva. After two years spent here he removed to New Haven, Conn., where an elder brother, James Hadley, was then residing—and entered Yale College as a sophomore. Here he distinguished himself by his scholarship and literary talents, and was graduated in 1847 with the highest honors of his class. He remained connected with the college for one year as a resident graduate, and then for two years as a student in the Theological Department. A third year of theological study was passed in the Seminary at Andover, Mass. From May, 1851, to December, 1852, he exercised the office of tutor in Yale College. He then removed to New York city and spent some time in the study of the law, being led to this profession by doubts as to his personal fitness for the work of a Christian minister. Becoming convinced, however, that theology was his true field for effort and influence, he returned to New Haven early in 1855, and there spent more than three years in theological pursuits, and especially in a systematic study of the Hebrew language and the Old Testament scriptures. In 1858 he was called to the Union Theological Seminary, in New York city, to give instruction in Hebrew as assistant to Professor Edward Robinson. He remained until his death connected with that institution. In 1861 he accepted, and held for one year, the professorship of Hebrew in the theological department of Yale College; but he continued at the same time to act as an instructor in New York, and in 1862 he gave up his post in Yale College, and received the professorship of Hebrew in the Union Seminary. He was an indefatigable teacher, laborious in preparing his exercises, thorough in conducting them, and full of expedients for keeping up the interest and advancing the progress of his classes. In private intercourse, also, he exerted a strong influence on his pupils by the unaffected kindness and goodness of his char-

acter. In his scholarship he was patient, clear, and cautious, with a singular fairness of mind and freedom from prejudice. Besides his knowledge of the Hebrew language and literature, he had made considerable progress in other Semitic languages; but, unambitious and self-distrustful, he gave to the public hardly any thing beyond a few articles contributed to the "American Theological Review." When the present war broke out his warmest sympathies were enlisted for the cause of the country. Having no family to provide for, he thought it his duty to give his personal service as a soldier to the Government, and only the unanimous opposition of friends, who thought that the country needed him more in his own department of labor, prevented him from doing so. But out of scanty means he placed two substitutes, both carefully chosen, in the national army; and during his summer vacation of 1864 he offered his time for the work of the Sanitary Commission. He was sent to City Point, Va., about the end of June, and was engaged in the hospital of the 9th army corps through most of July. But his assiduous, and indeed excessive, labors brought on a fever, which ended in a sudden collapse.

HAMMOND, JAMES HENRY, a statesman, and former Governor of South Carolina, born in Newberry, South Carolina, November 15th, 1807, died at Hamburg, in that State, November 18th, 1864. His father, Eliha Hammond, was a native of Rochester, Mass., a graduate of Dartmouth College, removed to South Carolina in 1801, was for a time professor of languages, and in 1816 was chosen President of South Carolina College in Columbia. His son graduated at that college in 1825, and commencing at once the study of law was admitted to the South Carolina bar in 1828. In 1830 he became editor of a political journal at Columbia, and advocated with zeal and considerable ability the doctrine of State Rights, and nullification as a remedy for alleged oppression on the part of the Federal Government. He was then and through life an ardent supporter of Mr. Calhoun's views. During the nullification excitement he was on the staff of Governor Hamilton, and subsequently of Governor Hayne. In 1835 he was elected a member of Congress from the Columbia district, but at the end of his term declined a renomination, and visited Europe, where he remained more than a year. In 1842 he was elected Governor of his native State. While Governor he published a letter to the Free Church of Glasgow, and two others in reply to an anti-slavery circular of Thomas Clarkson, M. P., of England, in which he took extreme ground in favor of slavery as sanctioned by the Scriptures, and as a useful and beneficent institution. These letters called forth strong and severe replies from those to whom they were addressed. He published several other essays on the same subject, which, with the letters above mentioned, were collected in a volume published in Charleston

in 1853, and entitled "The Pro-Slavery Argument." He had also published essays and discourses on agriculture, manufactures, banks, railroads, and literary topics, and an elaborate review of the life, character, and public services of John C. Calhoun. During his gubernatorial career he gave special attention to the improvement of military education in the State, introducing the West Point system into several of the academies and colleges. In 1857 he was elected to the United States Senate in place of Hon. A. P. Butler, deceased. Here, in March, 1858, he delivered a speech against the working-classes, which gave him an unenviable notoriety at the North, and fastened upon him the title of "Mudsill Hammond." The following paragraph from that speech was the one to which most exception was taken:

"In all social systems there must be a class to do the mean duties, to perform the drudgery of life; that is, a class requiring but a low order of intellect and but little skill. Its requisites are vigor, docility, fidelity. Such a class you must have, or you would not have that other class which leads progress, refinement, and civilization. It constitutes the very mudsills of society and of political government; and you might as well attempt to build a house in the air, as to build either the one or the other except on the mudsills. Fortunately for the South, she found a race adapted to that purpose to her hand; a race inferior to herself, but eminently qualified in temper, in vigor, in docility, in capacity to stand the climate, to answer all her purposes. We use them for the purpose, and call them slaves. We are old-fashioned at the South yet; it is a word discarded now by ears polite; but I will not characterize that class at the North with that term; but you have it; it is there; it is everywhere; it is eternal."

In the same speech he made, perhaps, the first, certainly the strongest avowal of the supremacy of cotton, and predicted the downfall of England if the South should choose to withhold its cotton. The following passage became subsequently the rallying-cry of the partisans of the South:

"No, sir, you dare not make war on cotton. No power on earth dares make war upon it. Cotton is king. Until lately the Bank of England was king, but she tried to put her screws as usual, the fall before last, upon the cotton crop, and was utterly vanquished. The last power has been conquered."

On the secession of South Carolina he withdrew from the Senate, and after the outbreak of hostilities remained quietly at home, superintending the affairs of his large estate, until declining health withdrew him from active pursuits.

HAWTHORNE, NATHANIEL, an American author, born in Salem, Mass., July 4th, 1804, died at Plymouth, New Hampshire, May 19th, 1864. He was descended from a strictly Puritan stock, his ancestors having settled in Salem very early in the history of the colony of Massachusetts, and one of them having been a magistrate who took an active part in the trials for witchcraft in Salem in 1692. For several generations they had been seafaring men, the son following his father to the sea, and in turn coming home gray-haired and weather-beaten

to enjoy the evening of life in quiet in the quaint old town. The last Captain Hawthorne (the change in the spelling of the name was due to the novelist, who believed that *Hawthorne* was the original name), the father of Nathaniel, died in Calcutta of fever, in 1810. Mr. Hawthorne's health was probably never firm; for, at the age of ten years, he left home to try the effects, upon his constitution, of farm-life, going to a farm owned by the family and situated on the shores of Sebago Lake, Maine. On his return to Salem he completed his studies, preparatory to entering Bowdoin College, where he graduated in 1825, with Rev. Dr. Cheever and the poet Longfellow. Ex-President Pierce, then and through life his intimate friend, was in the preceding class. For many years succeeding his college-life he lived in Salem—"a recluse from his own household; walking out by night and passing the day alone in his room, writing wild tales," most of which he burned, though some of them afterwards appeared in different magazines, annuals, &c. In 1828 he published an anonymous romance which he never claimed, and of which all that is now known is that it bore on its title-page the motto from Southey, "Wilt thou go with me?" Several of his earlier stories were contributed to the successive volumes of S. G. Goodrich's annual, "The Token." In 1837 he collected his sketches, and published them under the title of "Twice-told Tales." These were highly lauded by the "North American Review," but not immediately appreciated by the public. Little by little the book won readers who could not fail to recognize its merits; and in 1842 it was republished with a second series which contained many sketches from the "Democratic Review." These "Tales" were pronounced, in the words of Curtis, "full of glancing wit, of tender satire, and exquisite natural description; of subtle and strange analysis of human life, darkly passionate and weird."

In 1838, when the Hon. George Bancroft was collector of the port at Boston, Mr. Hawthorne received from him the appointment of weigher and gauger of the Custom House. In 1841, when the Whigs came into power, he was displaced; and at this time retired to the Brook Farm Fraternity, then forming at Roxbury. He tried the experiment for less than a year, however, and returned to Boston, married, and removed to Concord, occupying the well-known Parsonage. In the introduction to his "Mosses from an Old Manse," he gives an interesting account of his life there. His study was in the rear of the house; and from its windows, its clerical resident of the olden time had watched the famous "Concord Fight" of April 19, 1775. Here he lived in seclusion for about three years, until, on the return of his friend, Mr. Bancroft, to office as Secretary of the Navy, he was made surveyor of the port of Salem, to which place he moved, remaining there three years. Readers of that remarkable romance, "The Scarlet Letter," will remember its autobiographical

introduction, in which is recorded this truth, "Neither the front nor the back entrance of the Custom House opens on the road to Paradise."

On the advent of a new administration, in 1849, he was again displaced. At this time he left Salem and resided in Lenox, in a little red cottage on the shore of the lake known as the "Stockbridge Bowl." Here he wrote one of his best romances, "The House of the Seven Gables," which, as well as the "Scarlet Letter," attained immediate popularity. The "Blithedale Romance" appeared in 1852, the year in which he removed from Lenox to Concord. His "Life of Franklin Pierce" was published during the canvass which resulted in Mr. Pierce's election; and the new President signified his gratitude, and at the same time gratified friendly feelings long established, by bestowing upon Mr. Hawthorne the place of United States Consul at Liverpool, said to be the most lucrative at that time in the President's gift. This office he resigned in 1857, and, after a period of continental travel, returned to the United States, since which his "Marble Faun," and a collection of sketches of English scenery, character, and life, entitled "Our Old Home," have been published. Besides the books already enumerated, Mr. Hawthorne was the author of "True Stories from History and Biography" (1851); "The Wonder Book, for Boys and Girls" (1851); "The Snow Image, and other Twice-Told Tales" (1852); "Tanglewood Tales" (1853). He also edited "Journal of an African Cruiser" (1845). He was engaged till within a few weeks of his death upon a novel which was to have appeared in the "Atlantic Monthly;" but which, like Thackeray's last work, was left unfinished.

Mr. Hawthorne's reputation as a remarkable writer of fiction, and an agreeable essayist, was by no means confined to the United States. His most important works have been republished and widely read in England, and some of them, in the form of translations, have been popular in Germany. If his admirers have not been so numerous as those of many other authors, they have been warm and steady; and it is safe to say that his place in literature as a great and original writer is permanently settled. His books are perhaps too often pitched in a minor key to gratify the multitude. It is true that he is not without a rare vein of humor, still more fascinating, perhaps, because it is never boisterous, which strangely tempers the sombre tone of his pages; but the prevailing spirit of his writings is somewhat melancholy, and it occasionally rises into the weirdly tragic. In some of his books this is carried to a pitch which the reader, even of ordinary sensitiveness, finds almost painful. He is a master of that unusual art, oftener professed than excelled in, of extending to strictly natural events the deepest interest of the supernatural. He makes living men and women do a ghostly work; and he is a consummate creator of pic-

turesqueness of situation. Some of the scenes in the "Scarlet Letter," in the "House of Seven Gables," and in the "Blithedale Romance," have a terror akin to that with which in childhood we trembled over the pages of Mrs. Radcliffe; yet Mr. Hawthorne worked only with homely and almost unheroic materials, and in the most remarkable of these works had no historical or legendary assistance. With his humor was associated also the quality of pathos, which is rarely separated from the humorous. There are passages in the "Scarlet Letter" especially of woman's love and suffering, and of maternal tenderness, which are not only not surpassed by any thing in English literature, but are absolutely unique in their character. His earlier writings were exceedingly graceful and delicate in thought and language, yet there was in all their grace and beauty a certain monotony of manner which afterwards disappeared. As he went on his style became more vigorous and more varied, sparkling with wit and condensed in thought.

In his personal character Mr. Hawthorne was amiable, and where he was on terms of intimacy agreeable in conversation; but he was intensely shy, and in general society the embarrassment produced by his shyness was often mistaken for moodiness and want of social sympathy. His convictions on moral and political questions lacked the positive, decided element, and his hesitation and uncertainty in regard to public measures was sometimes unjustly imputed to a cold and unsympathetic nature.

His death was sudden, though his health had for a long time been infirm. He was on a journey with his friend the Ex-President Pierce to the White Mountains for his health, and had stopped for the night at the Pemigewasset House, Plymouth, where he died before morning.

HAYS, ALEXANDER, a brigadier-general of U. S. Volunteers and brevet lieutenant-colonel in the U. S. Army, born at Pittsfield, Pa., in 1820, killed in the battle of the Wilderness, May 5th, 1864. He graduated at the Military Academy of West Point, in 1844, having as classmates Grant, Hancock, and Pleasanton, entered the army as a brevet second lieutenant of the 4th U. S. infantry, and on the 18th of June, 1846, was fully commissioned a second lieutenant of the 8th infantry. He fought during the Mexican war, and was breveted from May 9, 1846, first lieutenant for gallantry at the battles of Resaca de la Palma and Palo Alto. Subsequently he was sent to Western Pennsylvania on recruiting service, and having in a short time enlisted a large number of men, he proceeded with them to Vera Cruz, and marched thence to the relief of our garrison at Puebla. Soon after arriving the second time in Mexico, he was appointed acting assistant adjutant-general to Brig.-Gen. Lane, and distinguished himself in the conflict near Atlixco. On the 12th of April, 1848, he resigned his connection

with the army, and became engaged as an iron manufacturer in Venango County, Pa., from which occupation he was called by the outbreak of this war. Entering the volunteer service as colonel of the 68d Pennsylvania volunteers, he was appointed captain in the 16th regiment of infantry, to date from May 14, 1861. During the Peninsular campaign he was attached with his regiment to the First brigade, Third division (Gen. Kearny's), Third army corps, under Gen. Heintzelman. He participated with gallantry in the battles of Seven Pines and Fair Oaks. He was nominated for a brevet of major of the U. S. A., to date from May 31st, 1862. He also distinguished himself during the seven days' contests, and was nominated for a brevet of lieutenant-colonel, from June 30th, 1862, for the battles of Glendale and Malvern Hill. He took part in the Maryland campaign, was appointed a brigadier-general of volunteers on September 29th, 1862, participated in the Fredericksburg battle, and was wounded during the battle of Chancellorsville, while in command of the Second brigade of the Third division, Second army corps. At the battle of Gettysburg he was in command of the Third division of his corps, and after the wounding of Gen. Hancock was temporarily in command of the corps. When Gen. Warren was appointed corps commander, Gen. Hays returned to the Third division, and led it through the battles of Auburn, October 18th, Bristoe Station, October 14th, and the affair at Mine Run, November, 1863. When the Army of the Potomac was reorganized for the present campaign, Gen. Hays was placed in command of the Second brigade, Birney's Third division, Second corps, under Gen. Hancock.

Aside from his qualifications as a brave and gallant officer, Gen. Hays was a man of decided scientific culture and a refined and accomplished gentleman.

HITCHCOCK, EDWARD, D.D., LL.D., an American clergyman, author, geologist, and professor, for ten years President of Amherst College, born in Deerfield, Massachusetts, May 24th, 1798, died at Amherst, Mass., Feb. 27th, 1864. His parents though poor were highly intelligent, and of great mental activity, and his mother was a woman of acute nervous sensibility, and constitutionally subject to mental depression. These traits he inherited to some extent. His opportunities for early education were limited, but he was an indefatigable student and a keen observer of nature and natural phenomena. He undertook with all his disadvantages to prepare for an advanced standing in Harvard University, but a fit of sickness so weakened his eyes, already injured by night study, and the contemplation of the stars, that he was compelled to relinquish his intention. From 1815 to 1818 he was principal of the Deerfield Academy, and while thus engaged he published a poem of five hundred lines entitled "The Downfall of Bonaparte." It was while at the head of this academy that the American publisher of the English Nautical Almanac

offered ten dollars to any man who should discover an error in the work. Mr. Hitchcock sent him a list of forty-seven errors, and on receiving only evasive answers published the list. This drew forth a contemptuous reply, in which the critic was spoken of as "one Edward Hitchcock," but the calculations for the next year were revised with great care. To the surprise of the publisher, no sooner had the Almanac appeared than that same Edward Hitchcock, sent out after it a list of errors more numerous than that of the previous year. The controversy went on for several years, the editor after a little changing his tone, till "one Edward Hitchcock" became "Mr. Edward Hitchcock," and finally, "Edward Hitchcock, Esq., to whom much credit is due for the industry and talent bestowed upon the work." While teaching at Deerfield he had imbibed Unitarian sentiments, then prevalent in that region, but the death of a young friend was the means of bringing him back to orthodoxy, and in 1818 he commenced a course of study for the ministry, prosecuting his studies in part at New Haven. He was ordained pastor of the Congregational Church in Conway, Mass., June 21st, 1821. After a pastorate of four years, during which he had made a scientific survey of the Western Counties of Massachusetts, he was dismissed to enter upon the professorship of Chemistry and Natural History in Amherst College. He spent some time in the laboratory of Professor Silliman, at New Haven, before commencing his labors as instructor. The college was then in its infancy, and the new professor was obliged to give instruction in all the departments of Natural History, and this with exceedingly inadequate and imperfect means of illustration, either in the way of laboratory, cabinet, or museum, but under his energetic efforts there was soon a material improvement in these particulars, and before his death the departments in which he had given instruction were divided among four professors, the chemical laboratory and apparatus among the finest in United States, and the cabinet and geological museum unique in their character and extent, in this country or Europe. In 1830 he was appointed State Geologist of Massachusetts, and in 1836 Geologist of the First District of New York. In 1840 Harvard University bestowed upon him the degree of LL.D. He came very early into the temperance movement, and exerted a powerful influence both by pen and voice in its promotion. In 1844 he was chosen President of Amherst College, and Professor of Natural Theology and Geology, and with great reluctance and hesitation accepted the position. The college was then passing through the darkest period of its history. Inadequately endowed, and depending mainly at that time upon the receipts from tuition for the payment of salaries and current expenses, it was running in debt two or three thousand dollars a year, and the income from tuition was diminishing with the diminution in the number of students. Dr.

Hitchcock had already acquired a high reputation as a scientific naturalist, and his future renown was to be looked for from the same source, while the acceptance of the presidency, involving as it did the intensest application to the interests of the college, would effectually cut him off from any considerable progress in the direction most congenial to his tastes. Believing, however, that it was a matter of duty, he accepted the appointment and threw all his energies into it, making a stipulation at the beginning that for a time the Faculty should divide the income of the college among them for their support, be the same less or more, and present no claims against the college for further salary. This stopped the accumulation of debt on the part of the college, and by his efforts new friends were found to aid in its endowment, the State made grants to it, and it was in a few years placed upon a solid and permanent foundation. At the end of ten years of constant and severe labor, as financial manager as well as instructor, Dr. Hitchcock resigned the presidency, satisfied that the college could maintain its position without his fostering care. The trustees were unwilling, however, to spare him from the institution, and he finally consented to retain the chair of Geology and Natural Theology, which he did until his death. In 1846 Middlebury College conferred on him the degree of D.D. In 1850 the State Government sent him to Europe as Commissioner to examine the agricultural schools of Europe. In 1857 the State of Vermont appointed him to complete the Geological Survey of that State. His reputation as a geologist was very high both in England and America, and he had been elected corresponding or associate member of most of the scientific societies of both continents. Especially in the department of Ichnology, which he might almost be said to have created, was he a standard authority. His investigations of the fossil footprints of the Connecticut Valley formed an era in geological science.

Dr. Hitchcock was a voluminous writer. Among his published works are the following: "Geology of the Connecticut Valley," 1828; "Catalogues of Plants within Twenty Miles of Amherst," 1829; "Dyspepsia Forestalled and Resisted," 1830; "An Argument for Early Temperance" (reprinted in London); "Religious Lectures on the Peculiar Phenomena of the Four Seasons," "First Report on the Economic Geology of Massachusetts," 1832; "Report on the Geology, Zoology, and Botany of Massachusetts," plates, 1838; "Report on a re-Examination of the Geology of Massachusetts," 1838; "Elementary Geology," 1840; "Final Report on the Geology of Massachusetts," 2 vols. 4to., plates, 1841; "Fossil Footmarks in the United States," 1848; "History of Zoological Temperance Convention in Central Africa," 1850; "Report on the Agricultural Schools of Europe," 1851; "Mémorial of Mary Lyon," "The Religion of Geology and its connected Sciences," 1851,

and many scientific papers in the "American Journal of Science," and other periodicals.

HORNBLOWER, JOSEPH C., LL.D., an American jurist, born in Belleville, N. J., May 6th, 1777, died at Newark, N. J., June 11th, 1864. Though unable to obtain a collegiate education he applied himself closely in the classical school of Orange, and received besides some valuable instruction in mathematics and other sciences from his father, the Hon. Josiah Hornblower, of Belleville, and at twenty-one commenced the study of law at Newark. In 1808 he was admitted to the bar, and soon took rank with the first lawyers of his State. In November, 1822, he was appointed Chief Justice of the Supreme Court of New Jersey, a position which he held for fourteen years, retiring in 1846. His decisions during this period are marked by learning, legal acumen, and high moral principle, and occupy several volumes of the New Jersey Law Reports. His well-known decision in 1856, that Congress had no right to pass a fugitive slave law, was one which, although reversed, attracted much attention. In 1844 Judge H. was one of the most prominent members of the convention called to frame a new Constitution for the State, and strenuously endeavored to obtain the insertion of a clause putting an end to slavery in the State, in which he was unsuccessful. In 1856 he was chairman of the New Jersey delegation, and Vice-President of the Philadelphia Convention, which nominated Fremont. Judge Hornblower was President of the New Jersey Colonization Society, of the Society for Promoting Collegiate and Theological Education at the West, and of the New Jersey Historical Society, besides being connected with many of the religious organizations of the day. His death was the result of paralysis.

HUGHES, JOHN, Archbishop of New York, born near Clogher, county Tyrone, Ireland, in 1797, died in New York, January 8d, 1864. He was the son of a respectable, well-to-do farmer, and was educated, until his eighteenth or nineteenth year, in the schools near his birthplace. His father emigrated to America in 1816, and settled at Chambersburg, Pennsylvania. John followed him the next year, and his mother and the rest of the family came over in 1818. John worked for his living until he was twenty-two years old, when he obtained admission to Mount St. Mary's College, at Emmitsburg, Maryland, with the understanding that as soon as he had learned a little more he should teach a class, and in the mean time should take care of the garden as a compensation for his expenses in the house. He was ordained priest from this establishment in 1826. His first pastoral charge was at Bedford, Pennsylvania, but he was there only a few weeks, being called, in January, 1827, to St. Joseph's church, Philadelphia. In 1831-'32 he built St. John's church, which, under his pastorate, became the "fashionable" church of that city. By controversies through the newspapers and several little polemical tracts, as well as his eloquence in the pulpit,

he soon took his place at the head of the Philadelphia clergy. The Rev. John Breckinridge, of the Presbyterian denomination, having published a general challenge to "priests and bishops" to discuss with him the chief points of difference between the Catholic and Protestant churches, Mr. Hughes accepted the invitation, and a controversy on the Rule of Faith and the principles of Protestantism was accordingly carried on for several months, in 1835, through the columns of the "Catholic Herald" and the "Presbyterian." Mr. Hughes afterwards published the letters on both sides in a volume. He met the same adversary, in 1836, in a public oral debate, of the questions, "Is the Roman Catholic religion, in any or in all its principles or doctrines, opposed to civil or religious liberty?" and "Is the Presbyterian religion," &c. A volume of the speeches on each side was published by the literary society before which they were delivered, but it was not complete.

In January, 1838, having narrowly escaped a bishopric on two or three previous occasions, he was consecrated coadjutor to Bishop Dubois of New York. The diocese then embraced the whole State of New York and a part of New Jersey: it contained nearly two hundred thousand Catholics, with only forty priests, scattered over an area of fifty thousand square miles. Bishop Hughes, though nominally only coadjutor, had the whole charge of ecclesiastical affairs in this vast district, in which there are now five separate sees; almost immediately after his arrival in New York, Bishop Dubois was stricken with paralysis, and though he lived until 1842 he took no further part in the government of the church. The first care of Bishop Hughes was to effect a reform in the management of church property. The titles to the churches had hitherto been vested in lay trustees, and as many of these were incompetent and some of them bad men, scandalous conflicts had arisen between them and the bishop; clergymen, silenced for misconduct, had been incited by the trustees to rebel against their ecclesiastical superiors; and the money affairs of the church had been almost hopelessly involved. Bishop Hughes called a meeting of Catholics at the cathedral, and announced his intention to close the churches if the trustees persisted in interfering in spiritual concerns. He soon afterwards delivered a course of lectures on the evils of the trustee system, and took measures to have the deeds of all church property acquired thereafter made out in the bishop's name. As for the few churches which the city then contained, he made no effort to take them out of the hands of their incorporators, but he reduced the trustees to perfect obedience—a task which no other bishop had yet been able to accomplish. He next turned his attention to education, and purchased property at Fordham, near New York, for a college; but, before going further, he visited Europe to collect money, and engage some religious com-

munities to found establishments in his diocese. He was reasonably successful, and returned in the summer of 1840. During his absence a movement had been made among the Catholics of New York for a change in the school system. They complained that although they paid taxes for the support of the public schools, they could not send their children to them, first because the school-books were sectarian in their character, and secondly because the natural fruit of an education in which positive religious teaching had not a place was infidelity. Weekly meetings were held for the setting forth of their claims, and discussing measures of relief. These meetings began to wear a political complexion, when Bishop Hughes put himself at the head of the movement, took it out of the political arena, and drew up a petition to the Common Council in the name of the Catholics of the city, praying that a portion of the school fund might be given to certain designated Catholic schools. The Public School Society presented a remonstrance, and on October 29th and 30th, 1840, both parties debated the question before the Common Council. Theodore Sedgwick and Hiram Ketchum appeared as council for the Public School Society, and the Rev. Drs. Bond, Bangs, Reese, Knox, and Spring spoke on the same side. Bishop Hughes appeared alone for the petitioners. The petition was rejected, and the matter was then carried before the Legislature, where a bill to effect a change in the system passed one house but was lost in the other. An election for members of the Legislature occurred while the bill was under consideration, and as it became known that most of the candidates of both parties had pledged themselves beforehand to vote against it, Bishop Hughes advised the Catholics to nominate an independent ticket. By this step, although they did not elect their candidates, they acquired political consideration, and a modification of the school system was before long effected. Bishop Hughes, however, had resolved to discountenance the public schools, and urged upon his clergy the importance of establishing a complete system of parochial education. St. John's College at Fordham was opened in June, 1841, and the foundation of a theological seminary was laid adjoining it in 1845. In 1842 the bishop convoked a diocesan synod, in which stringent regulations were enacted in relation to church property and secret societies. He organized a "church debt society," which, during the single year that it continued in operation, collected and expended about \$17,000, but he was not able to cure immediately the evils resulting from years of mismanagement. Five of the eight city churches became bankrupt, and were assigned and sold by the sheriff. This, upon the whole, was an advantage; the property was thereby transferred from the trustees to the bishop, and in time the debts were paid. In 1848 Bishop Hughes went to Europe to negotiate a loan in Belgium for the

purpose of consolidating the church debt at a low rate of interest; but he did not succeed. The next year he obtained a coadjutor in the person of the Rev. John McCloakey, the present Archbishop of New York. At the time of the Native American riots in Philadelphia, in 1844, he used his influence with the best results to prevent an outbreak in New York, and addressed a public letter to Mayor Harper, reviewing his own past course, and defending himself from the attacks of the "New York Herald" and other papers. He made a third voyage to Europe in 1845-'46, and obtained some of the Jesuits, Brothers of the Christian Schools, and Sisters of Mercy. When the Mexican war was imminent, in 1846, President Polk wished to send him to Mexico on a mission of peace; but he refused the honor. In 1847 the diocese was divided, Dr. McCloakey being appointed bishop of Albany, and another new see erected at Buffalo, and in 1850 Dr. Hughes was raised to the rank of archbishop, with the bishops of Albany, Buffalo, Boston, and Hartford for his suffragans. To these were added afterwards the incumbents of the new sees of Brooklyn, Newark, Burlington, and Portland. Archbishop Hughes went to Rome to receive from the Pope the insignia of his new dignity, and he visited the Holy City again in 1854, in order to be present at the definition of the dogma of the Immaculate Conception. On his return he became engaged in a sharp controversy with the Hon. Erastus Brooks, State senator of New York, growing out of a bill before the Legislature designed to vest all church property in trustees. He afterwards published his letters on this subject, together with a review of the trustee system, in a volume entitled "Brooksiana" (1855). The bill became a law, which, however, was never enforced, and was repealed in 1868. He laid the corner-stone of a new cathedral, which he intended should be the grandest ecclesiastical edi-

fice in America, in August, 1858; the work was suspended when the walls were about ten feet high, and has not yet been resumed. In November, 1861, the archbishop sailed for Europe, in company with Mr. Thurlow Weed, charged by the United States Government with an unofficial mission of peace. It was supposed that in preventing France and England from interfering in the American civil war, private gentlemen might be able to exert an influence abroad which the restraints of official etiquette would debar our diplomatic representatives from exercising. The archbishop, after a long interview with the Emperor and Empress of the French, went to Rome, where he remained until June, to witness the ceremony of the canonization of several martyrs. He preached in Dublin, when the corner-stone of the Catholic University was laid in July, and soon afterwards returned home. His health had been gradually failing for several years, and he came prominently before the public only once more. That was during the draft-riots in New York in July, 1863, when the Governor of the State having requested him to use his influence to stop the disorders, he published an address "To the men of New York called rioters," inviting them to assemble at his house, where he harangued them from the balcony, and urged them to desist from violence. His address was severely criticized in the newspapers. Besides the works already mentioned, and a little volume of "Letters to Kirwan," the only separate publications of Archbishop Hughes are lectures, sermons, pastorals, tracts, &c.; but he was a voluminous contributor to newspapers from the beginning to the end of his career. He wielded a more powerful influence than any other American bishop has ever possessed, but he never exerted it in behalf of any political party. His manners were polished and agreeable, and he was genial in social intercourse.

I

ILLINOIS. The debt of the State of Illinois on December 16th, 1864, was as follows:

Illinois Bank and Internal Improvement stock	\$81,000 00
Illinois Internal Improvement stock.....	42,000 00
Internal Improvement scrip.....	12,570 88
Liquidation bonds.....	254,650 21
New Internal Improvement stock.....	1,843,407 85
Interest bonds, 1847.....	1,204,596 94
Interest stock, 1857.....	701,404 75
Two certificates for arrears of interest.....	1,002 53
Refunded stock.....	1,887,000 00
Normal University bonds.....	65,000 00
Thornton Loan bonds, (act approved February 21st, 1861).....	182,000 00
Balance Canal claims, under Thornton Loan act	5,624 58
War bonds.....	1,679,100 00
Illinois and Mich. Canal bonds, payable in N. Y.	1,613,000 00
Illinois and Michigan Canal bonds, payable in London.....	1,651,668 89
Interest certificates, Canal stock, not registered	17,641 88
Canal scrip, signed by Governor.....	2,616 97
121 Macallister and Stebbins' bonds, which, according to statement of C. Macallister, would amount, January 1, 1865, to about...	57,000 00
	\$11,178,564 45

The debt of the previous year has been diminished one and a half millions by means of a fund consisting of receipts from the Central Railroad and a two-mill tax of 1863.

During the two years ending October 31st, 1864, the State has received for the seven per cent. tax on the gross earnings of the Central Railroad, \$705,908.

The receipts of the State Treasury for revenue purposes for the two years ending November, 1864, were \$497,616. The State has the fund in coin on hand to pay the interest on the debt held in Europe, and due in July, 1865, and January, 1866. Former balance in the Treasury, \$874,697. Warrants drawn in the same time, \$884,014. An increase of taxation or a reduction of expenditures is considered to be necessary.

The quota of the State for troops under all

the calls of President Lincoln prior to December 1st, 1864, was 197,860. Prior to October 17th, 1863, the State had furnished and been credited with 125,321 men, which was a surplus at that time of 8,151. By an adjustment of credits at that time the State gained an additional credit of 10,947 men. The total result to December 1864 is as follows:

Quotas of the State under all calls prior to December 1, 1864.....	197,860
Total credits for three years' volunteers, drafted men, and substitutes to December 1, 1864.....	197,860

Balance due the Government Dec. 1, 1864... 100

The deficit of 100 men has been more than balanced by enlistments during the month of December, 1864. Of the entire quota 197,860 men, the State furnished 194,198 volunteers, and 3,662 drafted men—organized as follows: 188 regiments and one battalion of infantry; 17 regiments of cavalry; 2 regiments and 8 batteries of artillery. In addition to the above the State furnished 13 regiments and 2 companies of hundred day volunteers, amounting to 11,823. Five of these regiments, after their term of engagement expired, extended it and marched into Missouri to the aid of Gen. Rosecrans.

The banks of the State on December 30th, 1864, held as securities \$175,634 in Illinois 6's, with a circulation of \$132,346.

The election for State officers was held in November. The candidates for Governor were Richard J. Oglesby, republican, and — Robinson, democrat. The result of the popular vote was: Oglesby, 190,376; Robinson, 158,701; majority for Oglesby, 31,675.

The Legislature was divided as follows:

	Senata.	House.
Republicans.....	14	51
Democrats.....	11	84
	8	17

The vote for President was as follows: Lincoln, 189,487; McClellan, 158,849; majority for Lincoln, 31,038.

Governor Yates, in his last message to the Legislature, thus describes the first appearance of Lieutenant-General U. S. Grant in the military arena of the present war:

In April, 1861, he tendered his personal services to me, saying "that he had been the recipient of a military education at West Point, and that now, when the country was involved in a war for its preservation and safety, he thought it his duty to offer his services in defence of the Union, and that he would esteem it a privilege to be assigned to any position where he could be useful." The plain, straightforward demeanor of the man, and the modesty and earnestness which characterized his offer of assistance, at once awakened a lively interest in him, and impressed me with a desire to secure his counsel for the benefit of volunteer organizations then forming for Government service. At first I assigned him a desk in the Executive office; and his familiarity with military organization and regulations made him an invaluable assistant in my own and the office of the Adjutant-General. Soon his admirable qualities as a military commander became apparent, and I assigned him to command of the camps of organization at "Camp Yates, Springfield, "Camp

Grant," Mattoon, and "Camp Douglas" at Anna, Union County, at which the 7th, 8th, 9th, 10th, 11th, 12th, 18th, 19th, and 21st regiments of Illinois volunteers, raised under the call of the President of the 15th of April, and under the "Ten Regiment Bill," of the extraordinary session of the Legislature convened April 23d, 1861, were rendezvoused. His employment had special reference to the organization and muster of these forces—the first six into the United States, and the last three into the State service. This was accomplished about the tenth day of May, 1861, at which time he left the State for a brief period, on a visit to his father, at Covington, Ky.

The 21st regiment of Illinois volunteers, raised in Macon, Cumberland, Piatt, Douglas, Moultrie, Edgar, Clay, Clark, Crawford, and Jasper counties, for thirty days' State service, organized at the camp at Mattoon, preparatory to three years' service for the Government, had become very much demoralized under the thirty days' experiment, and doubts arose in relation to their acceptance for a longer period. I was much perplexed to find an efficient and experienced officer to take command of the regiment, and take it into the three years' service. I ordered the regiment to Camp Yates, and after consulting Hon. Jesse K. Dubois, who had many friends in the regiment, and Col. John S. Loomis, Assistant Adjutant-General, who was at the time in charge of the Adjutant-General's office and on terms of personal intimacy with Grant, I decided to offer the command to him, and accordingly telegraphed Captain Grant, at Covington, Kentucky, tendering him the colonelcy. He immediately reported, accepting the commission, taking rank as colonel of that regiment from the 15th day of June, 1861. Thirty days previous to that time the regiment numbered over one thousand men, but in consequence of laxity in discipline of the first commanding officer, and other discouraging obstacles connected with the acceptance of troops at that time, but six hundred and three men were found willing to enter the three years' service. In less than ten days Col. Grant filled the regiment to the maximum standard and brought it to a state of discipline seldom attained in the volunteer service in so short a time. His was the only regiment that left the camp of organization on foot. He marched from Springfield to the Illinois River, but in an emergency requiring troops to operate against Missouri rebels, the regiment was transported by rail to Quincy, and Col. Grant was assigned to command for the protection of the Quincy and Palmyra, and Hannibal and St. Josephs Railroads. He soon distinguished himself as a regimental commander in the field, and his claims for increased rank were recognized by his friends in Springfield, and his promotion insisted upon before his merits and services were fairly understood at Washington. His promotion was made upon the ground of his military education, fifteen years' services as a lieutenant and captain in the regular army (during which time he was distinguished in the Mexican war), his great success in organizing and disciplining his regiment, and for his energetic and vigorous prosecution of the campaign in North Missouri, and the earnestness with which he entered into the great work of waging war against the traitorous enemies of his country. His first great battle was at Belmont, an engagement which became necessary to protect our southwestern army in Missouri from overwhelming forces being rapidly consolidated against it from Arkansas, Tennessee, and Columbus, Kentucky. The struggle was a desperate one, but the tenacity and soldierly qualities of Grant and his invincible little army gave us the first practical victory in the West. The balance of his shining record is indelibly written in the history of Henry, Donelson, Shiloh, Corinth, Vicksburg, Chattanooga, the Wilderness, siege of Richmond, and the intricate and difficult command as Lieutenant-General of the armies of the Union—written in the blood and sacrifices of the heroic braves who have fallen,

following him to glorious victory—written upon the hearts and memories of the loyal millions who are at the hearthstones of our gallant and unconquerable "boys in blue." The impress of his genius stamps our armies from one end of the republic to the other; and the secret of his success in executing his plans is in the love, enthusiasm, and confidence he inspires in the soldier in the ranks, the harmony and respect of his subordinate officers, his own respect for and deference to the wishes and commands of the President, and his sympathy with the Government in its war policy.

A disturbance took place in Coles County on March 30th, which was attended with the loss of five or six lives, and caused for a short time much excitement in that portion of the State. It appears to have originated in dissensions between citizens and soldiers in Charleston, and occurred on a day when there was an unusually large assemblage of people from the country in the town.

The progress of the State in prosperity is illustrated by that of its principal city, Chicago. In 1849 but one railroad, of the flat bar iron, twenty miles in length, terminated in Chicago. In 1864 eight railroads, with a thousand miles of track, had their focus there. Of these, the Illinois Central earned in the previous year \$6,300,000; the Chicago, Quincy and Burlington road \$5,109,000; the Chicago and Rock Island road \$3,000,000. Three horse-car railways traverse the streets of the city, and transport annually over 7,000,000 passengers. In the past year nine new churches were built, and 8,000 buildings and dwellings of all kinds, at a cost of \$4,700,000. Among the public buildings erected is a new edifice for the Chamber of Commerce, ninety-three by one hundred and eighty feet, with a fine hall, or Exchange Room, eighty-eight feet wide, one hundred and twenty-eight feet long, and forty-five feet high, at a cost of \$200,000; a Catholic school-building, sixty-five by one hundred and twenty-five feet; a new Opera House, capable of seating thirty-five hundred persons, and costing \$200,000; a building for the Chicago University eighty by one hundred feet; a massive octagonal stone tower, contiguous to the University, as an observatory for the reception of the great telescope just completed at Cambridge; and a spacious and elegantly-finished music hall. No less than 3,000 miles of water-pipes were laid in the streets during the year. The undertaking of tunnelling under the bed of the lake to a point two miles from shore, for a supply of water, has been pushed forward vigorously, and the excavation has reached about one-quarter of a mile from the shore shaft during the six months employed upon the work. An artesian well has been bored, which yields half a million gallons of pure water daily. One hundred and twenty-five miles of fire alarm telegraph have been laid. The municipal value of property has gone up from \$236,840 in 1837 to a fraction less than \$49,000,000 in 1864; while the local tax, in the same period, has been run up from \$5,000

to \$974,655. The total amount of revenue derived from the collection district during the fiscal year was \$3,617,388.57, being an increase of \$2,096,928.19 over that of the previous year. The sum of \$17,719.80 was realized as the taxes on horned cattle, and \$83,714.88 on hogs; \$1,260,848.65 were collected from distillers of spirits. Malt liquors were assessed \$65,210.81. Carriages are taxed \$24,800. Gas yields \$21,676.77. Oil yielded \$14,799.15. The average mortality is 280 persons per month. One hundred and two tobacco houses pay a revenue tax of \$157,188.70. There are 1,792 licensed drays, carriages, &c., and 1,125 licensed saloons.

There are seven National Banks in operation, with three or four others soon to commence, the aggregate capital of which exceeds four millions, and the daily transactions of the bankers often exceeds ten millions. In the season of 1852-'3 Chicago packed 48,156 hogs, and Cincinnati 361,000; during the season of 1863-'4 Chicago packed 904,658, Cincinnati packed 857,640. The receipts of flour and grain from the exhaustless granary of the West have been nearly 46,000,000 bushels; and the shipments from the city in round numbers, 44,500,000. In the shipment of staple productions by way of Lake Michigan, 2,166,904 tons of shipping have been employed, 8,824 vessels and 7,055 steamers having cleared from the port during the year 1864. To man this large number of freighters over 76,000 seamen have been required. The trade in boots and shoes and in clothing, which has sprung up within a few years, has now reached extraordinary dimensions, amounting last year to about \$25,000,000, a large portion of which was manufactured in the city. The wholesale dry goods sales have reached \$35,000,000.

For further details of the institutions and prosperity of the State, see preceding volumes of ANNUAL CYCLOPEDIA.

INDIA, BRITISH. According to Martin's "Statesman's Year Book for 1865," the area and population of British India are as follows:

PRESIDENCIES.	Area in English square miles.	Population.
Governor-General's District..	170,890	14,165,161
Bengal	280,200	41,493,608
Madras	125,805	28,127,555
Bombay	187,743	11,987,512
Punjab	100,406	14,794,611
Northwest Provinces	116,498	30,110,497

The "Gotha Almanac" for 1865, gives the area of British India at 1,004,616 English square miles, and 143,271,210 inhabitants. Other authorities estimate the population of the empire at close upon 200,000,000. The English population in India, according to the census of 1861, numbered only 125,945 persons. Of these, 84,088 were connected with the army, of which 22,556 consisted of men and boys in civil life. The number of females of English birth above the age of 15, was 11,-

686, of whom 8,856 were wives, and 1,146 widows.

British India is now governed in accordance with an "Act for the better government of India," sanctioned August 2d, 1858. This act places all the territories hitherto subject to the rule of the East India Company under the direct government of the Queen, and all the powers of the Indian Government are now exercised in the Queen's name. The powers formerly belonging to the East India Company, or the Board of Control, are now vested in a special Secretary of State, called the Secretary of State for India. At the head of the government in India is a Governor-General or Viceroy, appointed by the Crown, and acting under the orders of the Secretary of State for India. The present Governor-General is Sir John Laird Mair Lawrence, born March 4th, 1811, educated at Haileybury for the Indian civil service, 1827-'29; Assistant, Agent, Collector, and Magistrate at Delhi 1831-'48; Chief Commissioner of the Punjab, 1849-'58; member of the Council of State for India, 1858; appointed Governor-General of India November 28th, 1863.

The Secretary of State for India is assisted in the administration of the country by a Council of State for India, consisting of fifteen members, seven of whom are elected by the Court of Directors from their own body, while eight are appointed by the Crown. The majority of the council must be persons who have served or resided ten years in India, and have not left India more than ten years previous to the date of their appointment. The Secretary, as President of the Council, divides it into committees, directs what departments shall be under such committees respectively, and regulates the transaction of business. He calls a meeting of the Council whenever he pleases, but one meeting, at least, must be held every week.

The Governor-General is assisted by a "Supreme Council," sitting in Calcutta, and consisting of five ordinary, and from six to ten extraordinary members. The "Supreme Council" includes the ministerial departments of foreign affairs, finances, the interior, military administration and public works.

The following table presents the revenue and expenditure of India, in each of the years from 1858 to 1863, the years ending April 30th:

	Revenue.	Expenditure.	Home charges.
1858.....	£21,706,776	£25,073,528	£4,162,043
1859.....	36,060,788	43,560,794	7,466,186
1860.....	39,705,522	44,622,269	7,289,451
1861.....	45,908,264	41,529,973	5,394,646
1862.....	45,329,473	37,245,766	6,084,844
1863.....	45,143,792	36,800,806	6,515,601

The following table gives a general statement of the revenue of India for the year 1862-'63. It appears from this list that the receipts from land form nearly one-half of the total income, and that next to land stands opium:

Land.....	£19,570,147
Forest.....	639,659
Albances.....	1,361,629
Assessed taxes.....	1,439,512
Customs.....	2,464,846
Salt.....	2,944,180
Opium.....	8,055,476
Stamps.....	1,429,688
Mint.....	571,116
Post-office.....	425,588
Electric telegraph.....	75,585
Law and police.....	494,843
Marine.....	139,046
Public works.....	442,588
Tributes and contributions.....	735,768
Miscellaneous, civil.....	404,657
" military.....	802,309
Interest.....	24,364

£45,143,792

A return issued by the Secretary of State for India in September, 1864, states the debt of India at £116,721,122. The interest on the registered debt amounted to £3,184,897, on April 30th, 1863.

The quantity and value of raw cotton exported from Calcutta, Madras, and Bombay, in eleven months, from the beginning of May to the end of March, in 1862-'63, and in 1863-'64, was as follows:

	1862-'63.		1863-'64.	
	Quantity, cwt.	Value, £.	Quantity, Cwt.	Value, £.
Calcutta.....	363,864	1,899,110	401,668	2,152,138
Madras.....	506,785	2,143,400	597,995	4,106,000
Bombay.....	8,010,568	13,264,907	8,325,438	25,177,690
	8,881,202	15,799,517	8,825,101	31,433,816

The annual report on Indian railways by Mr. Juland Danvers for the year ending the 31st of May, 1864, contains many interesting facts. During the year 358½ additional miles have been opened, which is less than half the distance opened in each of the two preceding years. Of the 4,786 miles sanctioned by Government, 2,688 miles are completed. The next following year it is expected that 577 miles will be finished. The capital raised by the nine companies has been £54,285,088, and the expenditure has amounted to £51,144,722. Of the capital paid, nearly thirty-three millions have been expended in India, and upwards of eighteen and a half millions in England. That the natives do not take a particularly lively interest in undertakings from which they will derive the principal benefit, is shown by the fact that out of 33,358 shareholders, only about one in a hundred is a native.

The new Viceroy, Sir John Lawrence, assumed charge of his office on January 12th, 1864. His administration soon elicited the highest encomiums from the entire Indian press.

In April the Viceroy left Calcutta for Simla, to which place the Secretary of State for India, in accordance with a proposition made by the late Viceroy, Lord Elgin, had removed the seat of the supreme council.

On the arrival of Sir John Lawrence in India the insurrection of the Sittana fanatics

on the northwest frontier was subdued. Mulkah, the seat of the fanatics, was destroyed toward the close of December, 1863, and soon after the insurgent tribes announced their submission. Circumstances came subsequently to light which proved that the disturbances were fomented by Mohammedan agents. Several agents were arrested at Patna on the charge of assisting the fanatics with arms and money, and eleven men were summoned before court at Umballa. Among them was a Moulvie, or high priest, of Wahabies, by the name of Jeeah Ali, who had some sort of family connection with the leaders of the frontier tribes. One witness said that he was sent southward by a man since dead, to preach a religious crusade, and during that time it came to his knowledge that many agents were sent toward the same districts.

The head of the conspiracy at Umballa was Mohammed Shuffei, who held the meat contract for the supply of the European troops, not only at Umballa, but also at Jullundur, Lahore, Mooltan, Dera Ismael Khan, Sealcote, Rawul Pindie, Attock, and Nowsherra; and by means of his agents in these places was able to forward to the hills men and money without attracting suspicion. But the Umballa conspirators seem merely to have contented themselves with the part of agents to the more active brethren of Patna, whence emissaries were sent to all parts of Bengal to preach the Crescentate or Mahometan holy war, the converts or recruits being forwarded in the first instance to Patna, and thence on by way of Delhi and Umballa to the hills. The trial of the conspirators resulted in Mohammed Shuffei and three others being sentenced to death, and the remaining eight to transportation beyond the seas for life.

The Mohammedans of the northwestern provinces continued throughout the year to be greatly agitated. There were numerous fires at Umballa, which were believed to be the work of incendiaries; and several Mussulmans at that station were arrested whilst preaching Wahabeeism and the *jehad*—a fanatical crusade against infidels.

The mission of the Hon. Ashley Eden to Bhootan* had a very strange, and for the Indian Government, very mortifying issue. Bhootan is a province adjacent to the British Indian province of Assam, and the Hon. Ashley Eden, who is Secretary to the Government of Bengal, was sent there for the purpose, as was asserted, to effect better relations of trade. No pains appears to have been previously taken to ascertain in the slightest degree how such an offer would be received. Mr. Eden set out with his treaty in his pocket, and found when he placed his feet on the Bhootan territory that the people were opposed to his progress. The populations of the villages which lay in his course turned out, and showed the most unmis-

takeable hostility. But instead of turning back, he declared that difficulties only nerved his determination. When he reached the Court of Bhootan, new indignities awaited him. The people, it is reported, seized him by the beard and hair, took *betel* from their mouths and made him eat it, and insulted the party in many other grievous ways. The Bhootas would not, of course, look at the treaty which Mr. Eden was authorized to enter into with them. They rejected that with scorn. But they drew up one of a different character and placed it before Mr. Eden, and required him to sign it. This treaty ceded the whole of the English State of Assam, without limit or conditions, absolutely and unconditionally to Bhootan. The British Envoy was compelled to sign the treaty, and the Bhootas, of course, meant to hold the Indian Government to the terms of the treaty. The Government, after the return of Mr. Eden, demanded a retribution for the insult cast upon their ambassador, and when the Bhootas were obstinate, concentrated an army to bring them to reason. Military operations commenced in December, 1864. The Bhootas fought well, or at least with sufficient sturdiness to show that they were like all other hill tribes, not to be stricken down with ease. The English took two or three strongholds of the Bhootas, which, however, in the opinion of some military men, it would cost more to keep than they are worth. Many feared that the war might be of long duration, and therefore very expensive. Others, however, were sanguine that the annexation of the Bhootan "*doocars*" would prove to be one of the most useful and valuable acquisitions which the Indian Government had made for a long time. In this sense the *Calcutta Englishman* remarked: "The country is admirably suited for the growth of tea; cotton of an excellent quality is produced there; and we have seen samples of very good silk which has just come down to the Calcutta market from the *doocars*. Here are three commodities of great commercial value and importance produced or produceable in the newly-acquired territory; and, doubtless, when European settlers shall have commenced to 'develop the resources' of the country it will be found to have a capacity for affording many other leading articles of commerce, which will well repay the Government for taking it and the settler for cultivating it."

The other political relations of British India were satisfactory.

Among the most memorable events in this recent history of British India belongs the great "Durbar" which the Viceroy held, in October, at Lahore. Nearly all the chiefs of the Northwest and the Punjab were there, and many came down from the hills. Says a correspondent of the London Times:

Six hundred and four obeyed the summons, including kings under our protection, princes of the hills, military lords from the Afghan border, and the high nobility of the Punjab itself. No native

* See ANNUAL CYCLOPEDIA for 1868, p. 528.

monarch had ever convoked such a court. The Mogul sovereigns could not have thus commanded the Punjab; Runjeet Singh, the great ruler of the Punjab, could not have controlled the princes on the frontier. But on this occasion none were so high or so low as to neglect the call. Partly from the local renown of Sir John Lawrence, but partly also from the enhanced and growing reputation of the British rule, all concurred in tendering the compliment conveyed by the ceremony, even the old and infirm being brought to the rendezvous. The Durbar was held in magnificent tents pitched on a smooth plain outside the walls of Lahore. The commencement of the ceremony was expected at nine in the morning, but the smaller chiefs began to arrive at seven, and before half-past eight the highest of the assembly were in their places. In the East magnificence of costume is still expected, and the dresses of those Asiatic princes might be chronicled like the toilets at our royal drawing-rooms. The Rajah of Jheend was dressed in pure white muslin, gleaming all over with diamonds and emeralds, and a yellow turban. The Maharajah of Puteala, a very important personage, wore a dress of rich lavender silk, but so overlaid with emeralds and pearls that the color could hardly be distinguished. The Maharajah of Cashmere and his son, a boy of ten, were in white, with red and yellow turbans, emeralds and diamonds. One chief, of great stature, appeared in black and gold, with a green turban; another showed his true Sikh extraction by a robe of pure yellow. The characters and histories of these princes were as striking and varied as their apparel. There were the two high priests of the Sikh nation, lineal descendants of the very prophet who founded the state. There was the very Sikh nobleman who, as the best horseman of his race, had led the charge against us at Chillianwallah. There was the noble Persian of the Kussilbash tribe who had rescued the English prisoners from Cabul. There was a little nabob, only seven years old, who behaved with as much intelligence and composure as the most experienced ruler. One chieftain present was noted as the handsomest man in the northwest, another as the wittiest, a third as the heaviest—who was so large, indeed, that the arms of his chair had to be cut off before he could be seated. Not a state, not a dynasty, not a principality, not an office, not a dignity remained unrepresented in that Durbar.

As the entire meeting rose in his honor the Viceroy addressed the chiefs in their own language with the ease and fluency of a native. Never up to this time had such a proceeding been recorded. Some of the earlier governors of India could certainly have spoken Hindostanee, but they never enjoyed such an occasion of doing so. It was reserved for Sir John Lawrence to unite the accomplishments and the power which thus brought him into direct intercourse with the rajahs, the maharajahs, the nabobs, and the sirdars of territories once beyond our knowledge, and to these princes he addressed words of impressive simplicity and force. He told them how, when he lately stood in the presence of the Queen of England, she had inculcated on him the duty of promoting their welfare, and how her consort, the prince, whose greatness and goodness were everywhere known, had always felt the deepest interest in the prosperity of India. He reminded them of the solid advantages which they had actually derived from the English rule, and acknowledged the devotion by which in the hour of our peril they had repaid the obligation. He told them to educate their children in sound learning, and to acquaint themselves with the true policy and intentions of their rulers, so that they might discern and recognize the character of our Government. Then the whole 600 were presented to him one by one, princes and their heirs-apparent, great ministers of state, rajahs and nabobs, spiritual potentates and military chiefs. It was thought that six hours would be required for a

list of presentations of which none could be omitted or hurried; but so successfully were the ceremonies conducted that half the time was saved, and the Durbar was over at noon.

At the beginning of October, a terrible Cyclone, unprecedented within the remembrance of men, burst over the coast of India. Of the 200 ships in the harbor of Calcutta, only eight or nine escaped without suffering any material damage. The following details are supplied by an English paper of India:

Sixty thousand persons appear to have been destroyed by the Cyclone. In the island of Saugor out of 8,200 persons but 1,200 have been left. The remaining seven thousand passed, in less than an hour, out of existence. All along the eastern coast of the India peninsula went wind and storm fulfilling His word. It was the time of spring tides, and under the influence of the hurricane the sea rose to an unexampled height. Up the course of the Ganges the wave rushed, overwhelming the villages on the banks, and leaving the few who survived the flood to perish for want of food; their grain rotted and their crops were destroyed by the salt water, and they had no resource but to die. But the scene of the greatest disaster appears to have been Masulipatam, about half-way down the coast. The town lies a little to the north of one of the mouths of the Kistna, on the plain which stretches from the Kistna to the Godavary. The mud which has for ages been washed down these rivers has formed a district little above the level of the sea. In the wet season it is overflowed by the freshets of the Kistna, and it requires at all times to be protected from the ocean by sea-walls and dikes. The Cyclone rushing across the Bay of Bengal fell upon the spot which was least prepared to meet it. The centre of the hurricane passed within a mile of the devoted town at 10 P. M. on the 1st November, in a night of utter darkness. Amid the storm of wind a tidal wave thirteen feet higher than the highest tide-mark surmounted sea-walls and dikes and poured over the whole of the surrounding country. For an hour the water rose and covered nearly eight hundred square miles of the plain, and when it retired, at 11, the work of destruction was done. The plain for eighty miles along the coast and from nine to ten miles inland had been submerged, and in one place the storm-wave had reached a spot seventeen miles from the shore. The low built houses of the natives had been washed away, and those which might have reached above the wave had been blown down by the fury of the storm. The fiercest powers of the natural world were at work, and in the darkness of night there was no escape possible, whatever might have been done in the light of day. Whole villages were entirely destroyed; their inhabitants were drowned, their cattle were lost, their crops were buried beneath a thick deposit of mud and sand. The mud banks were full of unburied corpses; half the town was in ruins; fallen trees, drift, the ruins of houses, and deep pools of salt water made streets and roads impassable. Huge barges had been carried into the centre of the town, and masses of solid masonry had been rolled, boulder-like, distances of sixty and seventy yards. In fort and town one-third of the inhabitants had perished. A thousand were drowned in the fort and fifteen thousand in the town, and in the surrounding villages twenty thousand more met their death. In one Brahmin village on the outskirts of Masulipatam seventy only remained alive out of seven hundred.

INDIANA. The contribution of men from the State of Indiana to the military service of the United States from the beginning of the war to the 1st of January, 1865, was as follows:

VOLUNTEERS TO JANUARY 1, 1862.

Infantry, 6 Regiments 8 months.....	4,698
" 2 Regiments 1 year men.....	1,898
" 48 Regiments 8 years' men.....	47,505
Cavalry, 8 Regiments 8 years' men.....	8,388
Artillery, 17 Batteries.....	2,292
	58,085

Under calls for 1862.

Infantry, 1 Regiment, 54th, 1 year.....	1,028
" 80 Regiments 8 years' men.....	23,272
Cavalry, 2 Regiments 8 years' men.....	2,427
Artillery, 7 Batteries.....	978
	31,687

Recruits 1861 and 1862, and to Sept. 5th, 1863.

Infantry.....	4,810
Cavalry.....	587
Artillery.....	499
	5,896
	97,987

Under calls of 1863 and 1864.

Infantry, 4 Regiments 6 months' men.....	5,505
" 6 Regiments 8 years' men.....	5,505
" 2 Regiments 1 year men (140th and 143d).....	1,880
Cavalry, 7th Regiment.....	1,167
" 5 Regiments.....	6,001
Artillery, 1 Battery, 35th.....	144
	14,097

Recruits from September 5th, 1863, to date.

Infantry.....	9,707
Cavalry.....	1,847
Artillery.....	1,293
	12,853

Additional number, shown by rolls in the Adjutant General's office, say.....	900
Additional for 28th United States Colored Volunteers.....	518
One hundred days' volunteers, 8 regiments..	7,129
Reenlisted Veterans.....	11,494
	148,950

Drafted men and substitutes, forwarded and in camp, as reported by General Carrington, Superintendent.....	14,580
Enlisted in Regular Army.....	1,110
Enlisted in the Navy.....	774
	16,464

Total number of men furnished..... 165,814

There is a Sanitary Commission belonging to the State, not, however, established by law, to which the contributions have been, in money, \$155,796, and in supplies \$318,650. Its aid is devoted to the sick and wounded soldiers of the State. The contributions in the form of bounties and for the aid of soldiers' families in sixty-eight counties of the State was nearly three and a half millions of dollars.

The debt of the State is about \$7,000,000, on which the interest is paid at the rate of five per cent. The interest on the debt was paid by Messrs. Winslow, Lanier & Co. of New York, and the Governor in his message to the Legislature said: "I am glad to be able to say that the credit of the State has been fully preserved; and that her stocks now command a higher price relatively in the market, when compared with the stocks of other States, bearing like interest, than at any former period in her history." The State tax for 1864 was forty cents on each hundred dollars, and a poll-tax of one and one-fourth dollars. These rates were subsequently increased. The average county tax through the State was thirty-eight cents on each hundred dollars, and a poll-tax of forty-nine cents. To these are to be added city or township taxes.

There are three classes of banks in the State, known as National, Free, and State Banks. The number of National banks in June 1864 was thirty-one, with a capital of \$8,450,500, and a circulation of \$1,488,700. The system of Free banks is based on the credit of the State, in the same manner as the National banks are based on the credit of the United States. The number of these is eleven, with a capital of \$719,935, and a circulation of \$1,047,852, for the security of which there is deposited with the State Treasurer State stock to the amount of \$1,284,848. The State Bank and branches is a chartered institution. The parent institution transacts no business but regulates the branches. The number of these is twenty, with a capital of \$2,775,000. There are, also, private banks of discount and deposit, with a capital of about \$2,000,000.

The following is a statement of the railroads in the State, and their length and cost:

	Miles.	Cost.
Chicago and Cincinnati.....	61	\$1,280,000
Cincinnati and Chicago.....	108	2,080,438
Cincinnati, Peru, and Chicago.....	29	1,161,200
Evansville and Crawfordsville.....	182	2,465,792
Indiana Central.....	73	2,288,861
Indianapolis and Cincinnati.....	110	3,457,103
Indianapolis, Pittsburg, and Cleveland.....	88	1,902,698
Jeffersonville.....	78	2,182,004
Joliet and Northern Indiana.....	15	891,058
Knightstown and Shelbyville.....	27	270,000
Lafayette and Indianapolis.....	64	1,856,287
Louisville, N. Albany, and Chicago.....	288	7,029,494
Madison & Indianapolis (and Branches).....	135	2,667,704
Peru and Indianapolis.....	74	2,871,554
Rushville and Shelbyville.....	20	250,000
Shelbyville Lateral.....	16	160,000
Terre Haute and Richmond.....	78	1,611,450
Union Track, at Indianapolis.....	8	265,088
Michigan Central (inside of Indiana).....	52	2,402,603
Michigan Southern (inside of Indiana).....	135	5,951,820
Ohio and Mississippi (inside of Indiana).....	178	16,794,417
Pittsburg, Fort Wayne and Chicago (inside of Indiana).....	155	5,794,879
Toledo, Wabash, and Western (inside of Indiana).....	173	5,676,844
	2,125	\$70,295,148

Several other roads are in progress, which will increase the total of miles to 2,800, and the cost to \$90,000,000.

The number of public schools in the State is 8,175, and the number of children between 5 and 21 years of age in April, 1864, was 546,959. The revenue from the school fund and from a tax of one-tenth of one per cent. on property furnishes \$1.85 toward the expense of each scholar. There are in addition 1,982 private schools.

The circulation of the newspaper and periodical press of the State in 1864 was estimated at not less than 15,000,000, or more than eleven to every living person in the State.

The mineral products of the State are coal, oil, salt, iron, fire clay, building and other stones, lead, zinc, cobalt, antimony, and nitre.

The election for State officers took place on the second Tuesday in October. The Governor, O. P. Morton, was reelected for the term of four years. The opposing candidate was Joseph E. McDonald, and the convention by

which he was nominated passed resolutions denouncing arbitrary arrests, the suspension of the *habeas corpus*, suppression of newspapers, and the general policy of the national and State governments, favoring speedy peace and prompt payment of soldiers, and complimenting the troops. The vote of the people was as follows: Morton, 152,084; McDonald, 181,210; Majority for Morton 20,888. The result of the election dissatisfied the opposition so much that they declared it to have been accomplished by frauds extending "to almost every point where railroad facilities enabled the guilty parties to transfer voters from point to point."

At the Presidential election on the 8th of November ensuing, President Lincoln received 150,422 votes, and Gen. McClellan 180,283. Lincoln's majority 20,199.

The Governor in his Message to the Legislature in June, 1865, says:

Some misguided persons who mistook the bitterness of party for patriotism, and ceased to feel the obligations of allegiance to our country and Government, conspired against the State and National Governments, and sought by military force to plunge us into the horrors of revolution. A secret organization had been formed, which by its lectures and rituals, inculcated doctrines subversive of the Government, and which, carried to their consequences, would evidently result in the disruption and destruction of the nation. The members of this organization were united by solemn oaths, which, if observed, bound them to execute the orders of their Grand Commanders without delay or question, however treasonable or criminal might be their character. I am glad to believe that the great majority of its members regarded it merely as a political machine, and did not suspect the ulterior treasonable action contemplated by its leaders, and upon the discovery of its true character, hastened to abjure all connection with it. Some of the chief conspirators have been arrested and tried by the Government, and others have fled; their schemes have been exposed and baffled.

The arrest of the above-mentioned parties commenced in the latter part of September, and their subsequent trials before a military commission occupied several weeks at Indianapolis, causing much excitement in the State. Subsequent to the message of the Governor the Judge Advocate General of the United States, Holt, decided that the military commission at Indianapolis for the trial of these cases had no jurisdiction, and that they should be turned over to the U. S. District Court of Indiana for trial.

On September 3d Major-Gen. Hovey caused the following order to be issued:

HEADQUARTERS DISTRICT OF INDIANA, }
INDIANAPOLIS, Sept. 8, 1864. }

1. Large numbers of men of suspected loyalty to the United States have heretofore, and still are, immigrating to the State of Indiana, and in some localities their open and avowed hatred to the Government and treasonable designs are freely expressed. Men who seek asylum have no right to abuse the power that shelters and protects them. To guard, therefore, against the mischievous consequences arising from such a state of affairs, the following rules will be rigidly enforced by the military authorities of this District:

2. Provost Marshals will cause a registry to be made of all persons known as refugees within their

respective jurisdictions, stating where and from what place they arrived, their intention as to their future residence, and whether they are guilty of any violation of the laws of the United States, or the orders of the War Department.

3. It is made the duty of every officer in the military service of the United States in this district, to arrest and send to these headquarters every refugee who is guilty of disloyal practices or uttering seditious words. Every person so sent will be accompanied by written charges and specifications, with the names of witnesses to prove the same.

4. General Order No. 16, of August the 18th, Current Series, from these headquarters, will be strictly enforced.

By order of
Brevet Maj.-Gen. ALVIN P. HOVEY.
AND. C. CAMPER, A. A. G.

[Official.]

An order had previously been issued by Gen. Heintzelman, commander of the Department, prohibiting the transport of arms into the department by railroads.

Later in the year, about the date of the attempts to set on fire some hotels in New York city, the Mayor of Indianapolis issued the following address to the citizens:

To the People of Indianapolis.

MAYOR'S OFFICE, Dec. 5, 1864.

Reasons exist for warning our citizens that an attempt to burn the city will be made. Let every precaution be taken. See that pumps and wells are in order, and every appliance for the extinguishment of fire be ready for instant use. Proprietors of large establishments, depots, and valuable stores should have a trusty guard at night. Hotel keepers, look well to rooms occupied by strangers, and those vacated during the night should be inspected at once. Let citizens be vigilant and watchful. Watch not strangers alone, for if the attempt is made residents will aid. The fire department will be on the alert and ready for emergency. The different wards might do well to organize volunteer patrols. The fact that we are thoroughly prepared will be most likely to deter them from the attempt. J. CAVEN, Mayor.

Whether the law making United States notes a legal tender for debts contracted to be paid in coin, was constitutional, became a question in Indiana. In November a case was decided in the Supreme Court involving the constitutionality of the act. It was the case of Thayer vs. Hedges, from the Boone Circuit Court. Hedges and another gave a note to Thayer for \$500 in gold. The payees, when the note was due, tendered \$500 in greenbacks. Thayer refused to accept them, and sued on the note. The court below held the tender sufficient, and gave judgment for the plaintiff for \$500, the defendants recovering costs. Thayer appealed. Judge Perkins, in delivering the opinion in the Supreme Court, says the principal question in the case is whether the section of the act of Congress of Feb. 25, 1862, making Treasury notes lawful money and a legal tender, is constitutional. He thinks it is not. The act operates as follows:

1. It makes an article other than coin, and an article as thus used of no intrinsic value, legal tender money.

2. It impairs the obligations of contracts by compelling creditors to receive, in discharge of them, less than half their value according to stipulation.

3. It operates as a fraud on the public creditors

and a fraud upon the honest public servants, by depreciating and debasing the currency.

4. It enables the Government to make, by indirection, forced loans, as actual, if not as oppressive, as those of Charles the First, as they are made without interest against his will, without repayment of but a part of the principal.

5. It takes from the citizen his property against his consent, and without just compensation.

After an elaborate discussion of some twenty-two pages, he concludes that the section of the act alluded to is unconstitutional, and, therefore, void. He then proceeds to another view of the case, as follows: It is contended that we might decide this cause on the ground that the suit is on a note payable in a specific article. Such the contract sued on must be taken to be. Gold is used as an article of merchandise, of manufacture, etc., as well as for currency, and a standard of value, and if the defendants can by virtue of the legal tender paper law discharge their promise to pay gold, by paying paper at its face, which is less in value by more than half than the gold, then the obligation of the contract has been impaired, and the plaintiff deprived of more than half his property without compensation. Is it possible that courts are powerless to redress such wrongs? He cites Story to show that courts of equity may, upon principles of natural justice, insist upon decreeing a specific performance of all *bona fide* contracts; that the court below might have done so in this case, as law and equity are both administered under the Indiana code in one form of proceeding. While holding the views above expressed, the Court, however, as a matter of form, affirms the judgment below, on the ground that the question is now pending in the Supreme Court of the United States, and that the latter tribunal is the proper place for the decision of the question involved.

IOWA. At the Presidential election in November, the vote of this State was as follows:

	Lincoln.	McClanan.
Home vote	71,765	47,675
Soldiers' vote.....	17,810	1,921
Total.....	89,075	49,596
Majority		39,479

A Secretary of State and Members of Congress were chosen at the same time. The vote for Secretary of State was as follows:

	Republican. Wheeler.	Democrat. Hendersonson.
Home vote	73,517	48,056
Soldiers' vote.....	17,264	1,980
Total.....	89,771	49,910
Majority.....		39,861

The entire list of members of Congress on the Republican tickets were elected.

To the Legislature the Democrats elected less than fifteen members, although the whole number is nearly one hundred and forty.

The quota of the State under the two calls of the President for 700,000 men at the close of 1863 and beginning of 1864 was, 22,535 men. At the same time there was a credit due of 7,881 men. The balance was filled up by

April 1st by new recruits and the reenlistment of veterans, and a surplus obtained. Indeed, so ready were the people to enter the army, that when the call for 300,000 men was made in December 1864, the Governor found upon a settlement with the War Department that all previous demands had not only been filled, but the State was placed beyond the liability of a draft under that last call. Probably Iowa is the only State which has always been ready with her quota, and every one of her soldiers a volunteer. The number of men which the State has contributed exceeds seventy thousand.

The sessions of the Legislature are biennial. At the one held at the beginning of the year, a bill was passed requiring the several counties to levy a two mill tax for the benefit of the families of persons in the military service. A general bill was also passed enabling the inhabitants of any county to change its name. The object of the bill was to give the people of Buchanan County an opportunity to change the name of their county. It was urged as an objection to the bill, that only one county in the State could take the name of "Lincoln," and hence the danger that every county in the State would vote at the same time, and all select the same name, and that "Lincoln." The Senatorial and Representative districts were so changed as to make the number of members of the Senate forty-nine, and that of the House ninety-eight.

The population of the State in 1863 was 702,374; the number of acres of land assessed \$8,338,345. Value of the land, with improvements, \$111,038,569; value of town lots and improvements \$23,613,964; value of personal property, \$32,468,106; Total, \$167,118,639. The valuation of the U. S. census for 1860 is higher than this State valuation for 1863.

Within the limits of Iowa is in part located the most important lead region of the country, excepting the Missouri lead mines. This region embraces a district of country about sixty miles in diameter, of which about one-half is in Wisconsin, and the remainder is equally distributed in Iowa and Illinois. The Mississippi River cuts through the southwestern portion of the region. The Dubuque district in Iowa is about sixty miles in length, by seven to ten miles in width. The richest deposits are within the corporate limits of Dubuque, and they decrease in value toward the borders of the district. In 1833, the Indian title in Iowa was extinguished and mining subsequently began. From the surface of the river to the top of the bluffs there are four distinct strata. On the surface a clay soil varying in depth from eight to twenty feet; below the clay, shale, of which the thickness is five to twenty feet; next galena limestone—the lead bearing rock, and the blue or Trenton limestone. An obstacle to success has been the water which appears to be equally diffused over the mining regions. The pumps driven by machinery have produced only a temporary

effect in its diminution. Beyond this they have been found to be not only costly but useless. In a large number of instances some of the heaviest lodes have been worked into the water at the very point where the yield has been of the most lucrative kind. A plan of drainage has now been commenced by means of an adit which has been run about twelve hundred feet, and is to be extended about one mile. It is made in solid rock, with an average height of ten feet, and a width of about four feet. It is expected to drain off the water of a section of country of an average of between one and two miles. More than sixty millions of pounds have been taken from the clay diggings by some of the parties at work in the region expected to be thus drained.

The amount of lead produced from the entire region in the three States in 1860, was in value as follows: Illinois, \$72,953; Iowa, \$160,500; Wisconsin, \$325,868. The annual yield of these mines of the Dubuque region ranges from five to ten millions of pounds.

ITALY. A kingdom of Southern Europe. The present king is Victor Emmanuel, born March 14th, 1820, the eldest son of King Charles Albert, of Sardinia. The kingdom of Italy is a constitutional monarchy, in which, as usual, the executive power belongs to the sovereign exclusively, while the legislative authority rests conjointly in the sovereign and the parliament, the latter consisting of two Chambers, a Senate and a Chamber of Deputies. The Senate consists of the princes of the royal house, and of an indefinite number of members, above forty years old, who are nominated by the king for life. The Chamber of Deputies which, in 1862, numbered 448 members, is elected by the majority of citizens who are twenty-one years of age and pay taxes to the amount of forty lire. A deputy must be thirty years old, and have the requisites demanded by the electoral law, among which is a slight property qualification.

Italy has an area of 98,075 English square miles, and, according to the census of Jan. 1st, 1862, a population of 21,776,953. There are six cities with a population of more than 100,000 inhabitants, viz., Naples, 118,968; Milan, 196,109; Turin, 180,520; Palermo, 167,625; Genoa, 127,968; Florence, 114,886.

The ministry was reconstructed, in September, 1864, as follows:

President of the Council of Ministers: Minister of the Exterior, General Alphonse Ferrero de la Marmora; Minister of the Interior, Dr. John Lanza; Minister of Worship and Justice, Vacca; Minister of War, Gen. Aug. L. Count Pettiti Bagloani di Proreto; Minister of Finances, Quintino Sella; Minister of Public Instruction, Baron Joseph Natoli; Minister of Public Works, Peter Jacini; Minister of Commerce and Agriculture, Torelli.

The Italian budgets, which are divided into an ordinary and extraordinary part, were for the years 1864 and 1865, as follows:

Estimated Receipts.

	1864.	1865.
	<i>Lira.</i>	<i>Lira.</i>
Land tax.....	112,008,510	124,000,000
Tax on movable property.....	18,928,667	57,900,000
Tax on the transfer of property.....	69,355,750	76,500,000
Customs and maritime dues.....	68,300,000	60,700,000
Octroi duties and taxes on beer.....	22,925,197	32,300,000
Government monopolies.....	111,800,000	96,300,000
Lottery.....	40,042,323	40,000,000
Rent of State property.....	19,221,851	12,317,122
Railways.....	26,165,000	
Post-office.....	15,000,000	13,500,000
Telegraphs.....	3,170,000	6,000,000
Miscellaneous.....	23,594,471	24,517,235
Total ordinary receipts.....	522,011,728	564,065,107
Dues on deposit.....	569,116	12,963,293
Sale of domainial property.....	122,594,871	48,475,129
Total extraordinary receipts.....	123,164,987	61,437,411
Total.....	645,176,715	625,502,518

Total ordinary and extraordinary expenditure.....	890,365,435	853,814,030
Deficit.....	234,241,720	228,815,517

The whole debt of the kingdom of Italy amounted, on January 1st, 1864, including the loan 500 millions, of 1861, and three-fourths of the loan of 700 millions, of 1863, amounted to 3,817,490,979 lire, and the annual interest on this capital to 197,417,245 lire.

The effective army was, for 1864, computed at 14,541 officers, and 378,010, or, including 70,000 reserves, 448,010 men. The navy, in July, 1864, was composed as follows: 45 screw steamers, namely, 1 ship of the line, 9 frigates, 1st class; 4 frigates, 2d class; 4 iron-clad frigates, 1st class; 10 iron-clad frigates, 2d class; 17 gunboats and transports, together with 998 guns; 36 side-wheel steamers with 150 guns; 17 sailing vessels with 190 guns;

total, 99 armed war vessels, with 1,386 guns.* The commerce of Italy, with the principal countries of Europe, in 1863, was as follows:

	Importations.	Exportations.
		<i>Lira.</i>
Great Britain.....	29	15
France.....	31	15
Austria.....	10	11
Switzerland.....	8	14
Netherlands.....	3	10
Belgium.....	1	10
Sweden.....	1	10
Russia.....	1	10
Other countries.....	10	10
Total.....	92,511,545	478,107,007

The movement of shipping in 1863, was as follows:

Entered.—Vessels.....	184,400
Tonnage.....	3,002,371
Cleared.—Vessels.....	157,481
Tonnage.....	2,120,120

The merchant navy, in 1863, consisted of

18,500 sailing vessels.....	600,000 tons.
22 steamers.....	10,000 "
16,500	600,000 "

The brigandage in the Neapolitan provinces had nearly ceased at the beginning of the year 1864, and it did not again become a serious danger, or disturb the tranquillity of the country. A bill for the effectual suppression of brigandage was passed in both houses of the Parliament by a great majority. In April another conspiracy of the adherents of the ex-King of Naples was discovered by the seizure of a number of important documents, embracing the whole correspondence and reports on conspiracies of the Bourbons, from 1861 downward. They not only compromised several thousand persons in the Neapolitan provinces, but proved that the royal family had continued to keep up an agitation. The timely discovery of the conspiracy prevented its outbreak.

On Jan. 18, 1864, one of the democratic papers of Turin published an address from Garibaldi to the Italian nation, announcing the formation of a committee to promote Italian union. Garibaldi did not find as cordial a response to his manifesto as he expected. The elections, held at the close of January, were mostly favorable to the moderate party. Garibaldi himself was defeated at Palermo by Signor Robanda. But the immense enthusiasm with which he was received by the English nation, when he visited England in April, strengthened again the "party of action" throughout Italy. The Minister of the Interior, in reply to speeches from several members of the Opposition, stated that it was not for the Government to declare its intentions respecting Gen. Garibaldi and his party, but that it was, above all, necessary to know how the general and his party intended to act. After the journey of Gen. Garibaldi to London, and the eulogy bestowed by him on English institutions, and the respect paid by the

English nation to the queen and the laws, the minister hoped that nobody apart from the king and the Government would speak in the name of the country or pursue a policy differing from that of the Government, and in opposition to the constitution. Garibaldi did not take an active part in Italian politics during the remainder of the year.

The relations between the Italian Government and Parliament on the one hand, and the Pope and Italian bishops on the other, were not improved during the year. Though the Government often expressed a desire to come to an understanding with the Pope, it was unwilling to abandon the plan of the Italian unity, as the latter demanded. Several new decrees even widened the breach between the two powers. In February, 1864, the Minister of Justice presented to Parliament two bills, one for the suppression of all religious corporations, and the other for the suppression of ecclesiastical tithes. By the former not only all convents, but all chapters of collegiate churches, and all ecclesiastical benefices, are suppressed. Monks are to receive a life interest varying between 800*l.* and 600*l.* Nuns are to be allowed to continue to live in their convents, but when their number in any one establishment is reduced to six, they may be transferred to some other establishment. According to the "Opinione" of Turin, the total income of all the ecclesiastical property falling within this law amounts to 76,866,616*l.* per annum.

Signor Natoli, the new Minister of Public Instruction (appointed in September, 1864), by a decree, shut up all the ecclesiastical schools, as the bishops refused to submit to the common law, which provides that the Government inspectors should watch the system of education followed in the colleges, no matter whether they have been founded by the State or are private institutions. The minister also decreed that the schools of the seminaries shall henceforth be subjected to the established regulations. The bishops of Italy, on the whole, were as uncompromising in their opposition to the Government as the Pope; only one sided openly with the former, and a few others showed a conciliatory spirit. At the close of the year the Government had, however, the satisfaction to see that one of the cardinals, d'Andrea, pronounced himself openly for a reconciliation between itself and the Church, on the basis of recognizing the principle of Italian unity; and it was rumored that six other cardinals sympathized with him. On Dec. 8th the Pope issued a famous encyclical letter to all the bishops of the Catholic world, which directly condemned the principal features in the policy of the Italian government, and therefore threatened to lead to new complications during the year 1865. (See PUBLIC DOCUMENTS.)

A convention, which may have a far-reaching influence on the politics of Europe, was concluded between the Governments of France and Italy on the 15th of Sept. The text of the con-

* For more detailed statistics of the navy and the fleet, see ANNUAL DOCUMENTS for 1864.

vention, as published by the official gazette of the kingdom of Italy, is as follows:

Art. 1. Italy engages not to attack the present territory of the Holy Father, and to prevent even by force every attack upon the said territory coming from without.

Art. 2. France will withdraw her troops from the Pontifical States gradually, and in proportion as the army of the Holy Father shall be organized. The evacuation shall, nevertheless, be accomplished within the space of two years.

Art. 3. The Italian Government engages to raise no protest against the organization of a Papal army, even if composed of foreign Catholic volunteers, sufficing to maintain the authority of the Holy Father and tranquillity, as well in the interior as upon the frontier of his States; provided that this force should not degenerate into a means of attack against the Italian Government.

Art. 4. Italy declares herself ready to enter into an arrangement to take under her charge a proportionate part of the debt of the former States of the Church.

As a corollary to this document, it was agreed also that the capital of Italy should be removed from Turin to Florence. It soon became apparent that there was not a full agreement between the two Governments about the policy to be pursued in case the people of Rome should rise against the Papal Government, and demand annexation to Italy. A long diplomatic correspondence followed on this subject.

The French Minister of Foreign Affairs, M. Drouyn de Lhuys, on Oct. 30th, addressed a note to the Italian minister at Turin, in which he explains the obligations which, according to the French cabinet, the recent convention regarding Rome imposes upon King Victor Emmanuel. The Italian Government is to be restricted from employing, among other "violent means" against the Pope, "the manoeuvres of revolutionary agents upon the Pontifical territory, as well as all agitation tending to produce insurrectionary movements;" and the "moral means" are to "consist solely in the forces of civilization and progress," while the only "aspirations" to be considered legitimate by the Court of Turin are to be "those whose object is the reconciliation of Italy with the Papacy." The transfer of the Italian capital from Turin to Florence is to be "a serious pledge given to France;" and "to suppress this pledge would be to destroy the contract." Finally, "the event of a revolution breaking out spontaneously at Rome, is not foreseen by the convention;" and "France reserves her liberty of action for this eventuality," while the Italian cabinet is to follow the policy of Count Cavour, who "declared that Rome could only be united to Italy and become the capital with the consent of France."

Gen. La Marmora, on Nov. 7th, addressed a note to Chevalier di Nigra, Italian ambassador at Paris, in consequence of the publication of the despatches of M. Drouyn de Lhuys in the "Moniteur."

Gen. La Marmora states that the present ministry accepted the convention of the 16th Sept. because its clear and precise text could not give rise to any doubt, and because they thought

that, taken literally, it was advantageous to Italy.

The convention provides by positive assurance for the exigencies and relations of the Papacy with regard to France and the Catholic world. The Government repels even the thought of ever having recourse to secret dealings, which it regrets to have seen mentioned by M. Drouyn de Lhuys, but it has entire confidence in the action of civilization and progress. Both powers can have their own opinion upon the consequences of this act, but this cannot be the subject of practical discussion from the moment that Italy affirms that if her tendencies are to be realized, it shall never be by the violation of the treaty, whatever may be the national aspirations, independently of the question of a strict execution of the treaty. This is a ground on which the king's Government cannot place itself. The aspirations of a people belong to its national conscience, and cannot form the subject of an international discussion.

Reconciliation between Italy and the Papacy has always been an object of the Government, and the convention will help to attain it.

M. Drouyn de Lhuys having taken the initiative in mentioning the possibility of a spontaneous revolution in Rome and of the fall of the temporal power, Italy reserves, as France does, her liberty of action for such a case.

The convention was severely denounced on the one hand by the Catholic party, which saw in it a new danger for the temporal power of the Pope, and on the other by the party of action, headed by Mazzini and Garibaldi, which regarded it as a cowardly submission to French dictation, and as an abandonment, at least for the present, of the fondest hope of the Italian nation. Garibaldi, in reply to a letter from his friend, Gen. Avezzana, who declared himself as energetically as possible against the convention, wrote as follows:

CAPRERA, October 10.
MY DEAR AVEZZANA.—Like you, I deplore the massacre (*uccidio*) of the brave people of Turin. Like you I grieve (*lamento*) to see our country so badly and so shamefully (*vergognosamente*) governed. From the state of things generally I think I need not for the moment quit Caprera. I am, &c.

G. GARIBALDI.

But the great majority of the Italian statesmen, and a majority of both houses of the Italian Parliament, heartily endorsed the convention. Baron Ricasoli, the former Prime Minister of Italy, and undoubtedly one of the greatest Italian statesmen now living, thus expresses his views, about the convention:

I regard in that convention rather what it does not say than what it does say. The retreat of the French from Rome within a prescribed term, and the principle of non-intervention proclaimed by that fact, are of themselves no slight matter; but events will prove that what at present remains unseen will be of still more importance. Besides, what have we to gain without the convention? And, at this day, what do we lose with it? The condition of the transfer of the capital from Turin to Florence has taken the effect on me of a thunderbolt from a clear sky. But who

could fail to see, on a second view, the innumerable effects which will flow from it? These effects, I think, will all be in favor of our constitution. The difficulties of obtaining possession of Rome have not been augmented by the convention. It is eventually certain that the Italians will count amongst their finest jewels the noblest and the greatest of all, the city of Rome. When will this come to pass? I know not; but that this will come to pass I know. We are in effect taking Rome daily. I will say more—daily Rome is coming to us of herself. The convention, instead of opposing, aids this movement. Let not the Italians throw up this great game, and the result will not fail. It will be such as religion and civilization unite in claiming.

The announcement of the convention, created considerable discontent in Turin, where it gave rise to some formidable riots; and it was viewed with distrust by the foreign friends of Italy, who fancied that it implied a renunciation of Rome as the capital of the peninsula.

In the Italian Parliament, which was reopened on October 24th, the convention gave rise to a protracted and animated discussion. Most impressive speeches were delivered in favor of the project, by the prime minister, Gen. La Marmora, and by Gen. Cialdini. Both believed that with this convention, Italy would go forward toward a solution of the Roman question, prudently and slowly, yet without intermission. With regard to Venetia, Gen. La Marmora expressed the hope that some solution might yet become possible, and that the mind of the Emperor of Austria might be brought to new conclusions relative to this subject.

On November 19th, the Chamber of Deputies adopted the bill for the transfer of the capital to Florence, by 817 to 70 votes, and on Dec. 9th the bill was passed in the Senate by 184 against 47 votes. Two days later, Dec. 11th, the king sanctioned the bill, and the official gazette published it, as follows:

The Senate and the Chamber of Deputies having approved, we have sanctioned, and hereby publish, as follows:

ART. 1. The capital of the kingdom shall be transferred to Florence within six months of the date of this present law.

ART. 2. To meet the costs of the transfer a credit is opened in the extraordinary portion of the home budget, and under a special head of 7,000,000*f.* divided as follows:—2,000,000*f.* in the budget of 1864, and 5,000,000 in the budget of 1865.

The ministers of the interior, of finance, and of public works are especially charged with the execution of the present law.

We order that these presents, furnished with the seal of State, shall be inserted in the official collection of laws and decrees of the kingdom of Italy, and

ordain that all persons shall observe and cause them to be observed as a law of the State.

(Signed) VICTOR EMMANUEL,
Countersigned by all the Ministers.
Given at Turin, this 11th of December, 1864.

Both the Government and the majority of the national party seemed to be fully determined that during the two years which Rome will yet be held for the Pope by the French, no effort to interfere with the Papal power shall receive the least countenance from them, as both are fully convinced that a rupture of friendly relations with France must have disastrous consequences. It was found by the Government to be very difficult to prevent the sympathy of the Italians with Venetia from rushing them into a new war against Austria.

Insurrectionary movements broke out in Venetia in October, which the Government regarded as utterly hopeless and useless, costing Italy men and money, without the least chance of success. The *Diritto*, of Turin, was seized by the Government for publishing a proclamation of Signor Carioli, calling upon the people to support the insurrection in Venetia. The troops of the Italian Government on November 16th, had a severe engagement with a band of insurgents, or as they are called in the reports from Italy, with the Garibaldians, at Bagolino, in Northern Lombardy, in which both sides lost many men in killed and wounded, but which terminated in a capture of a part, and dispersion of the rest of the insurgents. The Austrian Government issued a proclamation on Nov. 15th, declaring martial law in eighteen districts of the provinces of Friuli and Treviso. Sentinels and patrols were ordered to fire upon assemblages after the first summons to disperse. The penalty of death was remitted to all those who voluntarily surrendered themselves or who were given up by the populace. In consequence of these measures the insurrection soon died out.

A congress of Italian workmen, consisting of about 90 delegates from Naples, Turin, Palermo, Bologna, Genoa, Milan, Venice, Florence, and many other cities, was held at Naples from October 26th to 28th. The purpose of the Congress was to draw up regulations for the association, and, in order to carry out its objects, it was resolved to establish schools, libraries, and a fund for assisting workmen in their trades. Political discussions were excluded. A letter was read from Garibaldi, who is the president of the association. The next meeting is to be held in Palermo.

J

JAPAN, an empire in Eastern Asia. Its system of government is as yet but imperfectly known. There are two Emperors, the "Mikado," or Spiritual Emperor, who resides at Miako, in the principality of Kioto; and the Tycoon,

or Temporal Emperor, whose residence is at Yeddo. But neither of them has a general authority extending over the entire empire; for actually the Government is a Confederacy of a large number (196) of princes, called

"Daimios," who not only claim absolute sway over the territory of their several principalities, but even the right of removing the Tycoon. There are two Councils of State; the "Gorogio," consisting of five members, and the "Onwakaduchisri," of seven members. The Gorogio is presided over by "Gotario," or Prime Minister, who occupies the post of regent of Japan, in the event of the minority or during the temporary illness of the Tycoon.

By the treaties with the foreign powers, the ports of Nagasaki (on the island of Kiusiu), Kanagawa (in the bay of Yeddo), and Hakodadi (in the island of Jeso), were thrown open to foreigners. The total value of the imports at the port of Nagasaki, in the year 1862, amounted to £149,326, and of exports to £217,814. But the chief station of the foreign commerce is Kanagawa. Its commerce is rapidly increasing. In 1862 the imports were £586,860, and the exports £1,313,568. On the commerce of 1863 the following interesting statements have been made by the British Consul, Winchester:

"The six clearances direct for Great Britain in 1862 rose to sixteen in 1863, in which year one hundred British ships cleared from Kanagawa; about four-fifths of the entire trade were conducted under the British flag. The exports amounted to £2,688,508. The imports reached £811,146, to which may be added five British merchant steamers, sold for £175,000, none of them considered capable of effective adaptation to warlike purposes. There remained a balance of trade in favor of Japan of £1,652,357, paid in cash and in large supplies of munitions of war, but the amount of the latter cannot be ascertained, it being an object with the Government to throw a veil over the transactions. The import tables include goods arriving under the British flag to the value of £685,731, including camlets, long ells, flannel lastings, &c., valued at £237,619, and cotton manufactures, £73,731. The goods exported under the British flag amounted in value to £2,149,291. The exports included 19,609 piculs of raw silk of the value of more than £1,000,000—an increase of 3,987 piculs over 1862, and a very considerable portion of the supply was believed to remain still in store ready to be brought forward when the obstacles presented by the Government should be surmounted. The export of tea increased to above 6,000,000 pounds. But the most remarkable feature is the sudden development of the trade in cotton from 4,616 piculs in 1862 to 46,697 in 1863. No dependence could be placed on the permanence of this branch of trade, stimulated as it has been by high prices, but the fact proves that the Japanese are quite alive to the advantages of foreign trade, and the rapidity with which so great a quantity of a staple largely used by the people for their own garments has been brought to market is no mean proof of the wonderful fertility and resources of the country. It is obvious that foreign commerce has struck deep roots and is acquiring influence. Last

year, under the contingency of an attack from the most powerful squadron ever seen in those seas, advantage was taken of every pause hurriedly to conclude large and important transactions. Considering the restrictions and discouragements interposed, and the general conservative impression which gives a color to Japanese thought, that Japan was happier in its seclusion, as being less exposed to danger, the wonder is that the progress of trade has been so great. It was much checked by Government interference during the last six months of the year. The truth is that there is a struggle between the Tycoon and the semi-independent princes, the former trying to secure the highest possible price for opening to the outer world the door of which he is lucky enough to possess the key, and the Daimios struggling to get cheaply through and part with as little as possible of their profits. The permanent foreign residents at Kanagawa have now increased to about three hundred, not counting soldiers; one hundred and forty are British subjects, and about eighty Americans and forty Dutch. The lapse of years has improved the tone and standing of the foreign community, and the pioneers of foreign trade have mostly left Japan to enjoy elsewhere any remnant of their strangely won gains."

Another British Consul, Howard Vyse, "sent home a report on Hakodadi, but the trade there is much less important, chiefly the export of seaweed. Hakodadi is situated on an island, where there is little or no cultivation, separated from the continent of Nippon by the dangerous Sangar Straits. No Japanese can enter Hakodadi, or have commercial intercourse with any foreigner, without permission from the officials, who claim an exorbitant percentage or squeeze on the business transacted. Mr. Howard Vyse states that an edict of 1837, still in force in Yesso, and, as he believes, in the whole of Japan, makes it a capital offence for natives to travel into other countries; and their seamen, even when accidentally cast on foreign shores, are, on their return, subjected to a rigorous examination, and sometimes tedious imprisonment, to purify them from the supposed pollution contracted abroad."

The Tycoon, in 1864, sent another embassy to France to obtain from the French Government a modification of the treaty of 1858. After six conferences between the three envoys of the Tycoon and the minister of foreign affairs, a convention was concluded on June 20, 1864, which provided as follows: 1. For the attack made upon the French vessel Kien-Cheng, in July, 1863, in the province of Nagato, the Japanese Government engaged to pay over to the French minister at Yeddo, three months after the return of the ambassadors from France, an indemnity of 140,000 Mexican piastres, of whom 100,000 piastres shall be paid by the Government itself, and 40,000 piastres by the authority of the province of Nagato. 2. The Japanese Government engages to procure and to maintain for the French ves-

sels a free passage through the Straits of Simonsaki, employing, to that end, if necessary, force conjointly with the commander of the French naval division. 8. The reductions in the tariff, which were granted by the Tycoon to the foreign commerce, shall continue in favor of importations from France, or under the French flag, as long as the treaty of October, 1858, remains in force.

While the Japanese ambassadors were in France, the strength of the anti-foreign party was steadily increasing. A council of daimios held at Kioto, had declared against the stay of foreigners in Japan, and condemned the policy of the Tycoon, and called on the latter to cause the abandonment by the foreigners of Yokohama. Armed bands of "Ronins" roamed through the country and even threatened Yeddo. After a long vacillation, the Tycoon at length resolved to adopt energetic measures against the native party. He deposed the regent, suspended the Gorogio, and sent troops against the "Ronins," who in two successive battles were totally defeated.

A new act of hostility against American vessels was committed by the Prince of Nagato in July. The following is the statement of this act:

The American steamer Monitor left Hakodadi July 2d for Nagasaki; she encountered strong gales, became short of fuel, and at about lat. 34 she ran into a large bay with good anchorage and a small village on the east side. Two officials came on board, asked what was wanted, when the owner and captain explained their distress, and that they wanted wood or coal, water and fresh provisions, for which they would pay. At the same time the officers were informed it was an American vessel, where from and whither bound. The officials said they would report it to the head men; it was then night.

At daylight the first messenger was a shot from a 4-gun battery near the village; the steamer got up steam as soon as possible, the battery meanwhile firing at her, but without effect. As soon as there was light enough they saw that screens had been placed before the village, and behind it infantry, who also fired at the steamer, 24 balls hitting her sides, but fortunately injuring no one. As soon as steam was got up the vessel ran out of range, when a 6-gun battery, more to the southward, commenced to fire upon her, but with no effect. The Monitor having on board two 24-pounder Parrott guns, then fired 26 shells into the first battery and village, setting it on fire in two places. She then left, running across to the island Tsu-Shima, and there only succeeded in getting wood by cutting it themselves. They then succeeded in reaching Nagasaki.

The bay where the steamer was fired in is in Nagato's territory; and before the steamer went in there she had burned several bulkheads, planks, some bales of hemp, having reserved only a few tons of coal for any emergency. The attack was cowardly and basely treacherous.

After receiving the despatch from France announcing the conclusion of the new treaty, the French ambassador, as well as the ambassadors of England, Holland, and the United States, addressed notes to the Tycoon, asking for an immediate answer whether the treaty would be ratified. On August 25th, they were notified by the Tycoon that the treaty would not be ratified. This reply hastened the expedition which the four ambassadors had for

some time planned against the Prince of Nagato, in order to punish him for his continued hostility to the foreigners, destroy his fortifications, and secure a free passage through the straits of Simonsaki. Of the operations of the allied fleets the *China Mail* of Hong Kong, Sept. 27th, gives the following account:

"The vessels of war detailed for this undertaking were as follows: English, the *Barossa*, the *Perseus*, the *Argus*, the *Coquette*, and the *Bouncer*. French: The *Semiramis*, the *Dupleix*, and the *Tancrede*. Dutch: The *Metalen-Cruz*, the *Djambi*, the *Medusa*, and the *Amsterdam*. The American minister, having no vessel of war at command, chartered the *Ta-kiang*, on board of which the United States flag was displayed, in order to show that America was acting in unison with the other powers.

"On the 5th of September the fleet having previously anchored off Simonsaki, an attack upon Prince Nagato's forts was commenced, which ended in the destruction of two batteries on the eastern extremity. The Japanese fired some shot and shell during the attack, but without any serious effect. Not more than seven vessels of the allied fleet were engaged in the attack. On the following day, Sept. 6th, shortly after daybreak, the *Tartar* and *Barossa* were in action, having been challenged by the fire of some Japanese forts further on, and in half an hour they succeeded in silencing the guns. Shortly afterwards, however, the firing was renewed, and arrangements were made for landing the marines. The men were put on shore at 9.30 A.M. along with the contingents from the French and Dutch vessels, and in about twenty minutes the forts were taken. The *Perseus* went on shore while protecting the landing parties, but continued to do service notwithstanding; she was got off 86 hours afterwards, the *Barossa* having stood guard over her all the while. The storming party were assailed with various weapons, including arrows; and it was remarked that the latter made nasty wounds. The struggle at this time was tough; Capt. Alexander, of the *Euryalus*, was among those who received severe injury.

"On the 7th instant, at daybreak, four vessels of the allied squadron moved on to the forts at Hakusima; but the successes of the previous day, and the play of the Armstrong guns, induced the occupants of these forts to retire. The *Barossa* and *Leopard* took charge of the captured guns, spiking some and taking others on board. Soon after this (at 8 A.M., on the 7th of September), a flag of truce was sent off in a boat under charge of one of the Japanese who had lately been in England. In the course of the day the signal of truce was hoisted all over the fleet; and it is reported that Nagato is quite willing to open the Straits and treat foreigners civilly. It is even affirmed that he has offered to open ports for trade upon his territories, and we can only hope he is sincere.

"The total loss sustained throughout the entire fleet does not exceed 100 killed and wound-

ed, that of the English squadron being 15 killed and 49 wounded. We are not in possession of the names of those who suffered; but, as despatches from the admiral go home by this mail, the details will no doubt be fully given in the regular official form. No English officers have been killed, but one or two are badly wounded. When the forts were destroyed, the Prince of Nagato's officials sued for peace, saying that they would agree to whatever terms might be proposed."

The treaty which the admirals concluded with Prince of Nagato was as follows:

1. For the future the ships of all nationalities shall, when passing through the Straits of Simonosaki, be treated in a friendly manner, and shall be allowed to buy coals, provisions, wood, water, and every other requisite. Moreover, as the harbor is frequently the scene of violent winds and currents, no opposition shall be offered to any one anxious to land during stress of weather. 2. The forts lately destroyed shall not be reconstructed, nor shall new forts be built, nor guns mounted. 3. The town of Simonosaki, which having first fired on foreign ships might justly have been destroyed, has been spared. A ransom shall be paid for this, and all the expenses of the expedition shall also be defrayed by the prince, the amount to be decided by the foreign ministers at Yeddo.

I agree to abide by the decision of the foreign ministers at Yeddo with regard to the points mentioned in paragraph 3. This agreement referring only to the cessation of hostilities on this special occasion has nothing whatsoever to do with any other questions affecting Choshu which may require to be arranged between the native and foreign officials.

(Signed)

SHIOHIDO BIEZN,
MORI IDZIMO.

When the news of the result of the naval expedition reached Yeddo, it produced a profound impression. The day after the foreign ministers at Yokohama were visited by an envoy from the Gorogio, who informed them that the Tycoon no longer insisted on the evacuation of Yokohama, that he declared himself the friend of the foreigners, that he would secure freedom of commerce in the open ports, and that he himself assumed the responsibility for the execution of the conditions imposed by the admirals upon the Prince of Nagato. The foreign ambassadors insisted, however, on the treaty being ratified by the Mikado, as they were fully convinced by the past history of the relations between Japan and the foreign powers, that a treaty without being sanctioned by the Mikado would never become effective. On October 5th the ministers were received by the Gorogio, who promised not to oppose the intercourse of the Japanese with the foreign powers.

JASMIN, JACQUES, a French provincial poet, born in Agen, March 6, 1798, died there Oct. 6, 1864. He was the child of poor parents, and after a scanty education was apprenticed to a barber and hair dresser in his native town. At the age of 18, he married and set up in business for himself, occupying his leisure hours with reading and verse-making, for which latter occupation he early developed a remarkable fondness and facility. His wife vainly attempted to discourage his poetical ten-

dencies, which she feared would bring them both to the almshouse—the ultimate abode of whole generations of Jasmins—and Jacques had the good sense to practice authorship only during hours of relaxation. To his business calling he remained faithful until the close of his career, with manifest advantage to his material interests, and he even took pride in being called a barber. Gradually his rural songs, written in the *Langue d'Oc*, the tongue of the Southern troubadours, and still the language of a very considerable portion of the French peasantry, gained him warm admirers among his friends and neighbors, at whose suggestion he published, in 1825, a burlesque poem *Lou Chalibari* ("The Charivari"), evincing easy and natural versification, and a ready command of the idiom of the language. Thenceforward, he produced at intervals a variety of pieces suggested by political events, or local tradition or romance, and of which the popularity is amazing in the South of France. Chief among these are the *Papillotes de Jasmin* ("The Curl Papers of Jasmin"), of which he published two series; *L'Abugle de Castel-Ouillé* ("The Blind Girl of Castel-Ouillé"), founded on a pathetic legend of Guienne, and admirably translated by Longfellow, *Françolette, Maître l'innoucento*; ("Mad Martha"), &c., &c. As his fame increased, the "barber poet," as he was called, was induced to make annual tours through the Southern provinces, where he recited his chief productions to delighted audiences, who tendered him flattering ovations and liberal contributions in money. With truly professional pride he invariably refused to appropriate the latter to his own use, but distributed it among the poor. In grateful remembrance of this trait the barbers of Paris, during his first and only visit to that city, honored him with a grand banquet. During the few days he remained in the metropolis he recited his "Blind Girl of Castel-Ouillé," upward of twenty-six times in public, on the last occasion in presence of Louis Philippe and the royal family. Until within a short period of his death Jasmin, when in Agen, could be seen daily at his shop in the practice of his trade. Testimonials of every description from cities, academies, and distinguished men were scattered in profusion about the room, in odd contrast with the implements peculiar to his calling, and the poet wore at his button-hole the red ribbon of the cross of the Legion of Honor, and signed himself *Jasmin, coiffeur, des académies d'Agen et de Bordéou*. He was a man of genial manners, and much innocent, because unaffected, self-esteem, entertaining no doubt of his superiority to all French poets, except Corneille, La Fontaine and Béranger. His works, owing to the fact that they have to be translated into ordinary French to be intelligible to two-thirds of his countrymen, are not so widely known as they deserve; but in the Southern provinces their popularity rests on a lasting basis.

K

KANSAS. The entire vote of this State at the presidential election was 20,182, of which Mr. Lincoln received 16,441, and Gen. McClellan 8,691. The only division in the election of State officers was between those who were friendly and those who were opposed to U. S. Senator Lane. On the vote for Governor the Lane ticket (Crawford) received 11,577 votes, and the anti-Lane ticket (Thatcher) 7,794. In the Legislature, the Senate and House were unanimously Republican. Senator Lane was reelected by this body to Congress by a vote of 82 to 17 scattering.

The military department of Kansas was placed under the command of Maj.-Gen. Curtis, who entered upon his duties Jan. 17th. Some disturbances, arising from the appearance of small parties of guerrillas, were created on the southern and eastern border. In other parts nothing of importance took place to disturb the peaceful pursuits of the citizens. The approach of Gen. Price toward Kansas, in his retreat from Missouri, caused the small force under Gen. Blunt to be concentrated to oppose him. At the commencement of the year the State had contributed 14,000 men to the Federal service. This number was still further increased in answer to the various calls for troops made during the year.

The improvement in the finances of the State, arising from the increased ability of the citizens to pay taxes by the aid of Federal currency, has been quite favorable. The State debt scarcely exceeds two hundred and fifty thousand dollars. The institutions of the State comprise a system of public schools, a State university and normal school, and an agricultural college. These, however, are in their infancy, and the latter are as yet hardly organized. Arrangements have been made also for the establishment of institutions for the insane, blind, and deaf mutes.

KENTUCKY. The manifest purpose of the Federal Government to bring the able-bodied negroes of Kentucky into the army, produced much excitement in the State early in 1864. On the 10th of Dec., 1863, the Governor was notified by Capt. Edward Oahill, that he had been ordered to Kentucky to recruit free colored men for the army, and the assent of the Governor to the necessary proceedings was requested.

In reply, on Dec. 14th, the Governor said:

You do not inform me by what authority you come to Kentucky to recruit "free colored men." I know of no act of Congress requiring such service, nor have I seen any order from the war department directing it. On the contrary, I am well assured, that in deference to our peculiar position, and to avoid unnecessarily aggravating the troubles of the loyal men of Kentucky, the authorities at Washington do not contemplate recruiting "colored men" in Kentucky. We are ready to fill our quota from the "free" white citizens of Kentucky. We will unhesi-

tatingly comply with the requisition for men to defend our Government. We claim the right to furnish from citizens whose duty it is to make that defence, and who are ready to comply with the requirements of duty. The duty of defence devolves upon those who enjoy the benefits of our Government. From such we will fill the call upon us. We presume that white men, who owe the duties of allegiance to the Government, will be accepted for its defence. We will furnish them. If, therefore, you came to recruit "colored men" for the benefit of Kentucky, we decline your services. If you came to recruit for the benefit of another State, we deny your right to do so, and forbid it. No State has the right under any law or order to enter Kentucky to recruit either white or "colored" men. We do not intermeddle with any State that chooses to recruit "colored" men within its own limits. But no State that is not willing to meet the measure of duty by contributing its quota from its own population shall be permitted to shelter from duty behind the free negro population of Kentucky.

We shall meet the call upon us without enlisting colored men, and your State must meet its call from its own white or "colored" men, as may best suit its people, and not assume to recruit either white or black in Kentucky.

Yours, &c. **THOMAS E. BRAMLETTE,**
Governor of Kentucky.

In a letter to Gen. Boyle on the same subject, dated Jan. 18th, the Governor says: "No such recruiting will be tolerated here. Summary justice will be inflicted upon any who attempts such unlawful purpose."

On the 18th of February, the Legislature being in session, adopted the following resolutions; the vote of the House was, yeas 79, nays 5; of the Senate, on the first resolution, yeas 21, nays 1; on the second, unanimous; on the third, yeas 21; on the fourth, yeas 18, nays 8.

Resolved by the General Assembly of the Commonwealth of Kentucky: 1. That this State need make no further declaration, by legislative resolutions, of her intense loyalty or of her sincere and unalterable devotion to the National Union and the Constitution. Her stand has been taken after the maturest deliberation, and is known to the world. She will not now prove recreant by taking any backward step, but will go forward with all her resources of men, money, and credit, to the support of our gallant armies in the field, until the rebellion is subdued and treason disarmed; and she will, through the peaceful mode prescribed by the fundamental law of the land, use her efforts to correct any errors that have been committed, either by the Executive or the Legislative Department of the Government.

2. That we regard as impolitic the enlistment of negroes as soldiers into the armies of the United States, and we earnestly protest against their enlistment within the State of Kentucky; and we respectfully request the President of the United States to remove from our limits and borders all camps for negro soldiers, by which our slaves are enticed to leave the services of their owners.

3. That, in the opinion of this General Assembly, the constitutional relation of the States in rebellion, as regards the Union, was not changed by the criminal action of their people in attempting to secede, thus forcing a civil war upon the country; and when the people of any or all those States shall, in good faith, return to their allegiance, their States are, as

before the war, members of the great American Union, and the people thereof are citizens—all subject to the Constitution and laws of the United States.

4. That the inaugural address and message of Gov. Bramlette (*see ANNUAL CYCLOPEDIA, 1868*) to the present General Assembly, so far as the same treat of our Federal relations, reflect truly the sentiments of the Union people of Kentucky, are approved by the present General Assembly, and are recommended to the patriotic consideration of the American people.

On Feb. 24th Congress passed an act directing that all able-bodied male colored persons between twenty and forty-five, resident in the United States, should be enrolled and form a part of the national forces. When a slave of a loyal master should be drafted, his master should have a certificate and the bounty of one hundred dollars, and the slave should be free. Under this act of Congress the enrolment was commenced in the State, and the Governor, on March 16th, issued the following proclamation:

FRANKFORT, March 15th, 1864.

To the People of Kentucky:

FELLOW-CITIZENS: In view of the disturbance of the popular mind, produced by the enrolment of slaves for the army in Kentucky, it is deemed prudent to make the following suggestions for the benefit and guidance of the loyal people of Kentucky: Your indignation should not move you to commit acts of violence, nor to unlawful resistance. Standing as we have stood, and will ever stand, "for the Constitution, the Union, and the enforcement of the laws," we must repel the efforts of rebellion to overthrow our Government, by our gallant soldiers in the field, and meet and correct unjust or unconstitutional legislation by legitimate appeals to the constituted tribunals of the Government; and through the ballot-box displace, in the constituted modes, those who pervert or abuse the trusts committed to them. This is the only true mode of maintaining "the Constitution, the Union, and the enforcement of the laws."

The mere act of enrolling the names of slaves does not affect any right of the citizen. No draft has been ordered, nor do we know that a draft will be ordered. It may or it may not. We should abide by and maintain the law, and pursue in the modes provided the remedy it affords. If any violence or wrong to the person or property of the citizen be committed by any officer or soldier, against the known laws of the land, make your "accusation" in the mode prescribed by law; and, if the commanding officer refuses or neglects to use his utmost endeavors to arrest the officer or soldier under his command so accused, and hand him or them over to the civil magistrate for trial, when officially advised of the facts, the Executive of the State will prefer charges and demand a court-martial. In the Union, under the Constitution, and in accordance with law, assert and urge your rights. It is our duty to obey the law until it is declared, by judicial decision, to be unconstitutional. The citizen, whose property may be taken under it for public use, will be entitled, under the imperative mandate of the Constitution, to a just compensation for his private property so taken for public use. Although the present Congress may not do us justice, yet it is safe to rely upon the justice of the American people; and an appeal to them will not be unheeded or unanswered. Peace restored, and the unity of our Government preserved, will drive to ignominious disgrace those who, in the agony of our conflict, perverted their sacred trusts to the base uses of partisan ends and fanatical purposes. Uphold and maintain your Government as constituted, and obey and enforce its just demands as the only hope of perpetuating free institutions.

THOMAS E. BRAMLETTE.

At the same time the Union State Central Committee issued a call for a State Convention, to meet at Louisville on May 25th, to nominate an electoral ticket, and appoint delegates to the Chicago Convention.

On the 22d of March the Governor proceeded to Washington. The object of his mission he thus states, in a letter dated April 22d, addressed to Col. Hodges:

The object of my mission to Washington was to have the quota of militia called into service from Kentucky assigned upon the basis of enrolment, and not of population; and to obtain relief to the citizens of Kentucky against the unauthorized and offensive interference of officers, soldiers, and recruiting brokers, with the slaves in Kentucky; and to have the enlistment and draft of slaves confined within the purview of the act of Congress for enrolment and draft, &c.

He was quite successful in the objects of his visit, and further says:

It is a source of gratification to me to add, that the President and Secretary of War manifested the most cordial readiness to bestow upon the people of Kentucky every favor which, under the existing laws, could reasonably be demanded; and expressed the most earnest sympathy for them, and a desire to avert, so far as may be, the recurrence of those calamities to which, as a Border State, they have been subjected.

In the interviews between the authorities at Washington and the Governor, it was agreed that, when any county filled its quota, in any way, no further recruiting of negroes should be permitted in such county, except in such cases as where the master and slave both concurred in the application for enlistment. When the draft was necessary to fill the quota, all subject to draft had to take their chances of such involuntary service. It was agreed that all recruiting should be strictly limited to the regularly appointed officers for that service; and that those engaged without authority, or in the offensive and unlawful modes of sending out bodies of troops to gather up negroes by force and otherwise, and put them in camps, should be arrested and summarily punished. It was further agreed, that all negroes recruited by enlistment or draft should be removed to camps outside of the State, for organization and instruction. This was to prevent the entire demoralization and destruction of what might be left of that class of labor. Maj.-Gen. Burbridge, then in command in Kentucky, was selected, and charged with carrying out these points.

While at Washington, Gov. Bramlette, Senator Dixon, and Mr. A. G. Hodges, had an interview with President Lincoln, at the close of which the President remarked "that he was apprehensive that Kentuckians felt unkindly toward him in consequence of not properly understanding the difficulties by which he was surrounded," &c. It was subsequently suggested to the President, by Mr. Hodges, to write out his remarks at this interview for publication, as likely to remove much of the prejudice which was attempted to be created against him in Kentucky. The following is his letter:

EXECUTIVE MANSION, WASHINGTON, April 4.

A. G. Hodges, Esq., Frankfort, Ky.

MY DEAR SIR: You ask me to put in writing the substance of what I verbally said, the other day, in your presence to Gov. Bramlette and Senator Dixon. It was about as follows:

I am naturally anti-slavery. If slavery is not wrong, nothing is wrong. I cannot remember when I did not so think and feel. And yet I have never understood that the Presidency conferred upon me an unrestricted right to act officially upon this judgment and feeling. It was in the oath I took, that I would to the best of my ability preserve, protect, and defend the Constitution of the United States. I could not take the office without taking the oath. Nor was it my view that I might take an oath to get power, and break the oath in using the power. I understood, too, that in ordinary civil administration, this oath even forbade me to practically indulge my primary abstract judgment on the moral question of slavery, I had publicly declared this many times and in many ways. And I aver that, to this day, I have done no official act in mere deference to my abstract judgment and feeling on slavery.

I did understand, however, that my oath to preserve the Constitution to the best of my ability, imposed upon me the duty of preserving, by every indispensable means, that Government—that Nation, of which that Constitution was the organic law. Was it possible to lose the Nation, and yet preserve the Constitution?

By general law life and limb must be protected; yet often a limb must be amputated to save a life; but a life is never wisely given to save a limb. I feel that measures, otherwise unconstitutional, might become lawful, by becoming indispensable to the preservation of the Constitution, through the preservation of the nation. Right or wrong, I assumed this ground, and now avow it. I could not feel that to the best of my ability I had even tried to preserve the Constitution, if to save slavery, or any minor matter, I should permit the wreck of Government, country, and Constitution, all together. When, early in the war, Gen. Fremont attempted military emancipation, I forbade it because I did not then think it an indispensable necessity. When, a little later, Gen. Hunter attempted military emancipation, I again forbade it, because I did not yet think the indispensable necessity had come.

When, in March, and May, and July, 1862, I made earnest and successive appeals to the border States to favor compensated emancipation, I believed the indispensable necessity for military emancipation and arming the blacks would come, unless averted by that measure. They declined the proposition, and I was in my best judgment driven to the alternative of either surrendering the Union, and with it the Constitution, or of laying strong hand upon the colored element. I chose the latter. In choosing it, I hoped for greater gain than loss; but of this I was not entirely confident. More than a year of trial now shows no loss by it in our foreign relations; none in our home popular sentiment; none in our white military force; no loss by it anyhow, anywhere. On the contrary, it shows a gain of quite a hundred and thirty thousand soldiers, seamen, and laborers. These are palpable facts, about which, as facts, there can be no cavilling. We have the men, and we could not have had them without the measure.

And now, let any Union man who complains of the measure, test himself, by writing down in one line, that he is for subduing the rebellion by force of arms, and in the next that he is for taking these hundred and thirty thousand men from the Union side, and placing them where they would be, but for the measure he condemns. If he cannot face his cause so stated, it is only because he cannot face the truth.

I add a word, which was not in the verbal conversation. In telling this tale, I attempt no compliment to my own sagacity. I claim not to have controlled

events, but confess plainly that events have controlled me. Now, at the end of three years' struggle, the nation's condition, is not what either party or any man devised or expected. God alone can claim it. Whether it is tending seems plain. If God now wills the removal of a great wrong, and wills also that we of the North, as well as you of the South, shall pay fairly for our complicity in that wrong, impartial history will find therein new cause to attest and revere the justice and goodness of God.

Yours truly,

A. LINCOLN.

The Governor stated in his message to the Legislature, in January, 1865, relative to the agreements made with the authorities at Washington, and which Gen. Burbridge was appointed to carry out, as follows:

It was not contemplated, by me that this was to save slavery in Kentucky, nor did any such idea occur to the President. It was not sought thereby either to perpetuate slavery or to exterminate it, but solely with the view of protecting the interests of a loyal people, by securing them exemption from unlawful and offensive courses; from insults and unnecessary injuries; the State from the loss of its proper credits, and the country from the unnecessary destruction of a large amount of productive labor.

Having uniformly held and continuously announced the conviction, from the commencement of rebellion, that secession was the worst form of abolition, that it would abolish slavery in blood, it never entered my mind that any thing I might do to relieve my people from suffering on account of it, could either prevent or stay the hand of rebellion from working its destruction. The object of this arrangement was to benefit and protect the loyal white man, and prevent him being subjected to wanton and uncalled-for injury and unprovoked insult and outrage, by lawless acts, on account of the negro.

Had these agreements been carried out, a very different state of feeling would have existed in Kentucky. But, instead of carrying them out, the most offensive and injurious modes were adopted to violate them, by him who was selected and charged with their fulfillment.

The Governor then proceeds in the same message to lay before the Legislature his views as to the manner in which military affairs were conducted in the State:

In Western Kentucky, Brigadier-General E. A. Paine, confederated with other officers and some citizens, ran a career of shameful criminality. Though brief it was terrible. Hearing that wrongs were being perpetrated in that section, but that the citizens were afraid to speak out and make them known, I sent Lieut.-Col. J. J. Craddock, of the "Capital Guards," to Paducah, to inquire into and report to me the facts. Upon getting his report, I preferred charges against Gen. Paine and others to the President of the United States. By order of Lieut.-Gen. Grant, Gen. Paine was promptly relieved by Gen. Meredith, whose soldierly bearing and just administration have given peace and confidence in that section.

A commission, composed of Brigadier-Gen. S. S. Fry and Col. John M. Brown, 45th Kentucky mounted infantry, was appointed to investigate the conduct of Gen. Paine, etc. I send with this communication a copy of their report, with my letter to the President, and also letter of the 3d of September, touching other subjects.

The commandant of the District of Kentucky established a system of trade permits in violation of law and to the detriment of the public interests.

The Secretary of the Treasury, under the law, had fixed regulations; the military, without law, and in violation of law, assumed to organize Boards of Trade, who, for certain fees, were to pass upon and

determine who should buy and sell, not only in the ordinary course of trade, but for family supplies. As administered in Kentucky, it was a most shameful and corrupt system of partisan political corruption and oppression. This machinery of fraud and corrupt oppression is still retained, and the facts showing its corrupt use, should be collected and presented, by the authority of the Legislature of Kentucky, to the national authorities, in such form as to secure the abolishment and future prohibition of all such interferences with the lawful and necessary trade of the country.

An attempt was also made, under cover of these military trade regulations, through the Commissary Department, to perpetuate a most extensive swindle upon the farmers of Kentucky in the purchase of their hog crop. Under the trade orders none could ship or drive to market without a permit; and all were prohibited from shipping across the Ohio River, thus closing the Cincinnati and other markets to our farmers. The buyers and packers of Louisville and elsewhere were warned off under threats of arrest and confiscation, etc. Agents, who were assigned to this wholesale swindle, went actively to work, notifying the farmers that the Government had determined to take their hogs, and had fixed the price which they must take—a price greatly below the market value. To have a stop put to this swindle, which was being carried on through the Commissary Department, under the patronage of the commandant of the District of Kentucky, I sent a communication to the President, borne by reliable messengers, to explain the details of the matters of my letter.

The hog swindle was promptly ended, but not until the farmers had sustained losses to at least \$800,000, yet in time to save them the loss of over one million dollars. I suggest that it is due to the honest farmers of the State that you collate, or provide for so doing, the facts bearing upon this attempted and partially-executed fraud, and present them also in connection with the "military trade regulations."

The gravest matter of military outrage has been, and yet is, the arrest, imprisonment, and banishment of loyal citizens without a hearing, and without even a knowledge of the charges against them. There have been a number of this class of arrests, merely for partisan political vengeance, and to force them to pay heavy sums to purchase their liberation. How the spoils, so infamously extorted, are divided, has not transpired to the public information. For partisan political ends Gen. John B. Huston was arrested at midnight, preceding the election, and hurried off under circumstances of shameful aggravation. He was, however, released in a few days; but that does not atone for the criminality of his malicious arrest and false imprisonment. The battle-scarred veteran, Col. Frank Wolford, whose name and loyal fame is part of his country's jewelled memories, and whose arrest, for political vengeance, should put a nation's cheek to the blush, is yet held in durance vile, without a hearing and without an accusation, so far as he or his friends can ascertain.

Lieut.-Governor Jacobs, whose yet unclosed wounds, received in battle for his country, was victimized to partisan and personal vengeance, and hurried, without a hearing and without any known accusation, through the rebel lines into Virginia. The indecent and guilty haste with which he was hurried off, and through the lines stamps the personal malignity of the deed with the infamy of conscious criminality. Other cases might be mentioned, but these are selected because they are known to the whole country; their acts are part of the glorious history of loyal heroism, and their accusers shrink from the light of investigation, but cannot escape the scourging judgment of an outraged people.

The military authorities are as much bound to observe the laws as the civil. Though the law governing the action of the military may and does often and materially differ from that which controls the action

of the civil, yet the law applicable to each is alike binding on each. Although the facts which constitute reasonable and probable cause for the arrest and imprisonment of a citizen by the military are different from and far more extensive than civil arrests, yet the rules of law are the same in the application of the facts.

By the act of Congress, approved March 8, 1863, entitled "An act relating to habeas corpus and regulating judicial proceedings in certain cases," the mode of proceeding, when non-combatants and others have been arrested, is fixed. This law, which was intended to limit the action of military commandants in the various localities and give some assurance of ultimate justice to the citizen, has been wholly and utterly set at defiance by Brevet Maj.-General S. G. Burbridge in the instances of Colonel Wolford and Lieut.-Gov. Jacobs and others. Nay, further, the action in the case of Lieut.-Gov. Jacobs is in defiance of Federal and State Constitutions and laws; in defiance of the laws of humanity and liberty; dishonors the cause of our country, and degrades the military rank to the infamous uses of partisan and personal vengeance.

The contributions of the State to the army of the United States to Dec. 31st, 1864, were as follows: Three-years men, 89,645; one-year men, 18,085; nine-months men, 8,057—total, 61,817. This is exclusive of the colored troops, of whom there were 14,918, three-years men. The total of white and colored troops is 76,835. The returns of the enrolment presented the following results: 118,410 whites, 20,088 negroes; total, 138,498. About 5,000 should be added to the colored, as no returns were made from two districts. The receipts into the Treasury during the fiscal year were greatly decreased, and the Governor recommended an increased rate of taxation.

Near the end of the year 1863 a call was issued by some citizens of Missouri for a convention of the friends of freedom in slave States, to assemble at Louisville on June 8th, "for the promotion of a more cordial understanding between those who concurred in the necessity of adopting freedom policies; for the more effective initiation of local State organizations to accomplish the work of emancipation; and for such mutual interchange of opinions and experiences as may make the teachings of the past profit in the guidance of the present." The convention thus called was postponed to February 22d, at which time it assembled. About one hundred delegates from Missouri, Tennessee, Kentucky, and Arkansas were present. Wm. P. Thomason was chosen President, and the following resolutions were adopted:

Resolved, 1st. That the unity of this country, with the present republican form of government, State and National, must be preserved, and rebellion suppressed.

2d. That slavery was the cause and now constitutes the strength of the rebellion; that we see no hope of permanent peace until the principles of freedom announced in the Declaration of Independence and the Federal Constitution are carried into practice. The question whether slavery is to be perpetuated or not is no longer exclusively a State but a national one. It is, therefore, proper that the Constitution of the United States should be so amended as to secure freedom to every human being within its jurisdiction. Such a guarantee of individual freedom is as neces-

sary in the Constitution of the United States as that of a republican form of government to each State.

8d. The Government has the constitutional right to command the services of every man, no matter what his color or condition, whether bond or free. The master cannot interpose his right between the man and the Government; and we are in favor of enlisting and enrolling all alike.

4th. That during a rebellion the President, in the exercise of the war power, has full and ample authority to free all slaves in the rebellious districts, and they are hereby invested irrevocably with all the rights of freemen; and in the present rebellion he ought to exercise this power to its full extent.

5th. That with the effect of the President's Amnesty Proclamation before us we declare that in our opinion the same has been injurious to the Union cause and its operations within the district to which it especially applies, humiliating and unjust to loyal men, by placing them upon the same footing with rebels, and we would urge its recall or suspension until armed rebellion is wholly crushed.

6th. That the Slave-State Freedom Convention be made a permanent organization by the formation of an executive committee of one member and one alternate from each of the slave States for the purpose of carrying out its principles, and that the delegation for each State represented in the convention appoint the members on the committee.

7th. That we declare ourselves favorable to such an amendment of the Constitution of the United States as shall make the President elective for one term only.

A State executive committee was appointed by the Kentucky delegates to the convention, and a call issued for a State convention to assemble at Louisville on May 9th, and appoint delegates to the Baltimore Presidential Convention. The following persons were appointed the State executive committee: James Speed, afterwards U. S. Attorney-General, John Tompkins and L. N. Dembitz, Louisville; O. A. Preston, Covington; C. F. Beyland; Ham Cummings, Newport; Dr. Perry S. Leyton, Lewis County; George D. Blakey, Russellville; Thomas B. Calvert, Bowling Green.

A Republican, or a Republican Union convention, assembled at Lexington on April 11th, at which Mr. Goodloe was appointed chairman. Speeches were made, and delegates appointed to the Baltimore Presidential Convention.

On May 25th a Union Democratic convention assembled at Louisville, at which James Guthrie was chosen chairman. Delegates were appointed to the Chicago Presidential Convention, and an electoral ticket appointed. Resolutions were also unanimously adopted, affirming the principles expressed by the previous convention of March 17th, 1863, condemning the doctrine that the insurrectionary States have ceased to be States of the Union, that the object of the war should be to subjugate armed insurrection, condemning the enlistment of negroes, &c., &c.

A convention was also called by some of the most prominent members of the Democratic party of the State, to meet at Louisville on May 15th for the purpose of appointing delegates to the Chicago Presidential Convention. It had been previously proposed by the senators and some of the representatives from the State at Washington that the Union Democrats and Dem-

ocrats should meet in joint convention on June 18th. The former, however, declined the proposition. Both, however, acted in union at the Chicago Convention and at the subsequent election. The Democratic convention assembled June 15th, and Chas. A. Wickliffe was chosen chairman. The resolutions express the sovereignty of the people, that the declarations of the authors of the Constitution, the deliberations of the Federal conventions, the resolutions of 1798 and 1799, and the decisions of the Supreme Court, were the guides for its interpretation, that the coercion of eleven States is an act of suicidal folly; that the administration has attempted to strike down State sovereignty, interfered with the right of suffrage, &c., &c., and that they are uncompromisingly opposed to the elevation of the African race to citizenship and their formation into standing armies to control white men, &c. The convention also appointed a committee to address President Lincoln for the purpose which they thus state:

To Abraham Lincoln, President, &c. :

The Kentucky Democratic State Convention meeting in Louisville on the 28th of June respectfully requests, through the undersigned committee, your immediate attention to a grievance under which Kentucky is now suffering, of an extraordinary, if not anomalous, character in a republic.

For more than a week Democratic newspapers from other States have been excluded from the city of Louisville, by the order, we are informed, of the provost marshal, under the authority of General Ewing; and for nearly the same time the Cincinnati *Inquirer* and Chicago *Times* have been excluded from the whole State of Kentucky under the order, as reported, of General Burbridge.

Early in June an invasion of the eastern and central part of the State was made by Col. John Morgan from East Tennessee. For the object and details of the invasion see ARMY OPERATIONS. Guerrillas acting as thieves, were infesting the southern borders, greatly to the injury of the peaceable inhabitants. On June 21st Gen. Sherman issued the following instructions to the commander of the division of Kentucky:

HEADQUARTERS MIL. DIV. OF THE MISS. IN THE FIELD, }
BIG SHANTY, GA., June 21, 1864. }

Gen. Burbridge, Commanding Div. of Ky. :

GENERAL.—The recent raid of Morgan, and the current acts of men styling themselves Confederate partisans or guerrillas, calls for determined action on your part.

Even on the Southern "State Rights" theory Kentucky has not seceded. Her people by their vote and their actions have adhered to their allegiance to the National Government, and the South would now coerce her out of our Union, and into theirs, by the very dogma of coercion upon which so much stress was laid at the outset of the war, and which carried into rebellion the people of the middle or border slave States.

But politics aside, these acts of the so-called partisans or guerrillas, are nothing but simple murder, horse stealing, arson, and other well-defined crimes, which do not sound as well under their true name as more agreeable ones of warlike meaning.

Now before starting on this campaign I foresaw it, as you remember, that this very case would arise, and I asked Gov. Bramlette to at once organize in each county a small trustworthy band under the sheriffs,

and at one dash arrest every man in the community who was dangerous to it; and also every fellow hanging about the towns, villages, and cross-roads who had no honest calling, the materials out of which guerrillas are made up; but this sweeping exhibition of power doubtless seemed to the Governor rather arbitrary.

The fact is, in our country personal liberty has been so well secured that public safety is lost sight of in our laws and institutions, and the fact is we are thrown back one hundred years in civilization, law, and every thing else, and will go right straight to anarchy and the devil, if somebody don't arrest our downward progress.

We, the military, must do it, and we have right and law on our side. All governments and communities have a right to guard against real and even supposed danger. The whole people of Kentucky must not be kept in a state of suspense and real danger, lest a few innocent men should be wrongfully accused.

1st. You may order all your post and district commanders that guerrillas are not soldiers, but wild beasts, unknown to the usages of war. To be recognized as soldiers they must be enlisted, enrolled, officered, uniformed, armed, and equipped, by a recognized belligerent power, and must, if detailed from a main army, be of sufficient strength with written orders from some army commander to some military thing. Of course we have recognized the Confederate Government as a belligerent power, but deny their right to our lands, territories, rivers, coasts, and nationality—admitting the right to rebel and move to some other country, where laws and customs are more in accordance with their own ideas and prejudices.

2. The civil power being insufficient to protect life and property *as necessitate rei* to prevent anarchy, "which nature abhors," the military steps in and is rightful, constitutional, and lawful. Under this law everybody can be made to "stay at home and mind his or her own business," and if they won't do that, can be sent away where they cannot keep their honest neighbors in fear of danger, robbery, and insult.

3d. Your military commanders, provost marshals, and other agents, may arrest all males and females who have encouraged or harbored guerrillas and robbers, and you may cause them to be collected in Louisville; and when you have enough—say three or four hundred—I will cause them to be sent down the Mississippi, through their guerrilla gauntlet, and by a sailing ship send them to a land where they may take their negroes and make a colony, with laws and a future of their own. If they won't live in peace in such a garden as Kentucky, why we will send them to another if not a better land; and surely this would be a kindness to them and a God's blessing to Kentucky.

I wish you to be careful that no personalities are mixed up in this, nor does a full and generous "love of country," "of the South," of their State or country, form a cause of banishment, but that devilish spirit which will not be satisfied, and that makes war the pretext of murder, arson, theft, in all its grades, perjury and all the crimes of human nature. My own preference was, and is, that the civil authorities in Kentucky would and could do this in that State; but if they will not, or cannot, then we must, for it must be done. There must be an "end to strife," and the honest, industrious people of Kentucky and the whole world will be benefited and rejoiced at the conclusion, however arrived at.

I use no concealment in saying that I do not object to men or women having what they call "Southern feeling," if confined to love of country, and of peace, honor, and security, and even a little family pride; but these become "crimes" when enlarged to mean love of murder, of war, desolation, famine, and all the horrid attendants of anarchy.

I am, with respect, your friend,
(Signed) W. T. SHERMAN, Maj.-Gen.

On July 5th the President issued the following proclamation, establishing martial law in Kentucky:

Whereas, by a proclamation which was issued on the 15th day of April, 1861, the President of the United States announced and declared that the laws of the United States had been for some time past, and then were, opposed, and the execution thereof obstructed, in certain States therein mentioned, by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, or by the powers vested in the marshals of law;

And *whereas*, immediately after the issuing of the said proclamation, the land and naval forces of the United States were put into activity to suppress the said insurrection and rebellion;

And *whereas* the Congress of the United States, by an act approved on the 3d day of March, 1863, did enact that during the said rebellion the President of the United States, whenever in his judgment the public safety may require it, is authorized to suspend the privilege of the writ of *habeas corpus* in any case throughout the United States, or in any part thereof;

And *whereas* the said insurrection and rebellion still continue, endangering the existence of the Constitution and Government of the United States;

And *whereas* the military forces of the United States are now actively engaged in suppressing the said insurrection and rebellion in various parts of the States where the said rebellion has been successful in obstructing the laws and public authorities, especially in the States of Virginia and Georgia;

And *whereas* on the 15th day of September last, the President of the United States duly issued his proclamation, wherein he declared that the privilege of the writ of *habeas corpus* should be suspended throughout the United States in the cases where, by the authority of the President of the United States, military, naval, and civil officers of the United States, or any of them, hold persons under their command or in their custody, either as prisoners of war, spies, or aids or abettors of the enemy, or officers, soldiers, or seamen enrolled, or drafted, or mustered, or enlisted in or belonging to the land or naval forces of the United States, or as deserters therefrom, or otherwise amenable to military law or the rules and articles of war, or the rules or regulations prescribed for the military or naval service by authority of the President of the United States, or for resisting a draft, or for any other offence against the military or naval service;

And *whereas* many citizens of the State of Kentucky have joined the forces of the insurgents, and such insurgents have on several occasions entered the said State of Kentucky in large force, and, not without the aid and comfort furnished by disaffected and disloyal citizens of the United States residing therein, have not only greatly disturbed the public peace, but have overborne the civil authorities and made flagrant civil war, destroying property and life in various parts of that State;

And *whereas* it has been made known to the President of the United States by the officers commanding the national armies that combinations have been formed in the said State of Kentucky, with a purpose of inciting rebel forces to renew the said operations of civil war within the said State, and thereby to embarrass the United States armies now operating in the said States of Virginia and Georgia, and even to endanger their safety;

Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the authority vested in me by the Constitution and laws, do hereby declare that, in my judgment, the public safety especially requires that the suspension of the writ of *habeas corpus*, so proclaimed in the said proclamation of the 15th of September, 1863, be made effectual and be duly enforced in and throughout the said State of Kentucky, and that martial law be for the present

established therein. I do, therefore, hereby require of the military officers in the said State that the privileges of the writ of *habeas corpus* be effectually suspended within the said State, according to the aforesaid proclamation, and that martial law be established therein, to take effect from the date of this proclamation, the said suspension and establishment of martial law to continue until the proclamation shall be revoked or modified, but not beyond the period when the said rebellion shall have been suppressed or come to an end. And I do hereby require and command, as well all military officers as all civil officers and authorities existing or found within the said State of Kentucky, to take notice of this proclamation and to give full effect to the same.

The martial law herein proclaimed, and the things in that respect herein ordered, will not be deemed or taken to interfere with the holding of lawful elections, or with the proceedings of the constitutional Legislature of Kentucky, or with the administration of justice in the courts of law existing therein between citizens of the United States in suits or proceedings which do not affect the military operations or the constituted authorities of the Government of the United States.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington this fifth day of July, in the [L. S.] year of our Lord, one thousand eight hundred and sixty-four, and of the independence of the United States the eighty-ninth.

ABRAHAM LINCOLN.

By the President :

WILLIAM H. SEWARD, Secretary of State.

Arrests of individuals by a military force soon commenced, and a large number of persons were thus seized. A correspondent of the *N. Y. Times*, writing from Louisville, Aug. 5th, says:

What will be done with all the numerous arrested has not transpired. They were arrested under Gen. Sherman's instructions to Gen. Burbridge, and upon Gen. Carrington's information to Gov. Morton. The policy is to arrest the prominent guilty, and make a wholesome example of them. Those proved to be leading "Sons of Liberty," "American Knights," "Knights of the Bush," or leading sympathizers and aiders and abettors of such, will doubtless be at least banished for the war. No convicted conspirators and traitors can be tolerated upon Kentucky soil, any more than their knightly friends, the guerrillas. J. R. Buchanan, J. N. Leathers, and other Peace Democratic delegates, and not a few prominent Kentuckians of all professions and callings, are in limbo.

The following persons were among those arrested previous to Aug. 11th, at Louisville and in Jefferson County, on a charge of being "Sons of Liberty": Joshua E. Bullitt, Chief Justice of Kentucky, residence, county; G. W. G. Payne, residence, city; Dr. H. F. Kalfus, ex-Colonel Fifteenth Kentucky, residence, city; John Colgan, city; W. K. Thomas, jailer, Jefferson County, residence, city; Alfred Harris, President Louisville Water Company, residence, city; Thomas Jeffries, city; J. R. Buchanan, president Democratic Central Committee, city; M. J. Paul, chief of fire department, city; John Hines, Henry Stickrod, Michael Carroll, Wm. Fitzhenry, Erwin Bell, A. J. Brannon, Thomas Miller, county; A. J. Mitchell, John Rudd, R. S. Tharin, Charles J. Clarke, B. C. Redford, John H. Talbott, W. G. Gray, R. S. P. Vaughn,

Dr. A. B. Chambers. The Lieut.-Governor of the State, Jacobs, was also arrested on Nov. 18th, and banished to Richmond. In Dec. he was allowed to return.

On August 11th a party of nearly forty persons, citizens of Columbus, Paducah, and the vicinity, arrived at Detroit under the charge of Capt. B. H. Norton, 8th U. S. colored artillery, and about twenty artillerymen, on their way to Canada, whither they had been banished by orders of Gen. Paine. The party consisted of men, women, and children, all of whom belonged to the prominent families of the State. They consisted of judges, magistrates, wealthy merchants, young women, &c. They had not been allowed a hearing, nor trial, nor any opportunity to vindicate themselves.

The State election is held on the first Monday in August. It was confined to local officers and to a judge of the court of appeals from one district at this time, and took place on Aug. 1st. The candidates were Chief Justice Duvall and M. M. Benton.

On Friday, July 29th, Gen. Burbridge issued the following order:

HEADQUARTERS DISTRICT OF KENTUCKY, }
FIRST DIVISION, TWENTY-SEVENTH ARMY
CORPS, LEXINGTON, Ky., July 29, 1864. }

To the Sheriff of Kenton Co., Independence, Ky.:
You will not allow the name of Alvin Duvall to appear upon the poll books as a candidate for office at the coming election.

By order of Maj.-Gen. BURBRIDGE.
J. BATES DICKSON, Capt. and A. A. G.

Duvall was the nominee of the Union Democrats, and Benton of the Republican Unionists. Duvall now declined, and his friends immediately substituted the name of Judge Robertson, and by means of activity, secured a vote for him in fourteen of the twenty-three counties of which the district is composed. The result was as follows: Benton, 1,880; Robertson, 3,511; Duvall, 1,200.

The vote at the Presidential election in Nov. was as follows:

	Lincoln.	McClellan.
Home vote,	26,592	61,473
Soldiers' vote,	1,194	2,823
Total,	27,786	64,301

McClellan's majority, 36,515.

On Oct. 17th the Governor issued a proclamation, of which the following are extracts:

If military force is brought to menace the officers of election or voters, your duty is clearly marked out by law. The law is as binding upon the soldier as upon any other citizen. He has no more right to violate it, and is as amenable to its penalties. As no officer of any rank, from the President down, has any right or authority to interfere with elections, no order to do so can legalize the act. If there be sufficient power in the citizens present at any place where such interference may be attempted to arrest the offenders, and hold them over to answer to the violated laws, it will be the duty of the sheriff to make the arrest in such case. He has authority to require the aid of every citizen, and it should be readily and promptly given, in defence of a common right—of a blood-bought franchise. If the force employed to interfere with the election be too great, at any place of voting, to be arrested, the officers of

election, in such case, should adjourn, and not proceed with the election. If you are unable to hold a free election, your duty is to hold none at all; but adjourn, and report the offenders to the grand jury of your county for indictment and punishment. This is the lawful mode of meeting unlawful attempts to disturb the freedom of elections.

The laws regulating elections prescribe all the duties of the officers, and all the qualifications and tests of the voters. Observe those rules and none other. None other are of authority or binding.

While Gov. Bramlette visited Washington in April, the duties of his office were performed by Lieut.-Gov. Jacoba. During that time he granted a pardon to Rev. Calvin Fairbanks, who being implicated with Delia Webster in enticing slaves from the State some twelve years previous, had been sentenced to the State penitentiary for fifteen years.

The effect of these unsettled affairs in Kentucky during the year was utterly to "demoralize" the system of labor. The uncertainty of the tenure of slave labor destroyed its value. Some farmers who held slaves had lost a part or all of them. Others have had the wives and small children of their men left on their hands, a present and prospective burden, and, what adds to the perplexity of their position, the active men of every age and many of the younger and middle-aged women, have been going away and will continue to go until apparently the institution of slavery will remove itself, and with it goes nearly all the labor of the State. The Government wants the active black men for soldiers; the policy of their enlistment has become settled by legal enactment, and by the same power it is decided that the wives and children of colored soldiers obtain with the enlisted negro the status of freedom. Thus the question of labor to produce the crop began to create much anxiety.

Under the Provisional or Confederate Government of Kentucky an election was held for members of the Congress at Richmond, at which the following vote was cast on a general ticket throughout the State:

1. Machen.....998;	Noble..... 15;	
2. Morris.....445;	Triplett.....890;	
3. Read.....782;	Coker.....427;	
4. Ewing.....792;	Barrick.....263;	
5. Orisman.....571;	Napier.....313;	
6. Burnett.....817;	Thompson.....208;	Hardin..... 81
7. H. W. Bruce.....878;	Coker.....149;	
8. H. Marshall.....888;	Pickett.....240;	
9. E. M. Bruce.....784;	All others.....351;	
10. Moore.....964;	Johnson.....143;	May.....118
11. Bradley.....775;	Brackinridge.....211;	
12. Elliott.....908;		

Willis B. Machen, Henry E. Read, Geo. W. Ewing, James G. Orisman, H. W. Bruce, E. M. Bruce, and John M. Elliott were reelected members.

KING, THOMAS BUTLER, an American politician, born in Hampden County, Mass., August 27, 1804, died at his residence in Waynesboro', Ware County, Ga., of pneumonia, May 10, 1864. He was educated at Westfield Academy, Mass., and studied for the bar, but removed to Georgia in 1828, where he married, and devoted himself to cotton planting. In 1832, 1834, 1835, and

1837, he was a member of the State Senate of Georgia, and from 1839 to 1843, and again from 1845 to 1849, he was a Representative in Congress from Georgia, serving much of the time on the Committee on Naval Affairs, in which he took a special interest. In 1849 Gen. Taylor appointed him collector of the port of San Francisco, but he resigned after two years, though he continued to reside in California for some years. Returning to Georgia he was elected in 1859 State Senator. He was also a member of the Milledgeville Convention in 1833, of the Macon Railroad Convention in 1836, and of the Young Men's Convention in Baltimore in 1840, and had taken a practical interest in several railroad and canal companies in Georgia, of which he was some years president. His political sympathies had been for many years with the State Rights party, and in 1861 he identified himself with the secessionists, and was active in the effort to withdraw his State from the Union; and soon after its secession was sent as its commissioner to Europe, where he remained for about two years, although he accomplished little or nothing for the benefit either of his State or the Southern Confederacy. On his return he retired to his estate, and did not again mingle in public life. He was a man of cultivated literary tastes and extensive acquirements, and of fine and commanding address.

KIRKLAND, CAROLINE MATILDA (STANSBURY), an American authoress, born in New York in January, 1801, died there April 6, 1864. After the death of her father, who was a publisher in New York, she removed with her family to Geneva, in the interior of the State, where she was married to Professor Kirkland, of Hamilton College, who subsequently established a seminary at Goshen, on Seneca Lake. In 1843, after a residence of several years in Michigan, Mrs. Kirkland, accompanied by her husband, returned to New York, where she chiefly resided until her death, engaged in literary and educational enterprises. Her literary career commenced in 1839, with the publication of "A New Home—Who'll Follow?" a record of her own experiences in the West, written with such vivacity and freshness as to obtain for her an immediate and widespread popularity. This work, as well as "Forest Life" (1842), and "Western Clearings" (1846), was published under the pseudonyme of "Mrs. Mary Clavers." After the death of her husband in 1847 she assumed for eighteen months the editorship of the "Union Magazine," and in 1848-'49 made a tour in Europe, of which she published an account, under the title of "Holidays Abroad; or, Europe from the West" (2 vols., 1849). Among her remaining works are "The Evening Book; or, Fireside Talk on Morals and Manners, with Sketches of Western Life" (1852); "A Book for the Home Circle" (1858); the letter press for the "Book of Home Beauty," a volume containing portraits of twelve American ladies; "Per-

sonal Memoirs of George Washington" (12mo, illustrated, 1858); an "Essay on the Life and Writings of Spenser," and a great variety of magazine articles and miscellaneous contributions to the periodical press. Her latest publication was a tasteful selection of poetical extracts called "The School Girl's Garland," series first and second, which appeared but a few days before her death. As a teacher of young ladies she was more than ordinarily successful, and her culture, her literary tastes, and the charm of her conversation, drew around her a circle of the most refined people of the metropolis, comprising authors, artists, and divines. Her sketches of Western life remain

among the most faithful and lively ever drawn, and stamp her as a vigorous and original writer, whose reputation rests on no uncertain basis. She was of eminently philanthropic impulses, and employed much of her time in forwarding charitable objects. For several weeks previous to her death, as one of the ladies' committee of the New York Sanitary Fair, she labored with great enthusiasm to insure the success of that enterprise. She witnessed the opening of the Fair, and in her official capacity was on duty during the day and evening in the department of arms and trophies. She died the following morning of apoplexy, brought on probably by the fatigue of the few previous days.

L

LAFONTAINE, M. LOUIS HYPOLYTE, was born at Boucherville, Lower Canada, in October, 1807, being the third son of A. M. Lafontaine. Applying himself to the profession of the law, he worked with assiduity and success; nor did he permit any thing to distract his attention from his profession till he had acquired a competence. While he accumulated what was considered a handsome fortune for a professional gentleman in Canada, he enhanced his social position by a marriage with a daughter of M. Amable Berthelot, who long held a seat in the legislative assembly of Lower Canada.

Coming on the stage when Papineau was in the zenith of his fame and at the giddy height of a popularity from which he was to be dashed, never to rise again, M. Lafontaine was counted among that gentleman's followers. The different characters and talents of the two men were ultimately to assign them to very different positions. A period of rivalry between them was to come; and after a short and sharp struggle the mastery was to remain indisputably with M. Lafontaine. Till the period of the rebellion, M. Papineau was the leader, M. Lafontaine the follower; at first a distant and humble follower. Few prominent men of the popular party in Lower Canada escaped imprisonment at the time of the revolt. On the 4th of November, 1838, under a warrant issued by M. H. Edmond Barron, J. P., M. Lafontaine, *suspecté d'être suspect*, was ordered to be sent to jail. The same warrant included Charles (since Mr. Justice) Mondelet, Dennis Benjamin Viger, and a number of others more or less celebrated. This warrant was issued at the time when it was known that M. Lafontaine was on the point of starting for England as the agent, the Constitutional Association of Montreal said, of the Canadians; and they suggested that their delegate, who was about to proceed there, should be authorized to cause him to be arrested. Before his departure M. Lafontaine underwent an examination before a

special tribunal. On arriving on the other side of the Atlantic he did not deem it advisable to remain long in England; and accordingly passed over to France. He found, when in England, a powerful protector in Edward Ellice; and as no evidence had been adduced against him, he returned to Canada at pleasure, being neither outlawed nor having a price set upon his head.

After the return of M. Lafontaine, the old and once popular chief of the French Canadians, M. L. J. Papineau, long remained under ban. This gave M. Lafontaine an opportunity to lay the foundation of that leadership which his old chief had not the remotest chance of rivalling. In 1841, becoming a candidate for the representation of Terrebonne, he withdrew from the contest before its close, for reasons which he stated at great length at the time. It was after his defeat in Terrebonne that M. Lafontaine found a constituency in Upper Canada, North York electing an eminent stranger of another race and speaking a different language, in preference to a resident.

Under Sir Charles Bagot, M. Lafontaine first attained influence as a member of the Administration in 1842. This was the inauguration of responsible government in Canada. The successor of Sir Charles Bagot, Lord Metcalfe, conceived a prejudice against the ministry of which M. Lafontaine was a member, almost as soon as he reached Kingston, and perhaps before. He took an early opportunity to lay the foundation of a quarrel with them; and about the 28th of November, 1844, succeeded in compelling them to resign, on the ground that he had made appointments and offers of appointments without their knowledge or advice. A party contest of no ordinary vehemence followed, in which the name of the Governor-General was mixed up in a way that has fortunately since become impossible. Lord Metcalfe went to the extremity of ruling the country for a period of nine months with only a Secretary for adviser. By plunging into the

contest, by a lavish use of money to churches, charities, and for more direct support, the elections went in favor of the Governor and against his late advisers. The majority, one or two at first, finally increased to about seven. In 1848 a new election having in the interim changed the majority largely the other way, on a motion of non-confidence moved by Mr. Baldwin, and seconded by Mr. Lafontaine, the ministry of Lord Metcalfe's preference fell. He had himself, in the mean time, left the province in the last stages of a terrible disease, and died.

Now came the period of Mr. Lafontaine's greatest power. The majority of the ministry was enormous; but it was overweighted, and inclined to fall to pieces. But this tendency was not observable in the Lower Canada section.

M. Lafontaine retired from political life at exactly the right period to save his reputation and his credit. He had probably done all the good it was possible for him to do. At an important and in some respects critical period he had rendered good service to the country. He reconciled Lower Canada to a union it had detested, and did much to knit together two people in indissoluble bonds. But he was a finality statesman, and when he retired he had reached the farthest goal of progress. This was in 1850. Becoming Chief Justice of Lower Canada, he was created a baronet, and discharged the duties of that exalted position with credit and advantage. He died February 26th, aged fifty-eight years.

LANDOR, WALTER SAVAGE, an English author, born at Ipsley Court, Warwickshire, January 30, 1775, died in Florence, September 17, 1864. He was the eldest son of a wealthy country gentleman, and was educated at Rugby School and at Trinity College, Oxford; but for irregularities of conduct was rusticated and never returned to the university to take his degree. A certain wild strength and individuality of character made him an unfit companion for the staid society of the chapel or common room; and despising creeds and formularies, and aspiring already toward Greek culture and Greek love of art and freedom, he gladly renounced academic restraints and discipline to go out into the world. Thenceforth he was in politics a republican, in religion little better than a pagan. In 1795, soon after leaving Oxford, he published a volume of poems, followed in 1798 by "*Gebir*," an epic poem of some pretensions, a favorable notice of which by Southey abundantly compensated the author for the strictures or neglect of the smaller critics—a class whom he invariably despised. A few years later he published a Latin version of this poem. Refusing to enter the army or study for the bar, he lived for some years on a small stipend granted by his father, and travelled on the Continent, where he seems to have imbibed a hatred of the French perfectly characteristic of the time. Upon succeeding to the paternal estates he expended large sums in improving them; but becoming exasperated in

1806 by the bad conduct of some of his tenants, he disposed of his whole landed property, some of which had been in the family upward of seven hundred years, pulled down a handsome mansion recently built by him, and determined to live abroad, free from the vexations incidental to a British landlord. This rash impulsiveness pervaded his literature as well as his whole life. In 1808 he went to Spain to assist the patriots of that country against Napoleon, raised a body of troops at his own expense, and contributed twenty thousand reals to the cause, receiving in return the thanks of the Government and a colonel's commission in the Spanish army. On the return of King Ferdinand to Madrid, and the consequent violation of the constitution framed by the Spaniards during their struggle for independence, Landor threw down his sword, and left the country in disgust, declaring he would have nothing to do with a perjurer and a traitor. In 1811 he married Julia Thuillier de Malaperte, the daughter of a French *émigré* of ancient family, and in 1815 removed to Florence, where the greater part of his subsequent life was passed in literary culture and labor.

After more than thirty years' residence in Italy incompatability of temper induced him, when considerably past his seventieth year, to separate from his wife and children. Settling upon them his elegant villa in Florence and the greater part of his fortune, he returned to England, and for several winters passed a solitary existence in Bath, cultivating few friendships, and rather shunned by the world. A man of violent temper, intolerant, revolutionary, and sarcastic, he repelled rather than attracted. His poems, of which he published a new edition in 1831 under the title of "*Gebir*, Count Julian, and other Poems," were too severely Hellenic in genius and style to find many readers, and his *Idyllia Heroica*, despite their elegant Latinity, appealed necessarily to a small though select audience. His "*Imaginary Conversations*" (5 vols. 8vo, 1824-'29), written in pure nervous English, and among the most finished productions in the language, form his chief title to literary distinction; but even these so abound in paradox, in contradictions, in attacks upon received opinions, for no other purpose apparently than to gratify a spirit of opposition, and in theories subversive of all social laws, that the public almost feared while they admired them. The author seemed too extravagant and dogmatical, too much at war with all opinions but his own, too solitary and proud in his egotism to attract general sympathy. His residence in Bath, however, was not an idle one. Immersed as ever in books and study, he produced within a few years his "*Hellenics*" (1847), "*Imaginary Conversations of King Carlo Alberto and the Duchess Belgiojoso on the Affairs and Prospects of Italy*" (1848); "*Popery, British and Foreign*" (1851); "*The Last Fruit of an Old Tree*" (1853); "*Letters of an American*"

(1854), under the pseudonyme of Pottinger; "Antony and Octavius" (1856); and "Dry Sticks Fagoted" (1857). For certain grossly indecent verses and slanders in the last-named work, directed against a lady of Bath, he was sued for libel and amerced in damages to the amount of £1,000. The odium arising from the trial compelled him to quit Bath, and, in his eighty-third year, he returned to Florence, where he passed his latter years in comparative tranquillity. Until within a short time of his death an occasional letter, epigram, or imaginary conversation, written with all his earlier combative vigor, and with no abatement of his peculiarities of spirit or style, would appear in the columns of the "Examiner" or the "Athenæum."

Though a life-long student, Landor was not a rapid or fertile writer. His literary productions, the result of seventy years of labor, were polished to the highest degree which a fastidious taste could exact, and might easily be included in three moderate-sized volumes. Caring nothing for critics, and aware that he appealed to an unsympathetic public, he conceived an apathy, if not an antipathy, to popularity, and wrote chiefly to gratify himself, and to put on protest his opinions. What these were may be imagined from the fact that he justified tyrannicide, and offered to settle an annuity upon the widow of the man who should assassinate the Emperor Napoleon III. In private social intercourse he showed less of this violence and intolerance of spirit, and his conversation is said to have been unusually pleasing, manly, and instructive. The imaginary conversation, as a wide vehicle for thought and feeling, may be said to have been created by him. Plato and Lucian had indeed adopted this form of literature to illustrate moral and metaphysical science; but Landor dramatized man. "In his hands," says a recent writer, "conversation became a new power—the wit, passion, insight, railery, going to the illumination, not of a mere speculative point in science, but to the progress of nature and human life. Something of what Shakspeare did for drama Landor may be said to have done for dialogue. He found it sectarian; he made it secular." However true this estimate may be, Landor's writings would possibly soon be forgotten were it not for the admirably pure, terse, and beautiful style in which they are written. This will always have its fascination for scholars, in whose estimation he ranks among the chief masters of English prose. No collected edition of his works has appeared since 1846. A selection from his writings was edited by G. S. Hillard (Boston, 1856).

LEAD, EROSION OF. The erosion of lead, and even of type metal, by certain species of insects, is not generally known, and may be extremely mischievous. Not long ago it attracted the attention of the French Academy of Sciences, and several communications respecting it have been published with their pro-

ceedings in the *Comptes Rendus*. Of these the following is a *résumé*:

In 1858 Marshal Vaillant exhibited to the Academy leaden bullets brought back from the Crimea in some of which the larvæ of insects had excavated circular passages three or four millimetres in diameter, and in others superficial grooves. Inquiry was made through the Russian Ambassador, M. de Kisselef, whether similar erosion had been observed in Russia. M. V. de Motschulsky replied that nothing of the kind had been detected in the cartridges of the Russian army in the Crimea, and that the insect which had caused the injury appeared to be very rare in Russia, not having been discovered by Russian entomologists in the Crimea. It is stated to be very common in England, Sweden, and Germany, and to occur in the Jura in France. It attacks silver firs and pines.

The insect which damaged the French cartridges was imported from France in the wood of the cases in which they were packed. All the excavated passages were originally circular in section, and those that were semicircular in section, that is, superficially grooved, were only segments of which the other half was in the contiguous surface of other bullets or of the wood forming the sides of the cases. The passages were always open at both ends. Excavation was effected by the mandibles of the insect, the apparatus consisting of a saw toothed, and cut like a file. The insects do not eat the lead, but simply bore it out; and it was observed that their remains after metamorphosis had been carried downwards by the particles of the metal, reduced to powders, and dispersed on the outside through the cracks in the bottom of the packing-case. The perfect insects did not attack the lead, but died in the passages, even immediately after their complete metamorphosis, as very often occurs with insects in general.

In 1833 Audouin exhibited to the Entomological Society of Paris sheet lead from the roof of a building deeply grooved by insects. In 1844 Desmarest mentioned erosions and perforations of sheet lead by a species of *Bostriche* (*B. Capucina*), and illustrated the fact by cartridges from the arsenal at Turin. Mr. Westwood, the well-known British entomologist, has recorded observations by himself on the perforation of lead by insects. M. Boutheille, curator of the Museum of Natural History at Grenoble, sent to the French Academy of Sciences, from the collection under his charge, specimens of cartridges gnawed by insects, which were found *in situ*, and the following report upon the subject was made by Marshal Vaillant, de Quatrefoies, and Milne Edwards:—The insect was *Sirex gigas*, a large hymenopterous species which, in the larva state, lives in the interior of old trees or pieces of wood, and which, after the completion of its metamorphosis, quits its retreat for the purpose of reproduction. As previously stated, it cuts its

way by its mandibles, gnawing the woody substance or other hard bodies which it meets with in its course. Analogous perforations are made by the mandibles of the *Callidium sanguineum*. The reporters add:

"If it is probable that it is always with their mandibles that coleopterous as well as hymenopterous insects thus attack lead or other hard bodies, it is not well established that it is always the desire of liberty which prompts them so to act. Indeed, in some cases, coleopterous insects have been seen to gnaw the exterior of similar bodies."

Reference was made to a paper by Antonio Berti on the perforation of leaden pipes by an insect named *Apaté humeralis*.

Scheurer-Kestner, in 1861, communicated to the French Academy a notice of the erosion by an insect of the sheet lead of a new sulphuric acid chamber. The creature was caught in the act of escaping through the lead, having been imprisoned between it and a wooden support.

Perhaps the most interesting and important case of insect erosion is that of stereotype metal, which was communicated in 1843 by M. du Boys to the Agricultural Society of Limoges. Specimens riddled with holes were shown in illustration.

LEECH, JOHN, an English artist and humorist, born in London in 1817, died there October 29th, 1864. At an unusually early age he was placed in the Charterhouse school, where he remained eight years, having as schoolmates Thackeray and others, subsequently distinguished in many ways. Upon leaving school, in accordance with the wishes of his friends, he commenced the study of medicine and surgery in St. Bartholomew's Hospital. Although remaining there long enough to be qualified for a doctor, he evinced no liking for the profession, and, yielding finally to his own inclinations toward art, essayed to draw on wood for publication. The establishment of "Punch" about this time afforded an opportunity for the display of his ability, and thenceforth, until his death, his name and genius are inseparably connected with that periodical. It is an unquestionable fact, indeed, that "Punch" owes no slight degree of its reputation to the humorous and satirical, but ever kindly, pencil of Leech. As an illustrator of "Punch," he looked into every phase of life having ludicrous associations, travelled over many parts of Europe, and his note-book, which was his never-failing companion, recorded every characteristic face, and every bit of composition, humor, or effect, which he encountered, or which was suggested to him. These notes often supplied themes, or were used as occasion required, and the fertile memory of the artist brought them forth. Several thousand sketches, illustrating the politics, fashions, and follies of the day, testify to the industry of his pencil and the fertility of his invention; and the greater part of these, though hastily thrown off, have high artistic

merit as well as humor. In all his earlier sketches the humor is paramount, and is expressed by means of that exaggeration of drawing and character which distinguish the mere caricaturist; but he gradually advanced to a higher level, and at the time of his death was in the full maturity of his powers. In one aspect he takes rank above all contemporary English artists, for he rescued his generation from oblivion. "A collection of his works," says a recent writer, "will be for our children's children a record of our customs, our habits, our fashions, our social relations, and even our figures of speech. We shall speak again and again through him to those who shall come after us; and in this view his versatility and the multitude of his productions leave little room for the regret that has sometimes been expressed, that such rare faculties should not have found a worthier medium for expression than rough woodcuts in the pages of 'Punch.'" He did not deal more happily with men and women than with landscape, and some of his backgrounds are replete with incident, light, and shade, and even color—in fact, are true pictures in the best sense of the word. He owed this result to his large as well as intricate knowledge of effect and detail; and whether he illustrated a street incident, a hunting field, or a sporting scene, there was a graphic power and a truthfulness in the design which impressed the beholder quite as much as the humor. He was in reality a part of much that he depicted, being fond of fishing, riding, and athletic sports, and capable of adapting himself to almost every state of society in which circumstances might place him. No one having knowledge of horse-flesh can have failed to perceive how happily he delineated horses of every condition, from the thoroughbred to the knock-kneed, broken-down hack, and in all possible attitudes; how careful were his studies of the anatomy of the animal, and how truthful his details of its surroundings. A similar habit of accuracy of detail was carried into all his pictorial efforts. Leech was not of a naturally vigorous constitution, and his ceaseless labors as an illustrator began of late years to tell upon him, until finally his whole nervous system fell into a state of extreme irritability, so that, at times, the slightest noise caused him great suffering. He was about to enjoy a period of much needed rest, which might have prolonged his life many years, when he was suddenly cut off by death. Apart from his numerous designs for "Punch," several series of which have appeared in separate publications, he illustrated the "Comic History of England," the "Ingoldsby Legends," several of Albert Smith's novels, and a variety of minor works. He even experimented in oils, with a view of producing a gallery of painted designs from "Punch;" but his efforts in that direction were not considered happy. As an author he was known to his contemporaries by an occasional paper in the periodical to which his designs imparted such interest. For his picto-

rial contributions during twenty-three years to "Punch," he is said to have received the sum of £40,000. In all the social relations he was irreproachable, and his death was sincerely lamented by a large circle of friends. It may be truly said that "Punch" has not been itself since that event.

LIGHT. The light emitted by burning magnesium wire is rich in chemical rays—so much so that it may be used instead of sunlight for the purpose of photography. The spectrum of burning magnesium is exceedingly rich in violet and ultra-violet rays, partly due to the incandescent vapor of magnesia, and partly to the intensely heated magnesia formed by the combustion. So long ago as 1859 the chemically active power possessed by this light, compared with that of the sun, was determined, and the use of this light for the purpose of photography was proposed. It was shown that a burning surface of magnesium wire, which, seen from a point at the sea level, has an apparent magnitude equal to that of the sun, effects on that point the same amount of chemical action as the sun would do if shining from a cloudless sky at a height of $99^{\circ} 53'$ above the horizon. On comparing the visible brightness of these two sources of light, it was found that the brightness of the sun's disk as measured by the eye, is 524 times as great as that of burning magnesium when the sun's zenith distance is $67^{\circ} 22'$; whilst at the same zenith distance the sun's chemical brightness is only five times as great. Hence the value of this light as a source of the chemically active rays for photographic purposes becomes at once apparent. The steady and equable light evolved by magnesium wire burning in the air, and the immense chemical action thus produced, render this source of light valuable as a simple means of obtaining a given quantity of chemical illumination, and the combustion of this metal constitutes so definite and simple a source of light for the purposes of photo-chemical measurement, that the wide distribution of magnesium becomes desirable. The application of this metal as a source of light may become even of technical importance. Professor Roscoe, in a paper read before the British Association, is of opinion that a burning magnesium wire, of the thickness of .012 inches, evolves as much light as 74 stearine candles, of which 5 go to the pound. In order to produce a light equal to 74 stearine candles burning for 20 hours, whereby about 20 lbs. of stearine is consumed, two and a half ounces of magnesium would be required. The magnesium wire can be easily prepared by forcing out the metal from a heated steel press having a fine opening at bottom; this wire might be rolled up in coils upon a spindle, which could be made to revolve by clock-work, and thus the end of the wire, guided by passing through a groove or between rollers, could be continually pushed forward into a gas or spirit-lamp flame, in which it would burn.

LITERATURE AND LITERARY PROGRESS IN 1864. Notwithstanding the greatly enhanced cost of manufacturing books, and the resulting increase in the price, which, during the year, advanced fully one hundred per cent., the year 1864 has been remarkable for its literary activity. The number of works published varied but slightly from the aggregate of the preceding year, but a larger proportion of them were in more than one volume. The number of distinct publications, aside from occasional pamphlets, reports, circulars, catalogues, single sermons, etc., was 2,028. The number of reprints was comparatively small, considerably less than English reprints of American books. In all there were 301 foreign books, English, French, German, and Italian, republished. Of these 77 were either American translations, or had received extensive revision and additions from American authors, and 90 more were reprinted in the foreign language in which they were originally published, leaving only 134 simple reprints of English works. The greater part of these were works of fiction.

Of the publications of the year 25 appertained to military science; 143 to the domain of history, of which 13 were histories of the war; 14 histories of particular battles or campaigns; 53 narrative or didactic works on subjects appertaining to the war, though not strictly and formally histories; 23 were American local and other histories, having no relation to the war; 27 were histories of other countries or of the United States or Colonies during or before the Revolution; 7 were historical reprints; 8 were historical magazines or transactions of historical societies, and 8 ecclesiastical histories.

In the department of biography there were 104 publications, of which 88 were single and 16 collective biographies. In theology 26 works were published, of which 4 were doctrinal and 22 polemical. Of religious works, not theological, there were 139; of treatises on moral and intellectual science, 5; of works appertaining to physical science, 41; of which 15 were astronomical, 1 a treatise on geology, 16 monographs on zoological topics, 1 on botany, 2 on natural philosophy, and 6 on chemistry.

The number of works on topics connected with political, social, financial, and statistical science was 187; philology, 10; technology and mechanical science, 86; agriculture, 18; medical science, 54; legal treatises and essays, and compilations of laws, 68; educational science, 43; geography and travel, 30; essays and didactic literature, 65; poetry and music, 165; novels, 242, of which only 9 were professedly religious fictions; juvenile books, 428, and miscellaneous, 19.

Several of the works on military subjects possess high merit, and do honor to their authors and the literature of the country. Only 4 were republications, and of these, 3, viz., Dufour's "Strategy and Tactics," translated and edited by Captain Craighill; Jomini's "Life of Napoleon," translated and annotated by Major-

General Halleck, and Jomini's "Grand Military Operations" and "Art of War," translated by Col. S. B. Holabird, owe very much to their American translators and editors. Mr. Lynal Thomas's "Treatise on Rifle Ordnance" has been republished without alteration. Of the original military treatises issued during the year, the most important were Major-General Gillmore's "Engineer and Artillery Operations against the Defences of Charleston Harbor in 1863," a work of great labor, and of great value as demonstrating the possibility and method of employing artillery for breaching purposes at much greater ranges than had previously been deemed possible, and as giving the result of extensive practical experiment of the comparative value of different kinds of ordnance for such service; Mr. Alexander L. Holley's admirable and exhaustive "Treatise on Ordnance and Armor," which, in the present state of the questions of great guns and armored ships, leaves nothing more to be said; and General Haupt's excellent "Treatise on Military Bridges," a work which must become a standard authority everywhere. Several of the military works were intended as Manuals of Instruction in different departments of the army or navy service. To this class belong Commander Parker's "Squadron Tactics under Steam;" General W. H. Morris's "Field Tactics for Infantry," and his "Infantry Tactics," now adopted by the War Department; Mahan's "Descriptive Geometry applied to the Drawing of Fortifications;" the "Manual of Gunnery" for the navy; the "Gunnery Catechism," also for the navy; "Instructions for Field Artillery;" Congdon's "Cavalry Compendium;" Elliot's "Manual of Cavalry," and Kautz's "Customs of Service for Non-Commissioned Officers and Soldiers." Osbon's "Hand-Book of the Navy" is a valuable historical compilation of the actions in which any of our naval vessels have been engaged in the course of the present war. A new edition of "Winter Campaigns a test of Generalship," by J. Watts De Peyster, also made its appearance during this year.

In HISTORICAL LITERATURE there has been less interest than during the previous year in attempted histories of the existing war, and few new claimants for the public regard. Those histories which were in progress as serials have been continued, and some of them issued as bound volumes. Among them may be named, Crafts, Duyckinck's, and Tomes', as well as the Rebellion Record. Harper's History has made some progress, and a second volume of Schmucker's has appeared, as also the "Third Year of War," by E. A. Pollard, editor of the Richmond Examiner. Among the new histories are Mr. Horace Greeley's "American Conflict," the first volume of which brings the history from the Revolution in 1776 to 1862. This work has had an immense sale, not less than 75,000 copies having been subscribed for. The late Hon. Joshua R. Giddings (see GIDDINGS) had prepared a history of the

Exciting Causes of the Rebellion, under the title of "History of the Rebellion," which was published in the spring of 1864. It is to a considerable extent a history of Congress for nearly twenty-five years, embracing the period of the bitterest conflicts in that body on the slavery question. An admirable compend has been prepared by Mr. Edward McPherson, clerk of the late House of Representatives, under the title of "Political History of the Rebellion," 1860-1864. All political action, State or National, bearing on the Rebellion, up to July, 1864, is carefully collected in this volume.

A number of valuable contributions to the history of the war have been made in the way of reports or narratives of particular battles or campaigns, or of the service of particular regiments, brigades, or divisions. Among these the late Edward Everett's Gettysburg Oration, giving an account of that terrible battle with his peculiarly eloquent power of narration, is entitled to the first place; and the narrative of Rev. M. Jacobs, "The Rebel Invasion of Maryland and Pennsylvania and Battle of Gettysburg," is also deserving of notice. To this class of works also belong Gen. McClellan's report of his campaigns, published in several forms; Mr. William Sumner Dodge's "History of the Old Second Division in the Army of the Cumberland," Mr. Franklin B. Hough's "History of Duryee's Brigade," Stevenson's "Indiana's Roll of Heroic and Patriotic Dead," Bechtel's "Atlas of Battles," Mr. Frederick Milnes Edge's "Englishman's View of the Battle between the Alabama and Kearsarge," Capt. Raphael Semmes' "Journal of the Cruise of the Alabama and Sumter," "Chickamauga the price of Chattanooga," by the author of "Annals of the Army of the Cumberland," "The Soldiers of Indiana in the War for the Union," "The Last Campaign of the 22d Regiment N. Y. State National Guard," Rev. R. Eddy's "History of the 60th Regiment, N. Y. V.," "Our Campaign around Gettysburg," a history of the march of the 28d Regiment (Brooklyn) N. Y. S. N. G., Mr. H. T. John's "History of the 49th Regiment Mass. Vols.," and J. C. Myers' "Daily Journal of 122d Regiment Penn. Vol." In this connection, too, notice should be taken of those periodicals which have contained full narratives of particular campaigns or single battles, or of the movements or history of particular regiments, brigades, divisions, or corps. Among these are the United States Service Magazine, which has contained admirable narratives of Sherman's campaigns, by Col. S. M. Bowman, and accounts of many other battles and movements; the Army and Navy Journal, which, though devoted more exclusively to military science and official reports, has contained much valuable historical matter relative to the war; Harper's Weekly and Monthly, both containing important war narratives from the pens of eye-witnesses; the Connecticut War Record, a valuable monthly journal of war matters; the

Northern Magazine, which has given special attention to historical sketches of Maine regiments; "The Sanitary Commission Bulletin," and the Massachusetts Annual Register, which has published histories of most of the Massachusetts Regiments. The Bureau of Military Statistics of the State of New York is collecting the histories of the regiments of the State, and has published two interesting reports concerning them.

A still larger class of works pertaining indirectly to the history of the war, are those narrations of personal adventure in connection with it, on essays or topics directly involved in it, and sketches, hardly historical, yet furnishing some elements of history, of special expeditions or campaigns, usually by newspaper correspondents. The number of these is legion; a few only of the most important of them can be mentioned. Among those first named are Freeman's "Three Months in the Southern States," a reprint; Carleton's (O. O. Coffin) "Following the Flag;" "My Cave Life at Vicksburg;" Rev. A. M. Stewart's "Camp, March, and Battle-Field;" Rev. A. H. Quint's "Potomac and Rapidan;" F. Colburn Adams' "Story of a Trooper;" O. S. Bryant's "History of the Sioux Massacre;" Lieut.-Col. F. F. Cavada's "Libby Life;" A. F. Hill's "Personal Experiences of a Soldier in the Army of the Potomac;" E. S. P. Rouse's "Bugle Blast," containing incidents of the Conflict;" "The Burning of Chambersburg," by Rev. B. S. Schenck; "The Yankee Conscript," by George A. Fisher; and "Notes of Hospital Life," by a Philadelphia lady. Among the narrations not by eye-witnesses, are "Poetical Pen Pictures of the War," collected by J. H. Hayward; "Legends of the War," by D. J. Weeks; Bradshaw's "Volunteer's Roll of Honor;" Prof. H. B. Hackett's "Christian Memorials of the War;" Mrs. Sallie Rochester Ford's "Raids and Romances of Morgan and his Men;" "The Days of Sixty-Three;" "Thrilling Stories of the Great Rebellion," by a Disabled Officer; "Rebel Barbarities at Fort Pillow, Libby Prison," &c., two works, one by the Government Committee on the Conduct of the War, the other by the Sanitary Commission; Edmund Kirke's (J. R. Gillmore) "Down in Tennessee, and Back by Way of Richmond," and Ledyard Bill's "Pen Pictures of the War."

Of the essays, &c., the most important were: Rev. G. S. Phillips's "American Republic and Human Liberty;" Rev. W. D. Potts' "Freemen's Guide to the Polls;" J. Watts De Peyster's "Secession in Switzerland and the United States Compared;" "Shots from the Monitor," by Leo Grenard; Vol. 2 of Count Gurowski's "Diary;" J. Ferrer de Conte's "Enough of War; the Slavery Question Conclusively and Satisfactorily Settled;" "Philanthropic Results of the War," by an American Citizen; Gen. Juan Prim's account of "General McClellan and the Army of the Potomac;" "Soldiers and Soldiers' Homes," by Mrs. Phoebe Harris Phelps; C. C. S. Farrar's "The War: its Causes

and its Consequences;" Secretary Welles' volume on "Armored Vessels;" Mrs. A. H. Lincoln Phelps' "Our Country and its Relations to the Past, Present, and Future;" "America and her Commentators," by H. T. Tuckerman; Rev. R. L. Stanton's "The Church and the Rebellion;" Rev. C. B. Boynton's "English and French Neutrality and the Anglo-French Alliance in their Relations to the United States and to Russia;" "The Adder's Den," by John Smith Dye; "General McClellan's Oration at the Laying of the Cornerstone of the West Point Monument;" "The History of the Western Sanitary Commission," by Rev. J. G. Forman; and "The General Orders of the War Department from 1861 to 1863," compiled by O'Brien and Diefendorf.

The various sanitary fairs which took place in our larger cities during the year added considerably to our war literature, both directly and indirectly. Numerous poems, essays, &c., were contributed to or published to aid in increasing the sales of the fairs; but in addition to this, each of the great fairs had a daily newspaper published during its continuance, which was largely occupied with narratives of incidents connected with the war or the hospitals. Some of these papers possessed a high degree of merit. The paper of the Brooklyn Fair was called the "Drumbeat;" that of the New York Fair, "Spirit of the Fair;" the Philadelphia Fair gave to theirs the title of the "Haversack." "Autograph Leaves of our Country's Authors," 1 vol. 4to, published in Baltimore, Md., for the benefit of the Sanitary Fair held in that city. Memorial volumes, with portraits, views, &c., have also been issued of each fair.

Turning to the department of local and other American histories not connected with the present war, we find these very diverse in their character; some, like Mr. J. C. Hamilton's "History of the Republic, as Developed in the Writings of Alexander Hamilton and his Contemporaries;" Dr. Lieber's "Washington and Napoleon;" Mr. G. H. Calvert's drama of "Arnold and André," and Wallace's "Oration on the 200th Anniversary of the Birthday of William Bradford, the First Printer of the Middle Colonies," or Gen. Henry Lee's "Champe's Adventure," are almost biographical in their character; others, like volume 8d of "Palfrey's History of New England;" M. W. Montgomery's "History of Gay County, Indiana;" Mr. W. W. Waldron's "Huguenots of West Chester and the Parish of Fordham;" Abbott's vol. vii. of his American Histories (The Revolution); Mr. Fred. Freeman's "History of Cape Cod;" the Address, &c., at the Centennial Anniversary of Machias, Me.; Judge Daly's "History of the Introduction of the Drama into America;" Mr. Dwinelle's "Colonial History of San Francisco," and Hon. J. R. Bartlett's "Records of the State of Rhode Island," are distinctively local histories, generally prepared with great care and research. A few are elaborate reprints on large paper of old narratives of bat-

tles of the Revolution, issued to gratify the fashionable taste for large paper copies of valuable or rare books. Among these may be named: "Journal of the Expedition to Quebec in 1775," by James Melvin; another volume of Mr. H. B. Dawson's "Gleanings from the Battle-Fields of American History, containing a Narrative of the Assault on Stony Point;" "Observations on Mr. Stedman's History of the American War," by Lieut.-Gen. Sir Henry Clinton, K.B.; "Crumbs for Antiquarians," and Major Return J. Meigs' "Journal of the Expedition against Quebec under Benedict Arnold, in 1775," both edited by Mr. Charles J. Bushnell; and "The Operations of the French Fleet under Count de Grasse, in 1781-'2." A reprint has also been issued of Milet's "Relation de sa Captivité parmi les Onneionts, 1690-1691;" and of Increase Mather's "Early History of New England," as edited by Mr. S. G. Drake. A new "History of Ireland," by Martin Haverty, is the only American history of a foreign country published for the first time the past year.

The reprints of foreign historical works during 1864, though not numerous, were important. There has seldom been occasion to chronicle the simultaneous republication of so many works of high character. The republication of Merivale's "History of the Romans Under the Empire," commenced the previous year, was completed during 1864, and the issue of Mr. Philip Smith's "History of the World," which, from the volumes already issued, promises to be by far the ablest universal history yet published, was commenced. A fourth volume of Carlyle's "History of Frederick the Second" was issued. The first two volumes of Miss Martineau's "History of England from 1800 to 1854" were published; but this can hardly be considered wholly a reprint, as Miss Martineau writes a preliminary and a supplementary volume for the American publishers. The translation of Mr. Henri Martin's great and admirable "History of France" was undertaken, and two volumes (Age of Louis XIV.) issued, enriched by the annotations of American editors; Dean Milman's "History of the Jews," revised and enlarged by himself, was reprinted in a fine edition. Among other reprints were Curwen's "Journal and Letters (an American in England), 1775 to 1788," edited by G. Atkinson Ward; the third volume of D'Aubigne's "Reformation in Europe under Calvin, giving an account of the Reformation in France and Switzerland;" George Trevor's "Ancient Egypt;" and Chambers' "Book of Days."

Of Ecclesiastical histories, the most important were Rev. E. H. Gillett's "History of the Presbyterian Church in the United States of America;" Rev. Abel Stevens's "History of the Methodist Episcopal Church in America;" Rt. Rev. George Burgess's "Pages from the Ecclesiastical History of England from 1740 to 1840;" Dr. S. P. Hildreth's "History of the Northwest, including an account of the Moravian Missions in

Ohio," and a new edition of Rev. John Marsh's "Epitome of General Ecclesiastical History." There were also a considerable number of historical discourses delivered, giving the history of particular parishes or churches.

In BIOGRAPHY, the year has been remarkably prolific. Among individual biographies Lieut.-Gen. Grant has been honored with five; Pennington's, Larke's, Headley's, Willett's, and an anonymous writer in Philadelphia. Of these the first three are works of considerable merit and research. The Presidential candidates were, of course, the subjects of numerous biographical works, some of them carefully written, and intended for future as well as present use, while others were mere campaign documents. The life of McClellan was written by George S. Hillard, of Boston, W. H. Hurlbut, Alexander Delmar, A. J. Victor, Markinfield Addy, and by two anonymous writers; and his military career reviewed by William Swinton and Gen. J. G. Barnard. Among the memoirs of Mr. Lincoln was an elaborate one by Benjamin F. Barrett, of Cincinnati; a history of his Administration, by Henry J. Raymond, and a campaign life, from the same pen; a boy's life, by the Rev. Mr. Thayer, of Boston; and campaign lives by O. J. Victor, Abott A. Abott, and two anonymous writers. Archbishop Hughes was the subject of three pamphlet biographies, by anonymous authors, and an elaborate one by Mr. John R. G. Hassard was announced, but not published till 1865. Four biographical sketches or volumes on Rev. Thomas Starr King, also appeared, one a compilation from various authors, the others by Rev. Mr. Bartol, Rev. Dr. Bellows, and Hon. Richard Frothingham. General Butler's career was commemorated by Mr. Parton (a cheap edition), and a German version of his memoir, as well as by a biography by an anonymous writer. Thackeray had two biographers (or rather collectors of reminiscences, for no satisfactory memoir has yet appeared), an English writer, Mr. Theodore Taylor, and Hon. William B. Reed, of Philadelphia. Of other single biographies the most noteworthy were Weiss' "Life of Theodore Parker," a most admirable biography, as presenting the subject in the light of his own correspondence and writings; "Memoirs of Edward Livingston," by Charles H. Hunt, an interesting history of one of our ablest jurists and statesmen; the "Autobiography, Letters, &c., of Lyman Beecher, D. D.," compiled and arranged by Charles Beecher, a Boswellian book, but deeply interesting for the *naïveté* of its revelations of character; "The Life of Benjamin Franklin," by James Parton, the only satisfactory biography of the great printer, philosopher, and statesman; a revised and enlarged "Memoir of Aaron Burr" from the same able pen; "The Blennerhasset Papers" and Memoir, by W. H. Safford; "Forty Years of Pioneer Life; Memoir of John Mason Peck, D. D.," by Rufus Babcock, D. D., a memoir of an earnest and useful Western pioneer preacher;

a "Memoir of Dr. Thomas Chalmers," by Francis Wayland, D. D.; a "Memoir of Bird Wilson, D. D., LL. D., late Professor in the General Theological Seminary, N. Y.," by W. White Bronson; "Letters and Life of John Calvin," edited by Dr. Jules Bonnet, and translated by M. R. Gilchrist; the "Life of David Coit Scudder," by his brother, Horace E. Scudder, an admirably drawn picture of a restless but interesting young missionary; "Memoirs of Mrs. Caroline P. Keith" (also a missionary), by William C. Tenney; the "Apologia Pro Vita Sua" of Dr. John Henry Newman, a skilful piece of casuistry; Lieutenant-General Scott's "Memoirs by Himself," interesting, and exhibiting somewhat summarily the career of the venerable author; "Rev. Horatio Gray's Life of Rev. Benjamin C. Outler, D. D.," an instructive memoir of a good man; "Cousin Alice: a Memoir of Alice B. Haven," pathetic and attractive; "Philip Doddridge," by D. A. Harsha; "Memorial (and also a Funeral Sermon by Rev. Dr. Sprague) of Rev. John N. Campbell, D. D.;" "The Miner Boy and his Monitor," a life of Captain John Ericsson, by P. O. Headley; "The Ferry Boy and the Financier," a boy's memoir of Chief Justice Chase, by a contributor to the "Atlantic;" and the "Tailor Boy," a memoir of Andrew Johnson; Irving's incomparable "Oliver Goldsmith: a Biography," also appeared in a new form as one of the "Riverside Series" during the year. Of biographies of persons less widely known or making less claim to completeness, we note a "Memorial of Rev. Frederick Croswell," by Rev. E. Harwood, D. D.; "Father Matthew," by John Francis Maguire; "Pius VII.," by Archbishop Hughes; a pamphlet life of General Meade, by an anonymous author; a "Memorial of Rev. N. A. Staples," by Rev. O. A. Staples; "Lieut. Joseph P. Burrage," by Rev. Daniel S. Cady; "Bryant Gray," by Rev. Joseph P. Thompson, D. D.; "Life and Lectures of John Dempster," D. D.; "Beaser's Life of Paul," translated by Frederick Patmann; "Nineteen Beautiful Years," a girl's life, by Rev. R. S. Foster; "Letters and Reminiscences of Felix Mendelssohn Bartholdy," by P. and C. Mendelssohn Bartholdy, translated by Lady Wallace; Renan's "Vie de Jesus;" "Mrs. Sherwood's Life," by herself; "Jenny Wade of Gettysburg;" "Dr. Sprague's Memorial of Revs. John and William A. McDowell;" "Glorious in Tribulation: a Brief Memoir of Hannah Carson;" "Memorial of John Allan;" "Walter S. Newhall," a Memorial of the Sanitary Commission; "Lieutenant Franklin B. Crosby;" "Washington an Example," by Mrs. L. O. Searle; "John Mary Decalogue," translated from the French; "Memoirs of Mrs. Coghlan, daughter of the late Major Moncrieffe, written by Herself." Among *Collective Biographies* we have Duyckinck's "National Portrait Gallery," a serial; J. Gilmary Shea's "American Nation Illustrated in the Lives of her Fallen, Brave, and Living Heroes;" Frank Moore's "Portrait Gallery of the War;"

Winslow's "Biographies of Successful Philadelphia Merchants;" "Old Merchants of New York," by Walter Barrett, clerk (J. F. Scoville); Joseph Palmer's "Necrology of Harvard University 1851-'2 to 1862-'8;" new and enlarged editions of Sabine's "Biographies of Loyalists," and of Mary Forrest's "Women of the South;" Waterbury's "Sketches of Eloquent Preachers," and reprints of Smiles' "Industrial Biography," and Ellen Creathorne Clayton's "Queens of Song."

In the way of *Genealogies* we have the record of the "Hyde Family," by Chancellor Walworth; "The Gilman Family," by Arthur Gilman; "The Holt Family," by Daniel S. Durrie; "The Price Family," by Eli K. Price; "The Preston Family," by Orlando Brown; "The Giles, etc., Memorial," by John Adams Vinton; W. L. Weaver's "Genealogy of Ancient Windham;" "Inscriptions on the tablets and grave-stones of Christ Church, Philadelphia," by Edward L. Clark.

The number of contributions to *Theology* and *Polemical Divinity* has not been large or generally important. In *General Theology*, the principal works were, Oxenden's "Pastoral Office, its duties," etc., (a reprint); the Complete Works of Archbishop Hughes; "The Principles of Church History adapted to the Young;" "Justification," by Rev. T. S. Childs, D. D.; "Expository Lectures on the Heidelberg Catechism," by Rev. G. W. Bethune, D. D.; "Liturgic Worship, Sermons on the Book of Common Prayer," by the Bishops and Clergy of the Protestant Episcopal Church; and Lectures on the "Communion Office of the Protestant Episcopal Church," by a Presbyterian.

The principal *Polemical Works* were: Rev. William Barnes "Ne Plus Ultra; or, Lay Representation Unscriptural, Unreasonable," etc.; "Gilbert Haven's Defence of Lay Representation in the Methodist Episcopal Church," Rev. Edwin Hall, D.D.'s "Explanation of the Law of Baptism" (Presbyterian); Rev. G. S. Bailey's "Manual of Baptism" (Baptist); Burkett's "Plain Words about Infant Baptism," edited by Rev. J. H. Hobart De Mille (Episcopal); J. B. Holgate's "Shortcomings of the Puritan Church;" Dr. S. P. Parker's "Catholic Mission of the Protestant Episcopal Church;" Rev. G. O. McWhorter's "Church Essays;" Rev. O. H. Fowler on "Colenso's Fallacies;" Archbishop Hughes on the "Emancipation of the Irish Catholics;" Dr. Daniel D. Whedon on the "Freedom of the Will;" Rev. John H. Egar's "Doctrine of the Trinity defended against J. F. C.;" "The Two Sabbaths," etc., by Rev. E. Q. Fuller; Sadlier's "Confessions of an Apostate;" Bishop John H. Hopkins' "Scriptural, Ecclesiastical, and Historical View of Slavery," and Watson's "Theological Institute," defended by Rev. John Levington.

Religious Books not distinctively theological may be arranged in four classes, viz.: Sermons, either single or collected; works on the Practical Duties of Christianity; Commem-

taries on the Scriptures, and Miscellaneous. Of Sermons, twenty-four volumes were published during the year, besides numerous single Sermons in pamphlet form not reported. The most important were "The Discourses of the Paulist Fathers for 1863 and 1864;" Rev. W. Aikman's discourses on "The Moral Power of the Sea;" Rev. Dr. Hitchcock's "Final Triumph of Christianity;" Rev. J. Matthews, D. D., "Sermons on the Influence of the Bible in improving the Understanding and Moral Character," with a life of the author; Dr. John Cumming's "Great Consummation, 2d Series;" Archbishop Hughes' "Sermon on laying the cornerstone of the New St. Patrick's Cathedral;" Rev. F. W. Robertson's "Sermons, 5th Series" (a reprint); Rev. Gardiner Spring, D. D., "Pulpit Ministrations and Sabbath Readings;" Rev. T. S. Preston's "Sermons on the principal Seasons of the Sacred Year" (Catholic); Rev. James Freeman Clark's "The Hour which Cometh and now Is;" Rev. George Junkin, D. D., LL. D., "The Two Commissions, the Apostolical and Evangelical;" Henry B. Smith, D. D., on "Christian Union and Ecclesiastical Reunion;" Josiah D. Smith, D. D., "Sermons: The Truth in Love," with Memoir of the author; a new edition of the Sermons of Rev. Samuel Davies, D. D., edited by Rev. Dr. Sprague; Andrew Jackson Davis's "Morning Lectures, delivered before the Friends of Progress;" Rev. Morgan Dix, D. D.'s Lectures on the "Pantheistic Idea of an Impersonal-Substance Deity, as contrasted with the Christian Faith concerning Almighty God;" Horace Bushnell, D. D., "Christ and His Salvation;" Charles Kingsley's "The Good News of God" (reprint); Rev. J. A. Collier's "The Dawn of Heaven," with a memoir of the author, and Rev. J. Spaulding's "Christ and the Sea."

Of Commentaries the most important work of the year was the publication of the first volume of Dr. J. P. Lange's Commentary on the Scriptures, translated and edited by Philip Schaff, D. D., with additional notes from eminent theologians of different denominations. This first volume contained a General Theological and Homiletical Introduction to the New Testament, and a Commentary on the Gospel according to Matthew. The work will extend to a considerable number of volumes, and is an enterprise of great importance. Other Commentaries of the year were, Prof. Charles Hodge on "The Epistle to the Romans;" Rudolph Stier's "Words of the Lord Jesus," translated and edited by Profs. J. Strong and H. B. Smith; Rev. L. A. Sawyer's First Gospel (Mark) translated, with notes, and Daniel, with the Apocryphal additions, translated and annotated; Rev. M. Dix, D. D.'s Exposition of Galatians and Colossians; Archbishop Leighton on First of Peter; Rev. W. Hanna, D. D., on the "Forty Days after our Lord's Resurrection;" Dr. David Brown's "Commentary on the Four Gospels;" Rev. Sylvanus Cobb's "The New Testament, with Explanatory Notes and Practical

Observations;" William Nast, D. D.'s Commentary on Matthew and Mark; M. W. Jacobus, D. D.'s Notes Explanatory, &c., on Genesis; The American Bible Union's New Version of the New Testament; Joseph Lathrop, D. D., "Exposition of Ephesians," edited by Rev. Dr. Sprague; Dr. W. S. Plumer's "Law of God (Ten Commandments) Explained;" E. C. Wines, D. D., "The Penitent Portrayed," in a practical exposition of the fifty-first Psalm.

Among the works on Practical Religious duties, five, by Rev. Robert Nelson, Rev. J. Chaplin, D. D., Rev. D. X. Junkin, D. D., Miss Sewell, and an anonymous author, are intended as guides to the reception of the Eucharist; ten are either forms of prayer for private and family or camp use, or treatises on prayer; they are by Rev. S. J. Prime, D. D., Rev. J. G. Forman, S. H. Tyng, D. D., John S. Hart, LL. D., J. R. Macduff, D. D., and several anonymous authors. Four are books of consolation, viz.: "Choice Consolation for the Suffering Children of God" (anonymous); "The Prayer of the Afflicted," by G. F. Smith, D. D.; "Over the River," a book of Consolation for the Sick, the Dying, and the Bereaved, by Rev. T. B. Thayer; and "Human Sorrows," by the Countess de Gasparin, translated by Miss Mary L. Booth. Attractive editions of Jeremy Taylor's "Rule and Exercise of Holy Living," and "Rule and Exercise of Holy Dying"; "Selections from Works of Jeremy Taylor;" Thomas Fuller's "Holy and Profane States;" Dr. Goldburn's "Thoughts on Personal Religion;" Rev. K. Tweedie's "Life and Work of Eminent Men," and a little English work entitled "Ore from Precious Mines," have appeared during the year. Other practical religious works published in the course of the year were: "Christian Missions: their Agents and their Results," by T. W. M. Marshall (Catholic); "The Spirit in the Word," by J. A. Smith, D. D.; "Satan's Devices and the Believer's Victory," by Rev. W. L. Parsons; "Thoughts for the Christian Life," by Rev. J. Drummond, with an introduction by J. G. Holland; "The Foot of the Cross and the Blessings Found There," by Octavius Winslow, D. D.; "The Star of Bethlehem, a Guide to the Saviour," by Rev. D. A. Harsha; "The Good Steward, or Systematic Beneficence an Essential Element of Christianity," by D. X. Junkin, D. D.; "The Religion of Childhood, or Children in their Relation to Depravity, to the Family, and to the Church," by F. G. Hibbard, D. D.; "Religious Training of Children, in the School, the Family, and the Church," by Miss Catherine E. Beecher; "None but Christ, or the Sinner's Only Hope," by Robert Boyd, D. D.; "Life Lessons in the School of Christian Duty," by E. H. Gillett, D. D.; "God's Way of Holiness," by H. Bonar, D. D. (reprint); "Treatise on Sanctification," by George Junkin, D. D., LL. D.; "The Immortality of the Soul considered in the Light of the Holy Scriptures, the Testimony of Reason and Nature, and the various Phenomena

of Life and Death," by Rev. Hiram Mattison; "Man all Immortal," &c., by Rev. D. W. Clark, D. D. Of Religious books of a more miscellaneous character, the following are the most important: "Redeemer and Redeemed," by Charles Beecher; "Death and Life," by Mary G. Ware; "Reposing in Jesus," by G. W. Mylne; "Believer's Daily Remembrancer," by Rev. James Smith (reprint); "Soldier's Armor of Strength," by Pilgrim John; "The Virgin Most Faithful," by Rev. T. Joslin; "Consciousness Revealing the Existence of God, Man, and Nature" (anonymous); "The Healing of the Nations," by Charles Lenton; "Bethlehem," by F. W. Faber, D. D. (Catholic); "Letters to a Theological Student," by Rev. Leverett Griggs; "The Marriage Gift," by Rev. James Petrie; "The Right Use of Speech," by the author of "The Formation of Christian Belief;" "The Veil Partly Lifted and Jesus Becoming Visible," by Rev. W. H. Farness; "Light in Darkness" (an answer to the preceding), by Rev. W. L. Gage; "Origin of Evil and Immensity of God," by Samuel B. Smith; "Treatise on Homiletics," by D. P. Kidder, D. D.; "Gleanings from the Fields of Science, Art, and History, or Incidental Testimony to the Inspiration of Scripture," by Rev. A. B. Rich; "The Prayer Book and its Story," by Rev. R. M. Abernethy; "Christian Union: its Moral Obligation and the Only Mode of Obtaining it" (anonymous); "The Red Sea Freedmen," by Alexander Clark; "Religion and Chemistry" (Graham Lectures), by Josiah P. Cooke, Prof., &c.; "The Voice of Blood in the Sphere of Nature and the Spirit World," by Rev. Samuel Philips; "The Bible and Modern Thought," by Rev. T. R. Birks; "Beauties of Sacred Literature, a Compendium of Christian Doctrine, Faith, and Practice;" "Briefs on Prophetic Themes," by a Member of the Boston Bar; "The Predictions of the Prophets which have been most Wonderfully Fulfilled since the Commencement of the Christian Era, and especially those Predictions concerning the United States of America," by Rev. P. E. Royce. Besides these, there have been several Manuals of Discipline and Rituals published, and a "Register for Army Chaplains," by Rev. J. Tuttle Smith.

In *Moral and Intellectual Science*, there have been but few additions to our literature. Herbert Spencer's "First Principles" of his New System of Philosophy, and "Classification of the Sciences;" Vol. I. of "Philosophy as Absolute Science," &c., by Messrs. E. L. & A. S. Frothingham; Rev. Dr. Whedon on the "Freedom of the Will" and Mr. Rowland G. Hazard's "Freedom of the Mind in Willing," are the only noteworthy books in this department.

The friends of the Spiritualistic Philosophy have published several works in advocacy of their views. Among these are: Mr. S. B. Brittan's "Man and his Relations;" "Spiritual Influence as it relates to Sciences;" "The Davenport Brothers: their History, Travels,

and Manifestations," by Orrin Abbott; "The Constitution of Nature," theories intended to unfold Nature and her Operations," by William Andrew; and "The Philosophic and Scientific Ultimatum," by W. A. Allibaco.

In *Mathematical Science* we notice "Manual of Elementary Problems on the Lunar Prospective of Form and Shadow," by S. Edward Warren, C. E., Professor in the Rensselaer Polytechnic Institute; "Elements of Design," Book First, by W. Remmer; "Dead Reckoning; or, Day's Work," by Edward Barrett, Lieutenant Commander U. S. N.; and "The Laws and Principles of Whist stated and explained," by Cavendish.

Philosophy and Chemistry have had somewhat larger contributions, and some of them of great value. Dr. Alexander Wilcock's "Thoughts on the Influence of Ether in the Solar System, its relations to the Zodiacal Light, Comets, the Seasons, and periodical Shooting Stars," a paper read before the American Philosophical Society, and published in their transactions, is one of the most important; and "The Correlation and Conservation of Forces," a collection of Essays on the newly-propounded principles of Natural Philosophy, edited, with an admirable scientific introduction, by Edward L. Youmans, M. D., is another. "Spectroscopy; or, Surprising Spectral Illusions," also belongs to this class, while in Chemical Science we have Prof. John A. Porter's "Principles of Chemistry;" "The Elements of Chemistry, Theoretical and Practical," by William Allen Miller, M. D., LL. D., parts 1st and 2d (a reprint); a new edition, by Prof. S. M. Johnson, of Fresenius' "Chemical Analysis;" "Heat in its relations to Water and Steam," by Charles Wye Williams; and the 8d part of Dr. F. H. Storer's "First Outlines of a Dictionary of Solubilities of Chemical Substances."

In *Astronomy and Meteorology*, the Government have published "Almanac for the use of Navigators for 1866," and "Results of Meteorological Observations at the Patent Office and Smithsonian Institute for the years 1854-1859."

In *Zoology* there has been remarkable activity, the monographs greatly exceeding those of former years. Proceedings and Annals of the Boston Society of Natural History, of the California Academy of Natural Sciences, of the Cambridge Museum of Comparative Zoology, of the New York Lyceum of Natural History, and of the Philadelphia Academy of Natural Sciences, were published during the year. Aside of these, the following monographs also appeared: "Monograph of the Bats of North America," by H. Allen, M. D.; Daniel Giraud Elliot on the "Tetraonidae, or Grouse Family;" "Legends of the Birds," by C. G. Leland; J. W. Weidemyer's "Catalogue of North American Butterflies;" A. S. Packard, Jr.'s "Synopsis of the Bombycids of the United States;" "Lives of Familiar Insects," by the author of "Violet;" "Observations on the Terrestrial Pul-

monifera of Maine, with a catalogue of all the species of Terrestrial and Fluvial Mollusca," by Edward S. Morse; "Contributions to Conchology No. 2, The Pholadacea," by George W. Tryon, Jr., and "Rafinesque on Recent and Fossil Conchology," edited by W. G. Binney and George W. Tryon, Jr. In Botany we have "Preliminary List of Plants in Buffalo and Vicinity," by George W. Clinton, and "Icones Muscorum: the Mosses peculiar to Eastern North America, not before figured," by W. S. Sullivan, LL. D. To the Department of Physical Science also belongs the "Annual of Scientific Discovery for 1864," by David A. Wells.

In *Political and Social Science*, though the number of publications was considerable (88 distinct works having appeared), there were comparatively few of permanent value. The Presidential campaign, and the strife of parties, led to the publication of many ephemeral and worthless books and pamphlets. Among those of a higher character were: Herbert Spencer's "Essays: Scientific, Political, and Speculative;" "American Politics: a Moral and Political Work, treating of the Causes of the Civil War," &c., by W. W. Handlin; "Inside Views of Slavery on Southern Plantations," by John Roles, twenty-five years a resident of the South, and ten years an overseer; "The Future: a Political Essay," by Montgomery H. Throop; "England's Liability for Indemnity, a reply to Historicus," by Chas. G. Loring; "Transactions of the Rhode Island Society for the Encouragement of Domestic Industry, for 1863;" "The Democrat; or, the Fundamental Principles of Democracy as Established by the Constitution of the United States;" "An Address on the Subjects of Rebellion, Slavery, and Race," by N. G. Upham; "The Federalist; a Collection of Essays," &c., edited by John C. Hamilton; "Letter to a Whig Member of the Southern Independence Association," by Prof. Goldwin Smith; "The True Temperance Platform; or, an Exposition of the Folly of Alcoholic Medication," by R. T. Trall, M. D.; "Mistakes and Failures of the Temperance Reformation;" "The Wrong of Slavery, the Right of Emancipation, and the Future of the African Race in the United States," by Robert Dale Owen; "The Negro Problem Solved; or, Africa as she was, as she is, and as she shall be, her Curse and Cure," by Rev. Hollis Read; "Report of the Debates and Proceedings of the Peace Congress of 1861," by Hon. L. E. Chittenden; "Dissertations and Discussions," by John Stuart Mill; "The Suppressed Book about Slavery;" "Southern Slavery in its Present Aspects: a reply to Bishop Hopkins," by Rev. D. R. Goodwin, D. D.; "Free Government in England and America, containing the Great Charter, the Petition of Rights, the Bill of Rights, and the Federal Constitution," by S. M. Johnson; "State Rights: a Photograph from the Ruins of Ancient Greece," by Prof. Taylor Lewis; "Practical Thoughts on Sisterhoods, in reply to a Letter of Inquiry," by one

of the Sisters of the Holy Communion (St. Luke's Hospital); "Manual of Social Science, being a Condensation of H. C. Carey's Principles of Social Science," by Kate McKean. Early in the year a pamphlet appeared from the pen of an anonymous author, bearing the title, "Miscegenation: the Theory of the Blending of the Races, applied to the American White Man and the Negro." It was written with considerable ability, and called out many replies, one of which, "Subgenation: the Theory of the Normal Relation of the Races," had a somewhat extensive sale.

The works on *Financial Science* published during the year, had generally a particular reference to the somewhat anomalous condition of the national finances. The most important were: "The National Debt, Taxation, Currency, and Banking System of the United States," by James Gallatin; "The Great Paper Bubble; or, the Coming Financial Explosion," by Alexander Delmar; "Gold Currency and Funded Debt," by G. H. Wainwright; "Acts of Congress relating to Loans and the Currency, from 1842 to 1864;" "Greenbacks; or, the Evils and Remedy of using 'Promise to Pay the Bearer on Demand' as a Measure of Value;" by Observer; "Industrial and Financial Resources of the United States of America, as developed by official Federal and State Returns," by Samuel Hallett, banker; "Considerations for Bankers and Holders of United States Bonds," by Lysander Spooner; "The National Banking Law;" "Our Resources: a Series of Articles on the Financial and Political condition of the United States," by a Citizen of Rhode Island; "Essai d'Economie Sociale," par F. Tufferd; "The Coins of the Bible and its Money Terms," by J. Ross Snowden; "Principles of Percentage Explained and Illustrated," by J. H. Partridge, A. M.; "Sterling Exchange for the reduction of Sterling into United States Currency, and of Currency into Sterling," by Alfred Phillips; "Historical Sketch of Continental Paper Money," by Samuel Buck.

In *Encyclopædias and Statistical Works*, the principal publications were the United States Census Report of the 8th Census, Vol. 1, Population, by J. O. G. Kennedy; The American Annual Cyclopædia for the year 1863; Chambers's Encyclopædia, Vol. 6; The National Almanac for 1864, and thirty-seven other Almanacs, many of them containing Statistics; fifty-nine Registers and Directories; four Indexes and Statistical Catalogue, and twelve Statistical Reports in bound volumes.

The most important contribution to *Philology* during the year was the publication of the illustrated edition of Webster's quarto unabridged Dictionary. This work, which had long been in preparation, and on the revision of which years of labor had been bestowed by several eminent scholars, was in many respects the greatest addition to the philology of the present age which has appeared within half a

century. "The Mercantile Dictionary," containing commercial terms and phrases, and correspondence in English, French, and Spanish, by Mr. I. de Veitelle, is also a notable addition to our philological resources. Among other important philological works we notice the second series of Mr. Benj. W. Dwight's "Modern Philology: its Discoveries, History, and Influence;" Mr. William Swinton's "Rambles among Words;" "A Hebrew Chrestomathy; or, Lessons in Reading and Writing Hebrew," by Prof. W. H. Green, of the Princeton Theological Seminary; "Phrasis; a Treatise on the History and Structure of the different Languages of the World," &c., by J. Wilson, A. M.; Mr. J. E. Worcester's "Comprehensive Spelling Book;" Archbishop Trench's "Synonyms of the New Testament," second series (reprint); "Poems in the Dorset Dialect," by William Barnes, also a reprint, and "Judgment Erroné de M. Ernest Renan sur les Langues Sauvages," par N. O., a Canadian contribution to Philology.

In works on *Technology* and *Mechanical Science* the year has been unusually prolific. Those appertaining to architecture and landscape gardening were: "Villas and Cottages," by Calvert Vaux, architect; "Carpenter's and Joiner's Hand-Book," by H. W. Holly; "Roads and Walks of the Central Park, mode of Construction; and Materials used." On steam engines the principal works were: "The Steam Engine Indicator and Improved Monometer," by Paul Stillman; "The Indicator and Dynamometer, with their Practical applications to the Marine Steam Engine," by Thomas J. Maine and Thomas Brown; "The Marine Steam Engine," by the same authors (both reprints); "The Boiler Explosion of the Martin Boiler on board the United States 'Double Ender' Chenango;" "Questions on subjects connected with the Marine Steam Engines, and Examination Papers," &c., by T. J. Main and T. Brown (reprint). On Metal working: "The Practical Metal Worker's Assistant," by Oliver Byrne; "The Management of Steel," by George Ede; "The Art of Sawfiling Scientifically Treated and Explained," by H. W. Holly; "Practical Work Shop Companion for Tin, Sheet Iron, and Copper Plate Workers," by Leroy J. Blinn.

There have been three new treatises on Photography, viz.: "Photographic Manipulations," by S. R. Divine, Practical Photographer; "The Silver Sunbeam, a Practical and Theoretical Text-Book on Sun Drawing and Photographic Printing," by J. Towler, M. D.; and "The Camera and the Pencil; or, the Heliographic Art, its Theory and Practice in all its Branches," by M. A. Root. Of female occupations, we have four treatises on cookery, "A Complete Treatise on Perfumery," by M. Pradal, Perfumer Chemist, and M. F. Malpeyre; "Ladies Complete Guide to Needle-Work and Embroidery," by Miss Lambert; "Wax Flowers, and How to Make Them;" "Phantom Flowers; a Treatise on the Art of Producing Skeleton Leaves." In

the way of miscellaneous manufactures and useful arts, the principal works were: "History of American Manufactures from 1806 to 1860," by J. Leander Bishop, A. M., M. D.; "Umbrellas and their History," by Clyde and Black; "Americanische Weinbauschule," von Friedrich Münch; "History and Processes of Manufacture and Uses of Printing, Gas Light, Pottery, Glass, and Iron," a reprint from the Encyclopædia Britannica; "Infallible Counterfeit Detector at Sight," by Laban Heath; "Practical Treatise on the Fabrication of Matches, Gun Cotton, Colored Fires, and Fulminating Powders," by Prof. H. Dussance; "Theory and Practice of the Art of Weaving by Hand and Power," by John Watson, manufacturer; "The Compendium of Tachygraphy, or Phonetic Short Hand," by D. P. Lindsley; "The American Angler's Book: Instructions in Fly Fishing, Fly Making, and Rod Making," by Thad. Morris; "Hints to Riflemen," by H. W. S. Cleveland; "All About Petroleum and the Great Oil Districts of Pennsylvania, West Virginia, and Ohio," by Alexander von Millern, LL. D., Professor. The new works on agriculture were very few, and with two or three exceptions of no particular merit. "Ten Acres Enough," by Edward Morris, was a very successful attempt to demonstrate the value of small farms in the neighborhood of large cities, where they could be cultivated as market gardens; "How to get a Farm and Where to Find One," a compilation by the same author, of the advantages offered for purchasing farming lands in New Jersey, Long Island, Northern New York, and the West, possessed less merit. Mr. A. S. Fuller, a practical horticulturist of Brooklyn, N. Y., published two valuable little manuals, "The Grape Culturist," and the "Illustrated Strawberry Culturist;" "The Forest Arcadia of Northern New York: its Mineral, Agricultural, and Timber Resources," is a tolerably well written and very well priced account of that region published in the interest of land owners there; "Flowers for the Parlor and Garden," by E. S. Rand, jr., is a pretty manual for the fair flower-growers; the reprint of Mr. Robert Jennings' work on Sheep, Swine, and Poultry, is timely. Mr. Solon Robinson, agricultural editor of the "N. Y. Tribune," has gathered into a volume facts and opinions which he has garnered for many years under the title of "Facts for Farmers, and also for the Family Circle." The report of the agricultural department for 1863 was published in 1864; it is a large 8vo volume, and contains some valuable essays. The number of medical treatises and monographs published was large, and many of them display marked ability. Of fifty-four works published only eight were reprints, and most of these had undergone editorial revision here.

Of general treatises the most important were Dr. J. M. Da Costa's "Medical Diagnosis with special reference to Practical Medicine;" Dr. G. H. B. Macleod's "Outlines of Surgical Diagnosis;" Dr. S. D. Gross's "System of Surgery,

Pathological, Diagnostic, Therapeutic, and Operative;" Dr. Frank H. Hamilton's admirable "Treatise on Military Surgery;" "Military, Medical, and Surgical Essays, prepared for the Sanitary Commission, and edited by William A. Hammond, late Surgeon General United States Army;" Dr. J. M. Scudder's "Eclectic Practice of Medicine;" "The Homœopathic Theory and Practice of Medicine," by Drs. E. E. Marcy and F. W. Hunt; "Manual for Medical Officers of the United States Army," by C. R. Greenleaf, M. D.; a new edition of Dr. Alfred Stillé's "Therapeutics and Materia Medica;" T. H. Tanner, M. D., "Manual of the Theory and Practice of Medicine" (a reprint); Dr. W. W. Hall's Essays on "Health and Disease," and on "Sleep;" Dr. John B. Beck's "Essays on Infant Therapeutics and other subjects;" Dr. William Grace's "Army Surgeon's Manual;" Dr. John King's "American Dispensatory," sixth revised edition; Dr. Hugh S. Hodge's "Principles and Practice of Obstetrics," a new and enlarged edition; Dr. R. S. Trall's "Hand-book of Hygienic Practice, intended as a Practical Guide for the Sick Room." The principal monographs were: Dr. Austin Flint's "Compendium of Percussion and Auscultation;" Dr. H. H. Salter's "Asthma: its Pathology and Treatment;" Dr. Louis Elsberg's "Laryngoscopic Medication;" Dr. A. Troltsch's "Diseases of the Ear; their Diagnosis and Treatment;" D. F. A. Von Moschizsker's "The Ear: its Diseases and their Treatment;" Dr. C. Both's "Sketch of the Theory and Cure of Phthisis;" Dr. W. H. Byford's "Treatise on the Chronic Inflammation and Displacement of the Unimpregnated Uterus;" Dr. F. J. Bumstead's "Pathology and Treatment of Venereal Diseases;" Dr. C. Fayette Taylor's "Mechanical Treatment of Angular Curvature; or, Pott's Disease of the Spine," and his, "Spinal Irritation; or, the Causes of Backache among American Women;" Dr. W. H. Fuller "On Rheumatism, Rheumatic Gout, and Sciatica; their Pathology, Symptoms, and Treatment;" Dr. J. O'Reilly's "The Nervous and Vascular Connection between the Mother and the Fœtus in Utero;" Dr. H. F. Damon's "Leucocythemia;" a Boylston medical prize essay; Dr. Silas Durkee's "Treatise on Gonorrhea and Syphilis," a second revised edition; Dr. S. R. Percy's "Inquiry into the Physiological and Medicinal Properties of the Veratrum Viride," a prize essay; Dr. E. J. Tilt's "Hand-book of Uterine Therapeutics;" W. A. Hammond, M. D., "Lectures on Venereal Diseases;" Dr. T. H. Tanner's Memoranda on Poisons" (a reprint); William Acton, M. R. C. S., "Functions and Disorders of the Reproductive Organs in Childhood, Youth, Adult Age, and Advanced Life;" Dr. J. C. Dalton's "Observations on Trichina Spiralis," and Dr. Peter D. Keyser's "Glaucoma: its Symptoms, Diagnosis, and Treatment." The Homœopaths, besides their work on the theory and practice of medicine already named, have published a

"Monograph on Diphtheria: its Nature, Pathology, and Homœopathic Treatment," by W. T. Helmuth, M. D.; John Ellis's "Family Homœopathy;" a work on "New Remedies in Homœopathic Practice," by Dr. E. W. Hall, and a "Homœopathician's Medical Diary," by Dr. E. P. Mosman. The only other medical works of importance are the reprint of "Braithwaite's Retrospect," still maintained; a third edition of Dr. Edward Parish's "Treatise on Pharmacy;" Dr. E. Small's "Anatomy and Physiology rendered Attractive;" Mrs. O. H. Dall's "Sunshine: a New Name for a Popular Lecture on Health;" Dr. J. Thomas' "Comprehensive Medical Dictionary;" a new edition of Dr. Henry Beasley's "Book of Prescriptions;" Dr. J. H. Wythe's "Physician's Dose and Symptom Book;" several "Medical Diaries, Visiting Lists and Hand-books," and Mr. Edward Mayhew's "Illustrated Horse Management."

In *Legal Literature* there were the usual number of State reports of the cases in the higher courts; reports of cases in the United States Courts, and in the English exchequer and common law courts, amounting in all to about thirty volumes; but aside from these the year was remarkably prolific in treatises on great law questions, as well as in the productions of those standard authorities and textbooks which are so constantly required both in the courts and in the law schools. Of the former class were Mr. Richard H. Dana, Jr.'s "Enemy's Territory and Alien Enemies;" Mr. Theodore W. Dwight's "Argument in the Rose Will Case," and his collection of "Cases in England of Disposition of Property for Charitable and Public Uses;" Mr. George Bemis's "Precedents of American Neutrality, in reply to Sir Roundell Palmer;" Mr. R. S. Blackwell's "Practical Treatise on the Power to Sell Land for the Nonpayment of Taxes, embracing decisions of the Supreme Court of the United States, and the Supreme Judicial Tribunals of the several States;" ex-Governor Washburn's "Treatise on the American Law of Property;" Chief Justice Redfield's Law of Wills, embracing not only the Jurisprudence of Insanity in that connection, but all other points affecting their validity; Mr. Francis Hilliard's revised edition of his "Law of Mortgages and Personal Property;" Mr. Charles C. Bonney's "Rules of Law for the Carriage and Delivery of Persons and Property by Railway," with statutes and decisions; a new edition by Mr. G. S. Hutchinson of Cleveland's "Banking System of New York, with notes and references to adjudged cases;" Mr. William Whiting (Solicitor General United States) "War Powers under the Constitution of the United States."

Among the text and reference books may be mentioned: Mr. C. H. Scribner's "Treatise on the Law of Dower;" Mr. Pomeroy's "Introduction to Municipal Law;" President Woolsey's "Introduction to the Study of Interna-

tional Law;" Judge Parsons's "Law of Contracts," fifth edition; Mr. J. B. Ecclesine's "Compendium of Laws and Decisions relating to Mobs, Riots, Invasions, &c., as affecting Fire Insurance Companies in the United States;" Judge Stanley Matthews "Summary of the Law of Partnership for Business Men;" "Commentaries on the law of Marriage and Divorce," by J. P. Bishop, fourth edition; Bernard Roelker's "Manual for the use of Notaries Public and Bankers;" Mr. George W. Raff, "On the Law relating to Roads and Highways in the State of Ohio;" Mr. Henry Sumner Maine's "Treatise on Ancient Law: its Connection with the Early History of Society, and its relation to Modern Ideas," with an Introduction by Professor Dwight. To this class also belong the numerous volumes on the Pleading and Practice of different States and of different courts in the same State, and the treatises on the law relating to the powers and duties of Justices of the Peace and Constables in Indiana and Kentucky, as well as "The Forms of Practice and Pleadings in Actions," by Messrs. Abbott Brothers; "The Tax-payer's Guide" of Mr. Thompson Westcott; Messrs. Tiffany & Smith's "New York Practice," and "The New York Code of Procedure amended to 1864," by John Townsend. Among the laws and proposed laws published during the year we find, "The United States Statutes at large for the first session of the Thirty-eighth Congress," edited, as usual, by Mr. George P. Sanger; "The United States Digest," vol. 15, edited by H. Farnam Smith; "The Tax and the Tariff Laws," each alphabetically arranged; "The Act authorizing the Formation of Corporations for Manufacturing, Mining, Mechanical, and Chemical Purposes," with all the subsequent amendments thereto; and the "Draft of a Penal Code for the State of New York," prepared by the Commissioners of the Code, and submitted to the Judges for examination before final revision.

We have also two legal documents appertaining rather to the antiquarian than the jurist. These are: A Calendar of New York Colonial Manuscripts, endorsed "Land Papers," in the office of the Secretary of State; and a reprint (on large paper) of the proceedings of a court-martial held at New Brunswick in 1778, for the trial of General Charles Lee.

In *Educational Literature* but little has been done, except in the way of Text-books for colleges, academies, seminaries, and public schools. Rev. Asa D. Smith, D. D., has published his inaugural on assuming the Presidency of Dartmouth College, and Governor J. A. Andrew his address to the graduating class of the Medical College of Harvard University, and both are replete with sound and useful suggestions on the subject of education. Mr. J. P. Wickersham, Principal of one of the Pennsylvania Normal Schools, has prepared a volume of great value entitled "School Economy: a treatise on the Preparation, Organization, Em-

ployment, Government, and Authorities of Schools;" Mr. James E. Murdoch, the actor, who has given his whole time and talents to the cause of his country during the war, has collected some of the poems, &c., he has been in the habit of reading at his public readings and recitations, in behalf of the soldiers, under the title of "Patriotism in Poetry and Prose." Among the Text-books, the most noteworthy are: Prof. J. E. Boise's "First Three Books of Xenophon's Anabasis," with notes, vocabulary, and Kiepert's excellent map; Prof. Albert Harkness' "Latin Grammar for Schools and Colleges;" Prof. Francis Bowen's "Treatise on Logio;" Prof. Hiram Corson's "Elocutionary Manual;" Prof. R. R. Raymond's "Patriotic Speaker;" Prof. J. W. S. Hows' "Ladies' Book of Readings and Recitations;" Prof. N. C. Brooks' "Vita Virorum Illustrium Americæ;" Prof. W. B. Silber's "Progressive Lessons in Greek;" Rev. J. W. French's "Grammar," part of a course on language prepared for the Cadets at West Point; Messrs. Benjamin F. Shaw and Fordyce A. Allen's "Comprehensive Geography, combining Mathematical, Physical, and Political Geography, &c.;" Prof. A. E. Church's "Elements of Descriptive Geometry, with its application to Spherical Projections;" Prof. J. Madison Watson's "Manual of Calisthenics;" Prof. E. C. J. Krauss's "German Manual, or First Instruction in the German Language;" and several readers and other elementary text-books in French and German. Mr. G. P. Quackenbos, well known as an author of successful school books, has prepared a "First Book in English Grammar," as a part of his course on Grammar, and a "Primary and Elementary Arithmetic," based on the works of G. R. Perkins, LL. D. Mr. Nelson M. Holbrook has continued the series of Towne and Holbrook's Progressive Readers by the publication of a "Fourth Reader;" and Messrs. Ivison, Phinney, Blakeman & Co. have done good service to the higher schools by the publication of "Arithmetical Examples; or, Text Exercises for the use of Advanced Classes."

The publication of Barnard's "American Journal of Education" (quarterly), and of the "American Educational Monthly," has been continued during the year, and both journals, as well as the numerous local ones of which there are one or more in almost every Northern State, have contributed powerfully to promote the cause of education, in its relations to teacher, scholar, and parent. Notwithstanding the large number of teachers who have joined the army, impelled often by the most patriotic motives, there has been no retrogression in educational effort in the Northern States; the schools have generally been better sustained and taught than before, and though in some of the colleges there has been a little falling off in numbers, yet it has been made up in others.

In *Geography and Travel*, the event of the year was the publication of Capt. Charles Fran-

cis Hall's "Aroctic Researches and Life among the Esquimaux," a work of great interest, and creditable to its author both as an explorer and narrator; the "Journal of the Discovery of the Source of the Nile," by Captain John Hanning Speke, and of Mr. W. Winwood Reade's "Savage Africa: a Narrative of a Tour in Equatorial, Southwestern, and Northwestern Africa," both reprints, were also important additions to our geographical literature. Among other original American works of this class we notice "Man and Nature," by Hon. George P. Marsh; Mr. Edward L. Clark's "Daleth; or, the Homestead of the Nations, Egypt. Illustrated;" "A Summer Cruise on the Coast of New England," by Mr. Robert Carter; "The Hawaiian Islands: their Progress and Condition under Missionary Labors," by Rufus Anderson, D. D.; "From Dan to Beersheba; or, the Land of Promise as it now appears," by Rev. J. P. Newman, D. D.; "Arizona and Sonora; the Geography, History, and Resources of the Silver Regions of North America," by Sylvester Mowry; Mr. J. Ross Browne's "Cruzo's Island, Washoe, &c.," Mr. Edward H. Hall's "The Great West: Emigrants, Settlers, and Traveller's Guide and Hand-book of the Pacific States and the Territories;" Rev. Lewis Grant's "Zulu-Land; or, Life among the Zulu-Kafirs of Natal and Zulu Land;" Mr. J. S. Campbell's "Idaho: Six Months in the New Gold Diggings;" "The Silver Mines of Nevada, with Map;" Rev. G. S. Bailey's "The Great Caverns of Kentucky—Diamond Cave, Mammoth Cave, and Hundred Dome Cave;" Mr. John Austin Stevens, Jr., "The Valley of the Rio Grande: its Topography and Resources;" Rev. Joshua Leavitt, D. D., "Denmark and its Relations;" Mr. J. Milton Mackie's "From Cape Cod to Dixie and the Tropics;" Mrs. H. Dwight Williams' "A Year in China: and a Narrative of Capture and Imprisonment, when Homeward-bound, on board the Rebel Pirate Florida;" a new and enlarged edition of Mr. P. McD. Collins's "Overland Explorations in Siberia, Northern Asia, and the Great Amoor River Country;" a condensed narrative of Moffatt's "Adventures as a Missionary in South Africa;" a compilation of great interest, entitled "Treasury of Travel and Adventure;" and Miss S. W. Lander's "Spectacles for Young Eyes, Zurich." In the way of Maps, Guide, and Hand-books, we have Colton's condensed 8vo "Atlas of the Union;" the third year of Harper's "Hand-book for Travellers in Europe and the East, prepared by Mr. W. P. Petridge;" "A Guide Book of the Central Railroad of New Jersey and its Connections through the Coal Fields of Pennsylvania;" Mr. J. Disturnell's "Traveller's Guide to the Hudson River, Saratoga, Lake George, the Saguenay River," &c.; and "The Washington Sketch Book," by Viator.

The *Essays* were quite numerous. We have already enumerated the principal ones on topics connected with the war. Those on other subjects may be classified into those discussing religious and moral questions, literary or scien-

tific, and reprints. Of the first class are Rev. T. L. Ouyler's "Cedar Christian and other Sketches;" Mary G. Ware's "Death and Life;" Rev. Orville Dewey's "Problem of Human Destiny;" Gail Hamilton's (Miss A. Dodge) "Stumbling Blocks" and "New Atmosphere;" Miss Frances Power Cobbe's "Broken Lights," an inquiry into the present condition and future prospects of religious faith, which though written the other side of the Atlantic was primarily intended for American readers; Fanelon's "Reflections and Meditations," with a memoir by Mr. John R. G. Hassard; Mrs. L. Maria Child's "Looking Toward Sunset;" Mr. A. B. Muzzey's "The Blade and the Ear: Thoughts for a Young Man;" "A Pastor's Jottings;" "St. John's Land, a Retro-Prospectus;" Mr. Frank W. Ballard's "The Stewardship of Wealth, as Illustrated in the Lives of Amos and Abbott Lawrence." Of the literary, scientific, and philosophic essays, the most important were Mr. W. W. Story's "Roba di Roma;" Miss Henrietta's Wilson's "Chronicles of a Garden: its Pets and its Pleasures;" Rev. Dr. Horace Bushnell's "Work and Play; or, Literary Varieties;" Jean Paul Friedrich Richter's "Campanar Thal and other Essays," translated by O. T. Brooks; Mrs. Eliza W. Farnham's "Woman and her Era;" T. Starr King's "Patriotism and other Papers;" Mr. Howard Payson Arnold's "European Mosaic;" "Autograph Leaves of our Country's Authors;" Ik Marvel's (Mr. Donald G. Mitchell) "Seven Stories with Basement and Attic;" Mr. J. J. Jarves's "The Art Idea;" Mr. H. D. Thoreau's "The Maine Woods;" "Jennie June's;" "Jennie Juneiana: Talk on Women's Topics;" Mr. James Russell Lowell's "Fireside Travels;" "Elia;" hitherto uncollected writings of Charles Lamb; Mr. S. B. Ruggles's "Semi-centennial Address to the Class of 1814 and the Society of Alumni of Yale College, on the Past and the Present;" President Felton's "Familiar Letters from Europe;" "Autumn Leaves," by the late Samuel Jackson Gardner; "Wet Days at Edgewood," by Ik Marvel; Mr. Charles D. Drake's "Union and Anti-Slavery Speeches delivered during the Rebellion;" Mrs. H. B. Stowe's "House and Home Papers;" and new editions of Irving's "Sketch-Book;" Headley's "Adirondack;" Hawthorne's "Thrice Told Tales;" and Longfellow's prose works. A few of the reprints were of some importance; among them were Sir E. B. Lytton's "Caxtoniana;" two volumes of Francis Bacon's Works; the interminable A. K. H. Boyd's "Counsel and Comfort Spoken from a City Pulpit;" Mr. Herbert Spencer's "Illustrations of Universal Progress," and "Essays: Moral, Political, and Æsthetic;" Madame D'Hericourt's "A Woman's Philosophy of Woman; or, Woman Affranchised;" a new edition of D'Israeli's "Amenities of Literature;" Edmund About's "Les Progres;" "Essays on Social Subjects," from the "Saturday Review;" "The Gentle Life;" "Essays in Aid of the Formation of

Character;" Mrs. Jameson's "Sacred and Legendary Art," and "Legends of the Monastic Orders;" Mr. E. M. Whitty's "Bohemians of London;" Leigh Hunt's "The Seer; or, Common Places Refreshed;" Guizot's "Love in Marriage, a Historical Study;" "Lady Rachel Russell;" Hugh Miller's *Essays, Historical Biographies, &c.*, edited by Peter Bayne; "Pearls from Heine."

In *Poetry* there was an alarming increase of the number of new poets, who for the most part had come before the American public for the first time in a collected volume of their own poems. Forty of these adventurous spirits have thus laid claim to a literary immortality, and there is a slight possibility that some one of the forty may possibly attain to it. The poetry of most of these volumes is respectable, while three or four exhibit abilities above mediocrity; and while none as yet have given marked evidence of the possession of the divine afflatus, they may yet develop into something beyond their present condition.

We name a few of the most promising: Mr. Harvey Rice's "Mount Vernon and other Poems," has sold sufficiently to require a second edition; Mr. Edward Hopper's "Fire on the Hearth in Sleepy Hollow," has passages of great merit; "Utterances," by Col. A. J. H. Duganne, contains some songs and ballads which had already attained high reputation in the newspaper columns; "Idylls of Battle and Poems of the Rebellion," by Miss Laura C. Redden, a lady who is a semi-mute, exhibits harmony, grace of versification, and in a few of the pieces a poetic fire worth cultivating; "Faith and Fancy," by John Savage, is a volume of which its author has no occasion to be ashamed. The little volumes of Mr. F. G. Tuckerman and Mr. Henry F. Tuckerman, are worthy of the reputation of those gentlemen as elegant *belles lettres* scholars. Bishop Coxe's "Christian Ballads," and Messrs. Bayard Taylor, John G. Saxe, N. P. Willis, and Robert Lowell's collections of poems, now published in new forms, have been for some years before the public. One of the most remarkable volumes of poetry published during the year was a little collection printed in Germany, though nominally published in Milwaukee, from the pen of an American lady (Mrs. Mary H. C. Booth), since deceased at the early age of thirty-four; it bore the title of "Wayside Blossoms among Flowers from German Gardens," and some of the poems exhibited rare poetic genius. Mr. George H. Boker has published a volume entitled "Poems of the War," containing a number of lyrics which are favorites with the army. Other volumes of original poems issued during the year were: "Poems from the Inner Life," by Lizzie Doten; "Poems," by Henry Peterson; "Poems," by Una; "Secession, or Prose in Rhyme, and East Tennessee, a Poem," by an East Tennessean; "Sacred Poetical Paraphrase, and Miscellaneous Poems," by Rev. J. B. Steele; "The Book of Job in Poetry" (more correctly in rhyme), by Rev. H. W.

Adams; "Voices from the Hearth; or, a Collection of Poems," by Isidor (Isidor G. Ascher), a Montreal book; "Lyrics of a Day; or, Newspaper Poetry," by a United States Volunteer; "A Tribute to the Fair; a Collection of Vers de Société;" "Poems of the Republic," by William Oland Bourne; "Hymns of the Spirit," by Rev. S. Longfellow and Rev. S. Johnson; "Memorial Poems and Hymns," by Prof. E. Turney; "The Wind Harp, and other Poems," by Ellen C. Howarth; "The Burden of the South," in verse, by Sennoia Rubek; "The Poet, and other Poems," by Achsah W. Sprague; "War Songs for Freemen;" "First and Last; a Poem, intended to illustrate the Ways of God to Man;" "A Poetical Cook Book;" "Cabi-ro," a poem, by George H. Calvert; "Marble Isle, and other Poems," by Sallie Bridges; "Chimasia: a Reply to Longfellow's Theologian and other Poems," by Orthos; "Visions and Verses," by Charles Dexter; "Elim; or, Hymns of Holy Refreshment," by Rev. F. D. Huntington; "Young America; a Poem," by Fitz Greene Halleck; "The Palace Beautiful and other Poems," by Orpheus C. Kerr (Newell); "Rosa Mystica, Mary of Nazareth, the Lily of the House of David," by Maria Josephine; "Real and Ideal," by John W. Montclair; "Poems," by Astarte. Among the collections of poems by different authors, were three little volumes arranged and edited by Frank Moore; "Rebel Rhymes and Rhapsodies;" "Songs of the Soldiers;" and "Personal and Political Ballads;" "Poetry of the Age of Fable," by Thomas Bulfinch, a new edition; "Golden Leaves from British Poets," and "Golden Leaves from American Poets," both selected and arranged by Prof. John W. S. Hows; "Lyra Anglicana," and "Lyra Americana," both edited by Rev. George T. Ryder; "A Selection of War Lyrics," illustrated by F. O. C. Darley; Rev. W. D. Potts' "Campaign Songs for Christian Patriots and True Democrats;" "Ballads of the War and Ballads of the South;" "Hymns of the Ages," third series; "Sacred Poetry, selected from the Writings of Charles Wesley;" four American Poems, metrically translated into German by Charles Theodore Eben; twenty Hymns with Music; and three or four Selections of the Psalms, with Chants for Responsive Service. The reprints, though few in number, were important in character. Among them were Tennyson's "Enoch Arden and other Poems," of which seven editions appeared in as many different styles; Robert Browning's "Sordello, Strafford," &c., and his "Dramatis Personæ;" Adelaide Procter's Poems; "An Artist's Poems, written and illustrated by Carl Heinrich Schurze," and translated by Chas. G. Leland; a beautiful edition of Schiller's Poems and Ballads; Poems by David Gray, with a Memoir and an Introduction by Lord Houghton. An elegant uniform edition of the Poems of Byron, Moore, Scott, Burns, Keats, and Gray, has been issued by a Boston publishing house. A new edition of Keble's "Christian Year," and one

of Milton's Poetical Works, by Prof. C. D. Cleveland, has also appeared. Mr. Benson J. Lossing has done a good service to the public in editing, with abundant historical and biographical notes, Trumbull's Revolutionary Poem, "McFingal," and for the first time we have a good translation of the German political and humorous ballad, "Reynard the Fox." We are obliged, for want of space, to omit all reference to works on *Music*, and to collections of music, either sacred or secular, as well as to the musical periodicals, some of which are edited with great ability.

Of the 233 *Works of Fiction*, not of a specially religious character, published during the year, 164 belonged to the cheaper class in paper bindings, and of these 65 were sold at prices ranging from ten to fifteen cents, and the remainder at from twenty-five to seventy-five cents each. Of these cheapest novels we shall have more to say further on. Twenty-six were French and German works reprinted here in their original language. Less than fifty were bound volumes; and of these, several were new editions of popular favorites, Dickens, Thackeray, Le Sage's *Gil Blas*, etc. Of the original novels of a higher class published during the year the most important were: "John Godfrey's Fortunes," by Bayard Taylor; "Oudjo's Cave," by J. T. Trowbridge; "The Three Scouts," by the same author; "Azarian, an episode," by Harriet E. Prescott; "Emily Chester, a novel," "My Own Story," by Marian Leigh; "The Morrisons," by Margaret Hosmer; "Eliza Woodson; or, the Early days of one of the World's Workers, a story of American Life;" "Honor; or, the Slave Dealer's Daughter," by Stephen G. Bulfinch; "Sophia; or, the Reign of Woman," "Woodcliff," by Harriet B. McKeever; "Waifwood, a novel;" "Chateau Frissac," by Oliver Logan; four volumes of *Novelettes*, by T. S. Arthur; "Hassan Abdallah; or, the Enchanted Keys and other Tales;" a republication of Robert Lowell's "The Story of the New Priest in Conception Bay," and of H. L. Barnum's "The Spy Unmasked; or, the original of Harvey Birch, Cooper's Spy." Among the reprints of foreign novels, not in pamphlet form, were "The Gypsies of Dane's Dike," by George T. Phillips, (January Searle); "Justice and Mercy, a tale of All Hallows' E'en," by Mrs. Am. Stewart; several volumes of the household edition of Dickens; a fine edition of "Le Sage's *Gil Blas*;" Thackeray's "Mr. and Mrs. Frank Berry." A charming little German story, "Annie and her Master," was also reprinted during the year.

Of the *Religious fictions* of the year, the most remarkable, both in their merit and success, were the books of Mrs. Charles, an English writer, who as a delineator of the scenes, customs, and manners of past ages, has had no superior in modern times. Her first work which attained to a high popularity (although she had written several previously), was "The Chronicles of the Schonberg-Cotta Family, by two of themselves." This, the scene of which

was laid in Germany in the time of Luther, was published in two rival editions late in 1863, and a subsequent illustrated edition of it in the summer of 1864, and all enjoyed a remarkable popularity. In the summer of 1864 this was followed by "The Early Dawn;" a series of sketches of Christian life in England, at different periods of the Christian centuries: and several of her earlier works, such as the "Cripple of Antioch," the "Martyrs of Spain," etc., etc., written in the same vein, were also republished and had an extensive sale. Late in the autumn of 1864 appeared her "Diary of Mrs. Kitty Trevvilyan," a story of the Great Revival in the times of Whitfield and the Wesleys, which in its creative power and its graphic delineation of character surpassed all her previous works. The sale of these works has been very large, and is still maintained. Other religious novels of high character, published during the year, were "The Trial; or, More Links in the Daisy Chain," by Miss Yonge, author of the "Heir of Redclyffe;" "Melbourne House," by Miss Susan Warner, author of the "Wide Wide World;" "The Grahams," by Jane Gay Fuller; "Margaret's Secret and its Success," by Miss Carey Buck. A republication of Sargent's "Temperance Tales," by the American Tract Society, Boston, belongs also to this class of books.

The number of juvenile publications is so large, 428 distinct works having been issued during the year, and many of these in several volumes, that we can only indicate the authors, without attempting to specify the books themselves. Indeed, the task of naming all the authors of these books would itself be a laborious work, since they number 264, were it not that 154 are anonymous, and 14 others conceal their identity under initials or a *nom de plume*. Among these writers for the young the English writer A. L. O. E. still maintains her preëminence in the number of her books, having issued twelve during the year. She is followed closely, however, by Aunt Fanny (Mrs. Fanny Barrow), who has published eleven, and "Mrs. Madeline Leslie," who has brought out ten. "Nellie Grahame" comes next with seven, Mrs. Charles with six, Uncle John and Jacob Abbott with six, R. M. Ballantyne and Hans C. Anderson with five; an anonymous writer (author of *Weldon Woods*) with the same number; "Maxwell" with four; Mayne Reid, F. M. S., and two anonymous writers, with the same number; while John S. Hart, "Sophie May," T. S. Arthur, S. J. Donaldson, Jr., Rev. P. O. Headley, Rev. Daniel O. Eddy, "Oliver Optic," Susie M. Waring, and Harriet B. McKeever published three each, and Mrs. Jane D. Chaplin, Aunt Friendly, W. H. G. Kingston, Mrs. Phebe Harris Phelps, Alice A. Dodge, "Fluta," Mary Howitt, "Rose Ellenwood," "Aunt Susan," "Cousin Kate," "Laurens," Mrs. H. E. Brown, Mary Harvey Gill, Rev. W. Blackburn, Rev. Ashton Oxenden, Miss Yonge, Josephine Franklin, Sir C. F. Lascelles Wrexall,

Anne Bowman, Rev. J. A. Collier, Anna Cooke, Mrs. Carey Buck, Catharine M. Trowbridge, and Adolphe Monod two each. Of the authors of a single juvenile book published during the year, the following were the principal: Mrs. Bradley, Rev. John W. Brown, Mary J. Hoffman, Sarah A. Myers, Rose Morton, Rev. J. S. Sewall, Rev. O. Witherspoon, Samuel Croxall, Mrs. S. B. Drake, Chauncey Giles, Edward Payson Hammond, Caroline E. Kelly, "Robert Merry," Mrs. Emily O. Pearson, Mrs. H. B. Goodwin, "Cousin Sarah," Helen R. Outler, Ezra M. Hunt, M. D., Mrs. H. O. Knight, Mrs. O. M. Kirkland, Mrs. Mary A. Denison, Jesse Thornton, Rev. A. R. Baker, Mrs. Caroline L. Blake, Rev. O. B. Frothingham, Rev. Asa Bullard, Miss M. E. Dodge, James Grant, Rev. W. K. Tweedie, "Brother Philippe," Marian Butler, Rev. Horatius Bonar, Gustav Nieritz, Rev. A. A. E. Taylor, J. Thomas Warren, Mrs. Fanny I. Burge Smith, Rev. Joseph H. Jones, D. D., Thomas Miller (the Basket Maker), Thomas Day, Fanny Fern, N. Hawthorne, William Dalton, Dr. Harley, Rev. S. M. Haskins, Horatio Alger, John O. Geikie, R. H. Stoddard, Mrs. L. O. Tuthill, Major Penniman, "Alfred Oldfellow," "Aunt Annie," J. H. Langille, Fanny Fuller, Miss Mary S. Chapman, Maria H. Bulfinch, Mary Granger Chase, Jean Ingelow, Julia Leonard, Frederick Howard Wines.

The class of *Miscellaneous Books* is small (only 19), and does not offer any publications worthy of note.

Under the head of *Works of Fiction*, we have alluded to the cheaper classes of these works in paper binding. The issue of one class of these, known as the "Dime Literature," has become a marked feature in the publishing enterprises of the day. Originating in 1859 with the house of Beadle & Co., who commenced in a small way the publication of fictions of one hundred pages large 16mo, at the retail price of a dime, it has extended and amplified until the issues of these books are reckoned by millions; and the issues of the "Dime Press" include not only fictions, of which, in all, perhaps one hundred and fifty different works have been published, but biographies, histories, school text-books, hand-books, manuals on different branches of art, industry, and behavior, and collections of songs and poetry. Five or six different houses have first and last entered upon this department of publishing, but the issues of the others have been small as compared with that of the originators of the business, Messrs. Beadle & Co., whose aggregate sales from 1859 to May, 1865, amounted to 6,655,450 volumes, of which 4,121,500 were novels; 1,638,700 songs; hand-books and manuals, 525,000; biographies, 225,000; border tales, &c., 480,250. Of the novels published in this series, nearly all have been American in authorship and subject; and it may be said to the honor of the publishers, that there is not one of them which is in the least

degree exceptionable in moral tone. Some of them may rank higher than others in literary merit, but all are alike free from any immoral tendency. The same high moral character extends to all their publications. The sales of single novels range from 85,000 to 80,000 copies, and other of their books have greatly surpassed this—their "Dime Song Book, No. 1," reaching a sale of more than 350,000 copies, and the dime edition of "The National Tax Law" of over 200,000 copies. A Dime publishing house has been established in London, and over forty of the Dime novels republished there. The large sales of these books are made in all parts of the country, the demand for them in the army being very large.

The publications of the other cheap publishing houses, which range in price from twenty-five to seventy-five cents, are with but few exceptions reputable in their character. Some of them are sensational, and thus gratify a morbid taste; but the number of really vicious novels is far smaller than a few years ago, and most of the cheaper novels of this class are reprints of English novels of high moral tone, and respectable ability. Indeed, a poor English novel will not generally repay the cost of printing.

In periodical literature, the year 1864 added but little to our stock of magazines and journals. The special magazines, *The United States Service Magazine*, and the *American Educational Monthly*, which though first issued really in December 1863, nominally commenced their existence with the year 1864, have been already noticed. There were several magazines projected during the year, but none we believe issued till just at its close, when "Our Young Folks," a magazine for youth, made its appearance in Boston, and *Gazlay's Pacific Monthly*, a magazine having in view the promotion of the literary interests of the Pacific States, was issued in New York. Both give good promise of success.

The extremely high price of paper and printing, and binding, still operate as a check on literary enterprise, and prevent the undertaking of publications which under other circumstances might be attempted; but with the close of the war the business is likely to attain to a higher degree of prosperity.

The number of publications in England, in 1864, as stated in the *London Literary Gazette*, was 8,553, including new editions and pamphlets. Of these there were of Religious Works, 715; Biography and History, 233; Geography, Topography, and Books of Travel, 151; Fiction, including Juvenile Works, 842; Poetry and General Literature, 565; Annuals and New Serials, 166; Law and Parliamentary Works, 79; Medicine and Surgery, 124; Foreign Philology, including Translations, 182; English Philology and Education, 177; Naval, Military, and Engineering Works, 82; Political Works, 56; Agriculture, Horticulture, and Field Sports, 46; Art, Architecture, &c., 52; Commercial, 41; Scientific Works, 122.

LONDON CONFERENCE. Upon the invitation of the Government of England, the plenipotentiaries of England, France, Russia, Austria, and Prussia, Denmark, Sweden, and the German Diet, met in conference in London on the 25th of April, for the purpose of attempting a peaceable solution of the Schleswig-Holstein question, which had already led to a war between Denmark and the two great German powers, Austria, and Prussia. The first endeavor of the conference was to obtain from the belligerent powers a suspension of hostilities for one month. This was agreed to by their representatives in the sitting of the 9th of May.

On the 12th of May Earl Russell called on the plenipotentiaries of Austria and Prussia to explain the motives which induced their Governments to occupy a large portion of the Danish territory, and to make known the intentions of their courts with a view to the re-establishment of peace. In reply to this appeal, the first plenipotentiary of Prussia declared that the German powers considered the ground of discussion as entirely free from any restriction resulting from engagements which might have existed before the war between their Governments and Denmark; that, however, they did not mean to exclude any combination which might tend to effect a solid and lasting peace, without prejudicing acquired rights. The explanations given by the plenipotentiaries of the German powers in the sittings of May 12th and 17th brought to light a complete divergence of opinion existing among the members of the Conference with regard to the validity of the Treaty of London of 1852. The plenipotentiary of Great Britain maintained that, although war may put an end to a treaty between two powers which have become belligerents, yet it cannot release those powers from their obligations to the other powers who joined in the signature of the same treaty. They were of opinion that the abandoning of an agreement ought to be justified by satisfactory means, and it ought to be understood what was intended to take its place. The plenipotentiaries of Russia and Sweden expressed themselves to the same purpose, while the French ambassador asked the German plenipotentiaries if in case the arrangements of 1851 and 1852 should not admit of being maintained, it would not be possible in their opinion to substitute for them a fresh combination without departing from the circle traced out by the stipulations of the treaty. The Danish representative insisted that the treaty of 1852 was still in force, while Baron de Beust, the representative of the Frankfort Diet, observed that its validity had never been recognized by the German Confederation.

In the sitting of May 17th Count Bernstorff, the Prussian plenipotentiary, announced the bases of pacification which the courts of Austria and Prussia proposed to submit to the Conference. He demanded, in the name of

Prussia, "the complete political independence of the duchies and their close connection by means of common institutions," while Count Apponyi, the Austrian ambassador, said the question of succession remained open, and future complications could only be avoided by the complete autonomy of the duchies with common institutions and entire independence in their political and administrative relations." Baron de Beust insisted that the German Diet would never consent to the restoration of a union between the duchies and Denmark.

In the sitting of the 28th of May the plenipotentiaries of Austria and Prussia brought forward a plan which had for its object to demand a complete separation of the Duchies of Schleswig and Holstein from the Kingdom of Denmark, and their union in a single state, under the sovereignty of the hereditary Prince of Schleswig-Holstein, Sonderburg-Augustenburg. The ambassador of Russia expressed his dissent from this proposition, and stated expressly that when the question of the succession of Holstein came to be considered, the Prince of Augustenburg would not be the only one who had claims to assert, and, as the plenipotentiary of Russia, he considered it especially his duty to present the claims of Oldenburg. The plenipotentiaries of Denmark declared that "if the Danish Government considered the proposal of the preceding sitting inadmissible, so much the more was it impossible for them to discuss this one."

In order, if possible, to meet this conflict of views Lord Russell read the following declarations proposing, in the name of Great Britain, a division of the duchies in accordance with the principles of nationality:

The plenipotentiaries of Great Britain have seen with deep regret that the last sitting of the Conference has not resulted in the establishment of the bases of an agreement between Germany and Denmark. In our opinion the elements of a solid and durable peace can neither be found in the engagements of 1851, which during twelve years have borne no other fruit than dissensions and troubles, nor in the analysis of an obscure and complicated law. But unless it is possible to lay down the bases of a solid and durable peace, it is not competent for the neutral powers to renounce the solemn treaty by which they recognized the integrity of the Danish monarchy, neither could they concur in a new arrangement which would be insufficient for Germany, or humiliating for Denmark. The elements of a solid and durable peace must therefore be sought elsewhere. For many years a lively sympathy for their brethren who are subject to the King of Denmark has animated the Germans of the Germanic Confederation. The Danes, on their side, are inspired by the love of independence and the desire of maintaining their ancient monarchy. These sentiments on either side deserve the respect of Europe. In order to prevent a future contest, and to satisfy Germany, it would be necessary, in our opinion, entirely to separate Holstein, Lauenburg, and the southern part of Schleswig from the Danish monarchy. To justify so vast a sacrifice on the part of Denmark, and to maintain the independence of the Danish monarchy, it is desirable, in our opinion, that the line of the frontier should not be drawn more to the north than the mouth of the Schlei and the line of the Danne-

werke. It is also necessary for the security of Denmark that the Germanic Confederation should not erect or maintain fortresses, nor establish fortified ports in the territory ceded by Denmark. An equitable arrangement of the public debt and the renunciation by Austria, Prussia, and the German Confederation of all right of interference in the internal affairs of Denmark, would serve to complete the friendly relations between Germany and Denmark. A question remains which would not form the object of the treaty of peace, but which interests Germany, and cannot be passed by in silence. In the opinion of the plenipotentiaries of Great Britain it should be understood that the future destiny of the Duchy of Holstein or the Duchy of Lauenburg, and of the southern part of the Duchy of Schleswig which will be annexed to the duchy of Holstein, shall not be settled without their consent. If the King of Denmark consents to the sacrifices of territory which are required of him in the name of peace, it would be just that the independence of his kingdom should be guaranteed by the great European powers.

The neutral powers accepted this proposal. The German plenipotentiaries accepted the principle of the plan, reserving to their courts the right of making counter propositions on the various questions of detail of which the projected arrangement was proposed. Denmark, on June 2d, also accepted the plan with certain reservations, which were stated in a declaration of M. de Quaade. The Danish plenipotentiary said that the King of Denmark was not opposed to a territorial cession, if the powers of Europe wished to abandon the Treaty of London, provided that he assumed thereby an independent and perfectly autonomous existence as regards the remainder of his States, and that the future destiny of the territories ceded be not decided without their consent. But there were limits to the sacrifices which it was desired to impose upon Denmark to which the Danish Government could not accede. The new frontier must provide for both her military and commercial interests, and that frontier must be protected by sufficient guarantees. To the cession of the duchy of Lauenburg the King of Denmark could only consent under special conditions, as this duchy was acquired by the King of Denmark in exchange for a part of Pomerania, to serve as an equivalent for the kingdom of Norway, and as it was essentially unconcerned in the dispute which has caused the present war. Finally, the Danish Government must claim the liberty to resume the position which they have invariably maintained on the ground of the Treaty of London, if a just and equitable arrangement should not be agreed upon.

In the same sitting of June 2d, the ambassador of Russia announced to the Conference that the emperor, desiring to facilitate as far as depended upon him the reestablishment of peace, had ceded to the grand duke of Oldenburg the eventual rights which section 8 of the protocol of Warsaw of May 24 (June 5), 1851, reserved to his Majesty, as chief of the elder branch of Holstein-Gottorp.

The Danish plenipotentiaries, after a good deal of hesitation, agreed on the 6th of June to a further suspension of hostilities, but they in-

sisted upon limiting the armistice to a fortnight, unless there should appear to be a fair probability of agreement upon a point so vital as that of the frontier.

The first line of demarcation adopted by the Danish Government had been traced from Eckernförde to Frederickstadt, a little to the south of the line proposed on the 28th of May by the plenipotentiaries of Great Britain. Later, the Danish plenipotentiaries were authorized to adhere to the line of the Schlei and the Dannewerke, but with the express understanding that no other arrangement whatever would be entertained. The plenipotentiaries of Prussia and Austria at first proposed the line from Apenrade to Tondern. Subsequently Count Bernstorff declared his readiness to recommend to his Government a line from Flensburg to the north of Tondern at Hoyer. The Austrian plenipotentiary did not at first consider himself authorized to adopt this line, but subsequently he received permission to do so. When, however, the Danes adhered to their determination not to entertain the proposition of any line south of the second line proposed by them, the plenipotentiaries of Austria and Prussia recurred to their first line traced from Apenrade to Tondern, and this proposition formed the extreme limit at which they finally took their stand. The efforts of the neutral powers to induce the belligerent powers to come to an understanding or a compromise about the intermediate territory between the Danish and the German line, proved fruitless.

On the 18th of June Lord Russell proposed arbitration, but to this proposition neither of the belligerents consented. The plenipotentiary of Denmark explained this refusal by the necessity which obliged him to regard the boundary proposed on the 28th of May as being intended by England as an ultimatum. Lord Clarendon combated this view. The line indicated on the 28th of May had been proposed in the interest of Denmark and of peace, and not with the intention of laying down a principle from which there could be no departure. The plenipotentiaries of Russia, France, and Sweden concurred in the opinion of Lord Clarendon.

Then came a proposition from the French plenipotentiary, that a vote should be taken in the mixed districts of Schleswig. Lord Russell said that the English plenipotentiaries would be disposed to concur, if the Danish Government thought proper to give their adhesion. M. de Quaade replied, that his instructions forbade him to consent to any other line than that proposed by the English plenipotentiaries on the 28th of May, and accepted by Denmark.

This declaration closed the debates of the Conference.

LOUISIANA. The proceedings relative to the formation of a State Government for Louisiana were continued early in the year. The basis of this State Government was the proclamation of President Lincoln of Dec. 8th, 1863. On Jan. 11th, 1864, Maj.-Gen. Banks issued his proclamation providing for the election of State

officers under the old constitution of the State on Feb. 22d, and for the election of delegates to a convention for the revision of the Constitution in April. (*See ANNUAL CYCLOPEDIA*, 1863, p. 592.) On Feb. 8d his general order relative to compensated labor plantations were issued. (*See ANNUAL CYCLOPEDIA*, 1863, pp. 594-5.) On Feb. 18th Gen. Banks issued the following proclamation prescribing the qualifications of voters:

HEADQUARTERS DEPARTMENT OF THE GULF, }
NEW ORLEANS, Feb. 18, 1864. }

General Orders No. 24:

1. Every free white male twenty-one years of age, who has been a resident of the State twelve months, and six months in the parish in which he offers to vote, who is a citizen of the United States, and who shall have taken the oath prescribed by the President in his proclamation of the 8th December, 1863, shall have the right to vote in the election of State officers on the 22d day of February, 1864.

2. Citizens of the State who have been expelled from their homes by the public enemy on account of their devotion to the Union, and who would be qualified voters in the parishes to which they belong, will be allowed to vote for State officers only in the election precincts in which, for the time being, they may reside.

3. Citizens of the State who have volunteered for the defence of the country in the army or navy, and who are otherwise qualified voters, will be allowed to vote in the election precincts in which they may be found on the day of election. And if the exigencies of the public service be such as to prevent their attendance at any established precinct, then commissioners fairly representing the interests involved in the election will be appointed to receive their votes wherever they may be stationed for that day, and to make due returns thereof, as well as of their own votes, to the Military Governor of the State as provided for other commissioners of election.

4. The Commissioners of Election, at any election precinct, are authorized to administer the oath of allegiance, as prescribed by the President, to any person otherwise qualified to vote, and to register the name of such voter in New Orleans where a register is required, or to receive it in other parishes where no register is required, at any time before the polls are closed on the day of election.

5. The Commissioners of Election in the several parishes will make prompt returns of the votes given to the sheriff of the parish, as provided by law, or in his absence to the provost marshal, who will immediately return the same to the Military Governor of the State.

6. The sheriffs of the several parishes, and in their absence, the provost marshals, will take especial care that the polls are properly opened, and that suitable Judges of Election and other officers are appointed. It is desirable that all persons properly qualified shall vote, but it is more important that illegal or fraudulent votes shall not vitiate the election.

7. The situation of Louisiana is not identical with that of other States designated by the President, but the test of loyalty required by him as a basis for the restoration of Government is unequivocal. Full opportunity has been given to the people for the suggestion of any obligation more in accordance, if possible, with the condition of this State, but no general unity of sentiment appears to exist as to the test of fealty which should be demanded. The inference is irresistible that all parties prefer the form prescribed by the President to any other than their own.

8. The oath prescribed by him offers amnesty and pardon only to those who have committed treason. To all others it is a simple pledge of continued fealty to the Government. The oath of allegiance cannot

be materially strengthened or impaired by the language in which it is clothed, but it may be accompanied by such explanations as to make known to the public the sense in which it is administered and received. Allegiance cannot be more or less than unreserved, unconditional loyalty.

9. The repetition of an oath once taken, or when unnecessarily clothed in unusual language, may well cause hesitation, but if it be identified with the restoration of a government, at a time when secret evasions and reservations have sapped public integrity, and endangered the safety of the nation, it is an unsound patriotism that criticizes the form or hesitates at its removal.

10. In times of public danger the Government has a right to demand an unreserved declaration of the purposes of all its people, and to provide, if necessary, an iron-clad defence against the weapons of its enemies. Those who seek its favor and protection must yield to its just demands. An exemption from all duties and an enjoyment of all privileges at the same time is a greater degree of happiness than is accorded to any man in this life. Let the People of Louisiana look at things as they are and base their political action upon a declaration of loyalty that cannot be misunderstood or misinterpreted. Upon this depends the restoration of peace and of private and public prosperity.

By command of Maj.-Gen. BANKS.

RICHARD B. LEWIS, A. A. Gen.

Three candidates for Governor were nominated: B. F. Flanders, Michael Hahn, and J. Q. A. Fellows. Mr. Hahn was the candidate of those who approved the measures of General Banks; the dissentients supported Mr. Flanders. The former was hostile to the admission of the men of African descent to the privileges of citizenship; the latter were generally in favor of it. Mr. Fellows was in favor of the "Constitution and the Union with the preservation of the rights of all inviolate." The election took place on Feb. 22d. The Federal lines at that time embraced the parishes of Plaquemines, St. Bernard, New Orleans, Jefferson, St. Charles, St. John the Baptist, St. James, Ascension, Assumption, Lafourche, Terrebonne, that portion of St. Mary's east of Bayou Teche, the portions of Iberville, East Baton Rouge and West Baton Rouge, immediately on the river bank; and the portion of East Feliciana and of St. Tammany, on which the troops were encamped. In all the parishes above St. John the Baptist, fronting on the river, there were guerrilla bands, which rendered the life of every man unsafe who was known to have taken an oath of allegiance to the United States. In the following parishes above named, the control was strictly limited to the surface occupied by the camps: St. Mary, Iberville, East Baton Rouge, West Baton Rouge, East Feliciana. The population of the State by the census of 1860 was 708,902; the population within the Federal lines, 233,185; balance outside the lines, 575,617. The vote of New Orleans for Governor was:

Michael Hahn	3,625
B. F. Flanders	1,907
J. Q. A. Fellows	1,189

The total number of votes was 10,270, including 107 cast by soldiers at Pensacola in Florida. Mr. Hahn received a majority of the votes cast.

The inauguration of Mr. Hahn, as Governor, took place on March 4th. The ceremonies on the occasion are thus described:

The dawn of yesterday was ushered in by the clangor of the iron-tongued bells, and the roar of artillery, waking the slumberous echoes from their lairs, and proclaiming to a disenthralled people the glad tidings of the reestablishment of civil liberty. The early dawn was unpromising for the comfortable carrying out of the programme of inauguration, but the sun came out and chased away the mists and clouds like the scattered remnants of a broken battle host, and by eight o'clock the anxious multitude were assured of as bright and fair a day for the interesting ceremony as could be desired.

At an early hour, the multitude began to assemble in the region of Lafayette Square. Sentinels and policemen were posted at the entrance, to keep back the crowd until the scholars had entered, and anxious committee-men ran hither and thither, perfecting arrangements and taking a general supervision of affairs, looking all the time considerably worried and flurried, and red in the face with excitement and heat. Then the school children began to arrive from all directions, marching in two ranks, marshalled by their teachers. They were of all sizes, from the lisping five year old to the radiant maiden of sixteen, just blooming into glorious womanhood, with a proper proportion of young American manhood, in short jackets and saucy-looking hats, their bosoms swelling with the mingled pride of statesmen and warriors. Neatly dressed, and their cheeks flushed with excitement, they made a beautiful and imposing appearance.

Entering the Square through the St. Charles Street gate, beneath a painted bust of Washington, over which was the inscription, "A Free Government—the dearest object of my heart," a grand and magnificent *coup d'œil* burst upon the enraptured vision. There was the immense amphitheatre, in which were seated six thousand gaily dressed children. Around the back of the amphitheatre had been erected a frame-work which was covered with flags stretched around, forming a silken wall of red, white, and blue, from which shone the bright silver stars of American freedom—a "joy forever" to the heart of every American freeman which has not been blighted and blasted by the canker of treason. At intervals around this wall of bunting, handsomely emblazoned on heraldic shields, were displayed the coats of arms of the thirty-four different States—South Carolina in loving proximity to Massachusetts. In the centre of the amphitheatre was a large painted banner, representing a prolific pelican feeding a brood of fledglings from her horn and bleeding breast, and just above, a patient phoenix sitting upon its funeral pyre, gazing proudly and fearlessly into eternal space, and only awaiting the slow process of combustion to "rise from its ashes." Underneath the pelican was the inscription, "All Hail to the Chief," and on either side the inscriptions, "The Star of Louisiana as she was in 1860," and "So stands she now in the Bright Galaxy of 1864." Around the flag wall were displayed the following inscriptions, in large letters: "Admiral Farragut, the Bravest of the Brave," "Major-Gen. Nathaniel P. Banks, the Noble Citizen and Dutiful Soldier," "Michael Hahn, the First Free State Governor of Louisiana," "Major-Gen. N. P. Banks, the Hero of Port Hudson, and of Freedom in Louisiana."

Immediately in front of the amphitheatre were seated the members of the immense orchestra, composed of nearly three hundred instruments, and the forty anvils to be used in beating out the metallic accompaniment to the "Anvil Chorus." In front of the orchestra was a circular raised platform, from the centre of which arose a tall flag-staff, held to its perpendicular by numerous ropes, trimmed with evergreens, which radiated in all directions from the

common centre, and found attachments to the neighboring trees in the square. From the sustaining ropes hundreds of signal flags of all shapes, sizes, and colors, waved in undulating grace and beauty. This platform was dedicated to the solemn and impressive ceremony of administering the oath to the newly elected officers of the Free State of Louisiana. In front of the platform hung suspended a banner fringed with arbor-vitæ-sprigs, with the words "Michael Hahn, our Governor," tastefully wrought in evergreens.

About 11 o'clock Gen. Banks, accompanied by a number of distinguished warriors and civilians, and the officers of the new Government, arrived and took his seat on the platform. Among those present we recognized Gen. Reynolds, commander of New Orleans defences; Gen. Hamilton, Military Governor, of Texas; Gens. Stone, Arnold, Ransom, Cameron and Bowen; Hon. Christian Roselius, Judges Peabody, Hiestand, and Howell; Captains Hoyt, McClure, and others. All seemed properly impressed with the solemnity of the occasion. The Governor, arrayed in a suit of black, with white vest and soft, mouse-colored felt hat, looked grave and thoughtful, but self-possessed and dignified.

The oath of office was, after some preliminary ceremonies, administered as follows:

I, Michael Hahn, do solemnly swear, in the presence of Almighty God, that I will henceforward faithfully support, protect, and defend the Constitution of the United States, and the Union of States thereunder, and that I will in like manner abide by and faithfully support all Acts of Congress passed during the existing rebellion with reference to slaves, so long and so far as not repealed, modified, or held void by Congress, or by decree of the Supreme Court, and that I will in like manner abide by and faithfully support all proclamations of the President made during the existing rebellion, having reference to slaves, so long and so far as not modified or declared void by the Supreme Court.

And I do further solemnly swear, that I am qualified according to the Constitution of the State to hold the office to which I have been elected, and that I will faithfully and impartially discharge and perform all the duties incumbent on me as Governor of the State of Louisiana, according to the best of my abilities and understanding, agreeably to the Constitution and Laws of the United States, and in support of and according to the Constitution and laws of this State, so far as they are consistent with the necessary military occupation of the State by the troops of the United States for the suppression of the rebellion, and the full restoration of the authority of the United States. So help me God.

MICHAEL HAHN.

Addresses were made by the Governor and Gen. Banks, and the city was illuminated in the evening, and an inauguration ball closed the day.

On March 15th the following letter was addressed to Governor Hahn:

EXECUTIVE MANNER, WASHINGTON, March 15, 1864.

His Excellency, Michael Hahn, Governor of Louisiana:

Until further orders, you are hereby invested with the powers exercised hitherto by the Military Governor of Louisiana. Yours, truly,

ABRAHAM LINCOLN.

On March 11th, Major-Gen. Banks issued an order relative to the election of delegates to the State Convention. The conditions were such as had been previously recommended by a committee to whom the General had referred the subject. One of the most important provisions

was that which defined the qualification of electors.

The constitution of the State under which Governor Hahn exercised his powers prohibited soldiers, seamen, or marines, from voting at elections.

HEADQUARTERS DEPARTMENT OF THE GULF, }
NEW ORLEANS, March 11, 1864. }

General Orders No. 85.

1. An election will be held on Monday, the 27th day of March, at 9 o'clock, A. M., in each of the election precincts established by law in this State, for the choice of delegates to a Convention to be held for the revision and amendment of the Constitution of Louisiana.

2. The several parishes shall be entitled to elect the number of delegates herein assigned to each upon the basis of white population exhibited by the census of 1860, to be chosen in each parish on one ticket by the qualified voters of the parish, except in the parish of Orleans, in which parish the election shall be held in the several representative districts established by law, for the number of delegates herein assigned to each district, to be chosen on one ticket by the qualified voters of the district. * *

3. Any parish not now within the limits of the army shall be entitled to select delegates as herein specified, at any time before the dissolution of the Convention, should such parish be brought within the lines of the army.

4. Every free white man, twenty-one years of age, who has been a resident of the State twelve months, and six months in the parish in which he offers to vote, who is a citizen of the United States, and who shall have taken the oath prescribed by the President in his proclamation of the 8th December, 1863, shall have the right to vote in the election of delegates.

5. Citizens of the State who have been expelled from their homes by the public enemy on account of their devotion to the Union, and who would be qualified voters in the parishes to which they belong, will be allowed to vote for delegates in the election precincts in which, for the time being, they may reside.

6. Citizens of the State who have volunteered for the defence of the country in the army or navy, and who are otherwise qualified voters, will be allowed to vote in the election precincts in which they may be found on the day of election.

7. The Commissioners of Election appointed to superintend the polls at the election of State officers, February 29d, 1864, are authorized and directed, in the absence of other orders, to fulfil and discharge all the duties of Commissioners of Election in their respective precincts, for this election.

8. The Commissioners of Election, at any election precinct, are authorized to administer the oath of allegiance, as prescribed by the President, to any person otherwise qualified to vote, and to register the name of each voter in New Orleans, where a register is required, or to receive it in other parishes where no register is required, at any time before the polls are closed on the day of election.

9. The commissioners in the several parishes will make prompt returns of the votes given to the sheriff of the parish, as provided by law, or in his absence to the Provost Marshal, who will immediately return the same to the Secretary of State in the same manner and form as for members of the General Assembly.

10. The sheriffs of the several parishes, and in their absence the provost marshals, will take especial care that the polls are properly opened, and that suitable judges of election and other officers are appointed. It is desirable that all persons properly qualified shall vote, but it is more important that the integrity of the election shall not be vitiated by illegal or fraudulent acts.

12. The delegates duly elected to the Convention shall meet at Liberty Hall, Executive Building, in the city of New Orleans, at 12 o'clock, M., on Wednesday, the 6th day of April, 1864. In case any vacancy occurs by resignation or death after the organization of the Convention, a writ of election shall be issued by the Convention to fill the vacancy.

By command of Major-General BANKS.
RICHARD B. IRWIN, A. A. General.

On March 16th Governor Hahn issued his proclamation to the sheriffs, authorizing the election. He said:

Whereas, By General Orders No. 85, under date of March 11th, 1864, Major-General N. P. Banks, commanding the Department of the Gulf, has ordered that an election "be held on Monday, the 28th day of March next, at 9 o'clock, A. M., in each of the election precincts established by law in this State, for the choice of delegates to a Convention to be held for the revision and amendment of the Constitution of the State of Louisiana," and has directed that the several parishes shall be entitled to elect the number of delegates herein assigned to each, upon the basis of the white population exhibited by the census of 1860, to be chosen in each parish on one ticket by the qualified voters of the parish, except in the parish of Orleans, in which parish the election shall be held in the several representative districts established by law, for the number of delegates herein assigned to each district, to be chosen on one ticket by the qualified voters of the district. * *

Now, therefore, I have thought proper to issue this my proclamation, notifying the qualified electors throughout the State of the election aforesaid, and commanding all sheriffs, commissioners of election, and other officers therein concerned, to hold said election for delegates in their respective parishes, and in the parish of Orleans, in the Representative districts as aforesaid, and to give the proper public notice thereof; and I enjoin upon them care that said election be held and conducted at the places and in the manner designated by law and the General Orders aforesaid, and that the returns be promptly made to the Secretary of State at New Orleans. For all of which this proclamation, without further notice, will serve as authority.

Given under my hand and seal of the State, at the Executive Building, city of New Orleans,
[L. s.] this 16th day of March, A. D. 1864, and of the Independence of the United States of America the eighty-eighth.

MICHAEL HAHN.

By the Governor:
S. WROTOWSKI, Secretary of State.

The election was held on the 28th. The number of members returned as elected was ninety-seven, of whom two were rejected because of irregular returns. No return of the votes was published. A Committee of the House in Congress, on the application of the persons from Louisiana for seats in Congress, reported that the Parish of Orleans was represented by sixty-three members, leaving to the country parishes thirty-two:

"From all that is known of the balloting it appears that the Parish of Ascension, within the Federal lines, and neighboring to New Orleans, and which in 1860 had a white population of 3,940, elected her delegates by sixty-one votes; that Plaquemines, with a white population in 1860 of 2,529, cast 246; and in the Parish of Madison, Montague was elected by a vote of 28.

"Elections were held only in the parishes

included within the Federal lines, and these lines were the Teche on the one side and the Amites on the other, comprehending the parish or city of Orleans, and the neighboring parishes on the Mississippi. To a question propounded to Gen. Banks as to what portion of the State voted, his reply was:

"All as far up as Point Coupee, and there were some men from the Red River who voted at Vidalia."

"And in his statement he announces that: 'The city of New Orleans is really the State of Louisiana.'"

In 1860 there were 367,629 whites in the State, of whom 149,063, or much less than one-half, were in New Orleans.

The Convention assembled on April 6th, and was organized on the 7th by the election of E. H. Durell, president, by the following vote: Durell, 43; R. K. Howell, 42. After a session of seventy-eight days the Convention adjourned on July 25th. A proclamation was immediately issued by the Governor appointing Sept. 5th as the day upon which a vote should be taken on the Constitution. The vote was as follows: yeas, 6,886, for its adoption; nays, 1,566, for its rejection. The vote of New Orleans was: yeas, 4,664; nays, 789. The most important feature of the Constitution was thus described by Gen. Banks:

In a State which held 331,796 slaves, one-half of its entire population in 1860, more than three-fourths of whom had been specially excepted from the Proclamation of Emancipation, and were still held *de jure* in bondage, the Convention declared by a majority of all the votes to which the State would have been entitled if every delegate had been present from every district in the State—

Instantaneous, universal, uncompensated, unconditional emancipation of slaves!

It prohibited forever the recognition of property in man!

It decreed the education of all the children, without distinction of race or color!

It directs all men, white or black, to be enrolled as soldiers for the public defence!

It makes all men equal before the law!

It compels, by its regenerating spirit, the ultimate recognition of all the rights which national authority can confer upon an oppressed race!

It wisely recognizes, for the first time in constitutional history, the interest of daily labor as an element of power entitled to the protection of the State.

At the same election the following persons were chosen members of Congress: 1st district, M. F. Bonzano; 2d, A. P. Field; 3d, W. D. Mann; 4th, T. M. Wells; 5th, R. W. Taliaferro.

A legislature was chosen at the same time, the members of which were almost entirely in favor of a Free State. By this body seven electors of President and Vice-President were chosen.

Notwithstanding this formal adoption of a reorganized State government its authority was quite limited. At the end of the year there was more than three-fourths of the State to which it was not safe to send military supplies. On Dec. 27th the following order was issued:

HEADQUARTERS DEPARTMENT OF THE GULF,
NEW ORLEANS, Dec. 27, 1864.

Special Order No. 349.

8. Upon the official report of the Attorney-General of the State of Louisiana, that the ordinary courts of justice are insufficient to punish the offenders named by him, and in consideration that the State government and courts of Louisiana owe their present existence to military authority, it is ordered that Michael De Courcey, Benjamin Orr, E. McShane, Y. M. Robinson, A. G. Pierson, and B. Wadsworth, for peculation and other offences, be sent for trial before the Military Commission now in session in the city of New Orleans, and of which Brig.-Gen. B. S. Roberts, U. S. Vols., is president, and that the Attorney-General of the State of Louisiana be admitted to appear before said commissioner as public prosecutor.

By command of Maj.-Gen. HURLBUT.

(Signed) C. S. SARGENT,
1st Lieut. 3d La. Vols. and A. A. A. Gen.

The Provisional Court established by an order of President Lincoln, issued Oct. 20th, 1862, Judge Peabody presiding, still continued in operation. The validity of the proceedings of this court was called in question both before and after the reorganization of the State Government. The opinion of the Court itself on the question thus raised will be found at the end of this article.

The condition of persons of African descent continues the same as in 1863. A bill was introduced in the Legislature under the new Constitution to give suffrage to such persons, but it was rejected by a large majority. The clause of the Constitution relating to the subject is in these words: "The Legislature shall have power to pass laws extending suffrage to such other persons, citizens of the United States, as by military service, by taxation to support the Government, or by intellectual fitness may be deemed entitled thereto."

The views of Gen. Banks on granting suffrage to these persons, while he was in command at New Orleans, are thus stated by himself:

It was with much hesitation that the mass of people entered into measures for the organization of government. Some were ready, but others reluctant. Revolutions make the mass of men timid. It required the strongest representations of public advantage to induce them to venture again into the stormy sea of politics. Had it been announced that the negroes, who were largely in the majority, against the example, advice, and instructions of all branches of the Government, were to be admitted to the right of suffrage by military order, it would have resulted in an exclusively negro constituency. You might not object to this; but I know perfectly well that, while a Government formed, as heretofore, by white men, may clothe negroes with the right of suffrage, a Government, organized by negro voters, that should give the elective franchise to white men, would not be acceptable to the Administration, to Congress, nor to the country, nor any part of it. Such would have been the result in Louisiana, beyond question, under a general order conferring the right of suffrage upon negroes. It would not have secured to colored citizens, now or hereafter, that right. It would have deferred, if not defeated it.

I did not decide upon this subject without very long and serious reflection, weighing the whole subject in every light, with a desire to effect the extension.

My plan was consistent with my orders, and would have been as successful in this as in other respects. It was to obtain from the United States Court—following the judicial example both of free and slave States—a decree, fixing the standard of citizenship as to color, and declaring that a man, with a major part of white blood, should possess all the rights of a white man. Upon this decision I should have ordered all persons of that class embraced within the decision of the court to be enrolled as voters. This was the way and the only way to begin. It would have given the right of representation to 30,000 colored people, and have led, without contest, to the immediate extension of the franchise of the race.

I had arranged this with Judge Durell, who was ready to give the case a hearing in the United States Circuit Court, and with one of the most eminent conservative lawyers to argue the question for the Government in favor of the negro; but a few men, who wanted to break the bundle of sticks without loosening the band, defeated it. The President gave me too much to do—more than any other major-general in the army—or it would have been accomplished. My belief is now, that the question of suffrage will be settled sooner in Louisiana than in any other State.

A board of education for freedmen was established by Gen. Banks, whose duty it was to establish one or more common schools in each school district that has been or may be defined by the Parish Provost Marshals under orders of the Provost Marshal General, to erect school-houses, employ teachers, and in all respects exercise the same powers as school officers in the Northern States.

In order to provide the requisite funds for this work the board is empowered to assess and levy a school tax upon real and personal property, including crops of plantations, in each school district. The taxes so levied shall be sufficient in amount to defray the cost and expense of establishing, furnishing, and conducting for the period of one year, the school or schools so established in each district.

In the performance of all their duties the board is to coöperate, as far as practicable, with the Superintendent of Public Education, and the current school year is to be estimated from Feb. 1st, 1864, to Feb. 1st, 1865.

The Superintendent of the Bureau of Free Labor in the Department of the Gulf, for the year ending Feb. 1st, 1865, states that the number of freedmen (orphans, infirm persons, &c.) supported by the Government during the year was 1,416, and the cost \$113,426. The number of freedmen on the plantations who were managed by the bureau was 50,000, and the number of plantations under cultivation by military orders, 1,500. On twelve plantations it has been found necessary to seize property for the purpose of securing the payment of the freedmen working them. It having been an exceedingly unprosperous year the planters have found it very difficult to pay their laborers.

The disaster of the past season by the failure of the crops has been so great as almost to ruin nearly every planter in the department. Their estates are so heavily mortgaged that if the crops again fail, as last year, they cannot save themselves, and the old planting aristocracy will disappear. Even with fair crops it will be

impossible to prevent a very early change in the ownership of the plantations, and they are even now preparing to give way to new capital and new proprietorship.

In regard to the treatment of the freedmen, the old planters have, as a general rule, paid them more promptly, more justly, and apparently with more willingness than have the new lessees from other parts of the country.

Early in May Maj.-Gen. R. G. Canby was ordered to assume command of the forces west of the Mississippi and to relieve Maj.-Gen. Banks. The department was reorganized; some regiments were recruited from the plantations, but no extensive military operations took place within the State during the remainder of the year. (See ARMY OPERATIONS.)

The receipts of Western produce from September 1st to March 8th, in the respective years, compare as follows:

	1859-'60.	1862-'3.	1863-'4.
Flour, bbls.....	974,340	174,048	184,868
Wheat, sacks.....	13,116	816	19
Corn, sacks.....	1,758,181	207,792	182,633
Oats, sacks.....	609,550	827,007	96,711
Pork, bbls.....	216,028	36,193	38,268
Bacon, pkgs.....	88,616	15,673	18,933
Lard, bbls. and tierces.	65,784	7,714	7,612
" kegs.....	90,699	5,289	10,878
Beef, bbls. and tierces.	44,984	44,341	21,643
Whiskey, bbls.....	188,043	5,687	577

The receipts of cotton at New Orleans in 1859-'60 were 2,255,448 bales; in 1861-'2 they were 38,882 bales; from Sept., 1862, to March, 1863, 7,865 bales; in 1863-'4 the receipts have increased to 84,402 bales.

A large amount of this produce was bought on Government account, and has been moved by the military authorities. New Orleans is thus not even a shadow of its former self. The receipts of Louisiana staples are only a moiety of what they were. The state of trade is thus reported: "Our trade for the supply of the interior with dry goods, hardware, groceries, etc., has fallen off in like proportion with the rest of our commerce. The whole volume of the year's business will barely reach the monthly record of the olden time. Most of our old population is scattered. New firms and new faces meet one at every corner. The memory of our former riches is almost all that remains to remind us of what New Orleans should be, and we may hope will be, after the termination of the war." Shreveport, in the north-west part of the State, was the seat of the former government, and there a Legislature assembled during the year, but nothing is known of its proceedings.

The validity of the organization of the Provisional Court of Louisiana as well as that of its proceedings, was brought before that court in the cases of the United States *vs.* Augusta Reiter, and the United States *vs.* John Louis. The following are the points of the opinion of Judge Peabody, in deciding the questions raised:

These two cases may without inconvenience or danger of confusion be considered together, although

they have in fact no connection with each other. The same objection to the proceeding of the Court to pronounce sentence upon the accused and in arrest of judgment, is made by both the defendants, and although the objection is urged on different grounds in the two cases, still the objection is proper to be considered on all the grounds in each case.

It is urged that this Court is not authorized to try these defendants, and that its proceedings have not the sanction of law in the premises. The accused have been indicted separately and tried separately on charges wholly different and having no connection the one with the other, and the consideration of their cases together rather than separately, now, is a matter of convenience solely. One of the accused, Reiter, has been indicted for murder. The other has been indicted for arson. Each has been tried before a jury of this parish and been duly convicted of the offence charged in the indictment, and each is now before the Court on a motion in arrest of judgment, and in each case the arrest is urged on the ground that the Court is not authorized in law, and has not jurisdiction to try the case.

The first question to be considered is whether the Court has ever had, from the nature of its origin and constitution, authority to try cases like these, and if this question shall be decided in the affirmative it will remain to examine—

The second question, namely, whether the power to try or the jurisdiction over such a case, once possessed by this Court, has been withdrawn or lost—whether the Court in fact has been in any way deprived of it by subsequent events.

It must be conceded that the Court, in its origin and structure, is quite out of the usual course and novel. It has not its origin or foundation in any constitutional or legislative enactment—is not the creature of any regularly organized constitutional or legislative body. This Provisional Court depends for its existence on the law of nations, and on that part of the law of nations relating to war—the law by which parties and neutrals are guided in their treatment of each other in a state of war; and that portion of it which relates to and determines the rights and duties of a belligerent, a conqueror in the territory of an enemy and holding it in armed occupation. On that law must depend the decision of the question presented by this motion, of the validity in law and the powers of this Court.

It was in that law that the President of the United States, pressed by the urgent wants of the community here, found his warrant for the establishment of this Court in the midst of the country of an enemy held by him *jure belli* in armed belligerent occupation.

The authority of this Court is derived from the President of the United States, the Chief Executive of the nation, and Commander-in-Chief of its forces, military and naval. It is conferred by an order, "Establishing a Provisional Court in Louisiana," dated Oct. 20, 1863. See AMER. CYC., 1868, p. 770. Provisional Court for Louisiana.

This order, by its terms, no doubt embraces cases like these under consideration, as indeed it does, perhaps, all others which can occur in life, or become the subject of judicial investigation. The President then sought to give power to this Court to try and determine cases of this kind, and having made an order to that effect, has given it that power, if he himself had authority to confer it. The authority of the President of the United States to create this Court, and invest it with powers which should embrace these cases, depends, to some extent at least, on the Constitution of the United States, which creates the office exercised by him, and determines its functions. That Constitution, article 2, section 1, paragraph 1, declares as follows:

"The executive power shall be vested in a President of the United States of America."

It also provides, article 2, section 2, paragraph 1:

VOL. IV.—31 A

"The President shall be Commander-in-Chief of the army and navy of the United States, and of the militia of the several States when called into the actual service of the United States."

As President, Chief Executive, and Commander-in-Chief of the army and navy, he would not ordinarily have power to establish tribunals for the determination of questions civil and criminal, arising in civil life. Was there any thing in the condition of affairs existing at the time the order was made which could give him the power to establish them, and if so, what was there in the condition of affairs then existing to give him power in this respect not ordinarily possessed by him as one of the attributes of his office?

Between the Government of the United States and a people inhabiting a portion of country lying on the Atlantic Ocean and the Gulf of Mexico, and extending north beyond the northern boundary of the territory in question, and embracing within its borders that section of territory theretofore known, and still most conveniently designated as the State of Louisiana, a war had for some time been waged. It is a matter of public knowledge and notoriety that this war had been pending, and that the country over which the jurisdiction of this Court is in question, had been for a long time previous to, and also since the commencement of this war, inhabited, cultivated, and owned by the same people who had entered into and carried on war with the Government of the United States, and that it was still so inhabited by a people whose relations with the Government of the United States had for some time been and were still those of enmity. That it had, in the course of the war, been by force of the arms of the United States wrested from the enemy, and was at the time the order establishing this Court was made, held by the forces of the United States in armed belligerent occupation.

These institutions having been formed, established, and administered by the Government existing previous to and at the time of the conquest confessedly hostile to the Government of the United States, were the only institutions found there at the time the military authority of the United States was by force of its arms established there. By the conquest of the country, in this case as in others, the previously existing Government and the power by which it was administered were subverted and swept away, and those of the conquering power were substituted in their places. This is the necessary consequence of a conquest of a country—a transfer of the control, government, and sovereignty of it from one party to another. They may be transferred to and adopted by the new governing power and may be used and operated by it. However there may be retained in use by the new governing power some of the features or institutions of the Government which has been supplanted, it is nevertheless wholly another Government, and derives its life and all its vital qualities from a new source—the new sovereignty installed by the conquest. A conquest necessarily operates the extinguishment of the power of the party conquered in the country which is the subject of conquest, and the establishment there of the power of the conqueror. Without this there is no conquest of a country, and there can be none.

When the power previously dominant in a country has been extinguished by that of another party, and rendered incapable of governing it further, and a new one has been established in its stead, it is both the right and the duty of the party thus coming into power to see to it that a Government wholesome and salutary shall be established and administered; and as in such a case there is only one power, that of the new party succeeding, capable of giving and administering the Government, it follows that it is the duty as well as the right of that power to do it.

So the Government of the United States having conquered and expelled from the territory of country

theretofore known as the State of Louisiana, the power by which the Government of it had been theretofore administered, and having established there its own power, was bound by the laws of war, as well as the dictates of humanity, to give to the territory thus bereft of a Government in the place and stead of the one deposed or overthrown, such an one as should reasonably secure the safety and welfare of the people thus reduced to subjection; in some manner, not inconsistent, to be sure, with the proper interests of the governing power, and the maintenance of it in its supremacy there.

The power established there was the military power of the United States, and the President of the United States, as we have seen, the Commander-in-Chief of the forces, military and naval, of the United States, was at the head of that power, and had the right and duty to exercise and direct it. It was incumbent on him, representing for this purpose the sovereignty of the United States, to see that the duty devolving on his Government should be properly performed. He acted in obedience to this duty, and in accordance with this right, when he attempted to establish there a judicial tribunal capable of deciding controversies and administering justice.

But how does this question stand on the authority of adjudged cases. In the case of *Cross et al. vs. Harrison*, in the Supreme Court of the United States, in 1856, reported in 16 Howard, at page 164, the Court held that a civil Government formed in California, under the direction of the President of the United States, as Commander-in-Chief of the army and navy, shortly after the conquest of the country, and while it was held in military occupation by the forces under him, was an act warranted by the laws of nations, and that the formation of such a civil Government was the rightful exercise of a belligerent right over a conquered country.

The decision covered the whole ground, that the Provisional Government of the United States there was rightful and legal, and that it continued in force a legal, rightful Government through the time the country was held in military occupation, and after that occupation ceased, and that it was, in fact, in force until some other system was provided according to law to supersede it.

For the doctrine that a conqueror in a conquered country may establish a Government, and courts for the administration of justice, the case of *Leitenadorfer et al. vs. Webb*, decided by the Supreme Court of the United States, in 1857, reported in 20 Howard, 176, is an authority directly in point. In that case the conduct of the Government of the United States by General Kearny, the officer in command of its forces there, was brought in question. It appeared that after the conquest of that country by the arms of the United States, General Kearny in command of the forces there, established a Government and provisional courts for the administration of justice.

Those courts, in the case referred to, were adjudged to be legal, and their decisions obligatory as warranted by law. The power to establish the Government and the courts was directly in question, and was directly passed upon by the Court, and was sustained on the ground of the right of conquest.

In that case, moreover, it appeared that the country conquered was subsequently, by treaty, ceded to the United States, and it was claimed that by the act of cession the rights of the United States to govern the country and enforce the laws made by the Provisional Government while it was held in military occupation, was terminated.

The Court say: "Of the validity of these ordinances of that Provisional Government there is made no question with respect to the period during which the territory was held by the United States, as occupying conqueror, and it would seem to admit of no doubt, that during the period of their valid existence and operation, these ordinances must have displaced and superseded every previous institution of the

vanquished or deposed political power which was incompatible with them. But it has been contended, that whatever might have been the rights of the occupying conqueror, as such, these were all terminated by the termination of the belligerent attitude of the parties, and that with the close of the contest, every institution which had been overthrown or suspended would be revived and reestablished."

"The fallacy of this pretension," the Court proceeded to say, "is exposed by the fact, that the conquered territory never was relinquished by the conqueror, nor restored to its original condition or allegiance, but was retained by the occupant until possession was matured into absolute, permanent dominion and sovereignty." The Court then proceeded to decide when the institutions of the Provisional Government would terminate.

They say: "We conclude, therefore, that the ordinances and institutions of the Provisional Government could be revoked or modified by the United States alone, either by direct legislation on the part of Congress, or that of the Territorial Government, in the exercise of powers delegated to it by Congress." The question there presented was the validity of an ordinance of the Territorial Government, authorizing attachments of property of debtors, enacted by the Provisional Government, while the country was held in military occupation, and before the cession of it, but sought to be enforced by the Provisional Territorial Court after the cession of the country to the United States, and after the military occupation had ceased. The Court upheld the law in its origin, and also in its continuance in force, and the administration of it by the Provisional Territorial Court after the cession of the country, and after the military occupation had ceased.

In the case of *Jecker vs. Montgomery*, 14 Howard, 498, decided in 1854, the same Supreme Court of the United States incidentally recognize the legality and powers of those Provisional Courts, and while deciding that, for reasons peculiar to cases of prize, and not at all applicable to any others, they could not legally act in cases of that class, the Court admit their powers and jurisdiction in other cases: making three decisions of the Court of last resort of the Government of the United States quite in point. Either of these should be sufficient authority for such a principle, if indeed a principle so plainly proper and necessary, can be thought to need authority of precedent at all.

But at the risk of being tedious and doing work of supererogation, which charges I am persuaded might well be maintained against me, I will add to these authorities already commented on, still another one, which has a bearing quite material on this case at more than one point. I mean the case of the *United States vs. Rice, & Wheaton*, 246. That case, as well as those already cited, decides that, by the conquest and military occupation by one nation of a portion of the territory of another, the portion so acquired passes from the operation of the laws and government of the nation to which it had previously belonged, and comes under the laws and government of the nation making the conquest. It also decides that while such territory is held by the conqueror, it is the right of the party so holding it to govern it, and for that purpose to make laws by which to govern it. In short, that, by conquest, the sovereignty and right to rule of the conqueror are introduced and established, and the sovereignty and right of rule in the party expelled are extinguished; and that the duty of allegiance in the people remaining there is transferred in like manner from the vanquished to the victorious party; in fact, that by such an act the change in the sovereignty and allegiance are complete, and new rights and duties in both parties are created accordingly. I think that all these conclusions certainly follow from what is decided, if, indeed, they are not all actually decided there.

The right, therefore, of a conqueror in a con

quered country to ordain a system of government for it, and, among other institutions, to erect courts of justice, and maintain them in the discharge of their proper functions, is as well established and free from doubt, when considered on authority, as it is in principle.

But it may be said that this reasoning, if correct as to territory foreign to the conqueror, and as to which his rights and duties are simply and solely those of a conqueror by force of arms, is not applicable to the case in question, for this Louisiana is a part of the territory of the United States, over which the powers and duties of the President and the other departments of the Government were already fixed, and are dependent on the constitution and laws of the United States, and limited to the powers and duties conferred by them; and that those laws do not give the President the power to establish a court like this, and therefore that he has not that power.

It is quite certain that, ordinarily, he would have no such power; and hence, instead of looking for it to the Constitution and laws of the United States alone, I have looked elsewhere and to other facts than his merely occupying the place of President at the time. I have invoked also the fact that he was by virtue of that office, as commander of the forces of the United States, holding in armed belligerent occupation the country in which the Court was established, and in which its powers and authority are now brought in question.

It may be said that the act of the United States in this case had not the usual effect of a conquest of foreign territory—that instead of acquiring anew the rights of a conqueror, the United States by this conquest (as I for the sake of convenience have called it), has but removed the obstacles to the enjoyment of its preëxisting rights, and has not acquired any new ones of a conqueror.

As we have seen, the foundation of the right of a conqueror to govern conquered territory, and for that purpose to establish provisionally civil institutions in it, is necessity, and that chiefly the necessity of the conquered country and its inhabitants. A government of some kind they must have, for no community can exist without it.

The power of the conqueror has overridden and subjected all other power, and this necessity can be supplied from no other source than him, for he holds for the time being all power. Whilst this continues to be the case, what is there in the case in question of Louisiana, which should make it different from a foreign country?

The inhabitants of that country owed allegiance to and were entitled to the protection of the Government of the United States, it is said familiarly, and this is quite true in the sense in which the remark is usually made. But did the United States ever, at any time, or under any circumstances, owe the people of this territory a protection and government which would supply all, or any considerable part of their wants in this respect?

If the Government of the United States should afford to this country all the protection, and aid—should perform for it all the governmental offices which it by virtue of the Constitution and laws of the land was ever bound, or had a right to do, how far would this go toward supplying the wants of the country in that respect? Is it not quite certain, on looking into the law on the subject of the relations, rights, and duties of the Federal Government to the tract of country in question, or any other tract embraced within the State, that with the Federal Government in full function and all its duties fully performed, a very small portion of the governmental necessities of the country would be supplied?

It is a fact familiar to us all, that under our system of government almost all the governmental aid needed by our people is due to them from the local depositories of power, the State governments—for most purposes within their own territory, sovereign.

These governments, under our system, are the repositories of nearly all of the powers of government in ordinary times in familiar use among us, and whether they be applied by the State itself, by its own officers directly, or be allotted out in parcels to smaller governmental districts, such as counties or parishes, cities, towns, or villages, to be applied by the officers of those localities respectively, still the State and not the Federal Government is the reservoir from which they are drawn, whether it be for distribution or exercise; and the State, and not the Federal power and officers, administer and execute them.

From which Government comes the system of police by which order in society is maintained from one end of the land to the other? From which the judicial power—the one in question *here and now*—by which, in ordinary cases, crime is punished and repressed, controversies decided, and the rights of persons and property established and maintained? and what is certainly quite in point, from *which source* comes the power by which these very unfortunate criminals now before me would ordinarily on a basis of peace be tried, and justice be meted out to them?

It is quite certain that the Government of the United States, remitted to its ordinary constitutional functions within one of the States as in times of peace, could not supply a government at all adequate to the necessities of society, and especially could not have taken cognizance of, or punished at all, either of the offences in question by any tribunal it ever had, or had the right to establish.

The necessity for a provisional government here for nearly all the purposes for which a government is necessary, and especially of a provisional tribunal for dispensing justice generally, and in cases like these now under consideration, was the same as, and none other than it would have been if this tract of country in question had been a part of the domain of a government wholly foreign to that of the United States, and over the territory of which it had no other rights than those growing out of war and conquest. Indeed, it may well be doubted whether, in reference to governmental rights and duties in matters of this kind, there is any difference between the citizens of the several States and those of foreign territory. Certain it is, from what has been said, that this territory is not, by the nature of our system of government, under the dominion of the Federal Government as to most matters of local administration, but is exclusively under the State and local government, and the Federal Government was never bound and never assumed or pretended to furnish government to any section of the States as to their internal or local matters generally, and has not, and never had the duty, right, or power to do so.

But this district of territory had been in insurrection against the Government of the United States, had openly withdrawn from all connection with that Government under the forms of law and civil legislation, had allied itself with others hostile and at war with it, and had, by force of arms, for a considerable time maintained this attitude external and hostile, resisting successfully the efforts of the Government to subject it to law and duty. However the act of secession was ineffectual in law, this district had in fact and practically withdrawn from all relations with the Government of the United States, and had arrayed itself in armed hostility to it. Its duties remained unchanged, no doubt, but its rights to the filial relation—its rights to receive from the Federal Government the consideration and care of a parent rather than the imperious commands of a military master, may have been much changed by the events which had transpired, and I think that they had been. Having taken for itself the attitude of a foreign State, and that, too, of one hostile and at war with the United States, and formed and adapted all its civil institutions, and in every respect bent itself to that condition, and claimed and asserted it, and prac-

tically maintained it by force of arms for a time, and having been at this time overcome and subjected to the arms of the Government of the United States, it may very well be that while it has acquired no new rights by virtue of its pretensions, it has resigned and forfeited old ones, and is no longer entitled to demand the benefits of a relation it has renounced and repudiated, however it may have failed in establishing at that time its freedom from the duties attendant upon it.

The counsel for the prisoners Reiter and Louis, however, take different grounds on this motion. The former insists that the whole structure of the Court in its origin was without warrant in law.

While the learned counsel for the accused insist that these powers have ceased, by reason, as I understand the argument, of the organization of a civil government here which supersedes the military, I pass to consider the question presented by this argument.

If a conqueror in a conquered country have a right to set up a government in it, when does that right cease? Or, rather, if he have such a right, and exercise it, when does the power of the government so set up cease?

I answer, *first*, it will terminate necessarily whenever the power which formed it shall terminate, or become unable to support it. And *secondly*, whenever that power shall for any cause voluntarily bring it to an end.

That the power of the Federal Government here has not been terminated, I need no argument to prove. But on this point, as well as the one to which I have cited the cases above referred to, some of those cases speak as authorities. In two of those cases, at least, in which the power of the provisional government and the provisional courts was sustained by the Supreme Court of the United States, it was so upheld in territory belonging, aside from military occupation and of right, to the domain of the United States, and over which that Government had powers of government full and complete, for all purposes, as any sovereign or State has ordinarily within its own territory; rights not limited to its external matters alone, or chiefly, as are those of the United States, in territory lying within one of the States, but embracing powers for all the details of local administration, legislative, executive, and judicial.

And even there, where the United States had, by the Constitution, powers of government ample for all purposes, the power to continue in force a provisional government long after military occupation had ceased, and when the rights of the United States there depended not at all on military power, or belligerency, but wholly on compact between the former sovereign and itself—even there, in territory confessedly belonging to the United States, and in time of peace, and in the absence of military power or military necessity, the provisional government and the provisional courts were upheld to the fullest extent, and were adjudged to continue legally and practically in force as instruments of the Federal Government until it should, by its constitutional action, through its legislature, otherwise provide.

In the earlier of those cases, *Cross vs. Harrison*, 16 Howard's Reports, 164, the Court say: "Our conclusion from what has been said is, that the civil government of California, organized as it was, from a right of conquest, did not cease or become defunct in consequence of the signature of the treaty or from its ratification.

"We think it was continued over a ceded conquest, without any violation of the Constitution or laws of the United States, and that until Congress legislated for it, the duties upon foreign goods, &c., were legally demanded and lawfully received by Mr. Harrison, the collector of the port, who received his appointment, &c., &c., from Governor Mason."

These cases, in deciding that a provisional government may be maintained by the military power of the

United States in territory belonging to it, not held in military occupation, or *jure belli*, go far to prove that the fact that this country belonged for some purposes to the United States, aside from the coming from conquest and military occupation did not take it from the application of the general principle that the conqueror, in conquered territory, has the right to govern it and to establish government as he may deem expedient; but that such territory, on the contrary, is on the same footing in that respect as territory strictly and for all purposes foreign.

There is no pretence that the Federal Government has in any manner directly brought, or sought to bring, the labors of this Court to a close. Having established it, and bade it proceed in the performance of its mission, it will continue (the power which established it continuing) until that power shall revoke its commission, or otherwise decree its discontinuance. But it is said that a civil government has been established here, and that therefore the proper functions of the provisional one, and among others the functions of the provisional court, have ceased.

It is quite true that some measures apparently tending to the establishment of a civil government have been taken. Members of Congress were elected in 1862, and were admitted to seats in the national Legislature. Several other officers—a Governor, Attorney-General, and others—have also been elected more recently under the direction of the military authorities. A convention for the revision of the Constitution of the State has been elected and convened. These things look like measures for the organization of a State government, and measures of this kind pursued may in course of time lead to such a consummation, at the pleasure of the Federal Government. That all these things have been done under and by virtue of the fostering care of the Federal Government, as exercised by the military arm of it, no one at all acquainted with the facts will doubt.

Waiving, for the present, however, as unnecessary to be considered here, the question whether these movements have their foundation in and derive their vital principle from the State or from Federal sources—and whether in use, as some of them are, they are in fact instruments in the hands of the defunct State, or of the living Federal power, it is quite certain and sufficient for present purposes that the Federal Government has not voluntarily abdicated and resigned to them all, or generally the functions of government, certainly not those of the provisional court.

Such a general surrender alone could have divested the power of this Court, for there is no pretence that the Federal Government has singled out certain powers, and among them the powers heretofore exercised by this Court, and so parted with them as to be unable to recall or exercise them. The whole argument, on the contrary, proceeds on the idea that civil government, as a whole, has been established here, and all the power to exercise it resigned into the hands of State authorities.

In short, that the State is again in possession of all the governmental powers which of right, under our system, belong to the State, in contradistinction to the Federal Government, and that the United States retain only what are designed, under our system of government, ordinarily to be exercised by the Federal Government in all the States in times of peace, and that both parties are, in fact, remitted to their own positions in the constitutional government formerly occupied by them, and the same as are now occupied by the loyal States.

At the time this motion was made (and every thing must relate to that time) there was not a court in the part of Louisiana within the Federal lines having any reasonable pretence of authority from any other source than the Federal Government.

The United States District and Circuit Courts then

in operation here, were and are the constitutional courts of that government. All else were creations of the military power of the Federal Government.

All the governmental functions in exercise here at that time, not only courts of justice but all others, and all the judges, officers, and instruments by which they were performed and operated, were those of the Federal Government, and were appointed, commissioned, animated, sustained, and moved by that power alone.

The Provisional Court for the State of Louisiana—the Court of the Federal Government—retains all the powers it ever had, and will continue to exercise rightfully a jurisdiction commensurate with its charter, so long as the President, or the Government he represents, shall will fit, and shall uphold it for that purpose; and whatever other institutions may have been brought, or allowed to come into existence in the mean time, this Court will not cease, or go out of existence, or be shorn of any of its powers or proportions by reason of the fact that some modicum of them, or of other powers of civil government, have been allotted by the common parent—the Federal Government—to other institutions or instrumentalities.

Something was said on the argument about the laws which these courts should administer. The laws of the conquered country, like every thing else connected with its government, are entirely under the control and subject to the will of the conqueror. He makes and adopts them in use at his pleasure. Those found in use at the time of the conquest may be continued in use by him or laid aside at his pleasure. If continued in use, however, they become his, and derive their force and efficacy from him and his adoption of them. In the cases cited above, a new code was made and introduced by Gen. Kearny, representing the government of the conqueror, called the Kearny Code.

In the absence of any provision on the subject, in such a case courts of justice are not bound to adhere to any particular system. This Court is commissioned to administer justice, and no code of laws is prescribed for it. It may adopt such rules as may seem wise and expedient, whether corresponding to the system in use here at the time of the conquest, or differing from it. It has always administered justice according to the Code of Louisiana, and so have all other courts here, not because it was *bound* by that code, as law of the State, but because it seemed expedient and wise to continue along under the system found in use here, rather than introduce a new one.

In the cases cited above from California, *Cross vs. Harrison*, 16 Howard R., 164; *Leitensdorfer vs. Webb*, 20 Howard, 176, and *Jecker vs. Montgomery*, 14 Howard, 498, the previously existing systems of law were ignored and a new and original system introduced, which course received the sanction of the Supreme Court of the United States in those cases; and in the case cited from Maine, the *United States vs. Rice*, 4 Wheaton, 254, the British Government made a new and different law and administered it while the territory was held by it, and that course received the sanction of the same court of highest authority, in the case referred to.

I have not cited authority for every thing I have said in this opinion—perhaps not for every doctrine I have declared. I have, however, referred to the court of highest authority in such cases of any tribunal known among men, and to the decisions of that court, quite in point, for every principle and doctrine claimed in this opinion, which is not so plain and evident as to make reference to cases for authority unnecessary and inexpedient, and, for the omission to cite them to such points, I have the very high authority of the Supreme Court of the United States, in the case of the *United States vs. Rice*; 4 Wheaton, 254, above referred to, that in cases like that “too clear to require aid from authority,” it is not well to encumber an opinion with them.

In addition to the cases already commented on, I will refer to several more having important bearing on this question, not as establishing any new principle or sustaining any old one not better sustained by more modern and unquestionable authority already referred to, though equally conclusive of the principle with them; but as furnishing, perchance, to some mind some new view, reason, or illustration of a principle better established on authority by cases already introduced.

My conclusions, therefore, are: That at the time of the establishment of the Provisional Court for Louisiana, a considerable part of the territory of that State was held by the forces of the United States, in armed belligerent occupation.

That in a country so held, the authority of the occupying force is paramount, and necessarily operates the exclusions of all other independent authority in it.

That government from some source is a necessity, and while the power to give and administer government is exclusively with a party occupying a country, there can be no doubt that the right and the duty are his to furnish a government and supply that want.

That the actual military occupation of that territory by the United States has continued from that time to the present, and still continues, and the right and duty of government, therefore, continue with the United States.

That the establishment of the Provisional Court for Louisiana, by the President, as Commander-in-Chief of the forces of the United States, while they held the territory in which it was to exercise its functions, was an act warranted by the law of nations.

That so long as the authority of the United States shall continue, the right and the duty of it as the party dominant there to afford to the country a government will continue.

That said Court has, from the time of its foundation to the present time, rightfully exercised its functions in territory in which the Government of the United States has been by force of its arms sovereign, and will continue rightfully to exercise them there, so long as its commission shall remain unrevoked and the power of the United States shall continue to support it in the exercise of them.

LOVEJOY, OWEN, born in Albion, Kennebec County, Maine, January 6th, 1811, died in Brooklyn, N. Y., March 26th, 1864. His father was a clergyman and farmer, and he worked upon the farm until he was eighteen years of age, when he fitted for college at a neighboring academy, and entered Bowdoin College. He graduated in 1835, and emigrated to Alton, Illinois, where he engaged in theological studies, his brother Rev. Elijah P. Lovejoy being at the time the editor of a paper there which advocated anti-slavery views. In 1837, the pro-slavery citizens of Alton and the neighboring counties in Missouri, taking offence at the de-

nunciations of slavery contained in Rev. Mr. Lovejoy's paper, a mob, mostly composed of Missourians, crossed the river to Alton, and, after destroying his press, murdered him. Owen Lovejoy was present, and his life was sought by the mob, but notwithstanding his utter fearlessness of danger, he escaped death at their hands, and from that day he devoted himself not to revenging his brother's death, but to seek the overthrow of slavery as having been the cause of it. At that time the laws of Illinois forbade the holding of anti-slavery meetings, and visited those who participated in them with fines. Mr. Lovejoy, who entered the ministry (of the Congregational Church) soon after his brother's death, and was pastor of a church in Princeton, Bureau County, Illinois, was in the habit of holding anti-slavery meetings at different points throughout the State, and when arrested, as he often was, and convicted and fined, he invariably announced at the close of the court at what time and place the next anti-slavery meeting would be held. He was often threatened with violence at these meetings, but the lion-like spirit of the man was only evoked the more strongly by such demonstrations, and the bursts of his eloquence, as he defended his position, thrilled his audience and won for him many warm supporters.

The authorities soon found that it was useless to punish a man of such a spirit for advocating views which he conscientiously held, and for which he was willing, if need be, to lay down his life, and after a time these odious laws fell into desuetude and eventually they were repealed. In 1854, Mr. Lovejoy was elected to the State Legislature, and in 1856 his district sent him to Congress, where he continued by successive reelections till his death. In Congress he was always an active working member, and an influential, eloquent speaker. His death was the result of Bright's Disease of the Kidneys, and though he had suffered from it for some time, his last sickness was brief.

On the 22d of February, 1864, only a month before his death, he wrote to his friend William Lloyd Garrison, giving his views with reference to Mr. Lincoln's reelection. The following were the sentiments he then expressed:

"I write you, although ill-health compels me to do it by the hand of another, to express to you my gratification at the position you have taken in reference to Mr. Lincoln. I am satisfied, as the old theologians used to say in regard to the world, that if he is not the best conceivable President he is the best possible. I have known something of the facts inside during his Administration, and I know that he has been just as radical as any of his cabinet. And although he does not do every thing that you or I would like, the question recurs, whether it is likely we can elect a man who would. It is evident that the great mass of Unionists prefer him for reelection; and it seems to me certain that the Providence of God, during another term, will grind slavery to powder. I believe

now that the President is up with the average of the House."

LOWELL, CHARLES RUSSELL, an American soldier, born in Boston, in 1835; died near Cedar Creek, Va., October 20th, 1864. He was educated at the Public Latin School of Boston, and in 1854, when scarcely nineteen years of age, graduated at Harvard College with the first honors. After several years of travel in Europe he entered into commercial pursuits, and at the outbreak of the present rebellion was superintendent of some iron-works in Maryland. He immediately sought service in the army, and was commissioned a captain in the Sixth regiment of regular cavalry. During the next two years he saw much service as a cavalry officer and as a member of Gen. McClellan's staff, and after participating in the Peninsular campaign and in the military operations in Virginia and Maryland of the succeeding autumn, was appointed early in 1863 to command the Second Massachusetts cavalry, then organizing in the neighborhood of Boston. In this capacity he on one occasion, by his coolness and personal courage, repressed a dangerous mutiny among a portion of his command. The regiment, upon being recruited to its full number, was sent to Washington, where for more than a year Col. Lowell held command of all the cavalry about the city, a post requiring no little vigilance and activity, in view of the daring depredations by Mosby's guerrillas, whom his troopers frequently encountered and dispersed. Becoming weary of this guard duty, and longing for the opportunity to serve in a regular campaign, he gladly transferred his command to Sheridan's army in the valley of the Shenandoah, and in every subsequent engagement and reconnaissance showed such ability and courage, that a brigadier-general's commission would undoubtedly have been soon conferred upon him, had he lived. He was mortally wounded at the battle of Cedar Creek, Oct. 19th, and died on the succeeding day. He had hitherto seemed to bear a charmed life, having had twelve horses killed under him within three years, and escaped without a wound. In social position, in culture, and in intellectual gifts, Col. Lowell was one of the most promising young men that New England has sent to the war. Almost every great quality belonging to the soldier seemed to be his, and his whole soul was absorbed in the cause for which he fought and died.

LOWENTHAL, Rev. ISIDOR, a philologist and missionary of the American Presbyterian Board of Missions, born in Posen, Prussian Poland, 1827, killed in Peshawur, Northern India, April 27, 1864. His parents were Jews, his mother being a strict adherent to the Rabbinical traditions or oral law. He was instructed carefully in the tenets of the Jewish faith, and in his early childhood attended a Jewish school, where he became familiar with the Hebrew and the rudiments of science, and exhibited that intense thirst for knowledge which

ever afterward characterized him. As soon as he had attained the requisite age he was admitted to the Gymnasium, where he acquired with extraordinary rapidity the higher studies of a liberal education, including most of the languages of modern Europe, and at the age of seventeen had completed the course of study. He then entered a mercantile house in Posen as clerk, but books were much more to his taste than merchandising, and every leisure moment was devoted to literary pursuits. In consequence of his association with a club of young men of liberal tendencies, and his contribution of a poem to one of the public journals, he found himself involved in difficulties, and to avoid arrest was compelled to escape from the country. Reaching Hamburg he embarked for New York, where he arrived in the autumn of 1846. Here for some time he sought employment in New York and Philadelphia without success. At length, with a few shillings he procured a few articles and went about with them in a basket as a peddler. In this capacity he visited Wilmington, Delaware, and his intellectual face and thin clothing excited the interest and compassion of Rev. S. M. Gayley of that city, who offered him a shelter for the night from the severe cold storm then raging. Entering into conversation with him Mr. Gayley found him possessed of talents of a high order, and attainments remarkable for his age, and on the morrow he invited him to remain at his house while he made efforts to secure him a situation as a teacher. He did so, and obtained for him the position of teacher of French and German in Lafayette College, Easton, Pennsylvania. In an almost incredibly short period, he obtained so thorough a mastery of English as both to write and speak it with classic purity. He entered Lafayette College in advance in 1847, and graduated in 1848. During the summer of 1847 he became a convert to Christianity, led, as he himself said, by the Christian example and devotion of his friend, Rev. Mr. Gayley. In 1848 he took the position of teacher of languages in the Mount Holly Collegiate School, N. J., and turned his attention to philological studies, in which he made rapid progress, and collected a large library of very rare and valuable books bearing upon philology. Through the kindness of Rev. Dr. Phillips, of New York, he was tendered a scholarship in the Princeton Theological Seminary, which he accepted, and in the fall of 1852 was matriculated as a student in that institution. Here he took a high position as a student, prosecuting his philological studies in connection with theology, and contributing articles of great ability to the Biblical Repository. For about a year after graduating at the Theological Seminary he was tutor in the College of New Jersey, but having decided to devote himself to the work of missions in India, he offered his services to the Board of Missions of the Presbyterian Church. He was accepted and appointed to the new mission to the Aff-

ghans. In August, 1856, he sailed for India, and arrived late in the autumn, and going immediately to Peshawur, his station, entered at once with ardor upon his work. He acquired with great readiness the difficult language of the Affghans (the Pushtoo), and soon after the Persian, Cashmiri, Hindustani, and Arabic, and as soon as he was able to speak intelligibly in these languages he commenced preaching. In the seven years of his missionary life, besides preaching with great frequency in all these languages, he had translated and published the New Testament in Pushtoo, and had nearly completed a dictionary of that language, had formed a more thorough acquaintance with Asiatic literature, manners, and customs, and Oriental politics, than any other foreigner in India; had so completely mastered the religious systems, both Pagan and Mohammedan of the country, that he was greatly feared by the ablest mufitis and priests as a disputant; had secured the friendship of the present and late Governor-General of India, to whom he rendered great services; had accumulated a very large and valuable library, said to be the richest private collection of manuscripts and rare books on Oriental topics in India, and was a frequent contributor to British and American reviews, besides conducting a very large correspondence. He was a most indefatigable student, devoting but four hours to sleep. He came to his death by this intense devotion to study, his *chowkedar*, or watchman, seeing him in his garden (where he was walking in the night to cool his heated brain), mistaking him for a robber, fired at him, and the ball striking his forehead, he fell senseless and soon expired.

LUTHERAN CHURCH. The condition of the Lutheran Church in 1864, and its progress since the previous year, is given as follows:

SYNODS.	Churches.	Communicants.
1. New York Ministerium.....	58	12,800
2. Hartwick Synod.....	38	4,400
3. Franckean Synod (New York).....	81	8,100
4. Synod of New Jersey.....	14	1,895
5. Synod of Pennsylvania.....	298	48,823
6. Synod of East Pennsylvania.....	114	13,669

Grand Total: 1,543 Ministers; 2,765 Congregations; 292,738 Communicants.

The following statistics of Lutheran ministers in the several States of the Union will give a view of the strength of the denomination in each State:

Pennsylvania, 348; Ohio, 282; Illinois, 139; New York, 133; Indiana, 116; Wisconsin, 96; Iowa, 62; Virginia, 51; Michigan, 49; Maryland, 49; Missouri, 41; South Carolina, 35; North Carolina, 33; Minnesota, 30; Texas, 28; Tennessee, 17; Georgia, 9; Mississippi, 6; District of Columbia, 6; Nebraska, 5; Louisiana, 4; Kansas, 3; Kentucky, 2; Massachusetts, 3; Delaware, 1; California, 1; Alabama, 1; Florida, 1. Total, 1,485.

The General Synod of the Lutheran Church of the United States met on the 6th of May, 1864, at York, Pennsylvania, and organized by electing Dr. Sprecher, president of Wittenberg College, president. This body meets every second or third year, and was, in 1864, composed of 27 particular synods. Three of these, however—those of Virginia, North Carolina, and South Carolina—have formally seceded from the general synod, and formed a "General Synod of the Lutheran church of the Confederate States." Besides these, the synods of Texas and West Virginia were not represented at either the general synod of 1862 or that of 1864. At the latter, two of the independent synods applied for admission: that of Minnesota and the Franckean synod. The request of the former was unanimously granted, but the admission of the Franckean synod called forth an animated discussion, because this synod had hitherto not formally acknowledged the Augsburg confession. Those delegates who favor the strictest possible adherence to the letter of the Augsburg confession, opposed the admission of the Franckean synod, but the majority decided (by 98 against 89 votes) in favor of admission after the delegates of the Franckean synod had declared that the latter would adopt, at its next meeting, the constitution of the general synod, which implies a recognition of the Augsburg confession. A portion of the minority entered a protest against the act, and the entire delegation of the Pennsylvania synod even withdrew from the General Synod. With regard to the composition of the General Synod it was decided to propose to the district synods

to amend the article in the constitution so that every synod having eight ministers should be entitled to one clerical and one lay delegate—sixteen to two; twenty-four to three; thirty-two to four; forty to five; fifty-five to six; seventy to seven; eighty-five to eight; one hundred to nine clerical and nine lay delegates, which shall be the highest number of delegates from any one synod. Strong resolutions, even more decided in their anti-slavery character than those of the last general synod, were offered by Rev. W. A. Passavant, and passed.

The most important event in the history of the Lutheran churches of Europe was the convocation of the first General Synod of the German and Slavic Provinces of Austria. It met at Vienna simultaneously with the first General Synod of the Reformed churches of the same provinces, on May 22d, 1864, and both bodies resolved to discuss such topics as were not of a strictly denominational character in joint session. The meeting of this synod completed the reorganization of the Lutheran church of Austria. An imperial letter of April 8th, 1861, and a church constitution of April 9th, 1861, proclaimed by the Government, provisionally regulated the affairs of the church. The Lutheran churches of Hungary were to have a constitution of their own, which they, however, refused to accept, claiming the right to retain their former church constitution intact. The Lutheran and the Reformed churches of the combined German and Slavic crownlands were to have each a general synod which was to revise the draft of a church constitution prepared by the Government, and take hereafter the chief control of the ecclesiastical affairs of the two churches.

The convocation of the first General Synod, was delayed by the Austrian Government no less than three years, and did not take place until May 22, 1864. The provisional draft of a church constitution, as prepared by the Austrian Government, was adopted in all its essential points by both synods. Their proceedings were very harmonious. An organic union between the Lutheran and Reformed churches, as it has been consummated in several German countries, was not resolved upon, but both synods will continue to meet simultaneously and at the same place, and to deliberate on all subjects not strictly denominational in joint session. The nationality question, which produces so much trouble in the political life of Austria, led, on some questions, to a disagreement between the German majority of the synods and the Slavic minority, as the former did not think it possible to concede all the demands made by the latter. The synods also resolved to present, conjointly to the emperor, a memorial containing the following demands of the Protestants of the Empire: "The General Synod protests: 1. Against the denomination of *non-catholic*, which is the term used in the decrees and ordinances of the political authorities to designate the adherents of the

two Protestant confessions—the Augsburg and the Helvetian; 2. The synod demands that those obstacles which, in some parts of the monarchy, are still presented to the establishment of Protestant congregations, shall be removed; 3. That booksellers shall be allowed to deal in Protestant books; 4. A community of cemeteries; 5. The admission of Protestant pastors, as of priests, into houses of retirement and charitable institutions, to exercise their functions in them; 6. The establishment of the equality of the Protestant and the Catholic festivals, in order that the authorities may be bound to protect the festivals of the Protestants in the localities in which they are the most numerous; 7. The synod protests against all interference by the subordinate political authorities in the affairs of the schools of the Protestant congregations; 8. It protests against the ordinance which prohibits the children of Jews

from frequenting Protestant, if there are Catholic schools in existence in the same locality; as it also protests against the ordinance which forbids Catholic parents placing their children with Protestant foster-parents; 9. The General Synod advances claims on the funds of the normal schools in favor of the Protestant schools; 10. It demands the admission of Protestant teachers in the medial Catholic schools; 11. The institution of Protestant catechists in the schools; 12. The incorporation of the Protestant Theological Faculty into the University of Vienna; 13. The representation of the Evangelical Church in the Diet and in the municipal council.”

The deputation which presented this memorial to the Emperor of Austria, received from the latter the promise that the Government would take the demands of the Protestants into its serious consideration, and fulfil all their just expectations.

M

MAGNETO-ELECTRICITY. Its application to lighthouse purposes has become a subject of interest. Some facts as to the manner of its use were lately stated by Mr. F. H. Holmes, in a paper read before the British Society of Arts.

Formerly lighthouses were few, and were very nearly all coal fires on high cliffs or towers, and most of them were the property of private individuals; but, as shipping increased, so the lighthouse system became more and more developed, both in the number of lighthouses and in the improvement of those already existing. The coal fire gradually gave way to the oil lamp and candles; next was the introduction of spherical mirrors or reflectors, and these, again, were superseded by parabolic reflectors, sometimes to the number of more than thirty in one lantern. After this came the introduction of the “Fresnel Lens,” which took the place of the reflectors and their lamps, however numerous they might be, and required instead one central lamp.

This “Fresnel Lens” has again grown larger and larger, as the want of a more powerful light was felt, till it has now a diameter of six feet and a height of ten, for to increase the quantity of light the size of the lamp must be increased, and the lens in proportion, or it would have been so far out of focus that the intention of the lens would have been frustrated.

To make these progressive improvements in lighthouses vast sums of money had to be expended to improve the light itself. This is done by the substitution of a lamp of four concentric wicks, the largest nearly four inches in diameter, for the coal fire. If the improvement had stopped at that it would have been small indeed, but this lamp is more under com-

mand than the coal fire. The value of the introduction of oil is not so much, then, on account of its greater power as for its aptitude for the employment of economizing apparatus, whether this consists of reflectors or lenses. All incandescent bodies give out rays as it were from the centre to the circumference of a sphere; of such rays only those which fall on the sea would be useful to the mariner, but by means of reflectors those rays which would pass inland, or upwards, or downwards, are reflected toward any required point, and by a proper arrangement of a series of reflectors, the whole or nearly the whole of the rays directed where required. The Fresnel lens consists of a middle refracting belt, and a double series of reflecting prisms, or zones, as they are generally termed, and, when properly constructed, it has the property of collecting all the rays into one horizontal beam, so that all the light from the lamp is utilized.

Whether a large or a small lamp be employed it will make no difference in misty weather, so long as the thickness of the flame is the same, for a large lamp may be equal to ten or twelve smaller ones, and, if replaced by these ten smaller, it will be evident that when one of these is obscured by mist the whole of them will be obscured. Quantity of light, then, will not add to its power of penetrating mist. By making the large lamp with four concentric wicks, the intensity of the light is a little increased, and such a lamp will penetrate further through mist in a slight degree. But it is in misty and hazy weather that the light is most required; hence the only thing wanting to make the whole system perfect is a light capable of penetrating mist; and as this power depends on the intensity of the light, and as electricity is capable of producing the most

intense light known, it was naturally looked to as the possible means of perfecting the whole system. But the light produced by electricity to be applicable for lighthouses must be certain and constant, not liable to extinctions or any great variations, as the first would tend to endanger vessels seeking and not finding the light; and if a fixed light had much variation, it might be mistaken for a revolving light.

Frictional electricity will give a succession of flashes intensely vivid, and might be used for the purpose, but for the fact that the slightest moisture is sufficient to convey the whole charge to the earth. The various forms of galvanic battery are all capable of producing a steady and intense light, but still (besides the great expense) they are not applicable, because of the necessarily varying current, which becomes weaker and weaker as the solution becomes saturated. The magneto-electric machine is then the source from which one would naturally expect a light which should be invariable in its nature and capable of being continuous for any given time, as the current produced by this machine is constant as long as the helices revolve with the same speed, and the speed can be easily regulated to any required velocity.

The electricity derived from a magneto-machine is induced in coils of wire, by the changing of the magnetic polarity of pieces of soft iron inclosed within the coils or helices; and the quantity or intensity of the induced current depends, first, on the amount of magnetism induced in the soft iron; secondly, on the facility with which the poles of the magnetized soft iron can be reversed; thirdly, on the velocity with which the change of polarity takes place; fourthly, on the length and diameter of the wire forming the helices.

The amount of magnetism induced in the soft iron depends on the size and force of the steel magnets employed, and on the weight and softness of the iron in the helices; but the weight in practice of the soft iron is limited by the weight of the steel magnets, for, if too heavy the steel magnets will be slowly deprived of their magnetism. To facilitate the change of the poles the soft iron cores of the helices are not solid pieces of iron, but are tubes, single, double, or treble, as it is found by experiment that the same weight of iron, when divided in this manner, loses or takes magnetism in much less time than when in a solid form.

There is a limit to the velocity to be employed when the maximum of electricity is required, for this reason: It has been already remarked that the amount of electricity depends on the amount of magnetism taken up, and that the soft iron takes time to become saturated, as it may be termed, with magnetism; hence, if the velocity be too great with which the cores move from one pole of a magnet to another, there will not be sufficient time for the cores to become saturated. But as again the quantity of electricity increases as the velocity increases, it is necessary to ascer-

tain this maximum point exactly, which is easily done, either by experiment or calculation, based on certain data. The length and diameter of the wire require to be different, according to the current required; for a short thick wire forming the helices represents a galvanic battery composed of a dozen, say, of very large pairs of plates, whilst a long thin wire would represent a battery composed of thousands of small plates. In other words, supposing the size of the helices to remain the same, if they are composed of thick short wires, quantity is obtained; but if composed of long thin wires, intensity will be the result.

From all this it results that there are certain laws known and established, by which a magneto-electric machine can be made to give a current of any given amount of electricity, with any given ratio between its quantity and intensity.

Having seen on what the production of the current depends, the next point to observe is, the peculiar nature of this induced current. It differs essentially from a galvanic current in this, that while the helices are revolving, the direction of the current is reversed, as the core of soft iron passes each consecutive pole of the steel magnets.

It now remains to explain how the current generated in the wires of the helices is to be withdrawn from the machine. In the first place all the helices are connected in two, or four, or more series, and in doing this great care must be observed that the direction of the coil of every alternate helix is in an opposite direction; that is, if one is wound as a right-hand screw, or, what amounts to the same thing, supposing all wound in the same direction, then the two inner ends of the wires must be joined of, say, numbers one and two, and the two outer ends of the wires of numbers two and three, and so on through the series; and lastly, the terminals of the series might be soldered into two insulated disks, and then led from the machine by two pieces of metal kept in contact with the outer surfaces of these disks by a slight spring; such an arrangement allows the alternating current to pass from the machine, and such a current will produce a light, but this light has certain disadvantages. It is never white, but always more or less blue or brownish; in fact it is like the electric light obscured by placing it behind a flame from spirits of wine. It is also extremely injurious to the eyes, both from its color and from its tremulousness. Mr. Holmes therefore does not use this current, but in its stead converts this constantly inverting current into two that flow from the machine in one direction only. This is accomplished thus: One-half of the helices are arranged so as to arrive on the poles of the magnet at the instant that the other half are exactly midway between the poles. Thus there are two distinct currents; and what may be called the dead point, that is the point when the current inverts in one series, occurs exact-

ly at the time when the other current is at its maximum, so that if now the inverted currents can be again inverted in both of these distinct currents, and that the two now flowing in one direction can be united as one compound current, it is evident that the result will be a current nearly as uniform as that from a galvanic battery, with the advantage of equable continuity. This is done by the two commutators, which consist each of two insulated rings of metal, of such a form at the periphery that two rollers or rubbers change sides from one disk to the other at the same instant that the current is reversed. Then, by combining the two commutators, a compound current is obtained that will produce a constant white light or perform any of the other functions of the galvanic current, and in a more perfect manner, as it is more uniform in its action.

A steady and constant current thus obtained from the magneto-electric machine is only one part of the problem of producing a constant and steady light, and, although the most important part, still it would be perfectly useless without an efficient lamp or regulator. In order to understand this it is necessary to explain that the carbon points used for producing the light or for converting a portion of the electric current into light, are consumed, and that the rate of consumption is irregular, owing to the irregularities in the structure of the substance used, which is the kind of graphite deposited in the gas retorts sawed up into pencils about a quarter of an inch square; but, as the consumption is irregular, no clock-work with continuous motion could be employed for the purpose of causing the carbons to approach as consumed, for it must be understood that the steadiness of the light as well as its brilliancy depend on the two carbon points being maintained constantly at a certain distance corresponding to the strength of the electric current.

Many pieces of apparatus more or less complicated have been invented from time to time for the purpose of regulating the movements of the carbon electrodes, but none of them, as formerly constructed, could be used in a lighthouse, because they were more or less uncertain in their action, and because the clockwork was too delicate and liable to accident in other hands than those of an electrician. The question, what constitutes a good regulator, must be answered by stating what it must accomplish; and moreover it must perform its several functions in the most simple manner. It must in the first place maintain the carbons at a given distance, whatever be the variation in the state of consumption, and must also be capable of being adjusted to any strength of current; secondly, if by any accident the current should be interrupted, and the light thereby extinguished, the regulator should be capable of re-lighting at once with full brilliancy, that is, not only must it allow the carbon points to touch to re-establish the current, but must separate them again instantly, or there

would be no light. Such a regulator we have here, for its construction is simple, and it performs its different functions in a most perfect manner. Its construction is this: The upper carbon is attached by a kind of small vice to a bracket, standing out from a tube, which slides freely in a column. The lower carbon is fixed in the end of another tube, exactly under the other carbon. Both of these tubes are put in motion thus: Two cords, passing over pulleys, properly arranged, are wound on one spindle, but in opposite directions. On turning a stud fixed on the end of the spindle the regulator is wound up; that is, the top bracket is raised and the lower tube depressed. On removing the hand from the stud, the upper tube would descend, and, being loaded, would cause the lower tube to rise; but to prevent this, while the regulator is out of use a bolt is pushed in, which prevents any movement in the regulator till it is again withdrawn. The regulator being wound up, the carbons are firmly fixed in their places by tightening the holders, and are then adjusted so as to bring the points of the focal plane by turning a spindle to which the fixed end of the cord belonging to the lower carbon is attached. So far the regulator is only a means by which the carbons can mutually approach each other with a certain relative speed, depending on the different diameters of the two parts of the spindle around which the cords are wound. But if the carbon points remain in contact, there will be no light. Some contrivance, then, was necessary to separate the points to the distance which, by experience, is found to give most light, and to maintain that distance between the points constantly till the whole of the pair of carbons is consumed. These two operations are accomplished thus: The fixed end of the cord which works the upper carbon is attached to one end of a lever; the other end of the lever has a piece of soft iron attached to it, over an electric magnet, so that when the bolt is withdrawn, and the carbons run together until they touch (thus allowing the current to pass), this electro-magnet instantly, by the action of the same current, lifts the cord and with it the upper carbon, to the required distance. But this is not all, for the carbons would again run together were there not some contrivance to prevent them. To accomplish this, advantage is taken of these two facts: first, that the quantity of electricity is proportional inversely to the distance between the carbon points; secondly, that the strength of an electro-magnet is proportional to the quantity of electricity passing through the wire that surrounds it. Bearing these two facts in mind, it will be easy to understand the use of the second electro-magnet. Over this electro-magnet, at a small distance above it, is placed a lever, one end of which is drawn down by a spring, the strength of which can be regulated by a thumb-screw. The fulcrum is between this end and the centre. The other end of the lever is furnished with a catch, and im-

mediately over the electro-magnet a piece of soft iron is fixed in the lever. On the carbons being allowed to touch as before, not only are they separated by the means described, but this second lever, acted on by its electro-magnet at the same instant, is drawn down toward it, and thus brings the catch between the teeth of a wheel placed under it for the purpose, and effectually locks the regulator. The strength of the spring is now adjusted till its tendency to lift the catch out exactly balances the current which draws it down. Should the distance now increase but the $\frac{1}{32}$ of an inch, the spring will be stronger than the current, will lift the catch, and the carbons will approach; by doing so, more current passes, the electro-magnet is strengthened, and is again enabled to overcome the spring and draw down the catch, and thus by their mutual action the distance between the carbon points is all but invariable.

When these regulators are employed in a lighthouse there are a pair for each lens and two small lenses, so that although it may take ten minutes to replace the consumed carbons, still the light is never extinguished; for, suppose the carbons consumed in the lens No. 1, the regulator is ready in lens No. 2; and all the light-keeper has to do is to bolt the No. 1 regulator and draw the bolt of the regulator in No. 2 lens; the current is thus diverted, No. 2 is instantly lighted, and the lighting of this extinguishes No. 1.

Thus, then, we have a most intense light, which may be maintained for any length of time, which does not require to be trimmed or extinguished for a second, and which has all the steadiness and uniformity required for lighthouse purposes. Its advantages over the oil lamp are:—first, its power can be increased *ad libitum* without increasing the size of the lens, for, if required, a machine may be made to give light enough to read by say at 10 or 20 miles; in fact the light is in direct proportion to the power of the machine that produces it; secondly, its great intensity gives it a power of penetrating haze only equalled by the sun; thirdly, its whiteness distinguishes it most perfectly from all other lights on shore, which is one of its most important properties, for many a vessel has been lost for want of this property in lighthouses lighted with oil; fourthly, where colored lights are required for the purpose of distinguishing one lighthouse from another, this light gives all the colors in a perfect manner, while the oil lamp always gives its own tinge to the color employed; fifthly, from the facility with which this light can be extinguished in an instant, and as instantly lighted to its full power, it offers other means of distinguishing lighthouse from lighthouse which cannot be obtained with any other light.

An objection has been made to this light, that, being so small, it would be altogether invisible at a considerable distance; and when it is merely considered that the apparent size of

distant objects depends on the visual angle, there seems to be some ground for the objection, but the law of visual angles does not apply in the case of self-luminous bodies; a piece of fine wire, almost invisible even with a strong light thrown on it, if by passing a current of electricity through it it is made self-luminous, it appears gradually to increase in diameter as it becomes brighter; and as a curious fact, illustrating the difference between the theorist in his study and the practical observer, a sailor who had seen the magneto-light from a great distance supposed it must be at least ten feet in diameter. Another objection to the light is, that it is too bright; this may be an inconvenience in clear weather, but a light to be useful when most needed must be inconveniently bright in clear weather.

A point to be considered is the cost of the magneto-electric light as compared with oil. The French director-general of lighthouses has made a report to his Government, both as to first cost and as to cost of maintenance; both are greatly in favor of the magneto-electric light; of course in making their calculations of cost, they take the cost of an equal quantity of light in each case, that is by oil and electricity.

At Dungeness, where the light had been in constant use since the 6th of June, 1862, there were in the lantern two small lenses, fixed one over the other, and two regulators to each. Only one light was shown at a time; but there were two regulators for each lens, so that an instantaneous change from one to the other could be made without extinguishing the light when fresh carbons were required. In the machine-room there were two magneto-machines, each capable of giving a powerful light, though both were in constant use. There was a distinct direct-acting steam engine attached to each machine, and there were two Cornish boilers, each capable of generating steam enough for the two engines. The material consumed at Dungeness was about 80 to 85 lbs. of coke per hour, and $5\frac{1}{2}$ inches of graphite in the regulator per hour, the price of this last being under three farthings per inch.

MAINE. The Legislature of Maine convened at Augusta on Jan. 6th, 1864, and was organized by the choice of George B. Barrows as President of the Senate, and of N. Dingley, Jr., as Speaker of the House of Representatives, both being members of the Republican party, which had a large majority. On the succeeding day Samuel Cony was inaugurated Governor of the State, and delivered the annual message to the Legislature. Among the measures recommended by him were an increased State tax; an effectual militia law; the appointment of a commissioner to classify public lands; a law making it imperative upon the Executive to issue death warrants upon the expiration of the year of grace allowed prisoners sentenced to be hung; the extension of the right of suffrage to soldiers in the field; a railroad to the northeastern frontier, as a means of de-

ence; and further legislation relative to the Reciprocity Treaty with the British Provinces, the benefits of which, he contended, were wholly on the side of the provincials. The Legislature adjourned on March 25th, after a session of seventy-nine days. The amount of appropriations made for the fiscal year ending January 1st, 1864, was \$4,707,911.55.

The expenditures of the State for 1864 were,

For all ordinary civil purposes, including payment of public debt and interest thereon.....	\$515,010 46
For refunding cities and towns money advanced in 1863 for relief of soldiers' families.....	592,108 14
For bounties.....	2,998,188 73
For other war purposes.....	73,179 68
	<u>\$4,108,499 01</u>

The receipts in the same period were:

From State taxes assessed prior to 1864.....	\$845,107 59
State tax of 1864.....	394,391 15
From loans permanent and temporary.....	2,965,000 00
From all other sources.....	309,513 48
	<u>\$4,509,999 22</u>

Balance in the treasury, December 31st, 1864, \$95,450.21. By a resolve approved March 19th, 1864, the Treasurer of the State was authorized to borrow \$3,000,000 by the issue of six per cent. bonds payable in twenty-five years. He disposed of bonds to the amount of \$2,765,000, which increased the funded debt of the State to \$5,187,000 on January 1st, 1865. At the same date the total ascertained funded and floating debt amounted to \$5,714,625.31. Owing to the surrender of their charters by many of the State banks, in order to recommence business as National banks, a considerable reduction was experienced in the receipts on account of the bank tax, which is by law granted as a permanent fund for common schools. During 1862 the sum of \$79,455 was received from this source, and in 1864 only \$34,492.78, with the prospect of still further reduction in 1865.

During 1864 the State contributed to the military and naval service of the country an aggregate of 13,904 men, of whom 8,880 were enlisted under the call of October, 1863, and 3,525 were veteran soldiers belonging to organizations formed at the beginning of the war, who reenlisted. The enlistments for the navy numbered 1,846. Allowances of credits for naval enlistments anterior to 1864 were made to the number of 3,675. During the year the 3d, 4th, 5th, 6th, 7th, 12th, 13th, and 14th regiments were mustered out of the service, by reason of the expiration of the term of their original enlistment. About 2,000 men were thus lost to the army. The residue of these organizations who had reenlisted, or whose original terms of enlistment had not expired, were transferred to other regiments. In view of the practice which had grown up since the commencement of the war, of large cities and towns, in their anxiety to avoid the draft, outbidding each other in the amount of bounties, thus depriving the poorer towns of the ability to fill their quotas, the legislature of 1864 enacted a law for the payment by the

State of a uniform bounty of \$300 to any person enlisting under any calls except those made prior to February 1st, 1864. Until the call of July 18th for 500,000 men, under which recruits were taken for one year, the law operated as was intended. But as the bounty of \$100 paid by the State for this class of recruits was found to be insufficient, the old mode of paying bounties by cities, towns, or associations was again resorted to. Authentic returns establish the fact that at the close of 1864 the State had sent more than 61,000 men into the military and naval service, a number nearly equal to one-tenth of her whole population. During the year claims to the amount of \$558,790.81 were presented to the State Treasurer by a number of towns, under the law reimbursing them for aid afforded to families of soldiers. Of this sum \$523,899.58 was allowed.

During the legislative session of 1864 an act was passed authorizing Maine soldiers in the field to vote for electors of President and Vice-President; also a resolve by a two-thirds vote providing for an amendment to the constitution of the State, so as to allow soldiers absent from the State, except those in the regular army of the United States, to vote for Governor and other State and county officers. The latter, in accordance with the constitutional provision, was submitted to the people for ratification, with the following result:

For the amendment.....	64,499
Against the amendment.....	19,127
Majority for amendment.....	<u>45,308</u>

The whole number of votes cast by soldiers was reported to be 4,915.

The number of beneficiaries supported by the State during the year at the Institute for the Blind was seven, and at the Asylum for the Deaf and Dumb, thirty-three. The Asylum for the Insane was filled to its utmost capacity, and unable to receive all the applicants for admission. The whole number of patients at the beginning of the year, ending April 1st, was 281; the number of admissions 143; and of discharges the same, leaving 281 under treatment, and making the whole number of patients during the year 374. Of the latter, 173 were males and 202 females. The expenses were \$51,096.02, and the receipts \$48,690.89. Since the opening of the institution, in 1824, 4,223 patients have been admitted, and 3,992 discharged. Of the latter, 2,003, or over fifty per cent., have recovered. The Reform School was reported in a flourishing condition, and in 1864, for the first time in the annals of the State, the wardens and inspectors of the State Prison were enabled to report that institution a self-sustaining one. During the year the State Normal School commenced operations at Farmington with every prospect of beneficial results.

The annual report of the Land Agent presents an encouraging view of the settlements on the public lands of the State, and of the

condition of the settlers. The latter, as a general rule, were prompt in performing the obligations imposed upon them, to open roads and make other improvements in payment for their lands, and there was an increased demand for settling lots in Aroostook. This result was attributable to a better knowledge of the richness of the soil and the healthfulness of the climate, and also to the anticipation that the projected European and North American railroad would soon be commenced through the region. This enterprise, however, depending for its immediate success upon the connection it might make with lines of railway in New Brunswick and Nova Scotia, made little progress during the year. The crops during the year were good; that of hay being unusually large, and the State was well supplied with live stock of all descriptions. The high prices realized for every species of farm products rendered the agricultural interests of the State prosperous beyond precedent.

The political canvass commenced early in the summer, and was conducted with unusual earnestness until the presidential election in November. The Republican State Convention assembled at Portland on June 29th, and re-nominated Samuel Cony for Governor by acclamation. John B. Brown and Abner Stetson were at the same time nominated for presidential electors at large. The following resolutions were adopted:

Resolved, That the Convention representing the Union men of Maine emphatically indorse the avowed policy and determination of the national Government to make no compromise with traitors in arms, but to prosecute the war until full submission is yielded to the Constitution and the legal authorities of the nation.

Resolved, That Abraham Lincoln and Andrew Johnson, as patriots and statesmen, tested in years of greatest public peril, deserve the entire confidence of the Union men of the country, and should be enthusiastically supported at the polls for the offices to which they were nominated by the Union National Convention at Baltimore.

Resolved, That the Union men of this State cordially approve the principles enunciated in the resolutions of the recent National Convention, which placed in nomination Abraham Lincoln and Andrew Johnson for President and Vice-President of the United States.

Resolved, That no country ever had a more heroic body of soldiers and sailors to defend its integrity than ours, that are deserving the gratitude and care of all true friends of liberty and the Union.

Resolved, That this Convention heartily sympathizes with the friends of the wounded and deceased soldiers, and pledges itself to the support of the bereaved and needy.

Resolved, That Hon. Samuel Cony, for the eminent ability and fidelity with which he has performed his official duties of Governor of the State, has the confidence and approbation of the Union citizens of Maine, and that we hereby pledge ourselves to give him a triumphant election in September.

The Democrats met at Bangor on August 16th, and unanimously nominated for Governor Joseph Howard, of Portland. Their candidates for electors at large were W. P. Haines and Adams Treat. The following resolutions were adopted:

Resolved, That the Democratic party is and ever has been the true Union party of the country. Under its conservative principles and enlightened policy the United States have hitherto been preserved in concord and in strength, our territory has been extended, our resources developed, our wealth increased, the rights of the United States and people maintained, public peace and domestic tranquillity secured, and the respect of the world for our free Government established, and God helping us, this Union we will maintain intact and hand it down as a priceless heritage to our posterity.

Resolved, That the existing fratricidal and calamitous war is the result of the political ascendency in power of fanatical and factious extremists; that the deliberate invasion by the National Administration of the rights of the States, the freedom of the press and the personal security of the citizens, and its avowed purpose to prosecute this war for the abolition of slavery, or until that institution shall be abandoned, exhibits a policy at once unconstitutional and revolutionary and in direct violation of the most solemn pledges of the President when he entered on the duties of his office, and of the unanimous voice of Congress when it resolved that this war was not waged in any spirit of oppression, or for the purpose of conquest or subjugation, or for overthrowing or interfering with the rights and established institutions of the States, but to defend and maintain the supremacy of the Constitution, and to preserve the Union with all the dignity, equality, and rights of the several States unimpaired, and when these objects are attained the war ought to cease.

Resolved, That the only ground of hope for the preservation of the Union under the Constitution, and of maintaining the rights of the people and of the States, and of securing an honorable peace, is by expelling from power the present corrupt, imbecile, and revolutionary administration, and substituting in its place an administration which will conduct the Government according to the requirements of the Constitution, and protect all parties in the full enjoyment of their constitutional rights, privileges, and immunities.

Resolved, That the administration, by its corruption and imbecility, has shown itself incapable of a successful prosecution of the war, and from its levity, tergiversations, and its bad faith, is manifestly incapable of negotiating an honorable peace.

Resolved, That we stand where the Democracy always have stood, in favor of the Constitution and of the rights of the States and the people, and of the entire Union in all its integrity, and of an honorable peace at the earliest possible moment.

The State election took place on September 12th, with the following result:

Governor.	No. of Votes.
Cony, Republican.....	62,889
Howard, Democrat.....	46,476
Majority for Cony.....	15,918

The Legislature chosen at this election stood:

	Republicans.	Democrats.	Rep. Maj.
Senate.....	28	8	25
House of Representatives.....	123	29	96

Giving a Republican majority of 118 on joint ballot.

The vote for presidential electors in November was:

Republican.....	61,803
Democratic.....	44,211
Republican majority.....	17,592

The electors chosen cast the vote of the State for Abraham Lincoln, President, and Andrew Johnson, Vice-President. William P. Fessenden, one of the Senators from Maine, having

resigned his seat to accept the office of Secretary of the Treasury, Governor Cony appointed Nathan A. Farwell in his place.

As one of the northern border States of the Union, Maine was exposed during the year to petty depredations by rebel refugees from the adjoining British provinces. At mid-day, on July 18th, a bold attempt was made to rob the Calais Bank, in that town, by a small party of rebel raiders from St. John, N. B., led by one Collins, a captain in a Mississippi regiment. But the town authorities having been previously put upon their guard by the American consul at St. John, three of the party were arrested and committed, and the remainder prudently kept out of the way. This attempt, though frustrated, caused an uneasy feeling along the eastern frontier, and in Eastport, Calais, Belfast, and other border towns, volunteer organizations were formed for the purpose of patrolling the streets at night, and the ordinary police force was increased and armed. The Governor, in view of the possibility of future attacks of this nature, ordered the several companies of State guards to be in readiness to move to any part of the State at a moment's warning.

An important change was made by the Legislature of 1864, in the rules regulating criminal proceedings, by the passage of an act providing that in the trial of all indictments, complaints, and other proceedings against persons charged with the commission of crimes or offences, the person so charged may, at his own request, but not otherwise, be deemed a competent witness; the credit to be given to his testimony to be left wholly to the jury, under the instructions of the court. An act was also passed incorporating the "Foreign Emigrant Association of Maine," to which the State agreed to give \$25 for every able bodied foreign emigrant from the north of Europe, between the ages of fifteen and fifty, whom the association might, within the next five years, introduce into Maine, and cause to remain one year.

MALAN, (Rev.) ABRAHAM HENRI CESAR, D. D., a Swiss Protestant clergyman and author, born in Geneva, Switzerland, July 7, 1787, died in the same city May 8th, 1864. From infancy young Malan exhibited extraordinary abilities; at three years of age he received at the commencement of the Geneva Academy a prize medal for reading, being borne in his nurse's arms to the old cathedral where the prizes were delivered, to receive it. His studies were continued at the Academy till his eighteenth year, when, from a desire to aid his parents, he went to Marseilles, and entered a mercantile house, but soon returned and prepared for the ministry at the Faculty of Theology, and at the age of twenty-three was ordained by the "*Vénérable Compagnie*" or Presbytery of Geneva. His extraordinary eloquence as a preacher and writer attracted attention at once, and ere long he was appointed preacher at the cathedral, where he occupied the pulpit of Calvin and

drew crowds to listen to his brilliant oratory. He was also appointed Regent at the Academy, and published for the benefit of his pupils a carefully annotated edition of "*Les Fables de Phédre*," and a selection of Latin poems of his own composition, remarkable alike for the exquisiteness of their Latin versification and their high moral tone. The title of this collection was "*Carmen Ettricum de precipuis bonæ vitæ officiis*." When Cesar Malan entered upon his ministry in the Genevan cathedral, the forms of the church founded by Calvin remained, but the spiritual life had departed. The young preacher endeavored to infuse the vitality of his own fervid spirit into the lifeless forms, and the latitudinarian creed of the "*Vénérable Compagnie*," but in vain. At this time there came to Geneva four men whose influence on his character was deep and abiding. These were the late Dr. John M. Mason and Matthias Bruen, of New York, and the brothers Haldane, of Edinburgh. By their instruction and conversation Mr. Malan was converted from Rationalism to a pure and active Christianity, and preaching the doctrines which he had so heartily imbibed, he soon produced a commotion in the city of Calvin. The "*Vénérable Compagnie*" had issued for circulation among the masses an edition of the New Testament, in which all passages bearing the Divinity of Christ were so altered as to favor the Socinian belief; this translation young Malan denounced with the most vehement eloquence, explaining at the same time to the assembled multitude what were the real declarations of the New Testament. The theological faculty ordered him to desist from such preaching, but in vain; they threatened him with the loss of position, and present and prospective honors; his reply was "God and Truth will remain."

In 1818 the rupture between him and the "*Vénérable Compagnie*" had become too public to admit of any hope of reconciliation, and he was dismissed from the Established Church, and the post of "regent" filled by another. For two years subsequently he preached in his own house, where some of the most eminent people of Geneva attended his service constantly. In 1820 he erected upon his own ground a church, which he named "the Chapel of the Testimony." (*La Chapelle du Témoinage*.) But his active spirit was not content with preaching the truth, or engaging in pastoral labors; his pen was also busy, now on polemical works, in defence of the Divinity of Christ; or the Sovereignty of Divine Grace, or exhibiting errors of the Romish Church, and anon in the preparation of religious tracts, clear, simple, and practical, and which exerted a powerful influence over the masses. He established the first Sabbath-school in Switzerland; founded a Magdalen Asylum, or "Penitentiary," as it is called on the Continent; organized a Tract Society for Switzerland, and taught a school of theology, in which several excellent pastors and some missionaries were educated; and amid all his toil

and cares found time to indulge his extraordinary powers as a musical composer and poet in the composition of both the music and words of a collection of *Chants de Sion*, many of the tunes in which are now adopted in the religious worship of nearly every Protestant denomination and people in Christendom, and some of his anthems have even been introduced in the Catholic service. Dr. Malan was a painter of great skill, both in oils and water colors, producing many gems in miniature during his hours of relaxation, for the gratification of his friends, a skilful lithographer and printer, and as a sculptor he possessed the ability to have attained a very high rank. Thorwaldsen was his intimate friend, and more than once intrusted him with the completion of some of his choicest groups, of which the lion executed for the city of Lucerne is an example, the fore-foot having been cut by Dr. Malan. These artistic pursuits constituted his usual amusement and relaxation from severe studies. He was an accomplished linguist, and with one of his sons, now a clergyman of the Church of England, and said to be equal to Mezzofanti in the extent of his linguistic acquirements, he made it a rule only to converse in Latin. Dr. Malan repeatedly visited England, where he attracted great attention by his eloquence, and where he had many warm friends. Many of his tracts, and several of his larger works, have been translated into English, and published in England and the United States. Among the Italian are "the Church of Rome," N. Y., 1844. "Stories for Children," 1852. "Pictures from Switzerland," 1854.

He was able to preach in his own church until the 10th of November, 1863, when he was prostrated by the disease which eventually proved fatal, but lingered almost six months, maintaining, amid severe and constant suffering, that serenity and patience which had been conspicuous in his entire life.

MARYLAND. At the commencement of 1864 all parties in this State were looking forward to the session of the Legislature which was to inaugurate measures for emancipation. The question of a State Convention to alter the organic law of the State, so that emancipation could be effected, had been decided at the election in November, by the choice of members to the Legislature in favor of such change. This body assembled at Annapolis on January 6th. The Senate was organized by the election of John S. Sellman as President, and the House of Delegates by the election of Thomas H. Kemp as Speaker. The vote was for Kemp 54, for John S. Dent 16, and one blank. On the 10th the following joint resolution was passed in the Senate and sent to the House, where on the next day it failed to pass—ayes, 26; noes, 27.

Whereas, The Senate of Maryland has this day received information from a "member of the House of Delegates" and from other reliable sources, that Gen Birney, who is in command of the "negro encampment at Benedict," has sent out about one hundred and fifty negro soldiers into the counties of Charles

and St. Mary's, with orders to seize upon and carry into the encampment at Benedict all negro men found upon plantations and otherwise, for the purpose of forcing into the military service of the United States all such as are capable of bearing arms, and of setting at liberty all who are not fit for such service;

And whereas, In the opinion of the Senate, this outrage upon the rights, property, and security of her citizens has been perpetrated by said Birney without the authority, knowledge, consent, or approval of the President; therefore,

Resolved, That a joint committee of not less than three on the part of the Senate, and not more than five of the House of Delegates, be and hereby are appointed to repair to Washington to confer with the President, and ask such redress and protection for her citizens as the necessities of their condition claim, and demand protection at the hands of the Government, and at their earliest possible convenience report to their respective bodies.

On January 18th the position of the members of the House on the question of emancipation was brought to a test. A preamble and resolutions were introduced, declaring that the "true interests of Maryland demand that the policy of emancipation should immediately be inaugurated within her borders;" that the Legislature "declares its intention to submit to the people at as early a day as practicable a call for a Constitutional Convention, so as to give them an opportunity to carry such policy into effect;" and requesting the Senators and Representatives in Congress "to use all honorable efforts to secure the passage of a law by Congress whereby all *loyal owners* may be compensated for the loss of their slaves." By a vote of 48 to 22, the rules were suspended, and the resolutions passed to a second reading. A proposition to amend the last resolution by striking out the words "*loyal owners*," and inserting "all who own slaves, and have not engaged in actual hostilities against the Government of the United States, or given aid or comfort to those engaged in hostilities against said Government," was rejected by a vote of yeas 19, nays 51. The preamble and resolutions were finally adopted by a vote of 51 to 15, seven members being absent or not voting.

On January 15th the Committee to whom was referred that portion of the Governor's Message relating to a State Constitutional Convention, submitted a majority and minority report. The majority report was signed by all the committee except one. It proposed a bill directing an election to take place on the 6th day of April ensuing, at which ballots should be cast "for a Convention or against a Convention." At the same election should be chosen delegates to a State Convention, on the same basis of representation as was established in the election of members of the State Legislature. If the majority of votes were cast in favor of a Convention the Governor was then to issue a proclamation, declaring that fact, and the delegates elected should meet in Convention at Annapolis on the 27th day of April. The Constitution adopted by the Convention was to be submitted to the voters of the State for confirmation or rejection at such time as the Con-

vention might prescribe. At the time of voting on the Convention question and for the election of delegates thereto, it was made the duty of the judges of election to challenge a voter on the ground of not being a citizen of the State, that he had expatriated himself, or did not admit his allegiance to the United States. To voters thus challenged an oath of allegiance was to be administered as a test of citizenship. The vote of those refusing the oath was to be rejected. The oath prescribed required the challenged voter to swear that he had not borne arms against the United States, or encouraged persons in armed hostility thereto; that he had not yielded voluntary support to any Government within the United States and hostile thereto, or held office under any such pretended authority, and furthermore that he would support the Constitution and Government against all enemies, foreign or domestic, and bear true allegiance thereto. The members of the Convention on assembling were required to take the same oath.

The bill reported by the minority submitted the question of Convention or no Convention to the voters at an election to be held on the 6th day of April, but did not provide for the election of delegates at that time. The result was to be certified to the Governor, who was to announce it in a proclamation. The Governor was also to communicate the vote to the Legislature, if he should call an extra session, or if he should not convene one, then at the next regular session of the Legislature. The effect of the bill would then be, that unless the Governor chose to convene an extra session of the Legislature, provision for the election of Delegates could not be made sooner than two years. The bill provided no test oath for voters or for members of the Convention.

On the 18th the Committee in the Senate on the same subject reported a bill similar to the majority bill of the House without conferring the right to require an oath of allegiance of voters as a test of citizenship.

On the 20th a motion made in the House to amend the majority bill so as to postpone the election of delegates to November, 1865, was lost—ayes 15; noes 51. On the 21st a motion to substitute the minority bill was lost—ayes 20; noes 51. In the Senate a motion to postpone the election of delegates to November, 1865, was lost—ayes 6; noes 15. These votes were watched with intense interest by the friends of immediate emancipation, who regarded them as test votes.

On the 22d a motion was made in the House to strike out of the bill the test oath. On the next day it was carried—ayes 33; noes 28.

On the 27th the Senate adopted an amendment providing that in all cases where voters were challenged as to their right of citizenship, on the score of having taken up arms against the Government, or having given aid, counsel, and encouragement to those in rebellion, it should be the duty of the Judges of Election to

put the party so challenged on his oath, and to examine him as to the truth or falsity of the charge. The vote was—ayes 14; noes 8.

On the 28th the Senate passed the bill before it—ayes 18; noes 2. The House on the same day passed its bill—ayes 45; noes 17. On February 8d the House passed the Senate bill with some amendments—ayes 43; noes 16. The most important amendment was the striking out from the first section all provisions relating to military interference with the election, and providing that the Clerks of the Circuit Courts of the State, the Clerks of all the Courts of Baltimore City, and the Registers of Wills, should not be eligible as members of the Convention.

The Senate, on the 5th, refused to agree to these amendments. The House declined to recede, and appointed a Committee of Conference. In conference it was agreed that the House recede from its amendment striking out that portion of the first section relating to military interference at the election, and that the section continue in the bill as it originally passed the Senate.

An amendment making members of the Legislature of Maryland eligible to seats in the Convention as delegates, but disqualifying the Senators and Representatives in the Congress of the United States, Judges of the Circuit Court of Baltimore and all the counties, the Judges of the Superior Court, Court of Common Pleas, and the Criminal Court of Baltimore City, the Clerks of all the said Courts, the Registers of Wills, and Sheriffs of all the counties and the city of Baltimore, was adopted.

An amendment was also agreed to requiring that sixty-five members of the whole number of delegates to the Convention—ninety-six—should be elected under the provisions of the bill before the Convention should organize; and after such organization, fifty members—the number constituting a quorum of both Houses of the Legislature—at least to constitute a quorum for the transaction of any business.

The bill was passed with amendments of the Conference Committee, in the Senate—ayes 14; noes 2. House—ayes 43; noes 15.

The provision in the bill relating to military interference with the election, was as follows:

And in case any organized military or armed force of the United States shall appear at the places where the polls shall be held, and shall interfere with said election, unless such military or armed force shall be called out by the judges of election, or other civil authority charged with the preservation of the peace, the said judges of election shall, under oath, certify to the Governor such unwarranted military interference with said election, in such election district or precinct, and the Governor shall, immediately thereupon, order a new election for delegates to said Convention, after ten days' notice, to be given by the Sheriffs as aforesaid, in such election district or precinct, and such new election shall be held and conducted in the manner and form hereinbefore provided; and the Governor shall order a new election for delegates from time to time as often as such illegal military or armed interference with the election shall be certified to him as aforesaid; but such

order or orders for such new election or elections shall not interfere with, hinder, or delay the assembling of said Convention as herein provided, if it shall appear from the count that a majority of all the votes cast in the election districts and precincts where no such illegal military or armed interference shall be certified to have taken place, are in favor of the call of such Convention.

The day fixed in the bill for the election was April 6th, and the day for the assembling of the Convention, if the election was successful, was April 27th.

Previous to the election a correspondence took place between Maj.-Gen. Wallace, commanding the military department, and Gov. Bradford, relative to the persons who should be allowed to become delegates to the Convention, or who should be allowed to vote for delegates, as follows:

HEADQUARTERS, MIDDLE DEPARTMENT,
EIGHTH ARMY CORPS,
BALTIMORE, Md., March 30, 1864. }

His Excellency, Gov. A. W. Bradford:

DEAR SIR: Herewith please find official copies of papers, a glance at which will doubtless satisfy you that persons disloyal to the Government of the United States are candidates for the Constitutional Convention, the election for which takes place on the 6th of April next. It is hardly necessary for me to say that I am deeply interested in the prevention of the scheme disclosed; and as my offer of coöperation in all matters calculated to promote the welfare of the people of Maryland was very kindly received by you, I am encouraged to ask a question touching a subject about which your Excellency's official opinion is entitled to the most distinguished consideration.

As the oath which the law providing for a Convention requires you to administer to delegates elect, before taking their seats, was evidently intended to exclude disloyal persons from participation in the deliberations of that body, I have thought it possible that it was also the legislative intention to provide a method for the rejection, at the polls, of the votes of disloyal men, and that the power, amounting to judicial authority (according to my interpretation of the act), with which the Judges of election are clothed, was really the mode adopted by the lawmakers for the accomplishment of that purpose.

Your Excellency would oblige me very much, therefore, by giving me your views as to the extent of authority possessed by the Judges of Election, and especially as to whether they have power to reject a vote on account of the disloyalty of the person offering it?

I will avail myself of the first opportunity to disclose to your Excellency the circumstances which, in my judgment, make it my duty to advise with you touching the subject.

Meantime I have the honor to remain, most respectfully, your friend and very obedient servant,
(Signed) LEW. WALLACE,

Maj. Gen. Com'dg Middle Department.

Reply of Gov. Bradford.

STATE OF MARYLAND EXECUTIVE DEPT.,
ANNAPOLIS, March 31, 1864. }

Maj. Gen. Lew. Wallace, Commanding Middle Dept.:

DEAR SIR: I received your letter of 30th inst., in which, premising that persons disloyal to the Government of the United States are candidates for the Constitutional Convention, the election for which takes place in this State on the 6th of April next, and referring to the oath which by the law providing for that Convention its members are required to take before they are entitled to seats therein. You suggest that it was probably also the legislative intention to provide for the rejection of the votes of disloyal per-

sons at that election, and that the Judges of Election are vested with an authority to that effect. You, therefore, request me to give you my views as to the extent of the authority possessed by the Judges on that subject.

It gives me pleasure to comply with this request, and to state as explicitly and as briefly as I can my views of the power possessed by our Judges of Election in the premises.

By a clause in our election laws as it has existed for many years, it is provided that "the Judges of Election may administer an oath in any inquiry they may deem necessary to be made touching the right of any person to vote; and if any person shall swear falsely in relation thereto, he shall, upon conviction thereof, suffer the pains and penalties of perjury." The effect of this provision was to authorize the administration of an oath by the judges in any inquiry touching the right of a person offering to vote; but whilst the oath was thereby legalized, and a party swearing falsely was subjected to the penalties of perjury, there was nothing in the law which required the judge to administer such oath. This omission, so far at least as the election of the 6th of April next is concerned, has been supplied by the act of the General Assembly under which that election is to be held.

By the terms of that act it is no longer a discretionary authority with the Judge to administer an oath or not, but it is made his duty to do so, and especially in the language of that act, "to every person offering to vote whose vote shall be challenged on the ground that such person has served in the rebel army, or has either directly or indirectly given aid, comfort, or encouragement to those in armed rebellion against the Government of the United States."

The fact to be ascertained is, whether the voter has served in the rebel armies, or directly or indirectly aided, comforted, or encouraged those engaged in the present rebellion; and whilst the Judge is required, wherever a voter is challenged on such ground, to administer an oath to him, he should not content himself with the mere denial, in general terms, by the one so challenged, that he has ever aided, comforted, or encouraged the rebels, but would be authorized, and I think required, to test the recollection of the party swearing by propounding to him particular interrogations, suggestive of different modes by which this aid, comfort, or encouragement may have been given—precisely as when a voter is challenged on the ground of a want of residence, the mere general affirmation upon oath of the party challenged would not be considered sufficient proof of his residence, but he would be required to state time, place, and circumstance, upon which a proper judgment as to the question of residence might be formed.

Neither is the Judge, in case of a challenge, on any account concluded by the answers of the party challenged, but he is fully authorized to administer an oath to any other who may be present and cognizant of facts having a relation to the question.

It will, of course, occur to you, from the acts which I have quoted, that the giving at any time since the commencement of the existing rebellion, either directly or indirectly, of aid, comfort, or encouragement thereto, is, so far as the coming election is concerned, the disqualification of a voter; for the General Assembly would not have imposed upon the Judge of Election the duty of inquiring into these facts, if, when their existence was established, the voter could still exercise the right of suffrage. I know that it may be said that the General Assembly possessed no power to prescribe the qualifications of a voter, and that these are established by the Constitution; but without entering into any discussion upon this point, or as to the extent of the Judges' power to inquire into and determine the question of citizenship—one of the constitutional qualifications to be possessed by the voter—it is sufficient to know that the General Assembly has declared that certain acts shall disqualify the voter at this election.

Such is the law of the State authorizing and regulating said election, and no one can lawfully question the constitutionality of that law until some court of competent authority has declared it unconstitutional. This is a prerogative belonging to our courts alone, and even as a judicial function is the exercise of a power of a grave and delicate character, and only warranted in a clear case.

I think, therefore, sir, that from this very hasty and imperfect review of our laws upon the subject, you will agree with me in believing that they are entirely sufficient, if faithfully executed, as I have every reason to hope they will be, to exclude disloyal voters from the polls.

The duty of our Judges of Election is, it seems to me, in this respect clearly defined and adequately enforced. By the 7th section of the Convention act, it is provided that any Judge of Election who shall refuse or neglect to perform any of the duties required of him by that act, "shall be liable to indictment for such offence, and upon conviction thereof shall be deemed guilty of a misdemeanor, and be sentenced to a fine of not less than \$500, and to imprisonment in the jail of the city or county where such offence may have been committed, for a term of not less than six months."

In conclusion, permit me to say I shall be at all times pleased to confer with you in all matters connected with your command touching the interests of the people of this State.

I have the honor to be, with great respect, your obedient servant,
A. W. BRADFORD.

Unusual care was taken to prevent unsuitable persons becoming members of the Convention. In Anne Arundel County, a Mr. E. G. Kilbourn was nominated as a delegate to the Convention. Gen. Wallace immediately ordered certain interrogations to be put to him, which, with his answers, were as follows:

First question asked: "Where were you born, and how long have you been a citizen of the State of Maryland?"

Answer: "I was born in Fitchburg, in the State of Massachusetts, and have been a citizen of Maryland since 1829 or 1830."

Second question asked: "Were you elected to and Speaker of the House of Delegates that met at Frederick, Maryland, April 26, 1861?"

Answer: "I was."

Third question asked: "At that session of the General Assembly of the State of Maryland were a series of resolutions offered and assented to explaining the relations of Maryland with the Federal Government, in which the following language may be found:

Whereas, The people of Maryland, while recognizing the obligations of their State, as a member of the Union, to submit in good faith to the exercise of all the legal and constitutional powers of the General Government, and to join as one man in fighting its authorized battles, do reverence, nevertheless, the great American principle of self-government, and sympathize deeply with their Southern brethren in their noble and manly determination to uphold and defend the same.

Now, therefore, it is hereby resolved by the General Assembly of Maryland, That the State of Maryland desires the peaceful and immediate recognition of the independence of the Confederate States, and hereby gives her cordial consent thereunto, as a member of the Union, entertaining the profound conviction that the willing return of the Southern people to their former Federal relations is a thing beyond hope, and that the attempt to coerce them will only add slaughter and hate to impossibility.

And also a resolution requesting the Representatives and Senators of the States of Maryland in the Congress of the United States to urge and vote for an immediate recognition of the independence of the Confederate States, in which may be found the following language:

Be it resolved, That the Representatives of the State of Maryland in the Senate of the United States, at the approaching extra session of that legislative body be, and they are hereby, earnestly desired and requested to urge and vote for an immediate recognition of the independence of the Government of the Confederate States of America.

Answer: "I am presented with a copy of the laws as contained in a volume, marked 'Laws of Maryland, 1861,' and without being able to state from my memory the fact, the resolutions as copied but in connection with others appear to have been offered and assented to."

Fourth question asked: "Did you vote for the series of resolutions to 'May 14,' 1861, heretofore cited, 'explaining the relations of Maryland with the Federal Government, and the resolutions requesting the Representatives and Senators of the State of Maryland in the Congress of the United States to urge and vote for an immediate recognition of the independence of the Confederate States?'"

Answer: By a journal of the proceedings of the House of Delegates I see my name recorded in favor of the series of resolutions assented to on the 14th day of June, and presume I voted as stated in the journal.

Fifth question asked: Did you vote for the series of resolutions assented to June 20th, in which may be found the following words:

Resolved, That prudence and policy demand that the war now waged shall cease; that if persisted in, it will result in the ruin and destruction of both sections, and a longer continuance of it will utterly annihilate the last hope of a reconstruction of this Union; therefore we want peace, and are in favor of a recognition of the Southern Confederacy and an acknowledgment of its Government.

Answer: I have no recollection of the words of the resolution, but presume I voted as stated in the journal of proceedings.

Sixth question asked: Are you aware that in the law providing for the Convention, for which you have presented yourself as a candidate, the Governor of the State is required to administer an oath to all its members to the following purport: They are required to swear that

They have never, either directly or indirectly, by word, act or deed, given any aid, comfort, or encouragement to those in rebellion against the Government of the United States?

Answer: I state positively that I have not attended any primary meeting or presented myself for election, and would not take the oath, if elected, as embodied in this interrogatory, and therefore would not serve. The reason why I could not take the oath is because of the possible misconception of my votes in the Legislature, all of which I gave in full conviction that they would promote the peace and happiness of the Union.

Seventh question: Should you be elected to the Constitutional Convention of this State, on the 6th of April next, would you take this oath before taking your seat in the Convention?

Answer: No.

E. G. KILBOURN.

Witness: MAX WOODRULL, Ass't Adj't Gen.

In consequence of this development Mr. Kilbourn's name was withdrawn from the ticket. The county judges also were extremely careful in conducting their investigations as to the proclivities of voters. In Cecil County they adopted the following particular interrogatories for their general guidance. These were recommended for adoption in all the counties:

QUESTIONS.

1. *Service in the Rebel Army.*

Have you ever served in the Rebel army?

2. *Aid to those in armed Rebellion.*

Have you ever given aid to the rebellion?

Have you never given money to those intending to join the rebellion?

Have you never given money to their agents?
Have you never given money, clothing, or provisions for the purpose of aiding the emigration of persons from this State to the South?

Have you never sent money, clothing, or provisions to persons in South since the rebellion?

8. *Comfort and Encouragement to the Rebellion.*

NOTE.—Comfort or encouragement means advocacy, advice in favor of. We aid the Rebellion by giving money, clothing, and provisions; we give it comfort or encouragement by our words. A man who has advocated the cause of the Rebellion, who talked in favor of Maryland going with the South, who rejoiced over the victories of the Rebel army, has given comfort and encouragement to the Rebellion.

Have you ever given comfort or encouragement to the rebellion?

Have you never, in conversation, attempted to justify the course of the States in rebellion?

Have you never expressed a wish for the success of the rebellion or its army?

Have you never in conversation discouraged the cause of the Federal Government?

Did you rejoice over the downfall of Fort Sumter?

4. *Disloyalty.*

NOTE.—If the Judges are satisfied that a man is disloyal to the United States, it is their duty to refuse his vote, for such person is not a "legal voter" of the State of Maryland.

Are you a loyal citizen of the United States?

Have you been loyal ever since the beginning of the rebellion?

Have you never rejoiced over the defeat of the Union army?

Have you never rejoiced over the success of the Rebel army?

When the Union army and the Rebel army meet in battle, which do you wish to gain the victory?

NOTE.—After interrogating the person offering to vote, the Judges may hear other evidence to prove or disprove his statements, and must be governed by the weight of testimony.

The result of the election was a majority of more than twelve thousand in favor of holding a convention. The number of delegates elected was ninety-six, of whom sixty-one were emancipationists and thirty-five opposed to emancipation. In the election there had also been involved the question of emancipation, with or without compensation. Of the emancipationists elected all, excepting three, were opposed to emancipation with compensation.

The Convention assembled at Annapolis on April 27th. Eighty members were present, and sixteen absent. Henry H. Goldsborough was elected President, having received fifty-eight votes. The following oath was administered to the members:

I do swear, or affirm, that I will, to the best of my skill and judgment, diligently and faithfully, without partiality or prejudice, discharge the duties of member of the Convention to frame a new Constitution and form of government; that I will support the Constitution of the United States, and will be faithful and bear true allegiance to the State of Maryland and the Government of the United States, any law or ordinance of any State to the contrary notwithstanding; and that I have never, either directly or indirectly, by word, act, or deed, given any aid, comfort, or encouragement to those in rebellion against the Government of the United States; and this I swear voluntarily, without any mental reservation or qualification whatever, so help me God.

On May 12th, the Committee on the Declaration of Rights presented a majority and minority report. The majority report consisted of forty-three articles, all of which corresponded

nearly with the then existing Constitution of Maryland, except the fourth and twenty-third articles, which were as follows:

Article 4. The Constitution of the United States and the laws made in pursuance thereof being the supreme law of the land, every citizen of this State owes paramount allegiance to the Constitution and Government of the United States, and is not bound by any law or ordinance of this State in contravention or subversion thereof.

Article 23. That hereafter, in this State, there shall be neither slavery nor involuntary servitude, except in punishment of crime, whereof the party shall have been duly convicted; and all persons held to service or labor as slaves are hereby declared free.

The minority report approved generally of all the articles contained in the majority report except the fourth and twenty-third, respecting which the minority say:

That, with regard to the proposed fourth article of the Declaration of Rights, as reported by the majority, they are of opinion that however true is the proposition that the Constitution of the United States and the laws made in pursuance thereof are the supreme law of the land, yet it has never been deemed necessary by the statesmen who framed that Constitution, or by those who framed the constitution of this State, or, in so far as the undersigned have learned, by the framers of any one of the numerous constitutions of the other States, to insert amongst the rights and prerogatives of their citizens any language enforcing the obligation of allegiance to the General Government of the United States.

Nor do the undersigned perceive the necessity for a departure from the universal practice that has obtained in all the States, and which practice has been adhered to even in those instances where constitutions have been framed in the midst of existing civil war; or for the voluntary offering of allegiance to the Government, on an assumed condition of hostility in the legislation of the State to the Government of the United States.

The undersigned also dissent from the adoption of the 28d Article as proposed in the majority report, believing it to contemplate a sudden, violent, and most mischievous destruction of the relation of master and slave, which, commencing with the earliest history of the colony, has been maintained during all the intervening period, with the regular and progressive advancements of the State in all that is useful and honorable, and with a conviction of its usefulness and propriety on the part of our citizens so deeply and universally felt, that they have carefully prohibited by their Constitution, as well that of 1776 as that of 1861, any interference with this relation, the rupture of which is now recommended by the majority of the committee, without the slightest preparation on the part of either master or slave for the extreme change of condition so instantaneously precipitated upon them, inflicting upon each very serious and unnecessary injury and suffering, and particularly upon the slaves, and in the absence of compensation, iniquitous and unjust in the extreme to the master.

The articles reported by the majority, except the 4th and 28d, were considered, and generally approved on the second reading. The latter were reserved for special consideration by the Convention. On June 1st they were taken up; when Mr. Clarke, of Prince George County, moved to strike out the 4th article, and insert the following:

The Constitution of the United States, and the laws made in pursuance thereof, being the supreme law of the land, every citizen of this State owes alle-

giance to the Constitution and Government of the United States, within the limits of the powers conferred by that Constitution, and is not bound by any law or ordinance of this State in contravention or subversion thereof; and the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, being reserved to the States respectively, or to the people, every citizen of this State owes allegiance to the State of Maryland, so far as the sovereignty of the State has not been affected by the Constitution of the United States and the laws made in pursuance thereof, and is not bound to yield obedience to laws made in direct violation of the Constitution of the United States, and in the exercise of usurped powers.

To this amendment, Mr. Sands, of Howard, offered the following amendment:

Provided, That nothing contained in this article shall be construed as giving to the State a right to secede from the Federal Union, or to form a Confederation with any other State or States of the Union, or to seize by force of arms or otherwise any property of the United States situate and being within the limits of this State, but that these acts are hereby expressly forbidden.

On the next day the amendment of Mr. Sands was adopted—yeas 45; nays, 30. The amended proposition was then rejected without a division, and the question recurred on the original article, when a motion was made to strike out the word “paramount,” and a general discussion ensued.

Mr. Cushing, of Baltimore City, in favor of the article without any change or amendment, took the floor:

He alluded to the protection that had been given the people of Maryland when the State had been invaded, and said the General Government had always exercised its paramount supremacy for the good of the people. There was no authority in Maryland to protect the people but that of the Government of the United States, and it was the least that the people could do to recognize the paramount allegiance they owed to that Government, and he would be happy to record his vote in favor of the article. He contrasted the spirit actuating the Government of the United States and the so-called “Confederate” Government, saying that the former savored of the mild, merciful, and paternal spirit of our Heavenly Father, and the other of the malignant spirit of the Father of Lies, and that the difference between the two was the same as that between Heaven and Hell.

On the next day, June 3d, Mr. Belt, of Prince George County, in opposition, contended:

That “allegiance” was due to the State and “obedience” to the General Government, and said he was opposed to the article because it tended to the adoption of the theory of the consolidation of Government, which he believed had been a curse to the country for the past three years.

The discussion was resumed on June 13th, when Mr. Miller, of Anne Arundel, in opposition said:

He would base his argument on three propositions, which he held to be true: First. That the Colonies, at the time of the accomplishment of the Revolution, were sovereign and independent States. Second. The Constitution of the United States was adopted by the people as citizens of the distinct and independent States to which they belonged at the time of its adoption, and that each of them was then considered and recognized as a sovereign State. Third. That the Government of the United States thus created is of a limited character, confined to the exercise of

limited powers, and all such powers as are not granted to it or implied are necessarily held by the people.

Mr. Miller argued at length in support of his views, saying that he was opposed to the doctrine of Secession as a constitutional right, and that he also opposed the doctrine that we are a people living under a consolidated Government with unlimited powers. The States form distinct and independent portions of the Government, and in their sphere are no more subject to the control of the Government of the United States than the latter is to the control of the State. The laws of the United States are supreme as to all their constitutional objects, and the laws of the State are the same, and it is no more the duty of the citizen to sustain the laws of the Federal Government against the laws of the State, than it is his to sustain the laws of the State against those of the Federal Government. Each are supreme in their constitutional sphere. In case of a conflict where they come under judicial cognizance we have the Supreme Court of the United States to appeal to, and several times that body has declared laws of both the United States and of the States to be null and void. There may arise cases which cannot be brought before that tribunal. Who, then, is to be the arbiter? Mr. Miller read extracts from an address delivered by John Quincy Adams before the New York Historical Society in 1839, from Edward Everett's letter accepting the nomination for Vice-President in 1840, from Secretary Seward's letter of instructions to Minister Adams in 1861, and from Alexander Hamilton in the *Federalist*, declaring that in a case of that kind arising, it would be better for the States to separate than to attempt to live together by coercion, and that such a course would only end in ruin.

Mr. Miller also said, during the course of his remarks, that the Government of the United States had no right to build a fort, dockyard, arsenal, or any building, except by the consent and permission of the State wherein such building was to be located. The Naturalization laws of the United States do not require those intending to become citizens to swear allegiance to the Government of the United States, although they have been citizens of a foreign nationality and sworn allegiance thereto. The person becoming naturalized swears only to “support” the Constitution of the United States, and gives his “allegiance” to the State of which he may happen to become a citizen.

On the 15th, the subject was again under discussion, when Mr. Ridgely, of Baltimore County, said:

This question was as old, if not older, than the Constitution itself, and had been a bone of contention ever since the formation of the Government; it had divided the country into sectional parties in the first Congress which met under the Constitution, and during the two first Administrations of the Government had supplied the South with sectional capital in their opposition to Mr. Hamilton's bank project, also to his suggestion to assume the payment of State debts; to the excise laws and tonnage duties; and in Mr. Adams' Administration, to the alien and sedition laws.

During the two succeeding Administrations it had arrayed the North against the South, in its opposition to the Embargo; and the war of 1812 had led to the claim of State Rights by the North, and the right of secession, and the doctrines of the Hartford Convention. In reviewing the relative positions occupied by the North and the South in the early days of the Republic, he had reached the conclusion that this doctrine had its origin rather in the local interests of the party which had expressed it, than in any love for the Constitution, or desire to restrain its functions. The South was inflamed by the introduction of petitions from Pennsylvania, in the first Congress,

to abolish their peculiar institution, Slavery; and the North were in a corresponding degree imperilled by the serious injury done to their commerce by the Embargo and the Declaration of War; he had, therefore, notwithstanding his veneration for the great names of Madison and Jefferson, whose opinions had been mainly relied upon as contemporaneous with the formation of the Constitution as authority for the doctrine of State Sovereignty, to receive such authority with comparative qualifications and restraints—for the reason that these men were at last but men, and were influenced in a good degree by the circumstances of their surroundings, by the prejudices inseparable from their locality and connections, and the training and discipline of the school of politicians to which they belonged.

They had expressed opinions upon both sides of this question. Mr. Madison, as a member of the First Congress, had earnestly opposed Mr. Hamilton's project of a bank, upon the ground that there was no such power enumerated in the grant of powers in the Constitution; that Congress had no power to create a corporation—and mainly upon his influence the scheme was defeated. The same gentleman—Mr. Madison—had, during his Presidency, surrendered these constitutional scruples, and signed the bill to incorporate the Bank of the United States. Mr. Jefferson, who, notwithstanding his well-known State Rights doctrines, had, in his advocacy of the construction of the navy by the Government for the purpose of punishing the Barbary powers, maintained that such navy would be also an effectual means of enforcing the laws against delinquent States. Mr. Jefferson had also, in a letter to Mr. Monroe, expressed the opinion that a single frigate sent to a delinquent port which had refused or withheld payment of its taxes to the Government, would be the effectual means of coercing obedience to the laws.

He also repudiated the theory that the United States was the mere agent of the separate State Sovereignities, by referring to the absurd conclusion which such premises would involve, leading, as they did, to the inevitable result, that the principal, if the individual States were such, would in fact be subordinate to the agent, for, by the Constitution, every officer of a State Government was bound, under oath, to support the Constitution of the United States; hence the obligation would be from the principal to the agent, rather than from the agent to the principal.

He concluded his speech by an analysis of the proposed Article in the Bill of Rights under discussion, contending that it was literally a transcript of the existing Article in the Constitution of the United States, which declares that the Constitution, and the laws made in pursuance thereof, is the supreme law; and that the language of the Article reported by the Committee on the Bill of Rights did not vary the Article, but simply drew, as a conclusion from the words of the Constitution, that *paramount* allegiance was due to it, simply because the law being supreme, necessarily imposed, as inseparable from such supremacy, supreme allegiance to it; or, in other words, supreme *obedience* to it. He remarked also that he thought the objection was rather to the word *allegiance*, because in these times it had a peculiar significance, well understood, without special definition, rather than to the idea that supreme obedience was not due to the Constitution of the United States and the laws made in pursuance thereof.

The question was fully discussed, and on June 16th all amendments were rejected, and the original article adopted—yeas 57; nays 81.

The 28d article was next taken up for discussion, and its passage urged by Mr. Valliant of Talbot County, who thus presented the reasons for refusing compensation to owners:

This article fails to make any provision for the compensation of those who may happen to lose by the sudden emancipation of slavery, and fails to empower the Legislature to make any such provision, and very justly failed to do so. Mr. President, slavery has already been emancipated. I contend that there is not a single slave in the State. Let us see if I am correct in saying there is not a single slave in the State. If one of your servants saw fit to approach you to-morrow morning and say: "I want to leave your service forever, and that ere another day passes over my head, I shall be beyond the western hills, to take up my residence with a strange people," you would not think it worth your while to take any steps to prevent his absconding. Is he a slave who can approach his master and use such language as this with impunity? Certainly not. Then, sir, slavery is entirely destroyed in this State, and really it is not the institution of slavery which we propose to do away with, but the status of slavery. All we propose to do is to wipe off from our statute books all recognition of an institution which has already ceased to exist.

Mr. President, I submit to gentlemen thinking differently from myself if it is the fault of the State of Maryland that slavery has been abolished here, or in any of the States south of it? Did the honest workmen of this State have any thing to do with it? Did the people of the State, or any party in it, bring about this radical change? Had the Governor of the State any hand in it? or had any of the State authorities any hand in it? Then, sir, I want to know, if neither the State nor any of the State authorities, nor the people, had any thing to do with the breaking up of the institution, upon what principle of justice can gentlemen claim a compensation at the hands of the State? Was it the fault, I again ask, of the honest, hard-fisted workman of the State, the small farmers of the State, the merchants of Baltimore, or the people of any of the Western counties? If not, then why should they be compelled to pay for it? Had the sudden emancipation of slavery been under their control, you and I would still have been slaveholders; therefore I am honestly of the opinion that the State ought not to be taxed for this destruction of property, for which destruction it is not in the smallest degree to be held responsible.

Suppose, for the sake of argument, slavery does exist in Maryland; suppose, further, that good men hands are worth all the Government is offering to pay for them; even in that case I doubt the expediency of the State paying for them, and for this reason, that if we undertake to compensate loyal owners we will soon have to compensate the disloyal.

The leading objections to emancipation were presented in opposition by Mr. Peter, of Montgomery County.

He first contended that the ties which bind the affection and love of a people to their country was a safe, sure, and stable protection in their rights and privileges, among which is the right of property; that the right of property in slaves existed by Divine authority, and by the laws of the land as settled and fixed by the decisions of the Supreme Court of the United States. He secondly contended that nothing sooner disturbed the quiet and equanimity of a people than the infringement or destruction of this right. That the destruction of this right would be a flagrant act of injustice to the people of Maryland, and dangerous in the extreme. If they could be stripped of one species or kind of property in this summary manner, it might soon follow that they would be deprived of some other kind of property; that by the Constitution of the United States the people of this State cannot be thus divested of their property, under the plea of policy or necessity, without just compensation. That the Constitution of the

United States being the supreme law of the land, no State action can divest its citizens of rights secured by that instrument. That the excuses and grounds urged for the destruction of this right in Maryland were fallacious excuses for personal advancement and gain. That we have suffered already great wrongs and injuries at the hands of the Government of the United States, which was bound to protect us. And lastly, that we were now enveloped in a vale of fanaticism.

The article was further discussed until June 88, when it was adopted—yeas 53; nays 27. On July 8th the Declaration of Rights reported by the majority of the Committee passed the Convention—yeas 48; nays 14.

The Convention continued its sessions during eighty-nine days, until Sept. 8th, when the new Constitution for the State was reported by the Committee on Revision as ready to be submitted to the Convention. It was read and adopted: yeas 53; nays 25. Some of the members opposed to the Constitution, when called to vote briefly stated the grounds of their objections, thus:

Mr. Dent, of St. Mary's, explained his vote as follows:

I shall vote against this Constitution for the following reasons:

First. Because I believe that the election by which this Convention was called, and its members elected, was not free for the legal voters of the State, but was held and conducted in clear violation of the legal rights of voters, in consequence of which a majority of the legal voters of the State was excluded from the polls.

Second. Because by this Constitution the cardinal principles of the rights of the State have been repudiated, and a rapid stride is taken toward centralization of power in the Federal Government.

Third. Because by this Constitution citizens of the State have been unjustly deprived of millions of dollars' worth of property by the abolition of slavery, and no compensation to the owners has been provided; and not only so, but the Legislature is expressly prohibited from providing compensation hereafter.

My fourth objection is because the right of suffrage is so impaired, or attempted to be impaired, by the provisions for submitting this Constitution to the voters of the State, that there cannot be a free exercise of the invaluable right of suffrage on its adoption or rejection.

Besides these cardinal objections, I have many comparatively minor objections to this Constitution, and believe that, taken as a whole, it is an instrument of wrong and oppression, unparalleled in the history of American Constitutions, and ought not to be adopted.

Mr. Jones, of Somerset, said he considered it a violation of the rights of the citizens to prescribe an oath to qualify them to vote for the new Constitution, and therefore he should vote "no."

Mr. Mitchell, of Charles, said that the people of his county would be affected in a great degree by the abolition of slavery—hundreds would be ruined by it. A great portion of them would also be disfranchised, and he would therefore vote "no."

Mr. Pugh, of Cecil, remarked that he had tried hard to be elected a delegate to the Convention, and he was proud that he had succeeded. Never in his life had he had an opportunity for more rejoicing than in casting his vote in the affirmative on the adoption of the Constitution.

Mr. Chambers, of Kent, said the new Constitution proposed the most unjustifiable seizure of property, and the most wanton attack on the political rights of

those whose property, liberty, and every political right the Convention had assembled to protect. He would therefore vote "no."

A protest against the action of the Convention, signed by thirty-five of its members, was subsequently published.

The Convention provided for submitting the new Constitution to the people on Oct. 12th and 18th, under such restrictions as were required in the Constitution for the qualification of voters at State elections, which were as follows:

SEC. 4. No person who has at any time been in armed hostility to the United States, or the lawful authorities thereof, or who has been in any manner in the service of the so-called "Confederate States of America," and no person who has voluntarily left this State and gone within the military lines of the so-called "Confederate States of America or armies" with the purpose of adhering to said States or armies, and no person who has given any aid, comfort, countenance, or support to those engaged in armed hostility to the United States, or in any manner adhered to the enemies of the United States, either by contributing to the enemies of the United States, or unlawfully sending within the lines of such enemies money or goods, or letters or information, or who has disloyally held communication with the enemies of the United States, or who has advised any person to enter the service of the said enemies, or aided any person so to enter, or who has, by any open deed or word, declared his adhesion to the cause of the enemies of the United States, or his desire for the triumph of said enemies over the arms of the United States, shall ever be entitled to vote at any election to be held in this State, or to hold any office of honor, profit, or trust under the laws of this State, unless since such unlawful acts he shall have voluntarily entered into the military service of the United States, and been honorably discharged therefrom, or shall be on the day of election actually and voluntarily in such service, or unless he shall be restored to his full rights of citizenship by an act of the General Assembly passed by a vote of two-thirds of all the members elected to each House; and it shall be the duty of all officers of Registration and Judges of Election carefully to exclude from voting, or being registered, all persons so as above disqualified; and the Judges of Election, at the first election held under this Constitution, shall, and at any subsequent election may, administer to any person offering to vote the following oath or affirmation: "I do swear or affirm that I am a citizen of the United States; that I have never given any aid, countenance, or support to those in armed hostility to the United States; that I have never expressed a desire for the triumph of said enemies over the arms of the United States; and that I will bear true faith and allegiance to the United States, and support the Constitution and laws thereof as the supreme law of the land, any law or ordinance of any State to the contrary notwithstanding; that I will in all respects demean myself as a loyal citizen of the United States; and I make this oath or affirmation without any reservation or evasion, and believe it to be binding on me." And any person declining to take such oath shall not be allowed to vote; but the taking of such oath shall not be deemed conclusive evidence of the right of such person to vote; and any person swearing or affirming falsely shall be liable to penalties of perjury, and it shall be the duty of the proper officers of registration to allow no person to be registered until he shall have taken the oath or affirmation above set out; and it shall be the duty of the Judges of Election, in all their returns of the first election held under this Constitution, to state in their said returns that every person who has voted has taken such oath or affirmation.

Provision was also made for a vote of the soldiers on the new Constitution, and at the subsequent election for President and members of Congress in November. The new Constitution authorized a poll to be opened in each company of every Maryland regiment in the service, at the quarters of the commanding officer thereof; the commissioned officers of such company were authorized to act as Judges of Election, and any one of them was made competent to hold the election; if no officer was present, two of the voters could act as Judges of the Election; any voters of the State within ten miles of the poll were authorized to vote. The judges were required to take an oath, which each one could administer to the other, to perform the duties of judges according to law, prevent fraud, and observe and make proper returns.

When these sections were reported to the convention, some of the committee presented a minority report, of which the following extract contains their objections:

The undersigned dissent from the report submitted by the majority of the committee:

1st. Because they believe the authority given to soldiers in camp to vote at all elections will utterly fail to have the effect proposed by those who advocate the measure. On the contrary, as the undersigned believe, it will enable the officers who command the soldiers to control the votes of those who feel and know the power of their officers, to make them unfair in various ways, the penalty of disobedience to their wishes. To a soldier on duty, the first great lesson taught is, "obedience to his commanding officer," military necessity requiring a rigid exaction of this duty. It allows of no discussion or discretion. To fail in the smallest respect ensures harsh treatment, even in cases where martial law prescribes no specific penalty. It will not be doubted that the only safe approach to the favor of an officer is to gratify his wishes by voting his ticket.

2d. But whatever may be the propriety of taking the votes of soldiers or their officers, the undersigned cannot permit themselves to doubt of the concurrence of the Convention in their determined opposition to so much of the report of the majority as provides for the immediate operation of portions of the Constitution before its adoption by the people. Surely if any one proposition in regard to our proceedings was universally accepted, by all who voted, whether for or against a Convention, it was this, that its work was to be submitted to and accepted by the people of the State before it should have any effect. Yet the majority propose that now, at the very moment when the question of adoption is being taken, in the very act of taking that question, the people shall be bound and governed by it, so far as relates to some of its most important and vital changes of the existing system of Government. What a strange spectacle would be exhibited if the provisions now proposed should be enforced as part of the new Constitution, in direct opposition to the existing Constitution, and yet the result show that the people will not accept the new Constitution! The present Constitution exists until the new one is adopted. How, then, can the provisions of the present Constitution be violated, or interfered with, until the new one has an existence, by the adoption of the people? The great purpose of the majority seems to be to deprive those who form the constituency of this Convention of the privilege secured to them by the present Constitution, of passing upon the work of this body; and to this end, by newly-contrived oaths and by the aid of the military, to confirm their proceedings. For these, amongst other reasons, the undersigned

protest against the report in the particulars mentioned.

In addition to the provision above mentioned in the 4th and 28d sections of the Declaration of Rights, the new Constitution provided for a uniform system of public schools and an elective judiciary. The right of confiscation in case of treason was also secured.

Those who were opposed to the new Constitution objected particularly to the oath as in conflict with the then existing Constitution of the State. Their rights and privileges, they asserted, were held under a Constitution adopted in 1851, and the laws made in pursuance thereof; but the new Constitution which attempted to regulate them, had not been adopted; it was a mere proposition to be accepted or rejected; it was without vitality or energy. Under those views several applications were made to Governor Bradford to instruct the judges of election to disregard the requirement of an oath, and to disregard it himself by announcing that he would not count the votes of any county where such an oath was administered to the voters. In reply to these appeals the Governor declined to act, on the ground that the decision of the question of the constitutionality did not belong to him; it was purely a judicial question, properly belonging to the Judiciary Department.

An active canvass for votes ensued. Public meetings were held in various parts of the State by the friends of the new Constitution. At one of these meetings held at Baltimore in the evening of October 10th, the following letter from President Lincoln was read:

EXECUTIVE MANSION,
WASHINGTON, October 10, 1864 }

Hon. Henry W. Hoffman:

MY DEAR SIR: A Convention of Maryland has framed a new Constitution for the State; a public meeting is called for this evening at Baltimore to aid in securing its ratification by the people; and you ask a word from me for the occasion. I presume the only feature of the instrument about which there is serious controversy, is that which provides for the extinction of slavery. It needs not to be a secret, and I presume it is no secret, that I wish success to this provision. I desire it on every consideration. I wish all men to be free. I wish the material prosperity of the already free, which I feel sure the extinction of slavery would bring. I wish to see in process of disappearing that only thing which ever could bring this nation to civil war. I attempt no argument. Argument upon the question is already exhausted by the abler, better informed, and more immediately interested sons of Maryland herself. I only add that I shall be gratified exceedingly if the good people of the State shall, by their votes, ratify the new Constitution. Yours truly,

A. LINCOLN.

Of the entire vote cast on October 12th and 18th 80,174 were for the Constitution, and 29,799 against it—majority 875. There were also 94 ballots cast by persons who refused to take the oath which were therefore rejected.

The new Constitution required the Governor on its adoption to issue his proclamation stating the fact. The Governor, in a letter to the public, on October 28th, says:

A request was made of me recently by a committee

of gentlemen, representing, as I understood, those opposed to the adoption of the new Constitution, that before issuing any proclamation, as required by its terms, I would allow counsel to inspect the returns of the soldiers' vote provided for by that instrument, and submit to me such objections thereto as they thought could be made. Although the proposition was a novel one, and I believe no other instance exists in which election returns, filed as they are, annually or biennially in this department, have ever been subjected to a legal scrutiny as a preliminary to executive action, I did not feel at liberty to refuse the request, and at once agreed that counsel should have full access to these returns, stipulating only that, as according to the view I took of the case, there were no facts about which I could inquire except such as were suggested on the face of the returns, that all objections or discussion should be limited accordingly, and that the friends of the Constitution should be advised of the proceeding and allowed the opportunity of answering these objections, as well as making any other to the home vote that might occur to them.

The past two or three days have been devoted to this examination, and a great number of exceptions have been taken to these returns, and argued with the ability that distinguishes the learned counsel who conducted the examination. He had been already apprised that my previous examination of that subject had brought my mind to the conclusion, several times expressed, that so far as my action was concerned, I was bound by the provisions of the Constitution which the Convention had adopted; and whilst we differed widely as to its authority, he very courteously waived all discussion upon that subject, and confined his argument to exceptions taken to the sufficiency of correctness of the military returns, and those I now propose to consider.

He then proceeds to state the objections to the soldiers' vote, and to reply at much length, and concludes, that "the entire vote authorized by the Constitution having been thus accurately ascertained, it becomes my duty, in obedience to its mandate, to proclaim the result and its adoption."

A case was also brought before the Court of Appeals to obtain an exposition of the rule of law which ought to guide the discretion of the Governor in his ascertainment of the result of the election had for the adoption or rejection of the new Constitution. Justice Bowie announced the conclusions arrived at by the Court, as follows:

The relator's prayer substantially is, that the Governor of Maryland show cause "why a writ of mandamus ought not to be issued, commanding him, in ascertaining the number of votes cast at the said late election held as aforesaid," to count certain votes which were tendered and rejected, and to exclude certain votes which shall appear to have been cast at any other place than the election precinct at which the person voting was qualified to vote.

From this brief analysis it appears the proceeding is one of the most momentous consequence, and should be treated with the greatest deliberation. Our first duty is to inquire whether it is a proper subject for judicial interpretation and interposition.

By our organic law, the powers of government are distributed into legislative, executive, and judicial. We are admonished by the Declaration of Rights that these powers "ought to be forever separate and distinct from each other, and no person exercising the functions of one of said departments shall assume or discharge the duties of any other."

The second article of the Constitution is, "the executive power of the State shall be vested in a

Governor." "He shall take care that the laws be faithfully executed."

The sixth section of the Convention law required the Constitution and form of government adopted by the Convention to be submitted to the legal and qualified voters of the State for their adoption or rejection, at such time, in such manner, and subject to such rules and regulations as said Convention may prescribe; and the provisions therein before contained, for the qualification of voters and the holding of elections, provided in the previous sections of this act, were made applicable to the election to be held under that section.

The eighth section further enacts that when the Governor shall receive the returns of the number of ballots cast in this State for the adoption or rejection of the Constitution submitted by the Convention to the people, if, upon counting and casting up the returns as made to him, as hereinbefore prescribed, it shall appear that a majority of the legal votes cast at said election are in favor of the adoption of the said Constitution, he shall issue his proclamation to the people of the State, declaring the fact, and he shall take such steps as shall be required by the said Constitution to carry the same into full operation and to supersede the old Constitution of this State.

Is the power and authority conferred on the Governor by this act a political or judicial power?

A late eminent jurist, whose recent death has been lamented as a national calamity, in the case of *Luther vs. Borders, et al.* (7 Howard, 39), expressed himself thus strongly: "Certainly the question which the plaintiff proposed to raise by the testimony he offered has not heretofore been recognized as a judicial one in any of the State courts. In forming the constitutions of the different States, after the Declaration of Independence, and in the various changes and alterations which have since been made, the political department has always determined whether the proposed Constitution or amendment was ratified or not by the people of the State, and the judicial power has followed its decision."

Courts of law will not interfere with the exercise of high discretionary powers vested in the Chief Magistrate of the State, for obvious political reasons. Among others, "because, as Governor of the State, deriving his powers from the Constitution thereof, he has been made a coördinate, separate, distinct, and independent department of the Government."

In the case of *Low vs. Towns*, Governor of Georgia, the Supreme Court of that State said: "The ultimate effect of this remedy (mandamus), in case of refusal by the Governor to obey the laws of the land, would be to deprive the people of the State of the head of one of the departments of the Government." (8 Geo., 372.)

Chief Justice Marshall, in the case of *Marbury & Madison* (1 Cranch), says that "the President is invested with certain important political powers in the exercise of which he is to use his own discretion, and is accountable only to his country in his political character, and to his own conscience."

The Chief Magistrate or Governor of the State bears the same relation to the State that the President does to the United States, and in the discharge of his political duties is entitled to the same immunities, privileges, and exemptions—*vide Hawkins vs. the Governor*, (1 Ark. Rep., 586.)

Independently of all political considerations, if the question was a purely judicial one, this Court could not, consistently with decisions in other States and in our own, grant the prayer of the relator.

The general principle laid down in all these, almost without exception, is, that where the act to be done requires the exercise of judgment and discretion in the officer against whom the mandamus is prayed, it will be refused. (*Vide cases collected 12 Md., Funnell vs. Green, 336; 17 Howard, 280.*) The result of these decisions is, that the duty and power to decide the questions which we are asked to determine are

devolved upon the officer, or Governor, without appeal, over whom, in that respect, the judiciary have no control or revisory power.

We have thus succinctly announced the general principles which lead us to the adoption of the conclusion that the order of the Superior Court in this case should be affirmed.

The Court has been invoked to enter into the constitutional powers of the Convention and express opinions upon the validity of their acts, even if they should hold that the right to issue a mandamus did not exist; and they have been referred to the eminent examples of the Supreme Court, through their Chief Justices, in some cases where they declared the law, although they could not enforce it. Without dwelling on the immense moral, political, and legal influence of that tribunal, to which we cannot pretend, we respectfully suggest there is no parallel between the cases. Those cases in which the Supreme Court adopted that course, with one notable exception, were not cases in which society was shaken to its foundations by civil discord and parties arrayed against each other with intense bitterness. If we cannot subdue the strife, we will not add fuel to the flame. All that we can do is to show such reverence for constitutional government, by confining ourselves to the strict limits of our authority, as may induce others, who love "liberty regulated by law," to cherish all its muniments and observe all their obligations.

Justice Bartol delivered the following separate opinion:

I assent to that part of the opinion of a majority of the Court which denies the mandamus asked for, on the ground that the duties devolved upon the Governor, by the act of 1864, chapter 5, in ascertaining and announcing the legal votes upon the adoption or rejection of the proposed new Constitution, are not purely ministerial in their character, but that they require the exercise of judgment and discretion on his part, necessarily devolving upon him the duty of passing upon and deciding the various questions argued before us, and upon which we have been called upon to pass. In such case the law is well established that a writ of mandamus will not be granted. *Green vs. Purnell*, 12th Maryland, 829, and the cases there referred to and many other cases might be cited. I do not agree, however, with my brothers in thinking the power devolved upon the Governor, now under consideration, is in any sense a political executive power belonging to him *virtute officii*, and not a proper subject for judicial investigation. That subject, however, having been submitted by law to the decision of the Governor, I forbear the expression of any opinion upon it.

GEORGE EARLE,

Clerk Court of Appeals of Maryland.

The vote of the State at the Presidential election was as follows: Lincoln, 40,163; McClellan, 32,789. Majority for Lincoln, 7,414.

At the same time, an election was held for State officers and members of the Legislature. The candidates for Governor were Thomas Swann, Republican, and — Chambers, Democrat. The majority by which Mr. Swann was elected, was about the same as that of President Lincoln. Of the five members of Congress elected, three were Republicans and two Democrats. The Legislature was divided as follows: Senate—Republicans, 11; Democrats, 13. House—Republicans, 52; Democrats, 28. Republicans majority on joint ballot, 22.

The receipts of the State Treasury during the fiscal year ending Sept. 30th, 1864, were from

the ordinary sources of revenue, including the direct tax, \$1,519,918. The disbursements on ordinary account were \$1,110,281, leaving a balance of \$406,636. The receipts of the Treasury on a bounty loan were \$721,384. The disbursements as bounties to volunteers were \$1,281,668. The bounties paid to volunteers were \$150 to each man, together with five monthly instalments of \$20 each. To slave recruits \$100 was paid, and to the owner, \$100.

The number of volunteers, white and free colored, during the year, was 5,890. Eight or nine regiments of slave blacks were recruited in the State. They comprised a large portion of the able-bodied slaves in the State.

The following order of Maj.-Gen. Wallace was designed to aid the slaves in securing the freedom to which they were entitled by the adoption of the new Constitution:

HQ'S MIDDLE DEPARTMENT, EIGHTH ARMY CORPS, }
BALTIMORE, MD., November 9, 1864. }

General Orders No. 112.

Official information having been furnished making it clear that evil-disposed persons in certain counties in the State of Maryland, within the limits of the Middle Department, intend obstructing the operation and nullifying, as far as they can, the emancipation provision of the New Constitution; and that for this purpose they are availing themselves of certain laws, portions of the ancient slave code of Maryland, as yet unrepealed, to initiate, as respects the persons heretofore slaves, a system of forced apprenticeship; for this and for other reasons, among them that if they have any legal rights under existing laws, the persons spoken of are in ignorance of them; that in certain counties the law officers are so unfriendly to the newly-made freedmen, and so hostile to the benignant measures that made them such, as to render appeals to the courts worse than folly, even if the victims had the money with which to hire lawyers; and that the necessities of the case make it essential, in order to carry out truly and effectively the grand purpose of the people of the State of Maryland—emancipation of every slave, man, woman, and child, within her limits, from and after the 1st day of November of this present year—that there should be remedies extraordinary for all their grievances—remedies instantaneous, without money or reward, and somebody to have care for them, to protect them, to show them the way to the freedom of which they have yet but vague and undefined ideas: It is therefore ordered:

1. That all persons within the limits of the Middle Department heretofore slaves, but now free, by operation of the New Constitution, shall be considered under special military protection, until the Legislature of Maryland may, by its enactments, make such military protection unnecessary.

2. A Freedman's Bureau for said department is hereby created, office in Baltimore, Major Wm. M. Este, A. D. C., in charge.

3. Major Este is intrusted with execution of this order, and to make it effective he is authorized to institute investigations, to send for persons and papers, and make necessary arrests.

4. Provost Marshals in their several districts, particularly those on the Eastern and Western Shores, are requested and directed to hear all complaints made to them by persons within the meaning of this order, to collect and forward information and proofs of wrongs done to such persons, and, generally, to render to Major Este such assistance as he may require in the performance of his duty.

5. As it will be impossible to carry out this order without having a place in which the sick, helpless, and needy can be temporarily rested and provided

for, Major Este is directed to take possession of the building known formerly as the Maryland Club House, but now named "Freedman's Rest," to select some excellent lady to take charge of the same as matron, and to suitably prepare and furnish as many rooms as may be required for the purpose proposed. And that this may be speedily accomplished, donations are respectfully solicited from all philanthropic and Christian persons, wherever resident. All fines hereafter assessed and collected by the Provost Marshal of the department will be appropriated to the support of the Freedman's Rest. To supply immediate wants, Major Este is directed to draw on Colonel Woolley.

6. Lest the moneys derived from donations and from fines collected should prove insufficient to support the institution in a manner corresponding to its importance, Major Este will proceed to make a list of all the avowed rebel sympathizers resident in the city of Baltimore, with a view to levying such contributions upon them in aid of the Freedman's Rest as may be from time to time required.

7. Major Este will enter upon the execution of this order without delay.

By command of Maj.-Gen. WALLACE. •
OLIVER MATTHEWS, Assistant Adj't-Gen.

The following estimate of the amount in value of the destruction by the enemy on their invasion of Maryland in 1864, was carefully prepared upon information gathered from responsible persons:

Philadelphia, Wilmington and Baltimore Railroad.....	\$107,000
Northern Central Railroad.....	100,000
Baltimore and Ohio Railroad, this road being longest occupied, say.....	400,000
Telegraph lines.....	4,000
Chesapeake and Ohio Canal.....	150,000
Harford County.....	15,000
Baltimore County.....	42,000
Carroll County.....	10,000
Frederick County.....	872,000
Washington County.....	85,000
Estimated value of supplies consumed and wasted.....	100,000
Food for horses.....	25,000
Damage to fences and farms (small).....	250,000
Four thousand cattle, at \$20 each.....	120,000
Sheep and hogs.....	50,000
Miscellaneous plunder.....	200,000
Total.....	\$2,080,000

The new Constitution provides for the adoption of a uniform system of public schools, and the levying a tax of ten cents on the hundred dollars for their support, and five cents on the same amount to provide a permanent fund. The charitable institutions of the State were in a favorable condition.

MASSACHUSETTS. The Legislature of Massachusetts convened at Boston on January 6, 1864, and was organized by the Republican party, which had a large majority in each house. John A. Andrew was inaugurated Governor for the fourth time, and on the 8th delivered his annual address. Among other suggestions he recommended that the various acts providing for bounties, and also those in aid of the families of volunteers, be extended to meet the cases of persons enlisting as soldiers in the regular army, and credited to the Commonwealth, in the same manner as the State volunteers; also, a modification of the laws relating to the State relief to the families of soldiers, so as to include all such families irrespective of their residence, and to authorize relief to be

given retroactively when the situation of the family may require it. He urged the establishment of a military academy under the supervision of the Commonwealth, and argued at length in favor of recruiting the wasted regiments in the field from the population of the rebellious States. Previous to the adjournment of the Legislature in May, a series of resolutions on national affairs, reported by the Committee on Federal Relations, was adopted by a large vote. They favored the prosecution of the war and pledged the resources of the State in its support; recommended an amendment to the Constitution abolishing slavery, and declared that the President had discharged the duties of his office with fidelity, sagacity, and courage, and that his administration deserved the confidence of the people.

The receipts into the State treasury for the year ending January 1, 1864, were \$7,229,828, and the disbursements in the same period \$6,728,597, showing a surplus of \$501,226. The liabilities and resources of the Commonwealth, on January 1, 1865, were as follows:

Liabilities.

Scrip loaned railroad corporations.....	\$6,574,485 56
Scrip issued in '61, '62, '63, and '64, on account of war expenses.....	6,198,500 00
Scrip issued for all other purposes.....	1,610,000 00
Unfunded debt, including monthly pay due volunteers.....	8,521,087 00
	\$22,904,073 56

Resources.

Productive property, consisting of sinking funds, &c. (and exclusive of school and other trust funds, \$2,181,826).....	\$14,669,298 97
Unproductive property.....	8,187,917 88
	\$17,857,216 80

Excess of liabilities over resources, \$5,036,761.26. The ordinary revenue and ordinary disbursements during the year 1864, for other purposes than those provided for by loan, were:

Revenue.

From all sources, including the corporation tax not yet distributed, and exclusive of loans.....	\$5,840,817 61
--------------------------------------------------------------------------------------------------	----------------

Disbursements.

For other purposes than those provided for by loans.....	5,102,287 95
----------------------------------------------------------	--------------

Leaving cash on hand..... \$788,089 66

The public debt on January 1, 1861, was \$8,103,082, and the increase during the four succeeding years, amounting to \$14,372,985, of which the greater part is held by citizens of the Commonwealth, was caused by expenses and obligations arising out of the war.

The Legislature of 1864 authorized the creation of a "Bounty Fund," by the issue of ten million dollars of scrip, at interest not exceeding five per cent. per annum payable in gold, "to be sold or disposed of at public auction, or in such other mode, and at such times, and in such pieces and amounts as the Governor and Council shall deem for the best interests of the Commonwealth." Owing to the violent fluctu-

ations of gold during the summer of 1864, and the high premiums which it commanded, the treasurer found it impossible to dispose of the scrip to advantage, and in accordance with an act passed in 1863, negotiated call loans to the amount immediately needed. The interest on these loans was by law limited to five per cent., but money being worth more, loans were advertised for at six per cent., in the expectation that the additional interest would be legalized by the Legislature of 1865. By the report of the paymasters appointed under an act of the Legislature of 1863, to disburse the state bounties to volunteers, it appears that up to November 30, 1864, the disbursements amounted to \$8,285,882.53, and were paid to 28,775 volunteers enlisted in the army, and to 745 enlisted in the navy. Bounties amounting to \$417,700 were also paid to 1,295 men recruited in the rebel States, and there was an unpaid balance, upon the rolls in the hands of the paymasters, of \$217,824.60. Besides the above there were 3,560 one year volunteers recruited in 1864, who elected to take \$20 per month additional pay in lieu of advance bounty, as provided by an act passed at a special session of the Legislature in 1863. The whole number of volunteers who received the monthly pay of \$20 was 18,043, and the sum disbursed to them amounted to \$996,860.03. At the close of 1864 there remained in the State treasury to the credit of Massachusetts soldiers, \$436,180.87.

The number of men which, according to the computation of the War Department, Massachusetts was called upon to furnish to the military service, from the commencement of the rebellion until the call of December 19, 1864, was 117,624. The number actually furnished by her up to December 22, 1864 (reckoning the nine months' men at one-fourth of their actual number, and reducing the number enlisted into the navy to the same term of three years), was 125,487, making a surplus over all calls, previous to the last, of 7,813 men. During 1864 the Commonwealth contributed to the army alone nine new regiments, one battalion, three batteries, and eight companies, amounting to 10,900 men, besides recruits, reenlisted men, veteran reserves, men enlisted in the regular army, conscripts and substitutes, amounting, according to the estimate of the State authorities, to 84,546 more, or 45,446 in all. In addition, she furnished in the course of the year 1,209 men for ninety days, and 5,461 for one hundred days' military service, who have not been credited to the quota of the State by the General Government. The number of men, reckoned as individuals, furnished by the Commonwealth for military or naval service, whether for terms of years, months, or days, amounted at the close of 1864 to 153,486. Up to December 22, 1864, the whole number of colored troops credited to Massachusetts was 4,731. Complaints having been made that the requisitions upon the people of the Commonwealth had been largely met by importing re-

cruits from abroad, it was shown that the whole number thus obtained was only 907, divided among four regiments. The proportional contribution of Massachusetts to the war is shown by a comparison of the number of men actually furnished by her, with the number enrolled in the militia of the State for the year 1864, which is as follows:

Number between ages of 18 and 45, enrolled by Assessors.....	151,920
Number between ages of 18 and 45, returned by Assessors as liable to duty.....	122,767
Number between ages of 18 and 24, returned by Assessors	22,373

From which it appears that, without allowing for the number of reenlistments, which it is impossible exactly to reckon, Massachusetts has sent more men into the service than are now to be found in the State between the ages of eighteen and forty-five, and 20,000 more than are now in the State liable to perform military duty. The absorption of men by the military and naval service has caused a very considerable increase in the number of women in the Commonwealth, who are now estimated to exceed the men by 100,000. Owing to the excess of enlistments over previous calls, the quota of the State under the call of December 19, 1864, was reduced to 805 men, who were directed to be raised in the eighth and ninth Congressional districts. In response to an application to the Secretary of War, United States general hospitals have been established at Worcester and Readville, with ample accommodations for sick and wounded soldiers.

In accordance with the Act of Congress of July, 1864, Gov. Andrew and Hon. John H. Clifford were appointed a commission to ascertain what credits the State and its several subdivisions were entitled to for recruits entering the naval service. In September they furnished a report, of which the following presents a tabular recapitulation:

NAVAL CREDITS—NUMBER OF MEN.	One year.	Two years.	Three years.	Reduced to three years.
Assigned to cities and towns	8,119	1,866	6,743	9,990
To State at large.....	4,118	881	5,647	7,006
Total.....	7,232	2,789	12,390	16,996
Total number of men.....				22,160

A proposition to amend the Constitution so as to enable citizens of the State absent in the military service to vote, was adopted by the Legislature of 1864. If readopted by the Legislature of 1865, it goes to the people for ratification.

The returns from the various cities and towns, as compiled by the secretary of the Commonwealth, show a decrease of \$18,915,420 in the total amount of personal property as compared with the valuation of 1863. This is accounted for by the fact, that by an act of 1864 the assessors are required to return the value of all corporate stocks to the treasurer of the Commonwealth, and that these stocks

are exempted from municipal assessment. The total valuation of the Commonwealth was, nevertheless, larger by \$4,782,120 than in 1863. The rate of taxation varied during the year from 32 cents to \$3.45 per \$100 in different parts of the State. The following table exhibits the number of polls and valuation of real and personal property in the several counties:

The number of savings institutions in operation at the close of 1864, exclusive of two incorporated by the Legislature of that year, and not fully organized, was 98. From abstracts prepared by the officers of these institutions, their conditions were as follows:

The whole number of depositors in ninety-seven savings banks (the Mercantile Savings Institution, of Boston, not being included in the "Abstracts").....	\$361,618
The number of depositors in the year 1863 (ninety-five banks) was.....	272,219
Showing an increase in 1864 of.....	12,261
The amount of deposits (in ninety-seven savings banks).....	\$62,557,004 80
Against an amount in the year 1863 (in ninety-five banks) of.....	\$4,283,593 55
Exhibiting an increase in 1864 of.....	\$5,673,775 75

The increase of deposits during the four years ending June 1, 1864, was \$17,508,369.30. The number of banks of discount in Massachusetts, organized under its laws, was, on Jan. 1st, 1864, 181, having a capital of \$66,991,200. Of these, 52, with a capital of \$25,801,700, became national banking associations during the year, and 47 have signified their intention to become such, leaving 82, with an aggregate capital of \$26,274,500, which have taken no steps toward changing. The number of new national banks in the State was 25, with an aggregate capital of about \$4,000,000.

The amount raised by voluntary taxation for the support of the public schools (including only wages of teachers, fuel, etc.) for the school year 1863-'4 was \$1,586,314.81, being an increase over the previous year of \$102,299.11. The aggregate return of expenditures on public schools alone (exclusive of the cost of repairing and erecting school-houses, and of school-books) was \$1,679,700.24, being an increase of \$113,750.76 over the previous year, and being an average sum of \$6.95 cents for every person in the State between the ages of five and fifteen,

of whom the number was 241,688. All the towns raised the sum required by law as a condition of receiving a share of the income of the State School Fund (\$1.50 per child between the ages of five and fifteen), and more than 85 per cent. of them raised twice, or more than twice the amount. The total sum expended in the Commonwealth for popular education, exclusive of collegiate and professional schools, is estimated at more than three millions of dollars annually. More than one-fourth of the whole number of towns neglected to keep their schools open the full term required by the law. The four normal schools were reported in a flourishing condition and unusually full, notwithstanding a large proportion of the pupils of those at Bridgewater and Westfield have at various periods during the war enlisted as volunteers. The number of persons connected with the colleges of the Commonwealth, either as alumni or students, who have entered the military service since the commencement of the rebellion, is very considerable. Harvard University has sent upward of 500, nineteen per cent. of the whole number living; Amherst College 146; and Williams College not less than 200.

The statistics of the three State lunatic asylums for the year ending Sept. 30, are as follows:

	Worcester.	Northampton.	Taunton.
Patients admitted.....	229	96	208
Whole number treated.....	625	476	605
Discharged recovered.....	180	48	...
" improved.....	103	38	...
" not improved.....	16	9	...
Died.....	86	47	39
Whole number discharged.....	266	143	196*
Whole number remaining.....	344	333	308

The State supports three almshouses, at Tewksbury, Monson, and Bridgewater.

During the year 1864 no new project was suggested or put into execution for adding to the coast defences of the Commonwealth; but the earthworks planned by the General Government to protect the harbors of Newburyport, Salem, Marblehead, Gloucester, Plymouth, and Provincetown, were completed, armed, and garrisoned; while steady progress was made on the permanent works at Boston and New Bedford. The Boston forts were supplied with some ordnance of very heavy calibre, adding greatly to the strength of the harbor defences. Of the million dollars appropriated by the Legislature of 1863 for coast defences, the sum of \$354,846.11 was expended in 1864, chiefly in the purchase of heavy ordnance at home and abroad. Seventy-three guns, besides a large supply of powder and projectiles, were procured, and plans for harbor obstructions, with calculations and specifications, were deposited in the State Ordnance Bureau.

In October, 1863, work was resumed, under the auspices of the Commonwealth, upon the railway tunnel through the Hoosac Mountain, and the expenditure up to Nov. 15th, 1864,

* Besides seven elapsed.

amounted to \$486,943.26. The estimated payments for November and December, 1864, were \$50,000 per month, and for 1865 from \$25,000 to \$35,000 per month. The construction of the road lying east of the mountain, and of which the terminus is Greenfield, in Franklin County, has not yet been resumed.

In September the political canvass commenced with the meeting of the State Conventions of the Republicans and Democrats, and thenceforth was conducted with energy, and generally in a conciliatory spirit. The Republicans met at Worcester on the 16th, and unanimously nominated Gov. Andrew for reelection. Their resolutions declared the duty of maintaining the integrity of the Union; of exterminating slavery, and upholding the acts and proclamations of the Government in that behalf; of refusing to entertain any proposition of compromise with rebels in arms, or which should not be based on their unconditional surrender to the National Government; and of sustaining the Baltimore platform and the Baltimore nominations. The Democrats met in the same place on Sept. 21st, and nominated Henry W. Paine for Governor. Their resolutions indorsed the nomination of Gen. McClellan, and commended the action of the Chicago Convention. The following embody their main views:

Resolved, That the patriotic principles declared by the National Convention, as nobly and eloquently expressed by its candidate for the Presidency in his recent letter of acceptance, embody a line of public policy upon which alone the American people can restore the Union, reëstablish Constitutional Liberty, give security to Individual Rights, and secure the return of permanent and honorable peace.

Resolved, That the Democratic party of this State is, as it always has been, unalterably opposed to the rebellion, and that we recognize in the victories of the national army and navy, and in the manifest popular determination to change the present administration, and return to the policy to which the Executive, Congress, and the People were solemnly pledged in the Crittenden resolution, coöperative movements toward Peace and Union.

Resolved, That the present deplorable civil war is fatal to the Union and Constitution; and, therefore, it is the highest duty of the people to preserve their Government and maintain its integrity in the present contest, by all legal means in their power.

The State and Presidential elections took place on Nov. 1st, and resulted in favor of the Republicans. The following is the vote for Presidential electors: Republicans, 126,742; Democrats, 48,745. Republican majority, 77,997.

The electors cast the vote of the Commonwealth for Abraham Lincoln for President, and Andrew Johnson for Vice-President.

The gubernatorial vote was: John A. Andrew, Republican, 125,281; Henry W. Paine, Democrat, 49,190.—Majority for Andrew, 76,091.

The Legislature elected at the same time stood as follows:

	Senate.	House.	Joint Ballot.
Republicans	40	284	274
Democrats	0	6	6
Republican majority ..	40	298	268

McCULLOCH, JOHN RAMSAY, a British statistician and political economist, born at Whithorn, in Wigtonshire, March 1, 1789, died in London, Nov. 11, 1864. He was descended from a Scottish family of considerable note, and his grandfather had commanded a revenue cutter in the royal navy. His early education was acquired under the direction of some of his maternal relatives, and he subsequently attended the public classes of the University of Edinburgh for two years, but did not graduate nor study for any profession. After spending some time in the office of a writer to the "Signet," he entered upon his career as a journalist in 1817, being editor of the "Scotsman" for two years, and a contributor for a long period subsequently. In 1818 he recommenced a series of contributions to the Edinburgh "Review," by an article on Ricardo's "Principles of Political Economy," and soon after gave lectures on that subject. In 1828 he was appointed Professor of Political Economy in University College, London, and removed to that city; but the chair being unendowed, the number of students attending his lectures was insufficient for his remuneration, and he relinquished the professorship. In 1838, the Whig Government made him Comptroller of the London Stationery Office, and he continued the head of that department until his death. Soon after undertaking its administration he instituted reforms, which resulted in a very large annual saving in the department, which had been conducted previously with great wastefulness, and his economy caused this saving to exceed greatly the entire cost of management. As his duties did not require his entire time, and he was of the most industrious and methodical habits, he began very soon to avail himself of the results of his previous studies, in the preparation of works on Political Economy and cognate topics. In 1837, the first edition of his "Statistical Account of the British Empire" was published, in 2 vols., 8vo, and as numerous editions were called for it was materially enlarged and improved. In 1840 the first edition of his "Geographical Dictionary" appeared, and was soon afterward reprinted in this country, and translated in several European countries. This was followed by his "Dictionary of Commerce and Commercial Navigation," which was also reprinted and widely circulated abroad. He had also previously edited with copious notes and additional dissertations Smith's "Wealth of Nations," which reached a fifth edition in 1863. His other principal works were "Treatises and Essays on Political Economy," 1853; "Principles of Political Economy," 1853; "Principles and Practical Influence of Taxation and the Funding System," 1855; "Succession to Property Vacant by Death; including Inquiries into the Influence of Primogeniture, Entails, and Compulsory Partition, upon the Public Interests," 1858; "A Catalogue of Books, the property of a Political Economist, with Critical and Biographical Notices."

McPHERSON, JAMES BIRDSEYE, a major-general of United States volunteers, born in Sandusky County, Ohio, November 14th, 1828, killed near Atlanta, Ga., July 22d, 1864. He entered West Point from Ohio, in 1849, and at the end of that year ranked second in his class. The two years following he stood first, graduating at the head of his class June 30th, 1853, and was at once appointed brevet second lieutenant of engineers and assistant instructor of practical engineering at the Academy, a compliment never before awarded to so young an officer. He was next appointed assistant engineer on the defences of New York harbor, and on the improvement of the navigation of the Hudson River, having previously been made full second lieutenant of engineers. In January, 1857, he was placed in charge of the construction of Fort Delaware, and subsequently of the erection of fortifications on Alcatraz Island, San Francisco Bay, California, and was also connected with the survey of the Pacific coast. In December, 1858, he was promoted to first lieutenant, and in 1861 was ordered from the Pacific coast to take charge of the fortifications of Boston harbor. The same year he was made captain, and upon the appointment of Maj.-Gen. Halleck to the command of the Department of the West in November, he was chosen aide-de-camp to that general, and at the same time was promoted as lieutenant-colonel. In the expeditions against Forts Henry and Donelson he was chief engineer of the Army of the Tennessee, and subsequently was at Shiloh and as colonel on Gen. Halleck's staff held the chief engineering charge of the approaches to Corinth which ended in its evacuation. On the 15th of May, 1862, he was made brigadier-general of volunteers, and appointed general superintendent of military railroads in the district of West Tennessee the following June. In September, 1862, Gen. McPherson held a position on the staff of Gen. Grant; and for his gallantry at Corinth was promoted to be major-general, dating from October 8th, rising to that position in the short space of nine years, and by merit alone. From that time till the close of the siege of Vicksburg, during which he commanded the centre of our army, his career was one course of triumph. Gen. Grant wrote of him: "He is one of the ablest engineers and most skilful generals. I would respectfully, but urgently, recommend his promotion to the position of brigadier-general in the regular army."

Upon this recommendation Gen. McPherson was immediately confirmed a brigadier-general in the regular army, dating from August 1st, 1863, and soon after conducted a column into Mississippi and repulsed the enemy at Canton. Subsequently Gen. McPherson's department was extended so as to embrace all the region bordering the Mississippi River, from Helena, Arkansas, to the mouth of the Red River, with headquarters at Vicksburg. In the memorable expedition to Meridian he was second in command to Gen. Sherman, and during the first

Atlanta campaign his command was the Department of the Tennessee, including the entire 15th, 16th, and 17th corps. He distinguished himself at Resaca, Dallas, Allatoona, Kulp House, and Kenesaw. In the battles before Atlanta, Gen. McPherson's grand division held the left of the line. In superintending the advance of his skirmish line he had ridden from left to right, and was returning when he was suddenly confronted by a party of the enemy in ambush, and received a shot in the breast causing almost instant death. Gen. McPherson was a man of indefatigable energy, tireless industry, and a bravery which almost amounted to recklessness. He always reconnoitred in person.

MEREWETHER, Rev. FRANCIS, an author and clergyman of the Church of England, born in England, in 1784, died at Cole Orton Rectory, July 21st, 1864. He studied at Eton, graduated at Christ Church College, Oxford, and took the degree of M. A. at St. John's College, Cambridge. In 1816 he was presented with the rectory of Cole Orton, and two years later was appointed by the Crown to the adjoining parish of Whitwick, which preferments he held for nearly fifty years. About the time of his entering upon these incumbencies the parish of Whitwick began to increase rapidly in population, owing to the discovery and working of coal mines; and having in other places interested himself in the establishment of schools, he at once entered vigorously upon similar works in his new field of labor. With the assistance and coöperation of his intimate friends Sir George and Lady Beaumont, he erected schools, churches, and parsonages in the neighboring districts, and established at Whitwick national and infant schools. In 1862 the church known as St. Andrews, Thringstone, was completed under his auspices, and remains as a fitting memorial of his incumbency. In his diocese and neighborhood his activity in all that concerned religion was conspicuous. The Leicester anniversary meeting of the Christian Knowledge and the Gospel Propagation Societies, was originated by him. He was warmly interested in every movement having for its object the welfare of his country, and was one of the founders of the first Leicestershire Agricultural Society, which was followed by similar institutions throughout the land. His labors were almost uninterrupted, and three days previous to his death he performed his ordinary Sabbath duties, closing without pain a life of constant usefulness and love to both church and country.

Mr. Merewether was the author of several sermons and letters, among which are: "A Defence of Moderation in Religious Doctrine, Practice, and Opinion, applied to the Present Times" (1812, 1813); "Coöperation in Promoting the Charitable Institutions of the Church of England" (London, 1822); "The Rational Creature, the Moral Instrument of his Creator" (London, 1824); "The Case between the Church and the Dissenters impartially and practically considered" (London, 1827). A letter to the Editor

of the "Quarterly Review" in furtherance of subjects of articles published therein. "On Agriculture and Rent;" "Substitution of Savings Banks for Poor Laws," and "On Planting Waste Lands" (1828); "An Appeal to the Nobility and Gentry of the County of Leicester in behalf of the Church of England" (1832); "The Ministerial Succession" (1838); besides other letters and pamphlets on church topics and controversial subjects.

MERIAM, EBEN. An American statistician and meteorologist, born in Concord, Mass. June 17, 1794; died at his residence in Brooklyn, L. I., March 19, 1864. In early manhood he removed to Kentucky, where for a number of years he was engaged in the manufacture and purification of saltpetre, as well as other mineral products of the Mammoth Cave in that State. He subsequently engaged extensively in the dry goods business in Zanesville, Ohio. Not far from 1838 he removed to New York City and entered quite largely into the manufacture of soap and candles, accumulating thereby a comfortable property. From his earliest childhood Mr. Meriam had evinced a taste for scientific pursuits, and devoted his attention more particularly to meteorological researches. He was the originator of the theory of cycles of atmospherical phenomena, upon which subject he published many interesting articles, which attracted the attention of scientific men abroad. In 1841 he commenced, at his own expense, the publication of the "Municipal Gazetteer," a work embracing every particular of his extended researches, and devoted to the interests of science. He was an industrious collector of facts and statistics, and his hourly records of the weather extend back to a period of nearly thirty years. He was a contributor to nearly all the journals in New York City upon scientific subjects, making the "Journal of Commerce" his special organ. In all his pursuits, his great end in view seemed to be the benefit of society, and never would he allow himself to take an adequate compensation for his mental labors. He had some eccentricities of habit, but his heart was ever warm in its sympathies, and his hand ready to relieve the wants of the poor and unfortunate, so that at his death it was found that he had made no provision for his family. His meteorological records were not collected for publication, but he contributed to a Statistical Almanac, published by Mason Brothers in 1858, some meteorological essays, and published also some pamphlets on this and other subjects.

METHODISTS. The Methodist Episcopal Church, which since the beginning of the present century has grown more rapidly than any other religious denomination of the country, has, since 1859, begun to decline in membership. In 1859 the number of members and probationers together amounted to 971,498, while, according to the Methodist "Almanac" for 1865, the Church had, in 1864, in fifty-seven Annual Conferences, the following membership:

The increase, however, according to the church papers, is only apparent, as the two colored conferences, Delaware and Washington, which report 13,158 members, are mainly composed of societies embraced in the returns of the Baltimore, East Baltimore, and Philadelphia Conferences, which met before the organization of the colored conferences.

The fourteenth delegated General Conference of the Methodist Episcopal Church assembled in Philadelphia, May 2, 1864, all the Bishops of the Church being present. It was presided over by the senior Bishop, Morris. Delegates were present from the Wesleyan Conference of England, from the Irish Conference, from the Methodist Episcopal Church of Canada, and from the African Methodist Episcopal Church,

all of whom addressed the General Conference on the state of their several communions. An address from the Bishops, giving an account of the condition and prospects of the Church, and many suggestions for the General Conference, was read. With regard to one of the most important topics which was expected to occupy the attention of the General Conference, the Slavery question, the Bishops gave it as their "solemn judgment," that no members should be admitted to the fellowship of the Church who were slaveholders. The General Conference referred this subject to a committee consisting of one member from each Annual Conference. This committee proposed so to alter the rule of the Church, as to prohibit not only, as heretofore, "buying or selling slaves," but also slaveholding. The General Conference had an animated discussion on this subject, and finally adopted the report of the committee by a vote of 204 to 8, the minority consisting of the delegates from the Baltimore, West Virginia, and Kentucky Conferences, and one from the East Baltimore Conference. The majority of the delegates from the East Baltimore Conference, and the entire delegation from the Missouri and Arkansas Conference, voted with the majority. In consequence of this action of the General Conference the rule was sent down to the Annual Conference, three-fourths of all the members of which bodies must concur, to make the action of the General Conference the law of the Church.

Another important subject which was acted upon by the General Conference was lay delegation. In 1862 a vote of the entire Church had been taken on this subject, and the Bishops reported that this vote had resulted as follows: Of the ministers, 1,388 votes for, 3,069 against; of the male members, 28,884 for, 47,855 against; showing a majority against lay representation in the General Conference of 1,731 ministers, and of 18,971 male members. A "Laymen's Convention," numbering upwards of two hundred delegates from twenty-one different States of the Union, met simultaneously with the General Conference, and, after addresses from Ex-Governor Wright of Indiana, Senator Willey of West Virginia, and others, adopted an address to the General Conference. The officers of the Convention were introduced to the General Conference, and the address was read before that body by Dr. Strong. A debate on the subject ensued, which led to the adoption of the following resolutions:

1. *Resolved*, That while we reaffirm our approval of lay representation in the General Conference, whenever it shall be ascertained that the Church desires it, we see no such declaration of the popular will as to justify us in taking action in relation to it.

2. *Resolved*, That we are at all times ready to receive petitions and memorials from our people on this subject, and to consider them most respectfully.

The time of pastoral service was extended by the General Conference from two to three

years, without any alteration in the mode of appointing the preachers.

The entire section of the rule on "the rights and privileges of our colored members," which recognized "the usages of the country," and limited their privileges accordingly, was stricken out. Now there is no difference between white and colored members in law, no legal bar to the admission of colored preachers into the Annual Conferences. Mission Conferences are to be formed of colored travelling preachers under the same restrictions which apply to white missions; their members cannot vote on constitutional questions, nor send delegates to the General Conference, nor share in the dividends of the Book Concern or Charter Fund. Two Mission Conferences have already been added to the list of Annual Conferences, namely, the Washington Conference, embracing Western Maryland, the District of Columbia, Virginia, and the territory south; the Delaware Conference, embracing all the territory north and east of the Washington Conference.

The German members of the Church were organized into three separate German Conferences, called the Central German Conference, the Northwestern German Conference, and the Southwestern German Conference. Twenty-two German churches remained, however, for the present connected with the New York Conference.

The General Conference resolved that the centenary of American Methodism be celebrated by special religious services and thank offerings, beginning on the first Tuesday in October, 1866, and continuing throughout the month; that \$2,000,000 be raised for two departments of Christian enterprise, the one to be styled connectional, and the other local.

On the state of the country the following resolutions were adopted:

Resolved, That in this hour of the nation's trial we will remember the President of the United States, all other officers of the Government, and our army and navy, in never-ceasing prayer.

Resolved, That it is the duty of the Government to prosecute the war with all its resources of men and money till this wicked rebellion shall be subdued, the integrity of the nation shall be secured, and its legitimate authority shall be reestablished, and that we pledge our hearty support and coöperation to secure this result.

Resolved, That we regard our calamities as resulting from our forgetfulness of God, and from slavery, so long our nation's reproach, and that it becomes us to humble ourselves and forsake our sins as a people, and hereafter, in all our laws and acts, to honor God.

Resolved, That we will use our efforts to secure such a change in the Constitution of our country as shall recognize the being of God, our dependence on Him for prosperity, and also His word as the foundation of civil law.

Resolved, That we regard slavery as abhorrent to the principles of our holy religion, humanity, and civilization, and that we are decidedly in favor of such an amendment to the Constitution, and such legislation on the part of the States, as shall prohibit slavery or involuntary servitude, except for crime, throughout all the States and territories of the country.

Resolved, That while we deplore the evils of war that has filled our land with mourning, we rejoice in the sublime manifestations of benevolence it has developed, as seen in the Sanitary and Christian Commissions, and in the associations formed to aid the vast multitudes who have recently become free-men, and that we pledge to these institutions our hearty coöperation and support.

A committee, consisting of Bishop Ames, Dr. Cummings, Dr. G. Peck, Dr. Elliott, and Rev. G. Moody, was appointed to wait on the President, and convey to him the loyal sentiments of the Conference, and of the Church represented by it.

The delegates proceeded to Washington, and presented to President Lincoln the address, in which the Conference express to him the assurance of the loyalty of the Church, her earnest devotion to the interests of the country, and her sympathies with him in the great responsibilities of his high position in this trying hour. They honor him for his proclamations of liberty, and rejoice in all the acts of the Government designed to secure freedom to the enslaved. In conclusion they say: "Actuated by the sentiments of the loftiest and purest patriotism, our prayer shall be continually for the preservation of our country undivided, for the triumph of our cause, and for a permanent peace gained by the sacrifice of no moral principles, but founded on the word of God, and securing righteous liberty and equal rights to all." To this address the President replied as follows:

GENTLEMEN: In response to your address allow me to attest the accuracy of its historical statements, endorse the sentiments it expresses, and thank you, in the nation's name, for the sure promise it gives. Nobly sustained, as the Government has been, by all the churches, I would utter nothing which might in the least appear invidious against any. Yet, without this, it may fairly be said that the Methodist Episcopal Church, not less devoted than the best, is by its greatest numbers the most important of all. It is no fault in others that the Methodist Church sends more soldiers to the field, more nurses to the hospitals, and more prayers to heaven than any. God bless the Methodist Church. Bless all the churches, and blessed be God who, in this our great trial, giveth us the churches.

Subsequently Rev. Dr. Thornton, delegate from the English Conference to the Methodist General Conference, with Dr. Scott, from the Irish Conference, was presented to the President by the Hon. M. F. Odell. These delegates expressed to the President their earnest and hearty sympathy of the Methodist membership of England and Ireland in the present national struggle, and desire for our success.

Dr. Thornton stated in connection, that he had held no official intercourse with the Methodist Church South during the rebellion.

At the meeting of the General Missionary Committee, which took place in Nov. 1864, \$622,910 were appropriated for the support of the foreign and domestic missions during the coming year. The receipts of the Missionary Society, in 1863, were \$429,768, an increase of \$157,245 over 1862. The missions of the Church, in 1864, were as follows:

<i>Foreign Missions.</i>	Missionaries.	Members.
Liberia	15	1,478
South America.....	8	100
China	82	125

Total Foreign.....	129	6,129
Grand total.....	433	20,174

The extension of the Methodist Episcopal Church in those seceded States which were recovered by the armies of the United States made considerable progress. The membership of the Missouri and Arkansas Conference increased from 4,887 in 1863, to 6,691 in 1864, mostly by accessions from the Methodist Episcopal Church South. Several Methodist churches were organized in Louisiana, especially in New Orleans, where there were, in July, 1864, as many as 500 scholars in the Methodist Sunday schools. Still more important were the movements in East Tennessee. At a convention of Union ministers and laymen of the Holston Annual Conference, held at Knoxville on the 17th of August, it was resolved, that the loyal members of the Conference have a just claim to all the church property; that they really constitute the Southern Methodist Church within the bounds of the Holston Conference; that they propose, at the earliest day practicable, to transfer the same to the Methodist Episcopal Church in the United States, and that the ministers be instructed to propose to their congregations to go *en masse* to the Methodist Episcopal Church in the United States.

On April 6th a convention of ministers of the Methodist Episcopal Church South, from States within the Federal lines, met at Louisville, Ky., for the purpose of adopting measures for the preservation of their church property. The St. Louis, Missouri, Memphis, Kentucky, Tennessee, Louisville, Western Virginia, and Kansas Mission Conferences, were represented by an average delegation of about two ministers from each, excepting the Louisville Conference, which had more. Rev. O. B. Parsons, D.D., was president; Rev. P. M. Pinckard, vice-president; and Rev. T. M. Finney, secretary; both of the latter from St. Louis. The Convention adopted the following preamble and resolutions with regard to the Book Concern of the Methodist Episcopal Church South at Nashville, Tenn.:

Whereas, An information has been filed in the United States Circuit Court for the Middle District of Tennessee for the confiscation of the Southern Methodist publishing house at Nashville, Tennessee, on sundry specifications unknown to us, but generally on the ground of disloyalty;

And whereas, Said publishing-house is the property of the Methodist Episcopal Church South—a legitimately organized ecclesiastical organization, and recognized as such by the laws and courts of the United States;

And whereas, It is the duty of said Church to respond to said information; and as the regular General Conference of said Church (owing to the existing agitations of the country) cannot be held according to the laws of the Church;

And whereas, We, delegates in convention assembled, and representing loyal members of several Annual Conferences of said Church, are, as such delegates, fully empowered (in view of the disability referred to), and do hereby, in the name of and for the loyal members of Annual Conferences of said Methodist Episcopal Church South, assert their right to, and claim the possession and administration of, said property for the purposes of the original foundation of said charity; therefore,

Resolved, That P. M. Pinckard, C. B. Parsons, and S. D. Baldwin be, and they are hereby, appointed a Board of Commissioners, with full power and authority to assert the rights of the Church in this behalf, and to do all things that may be necessary and proper to be done to effect the same, and to continue in the exercise of this power until a meeting of the General Conference may direct otherwise.

The Convention also adopted the following resolutions with regard to an order of the Secretary of War, authorizing the Methodist Episcopal Church to take possession of churches belonging to the Southern Church:

Whereas, Under an order issued by the Secretary of War, the authorities of another ecclesiastical body, distinct from, if not antagonistic to, the Methodist Episcopal Church South, have been empowered to take possession of the houses of worship belonging to said Church;

And whereas, We are informed and believe that said order does not meet the approval of the President of the United States; and further believing that, in the judgment and enlightened Christian feeling both of the officers of the army and many sober-minded Christians, the order is regarded as unjust, unnecessary, and subversive alike of good order and the rights of a numerous body of Christians; therefore,

Resolved, That we do most respectfully protest against the execution of said order, and request the President to restrain and prevent its enforcement.

Resolved, That the secretary be requested to transmit a copy of the foregoing to the President and Attorney-General.

Bishop Kavanagh, one of the Bishops of the Methodist Episcopal Church South, paid in June a visit to the Pacific Conference of the Church in California, and while in San Francisco was arrested on the charge of disloyalty. As the charge could not be proved, and as the Bishop declared his readiness to take the oath of allegiance, he was at once discharged. The Bishop informed General McDowell, the commanding general in California, that he, the Bishop, advised that the designation "South" in the official name of the Church be dropped. From Missouri, it was reported that the members of the Methodist Episcopal Church South, were in the habit of dropping the word "South" in their official designation. The Kentucky Conference of the Southern Methodist Church, which met at Maysville, Sept. 7, passed a report on the state of the Church, asserting its independence of the other Conferences of the Church

South, disavowing its complicity with the resolutions of other conferences or the rulings of the Bishops, and reasserting its loyalty to the Government of the United States. The Conference also took the necessary steps to organize itself as a corporate body, under the laws of the State of Kentucky. The Southern Methodist churches within the Federal lines had, at the close of 1864, not a single denominational organ; the *Sentinel*, a new paper which had been started in St. Louis, in the earlier part of the year 1864, being soon again discontinued.

There are in the free and border States of the Union two organizations of African Methodists, denominated the African Methodist Episcopal, and the African Methodist Episcopal Zion churches. The membership of the former was estimated, in 1860, at about 20,000; that of the second at about 6,000. The war greatly added to the membership of these two denominations, for a large number of former slaves, having become freemen, left the Southern Methodist Church, in order to join either the Methodist Episcopal Church, or one of the two African Methodist churches. In consequence of this, the African Methodist Episcopal Church, at its Quadrennial General Conference, held in Philadelphia, in May, 1864, was able to announce that its membership had increased from 20,000 to 50,000, and the Zion Church reported for North Carolina, alone, an increase of 2,000 members. The former reported the number attending its congregations as 300,000, and the number of children in its Sunday schools as 100,000. The two churches are annexing congregations in each of the recovered slave States, and Bishop Campbell, of the African Methodist Church, is about to make his residence in New Orleans. Both bodies, at their General Conferences, discussed the expediency of forming a fusion, and strongly declared themselves in favor of it. A joint convention of fifty delegates, of the two organizations (25 from each), which met at Philadelphia on the 14th of June to consider the terms upon which the two bodies could unite, had a pleasant and harmonious session, and adjourned on the 16th. The "Christian Recorder" says that they "ratified all their doings, and have arranged it so that union is certain. All appeared to be in the best of humor. The Bishops and superintendents spoke very satisfactorily before we closed, and all things went on wisely. We may consider ourselves one, in a manner. We have four years to mature the whole plan in, so that everybody will be satisfied."

The General Conference of the American Wesleyan Methodist Church met at Adrian, Mich., on June 1. The members of this Church showed themselves very favorable to a union of the different branches of Reformed Methodists. The Miami Conference appointed a committee to correspond with similar committees from other bodies, to agree upon a time for holding a convention for consultation.

The Western Virginia Conference of the

Methodist Protestant Church adopted a resolution expressing it as the sense of the Conference that "our interests as an Annual Conference will be best subverted by a union with the General Conference of the M. P. Church, embracing the northern, eastern, and western portions of the United States—all our sympathies and views being in harmony with the loyal people composing said General Conference." Provisions were made for taking a vote in all the stations and circuits upon the proposed union. It was also resolved to have no official connection with the Maryland Conference, as the latter body had refused to define its position with regard to the Government of the United States.

The twentieth session of the Western Primitive Methodist Annual Conference was held at Shullsburg, Wis., commencing May 19th. The statistics show an increase in the membership of between one hundred and two hundred. The appointment includes thirteen circuits and eleven missions, chiefly in Iowa and Wisconsin; though there are one or two appointments in New York and Pennsylvania. The Conference published two papers, one monthly magazine and a child's paper.

The Free Methodist Church now contains three Annual Conferences,—the Illinois, the Genesee, and the Susquehanna. The total of all the Conferences is thirty-three churches, sixty-six travelling preachers, and 8,555 members and probationers. The total value of the church property is \$64,658.

The Conference of Independent Methodist churches held their third annual session in New York City on Oct. 21. Ministers and delegates were present from New York, Williamsburgh, Brooklyn, Amsterdam, Rome (N. Y.), Hartford, Patterson (N. J.), Boston, and Cincinnati. Three additional churches were received into the connection. The Conference unanimously adopted the following resolutions, looking to a union of the various dissenting Methodist bodies:

Resolved, That we appoint a committee of three members of this body, to confer with similar committees from other Methodist bodies, with a view to the union of all the Methodist churches in this country who repudiate episcopacy, and recognize the rights of the laity, and that we respectfully invite churches and conferences who favor such a union to send delegates to such a convention, to be held (if generally concurred in) in the city of Syracuse, N. Y., on the second Wednesday in June, 1866. And we hereby invite all churches, conferences, and individuals favorable to such a convention, to communicate as soon as convenient with the chairman of this body for the time being, Rev. H. Mattison, No. 16 West Forty-first street, New York.

Resolved, 2d, That the Secretary of the Conference be instructed to furnish copies of these resolutions to all the papers of the different non-episcopal Methodist churches, with the request that they give them one or more conspicuous insertions; and that these resolutions, as thus furnished for publication, be signed officially by the president and secretary of the Conference.

The proposition was favorably received by the American Wesleyan Methodist, the Protes-

tant Methodist, and the Free Methodist churches, and a movement toward a union began in all these organizations.

The statistics of the British Wesleyan Conference, with its foreign and missionary dependencies, were, in 1864, as follows:

	Members.	Increase.	Decrease.
1. BRITISH CONFERENCE, viz.:			
Great Britain.....	829,668		88
Ireland and Irish Missions.....	20,996		267
Foreign Missions, viz.:			
Europe.....	889	81	
Asia.....	2,960		235
South Africa.....	8,942	279	
West Africa.....	9,718	885	
West Indies.....	44,808		2,506
2. FRENCH CONFERENCE.....	1,606	84	
3. AUSTRALIAN CONFERENCE.....	29,685	1,620	
4. CANADA CONFERENCE.....	52,699	166	
5. EASTERN BRITISH AMERICAN CONFERENCE.....	15,195	21	
Last year.....	525,156	2,576	2,974
Net decrease.....	526,554		2,576
	1,898		1,208

There are also 35,404 probationers, 1,951 ministers in full connection, and 541 on trial, with 287 supernumeraries. These figures when compared with the reports of the past years seem to indicate a progressive decline in numbers. Last year there was an increase of numbers in the whole connection of 6,585; there was an increase of 9,500 in 1861, of 17,500 in 1860, and of 15,700 in 1859.

The membership in the other Methodist denominations of England was, in 1864, as follows: The New Connection Methodists had 24,112 members in England; 783 members in Ireland, and 7,918 in Canada (a total increase of 51 members); the Bible Christians, 25,089 (a decrease of 287 members); the Primitive Methodist Connection, 148,690 members; the United Methodist churches, 64,831; the Wesleyan Reform Union, 10,189 members (increase 1,201).

On the subject of the union of "liberal" Methodist bodies, the New Connection Conference adopted the following resolution:

That this Conference has much satisfaction in learning that the expressions of Christian affection toward all evangelical denominations, and especially of our fraternal sympathy and relations with the several sections of the Methodist family, as embodied in the fourteenth resolution of our last Conference, have been cordially reciprocated by the Annual Assembly of the United Methodist Free Church; by the Conference of the Primitive Methodists; by the Primitive Wesleyan Methodists; by the Bible Christians, and the Methodist Reform Union; and this Conference indulges the hope that this interchange of friendly sympathy will be followed by more frequent intercourse, and also by mutual coöperation as far as this may be found practicable.

Outside of the United States and Great Britain the most important event in the history of Methodism during the past year is the organization of an Annual Conference in India. The General Conference of the Methodist Episcopal Church of the United States, at its session in Philadelphia, in May, 1864, organized the missions in the northwest provinces of India into

an Annual Conference. Bishop Thompson was sent out to preside at the first meeting of the Conference, which opened at Lucknow, Dec. 8, 1864. The statistics of the Conference were reported to be as follows: Church members, 117; Probationers, 92; Local preachers, 9; adults baptized, 62; children baptized, 58; churches, 9—value of church property, \$5,890; parsonages, 19; value, \$87,440; Sunday schools, 9; officers and teachers, 89; scholars, 897. Several natives were admitted into the Conference.

MEXICO. The close of 1863 found the French firmly established in the heart of Mexico, having possession of the chief towns in the most populous States, and preparing to extend their conquests to the north and west. They held the line between Vera Cruz and the capital, had pushed north as far as San Luis Potosi, occupying Queretaro, Guanajuato, Guadalajara, and other intervening cities, and had recently taken, after a hard contest, Morelia, the capital of Michoacan, directly west of the City of Mexico. The Juarists were still dominant in Southern Mexico and along the Pacific coast, though holding both by a somewhat uncertain tenure, and their seat of government varied with the movements of their main army in the North, which under Juarez, Doblado, and Negrete, was retiring before the invaders in the direction of Monterey, then occupied by a national force under Vidaurri. The northern States had never been entered by the expeditionary army; and so thinly were they populated, so great were the distances to be overcome, and so extensive the lines of communications to be maintained by an invading force, that the Mexicans believed here, at least, they could make a final and successful stand. It seems never to have occurred to them that the vast mineral wealth of these States, undeveloped though it was, might prove a strong incentive to their opponents, and that "intervention" was the thin disguise assumed by men who were coveting possession of the rich silver mines of Sonora and Sinaloa. The left wing of the Northern Mexican Army, under Doblado, was posted between the towns of Durango and Zacatecas, watching an opportunity to assail the advancing Franco-Mexican forces, commanded by Douai, Mejia, and Castagny, on the flank; while the main body moved on the road between San Luis Potosi and Monterey. Another Mexican force, known as the Army of the Centre, was distributed through the States of Jalisco and Michoacan, to the northwest and west of the capital. Uruga held the chief command, and under him were Ortega, Arteaga, and other generals. The Army of the South, under Porfirio Diaz, had its headquarters in the State of Oajaca, with outlying bodies in Chiapas and Tabasco; and in Guerrero old Juan Alvarez and his son Diego, with the hardy Pinto Indians under their command, stood firm for the republic. Though in the aggregate these forces com-

prised a considerable body of men, they lacked consistency, discipline, and morale, were largely made up of guerrillas and other irregular troops, and were inadequately supplied with material of war. Not above five or six thousand could be collected for any pressing emergency, and repeated defeats had rendered them very unstable when opposed to the well-trained and armed French battalions. Their efficiency lay rather in their ability, from a superior knowledge of the country and their mobility, to harass and disperse small expeditionary forces, to assail supply trains, or to cut off isolated garrisons. Organized operations may be said to have ceased after the fall of Puebla, and each general marched and fought at his discretion. No other course was possible. Brigandage prevailed to a frightful extent along the borders of the territory occupied by the French, and the guerrillas frequently showed a mingled ferocity and audacity scarcely calculated to reassure those who looked for the speedy pacification of the country. No convoy during the early part of 1864 dared pass between Vera Cruz and Mexico without a large armed escort. In January a travelling party, accompanied by a few soldiers, was attacked between Jalapa and Perote, and massacred, it was said, with the exception of one woman. Summary justice was dealt to the offenders, when caught, and French military law seemed to be the only code in force. Of the military events of the year it is almost impossible to give an accurate account, owing to the deliberate and systematic falsification practised by both parties. Victories for the Juarists which had little or no foundation in fact were frequently reported, and on the other hand the French accounts of their successes are exaggerated beyond the power of belief. That the national forces were gradually frittered away in frequent combats, and by desertion or submission, until organized resistance almost ceased, is the main fact in the military history of the year.

Early in January the French papers published a long list of towns, including San Luis Potosi and Guanajuato, which had given in their adhesion to the empire, and toward the close of the month the expeditionary army operating against Juarez marched north from San Luis Potosi. On February 7th Zacatecas was occupied by a column under Generals Douai and Castagny, Doblado having previously retired toward Saltillo. Almost immediately, however, the advance of the French was stopped from the necessity of watching the movements of Ortega and Uruga, who were reported between Zacatecas and Guadalajara, threatening the latter city, then recently captured by General Bazaine, who had returned to Mexico. On February 18th Ortega, according to the French accounts, was routed by Castagny at Ocotlan, in the State of Jalisco, and obliged in his retreat to disband his troops; but this dissolution seems to have been only temporary, as a few weeks later he appeared

again in Durango to the northwest of Zacatecas. Uraga, after hovering for some time around Guadalajara, which he was at one time reported to have retaken, moved off to the south of that city, his departure being hastened by a movement of General Douai toward Aguas Calientes to intercept him. Various other reasons contributed to delay the French several months in Zacatecas or its neighborhood, of which the chief one was the difficulty of maintaining their long line of communications. Such a thing as cutting loose from their base seems never to have been attempted by any of their leaders.

In the last week of January, Juarez with Doblado and Negrete approached Monterey, first sending forward a notification to Vidaurri that he intended to fix his capital in that city. The position held by the latter general was a peculiar one. Though frequently reported to have deserted to the interventionists, he still held the office of governor of the States of New Leon and Coahuila, having at his disposal a considerable body of troops, and preserving at least the appearance of friendliness to the national cause. He did not, however, attempt to conceal a deep-rooted hostility toward Juarez, and was believed to be deterred only by the military force which the latter had at his disposal from declaring for the Empire. He had recently cultivated friendly relations with the rebel authorities in Texas, and encouraged trade between them and his people, from which he had personally reaped very considerable advantages. Juarez had condemned this proceeding as a violation of the treaty between the United States and Mexico; and as his presence in Monterey would very seriously disturb Vidaurri's commercial speculations, the latter had every inducement to keep him at a distance. Learning on February 9th, that some of his troops had joined Juarez, he repaired to his fort near Monterey and prepared for a fight. Interviews between Vidaurri and Generals Doblado and Negrete followed, and on the 11th Juarez with his cabinet, generals, and about 2,800 men, took possession of Monterey. But as Vidaurri still held his fort with an armed force in a sullen attitude of defiance, Juarez, rather than provoke an encounter at this crisis, left the city on the 14th. Three days later Vidaurri issued a proclamation in which he justified his course, and declared himself against Juarez, which meant, of course, in favor of the Empire. For a month this state of things remained without change, when Vidaurri, finding that New Leon and Coahuila had declared against him, threw off all disguise and fled with a small escort to the Rio Grande and crossed into Texas. On March 31st Juarez again entered Monterey, and established there the national capital.

The Franco-Mexican papers at this time proclaimed that the so-called government of Juarez found itself reduced to four or five States, which rendered him only a nominal obedience, and that his position was too hopeless to admit of

further resistance to what they termed the "march of events." Some of his most trusted followers even began to waver in their faith, and Doblado suggested that his withdrawal from the presidency would smooth the way for a peace. In reply, Juarez said that such a step would cover the liberals with ridicule, and himself with ignominy, for deserting in time of danger a post which the nation had solemnly confided to him. He denied that the French wished to treat with any Mexican leader who had not previously accepted intervention, and showed that it was the National Government, and not the power of certain individuals, which they sought to destroy. In conclusion he said:

It is true the state of affairs is not now very bright, and I do not try to deceive myself that circumstances may improve, but I am certain that our duty is to struggle for our country, and that between a struggle and treason there is no mean. I beg you, therefore, to go on making war on the enemy by all possible means, this being our only hope of salvation. Otherwise the enemy will not treat with us except on dishonorable terms, or we must treat with the established government, which is not the government of the nation.

In the latter part of February, ex-President Santa Anna arrived at Vera Cruz from St. Thomas, after nearly nine years' absence from his native country. On landing he was required, as a condition of remaining in the country, to sign a paper declaring his adhesion to the French intervention, recognizing as the only legitimate government the monarchy proclaimed by the assembly of notables, with the Archduke Maximilian as Emperor, and pledging himself to abstain from any political demonstration, either by speech or writing, and to conduct himself wholly as a private citizen. To a man, however, who had passed the better part of his life in fomenting revolutions and projecting "plans," the issuing of a manifesto upon such an occasion, was a temptation too great to be resisted; and, by what means has never been clearly ascertained, four days after his arrival an address from "Antonio Lopez de Santa Anna, well deserving of his country, and general of division of the national armies," appeared in a newspaper of Orizaba. With characteristic egotism he reviewed the services he had performed for Mexico; charged upon the liberals the series of wrongful acts, culminating in anarchy, which had forced French intervention upon the country; but counselled the people, nevertheless, to yield willing obedience to the Empire. With the exception of some indirect complaints at the spoliation of the church property, there seemed to be nothing in the manifesto calculated to create public disturbance, but it led to the following peremptory order from Gen. Bazaine:

MEXICO, March 7, 1864.

GENERAL: His Excellency, Gen. Almonte, has just sent me a supplement to No. 68 of the newspaper, *Indicator*, published in Orizaba, and in which there appears in full the proclamation that you have sent to Mexico, signed by you. You have failed in the engagement that you signed on board of the English steamer *Comway*; nor have you thought it worth

while to make application in this respect to the Commander-in-Chief of the Franco-Mexican army, who represents France in Mexico. You cannot remain any longer in Mexican territory, and I beg you to leave it without delay, as I would a son.

I have given on this point explicit orders to the head Commander of Vera Cruz, as well as to the Admiral commanding the French naval forces in the Gulf, that a vessel be put at your service. Receive, General, the assurance of my high esteem.

The Commander-in-Chief: General BAZAINE.

On March 12th the military commander of Vera Cruz informed Santa Anna of the order for his departure received from the capital, and on the same day he left for Havana. From the latter place he published a reply to General Bazaine, denying that he made any promise not to interfere in politics, and insinuating that the order for his departure from Mexico emanated from Gen. Bazaine alone, as on the same day he received a letter from Almonte congratulating him on his arrival. With regard to the paper signed by him before landing at Vera Cruz, in which he promised not to take any part in politics without the previous sanction of the Government, he stated that he did not know its purport, as it was written in the French language, with which he was unacquainted. He further declared that the manifesto was printed by his friends, who were naturally desirous to know his opinion of public affairs, and entirely at their own suggestion; and announced his intention to appeal to Napoleon III. against the "unjust and inhuman" order for his departure. Whether the appeal was ever really made or not, he did not return to Mexico, the Emperor probably agreeing with Gen. Bazaine that his presence in the country might be productive of mischief, and that the indiscreet manifesto formed a good pretext for getting rid of him.

During March the French fleet was active along the Gulf coast, and blockaded that portion extending from Vera Cruz as far southward as Lagana. Several vessels also appeared off the mouth of the Rio Grande and took soundings preparatory to an attack in force upon Matamoras. On the Pacific coast the port of Acapulco was blockaded. But in Southern Mexico the French met with no success, having even been compelled to evacuate Tabasco and Minatitlan after severe fighting, and being afraid to approach the latter place on account of its unhealthiness. In the beginning of April they had no foothold in the States of Tabasco or Chiapas.

In the early part of 1864 the deputation of Mexicans which had in the preceding year presented the imperial crown to Maximilian, returned to Europe on a similar errand. The scruples of the archduke had been by this time so far overcome, that he was willing to receive the dignity without a ratification by the popular vote, accepting the submission of the people to the French arms as equivalent to a vote in his favor. On April 10th he received the deputation at his palace of Miramar, and listened to a harangue from Gutierrez de Estrada, who on

this, as on the former occasion, officiated as spokesman, and expressed the joy felt by the deputation in finding themselves once more in the presence of his Highness. They had come, he said, in the name of the imperial regency to announce that the vote of the notables which had conferred the crown on him had been ratified by an immense majority of the country, and that the unanimous acclamation of the notables of Mexico, of the municipal authorities, and of the popular corporations, represented a truly national vote. Maximilian replied, in Spanish, to the deputation as follows:

Mature examination of the acts of adhesion you have come to lay before me affords me the assurance that the resolution of the Mexican notables which brought you the first time to Miramar is confirmed by the immense majority of your compatriots, and that I may with good right consider myself the legitimate elect of the Mexican people. The first condition expressed in my reply of October 3d is therefore fulfilled. The guarantees which the future empire requires to be able to consecrate itself in peace to the first of its passions—the establishment upon firm bases of the independence and welfare of the country—are now secured, thanks to the magnanimity of the Emperor of the French, who, throughout the progress of the negotiations, has shown himself constantly animated by a spirit of loyalty and good will, of which I shall ever preserve the remembrance. The august head of my family, upon his part, has given his consent to my taking possession of the throne offered to me. I am thus enabled to fulfil the eventual promise I gave you six months ago, and I now solemnly declare that, with the aid of the Almighty, I accept the crown at the hands of the Mexican nation which tenders it to me. Following the traditions of that new continent, so full of strength and future, Mexico has used her right of selecting a government in harmony with her wishes and her requirements. She has placed her confidence in a descendant of that House of Hapsburg which three centuries ago planted a Christian monarchy upon her soil. This confidence touches me, and I will not betray it. I accept the power of organization which the nation, of which you are the organs, confers upon me, and I shall in any case retain it only so long as may be necessary to introduce settled order into Mexico, and to establish wise and liberal institutions. As I stated to you, gentlemen, in my address of the 3d of October, I shall hasten to place the monarchy under the safeguard of constitutional laws as soon as the country shall be completely pacified. The strength of the executive power is, in my opinion, secured by the precision equally with the well-defined establishment of its limits; it is therefore my intention, in carrying on my government, to fix such boundaries as may guaranty its stability. I firmly hope we shall prove that well-regulated liberty is perfectly compatible with the reign of order. I shall know how to respect the one and cause respect to be shown to the other. I shall hold high the flag of independence, the symbol of future greatness, with the same vigor. I ask the assistance of all Mexicans who love their country to aid me in accomplishing my splendid but difficult task. Union will make us strong, will procure for us peace and prosperity. My government will never forget the gratitude it owes to the illustrious prince whose generous support has brought about the regeneration of our beautiful country. Upon the way to my new country it is my intention to visit Rome, to receive from the hands of the holy father those benedictions so precious to all sovereigns, and which are doubly important to me, as called upon to found a new empire.

At the conclusion of this address the new

sovereign was greeted by shouts of "God save the Emperor Maximilian I.," and salvos of artillery from the castle and the town of Trieste. Gutierrez de Estrada then addressed him in the following remarks:

Sire, this complete and absolute acceptance on the part of your Majesty is the prelude of our happiness; it is the consecration of the salvation of Mexico, of its approaching regeneration, of its future greatness. Every year, on this day, our children will offer up thanksgivings to Heaven in gratitude for our miraculous deliverance. As for us, sire, there remains a last duty to perform, and that is to lay at your feet our love, our gratitude, and the homage of our fidelity.

The deputation then knelt and kissed the hand of the Emperor, and immediately afterward a procès verbal of the acceptance of the crown of Mexico was signed by the parties to the interview.

On the same day a convention between France and Mexico was signed by their respective representatives in the following terms:

ARTICLE 1. The French troops at present in Mexico shall be reduced as soon as possible to a corps of 30,000 men, including the foreign legion. This corps, in order to safeguard the interests which led to the intervention, shall remain temporarily in Mexico, on the condition laid down in the following articles:

ART. 2. The French troops shall evacuate Mexico in proportion as the Emperor of Mexico shall be able to reorganize the troops necessary to replace them.

ART. 3. The foreign legion in the service of France, composed of eight thousand men, shall nevertheless remain in Mexico six years after all the other French troops shall have been recalled, in conformity with article 2. From that moment the said legion shall pass into the service and pay of the Mexican Government, which reserves to itself the right of abridging the duration of the employment of the foreign legion in Mexico.

ART. 4. The points of the territory to be occupied by the French troops, as well as the military expeditions of the said troops, if there be any, shall be determined in common accord, directly between the Emperor of Mexico and the Commandant-in-Chief of the French corps.

ART. 5. On all the points where the garrison shall not be exclusively composed of Mexican troops, the military command shall devolve on the French commander. In case of expeditions combined of French and Mexican troops, the superior directions of those troops shall also belong to the French commander.

ART. 6. The French commanders shall not interfere with any branch of the Mexican Administration.

ART. 7. So long as the requirements of the French *corps d'armes* shall necessitate a two-monthly service of transports between France and Vera Cruz, the expense of the said service, fixed at the sum of 400,000 francs per voyage (going and returning), shall be paid by Mexico.

ART. 8. The naval stations which France maintains in the West Indies and in the Pacific Ocean shall often send vessels to show the French flag in the ports of Mexico.

ART. 9. The expenses of the French expedition to Mexico, to be paid by the Mexican Government, are fixed at the sum of 270,000,000 francs for the whole duration of the expedition down to the first of July, 1864. That sum shall bear interest at the rate of 5 per cent. per annum. From the first of July all the expenses of the Mexican army shall be at the charge of Mexico.

ART. 10. The indemnity to be paid to France by

the Mexican Government for the pay and maintenance of the troops of the *corps d'armes* after the 1st of July, 1864, remains fixed at the sum of 1,000*fr.* a year for each man.

ART. 11. The Mexican Government shall hand over to the French Government the sum of 66,000,000 in bonds of the loan at the rate of issue, viz.: 54,000,000 to be deducted from the debt mentioned in Art. 2, and 12,000,000 as an instalment of the indemnities due to Frenchmen in virtue of Art. 14 of the present Convention.

ART. 12. For the payment of the surplus of the war expenses, and for acquitting the charges in Arts. 7, 10 and 14, the Mexican Government engages to pay annually to France the sum of 25,000,000 in specie. That sum shall be imputed: 1. To the sums due in virtue of Arts. 7 and 10. 2. To the amount, interest and principal, of the sum fixed in Art. 9. 3. To the indemnities which shall remain to French subjects in virtue of Art. 14 and following.

ART. 13. The Mexican Government shall pay, on the last day of every month, into the hands of the Paymaster-General of the army, what shall be due for covering the expenses of the French troops remaining in Mexico, in conformity of Art. 10.

ART. 14. The Mexican Government engages to indemnify French subjects for the wrongs they have unduly suffered, and which were the original cause of the expedition.

ART. 15. A mixed commission, composed of three Frenchmen and three Mexicans, appointed by their respective Governments, shall meet at Mexico within three months, to examine and determine these claims.

ART. 16. A commission of revision, composed of two Frenchmen and two Mexicans, appointed in the same manner, sitting at Paris, shall proceed to the definite liquidation of the claims already admitted by the commission designated in the preceding article, and shall decide on those which have been reserved for its decision.

ART. 17. The French Government shall set at liberty all the Mexican prisoners of war as soon as the Emperor of Mexico shall have entered his States.

ART. 18. The present convention shall be ratified, and the ratifications exchanged as early as possible.

Done at the Castle of Miramar, this 10th day of April, 1864.

Soon after the interview at Miramar, Maximilian visited the Pope at Rome, and then, with his consort, the Empress Charlotte, embarked for Mexico; and after touching at Madeira and Martinique, at the latter of which places he liberated a number of Mexican prisoners, arrived on May 28th at Vera Cruz. On the succeeding day he landed, and passing hastily through the city, departed for Orizaba, where he arrived on the 30th. The inhabitants of Vera Cruz, with the exception of the French, exhibited a passive indifference to the imperial presence, and very few outward demonstrations of enthusiasm greeted the new sovereign upon entering his dominions. The brief stay in the city was attributed to the fear of the yellow fever and vomito entertained by the imperial couple. After a few days of rest from the fatigues of the sea-voyage at Orizaba, the emperor continued his journey to the capital, and on June 11th was met at Guadalupe, a few miles distant from Mexico, by the chief ecclesiastical, military, and civil dignitaries of the realm. Here, at the famous church of Our Lady of Guadalupe, high mass was celebrated by the

Archbishop of Mexico, assisted by other prelates, with imposing ceremonies, after which the emperor listened to an address from the political Prefect of Mexico, profuse in protestations of loyalty and delight at his arrival, to which he made the following reply:

Profoundly moved by the enthusiastic reception which I have received from all the towns and cities in my progress, my emotion and my gratitude acquire new intensity on finding myself at the gates of the capital, and seeing its principal authorities assembled to congratulate me in a place so respected and so dear to me and the Empress as it is to all Mexicans. I thank you for your felicitations, and salute you with the warmth of one who loves you, and who has identified his fate with yours.

The imperial entry into the capital took place on Sunday morning, June 12th, with a degree of pomp and circumstance never before witnessed in Mexico. The streets, lined with soldiers, were brilliantly decorated with flags and draperies, and at appropriate points spanned by triumphal arches festooned with flowers; and as the imperial cortège passed along, the roar of artillery and the clangor of church bells made a deafening welcome. The populace, who were gathered in dense crowds to witness the pageant, by their silence and lack of enthusiasm afforded a singular contrast to its scenic splendor. The French residents and the numerous government employés, it is true, gave vent to noisy demonstrations; but the native Mexicans looked on with comparative apathy, curiosity being apparently the only feeling which they cared to exhibit, and were sparing of their *vivas* or applause. Many of them took pains to impress upon strangers how different was the reception of Maximilian to that in former days bestowed upon some popular leader of the republic. After hearing a *Te Deum* at the cathedral the emperor held a levee at the palace, where he conferred the order of Guadalupe upon a number of persons, and the festivities of the day ended with an illumination of the city at nightfall. In the mottoes and inscriptions plentifully distributed over the city during the three days through which the celebration was protracted, the influence of the reactionist or church party was very apparent. Combined with the customary Mexican bombast, there was an ostentatious allusion to religious topics, which suggested political rather than religious motives, and showed how assiduous were the ecclesiastics to create a public opinion in their favor. Maximilian and his consort were apostrophized, not merely as the saviours of temporal Mexico, but as the defenders and bulwarks of the faith throughout the world, Mexico being, of course, the source whence their auspicious influences were to flow.

The excitement attending his arrival having subsided, the emperor set himself seriously to work to organize the government of his realm, and to ascertain in what manner the much demanded "regeneration" could be accomplished. Coming to power, according to his friends, with intelligence, capacity, and liberal views of gov-

ernment, he at once called upon the notables of the different provinces, and those persons supposed to represent the intelligence and strength of the country, for information upon the population and resources of their respective localities, and also for suggestions as to the best method of introducing order into the disorganized branches of the administration. He sought also, by private interviews with such persons, to get an insight into the national character and feelings; and as a pledge of his desire to establish a popular government, he organized them into committees to report upon financial, military, legal, or other reforms. Some of these committees were formed on the most liberal scale as regards numbers, that on finance alone consisting of sixty members, who represented every shade of opinion. The development of the resources of the country also occupied his attention, and projects were broached for building the much-mooted railroad across the isthmus of Tehuantepec, for forming new mining companies, railway and telegraph lines, and for organizing a national navy. As it was indispensable to unite the capital by a permanent line of communication with the Gulf of Mexico, the contract for continuing the railroad between Mexico and Vera Cruz, formerly granted by Juarez in perpetuity to M. Escandron, was given to an English company, who engaged to finish the road within four years.

The clemency which the emperor had shown to the Mexican prisoners at Martinique was subsequently imitated on a broader scale, in the hope that the people would thereby be induced to acquiesce in the new order of things; and shortly after his installation in the capital he conceded a general amnesty to all prisoners condemned for political offences, and also to those who, for mixed offences, had been sentenced to more than ten years' imprisonment or hard labor; although such persons were not, in consequence of this amnesty, released from private claims against them. Of more importance than these measures for pacification was an invitation which he sent immediately upon arriving in Mexico, to Juarez and the republican leaders, to attend a conference in the capital for the purpose of discussing a plan for the restoration of peace to the country and the firm establishment of the empire. This overture met with little favor from sincere liberals, who generally refused to hold any communication, except by arms, with the "agent of Napoleon," although to the wavering or despondent ones it afforded a welcome pretext to forsake the cause of the republic. Juarez replied in the following terms:

RESPECTED SIR: You have privately addressed me a letter, dated the 2d inst., on board the frigate *Novara*; and in my character of a polite and respectable person, the obligation is imposed on me of replying to it, although hastily, and without any thing like meditation, because you must already suppose that the delicate and important charge of President of the republic absorbs all my time without cessation; not even at night. French filibustering is seeking to en-

danger and overthrow our nationality, and I, who by my principles and my oaths am the one called to sustain the national integrity, its sovereignty, and its independence, have to labor actively, multiplying my efforts to respond to the sacred trusts which the nation, in the exercise of its sovereign faculties, has imposed upon me. Nevertheless, I propose, however briefly, to reply to the most important points contained in your letter.

You tell me that, "abandoning the succession of a throne in Europe, abandoning your family, your friends, your property, and the dearest thing to a man—your country—you and your wife, Donna Carlota, have come to distant and unknown lands only in obedience to the spontaneous call of a nation which fixes in you the happiness of its future." I certainly admire in one sense all your generosity; but, on the other, my surprise has been truly great in finding in your letter the phrase "spontaneous call;" for I had seen before that when the traitors of my country presented themselves, on their own authority, at Miramar, to offer you the crown of Mexico, with a few acts of nine or ten towns of the nation, you did not perceive in it any thing but a ridiculous farce, unworthy to be seriously considered by an honest and decent man. In reply to such an absurdity, you demanded a free expression of the national will, as the result of universal suffrage. This was to demand an impossibility; but it was the proper duty of an honorable man to do so. How great, then, must be my wonder to see you coming to the Mexican territory, without any of the conditions demanded having been fulfilled! How must I not wonder at seeing you now accepting the same farce of the traitors, adopting their language, decorating and taking into your service bandits like Marquez and Herran, and surrounding your person with this dangerous class of Mexican society! Frankly speaking, I have been greatly deceived; for I believed and hoped that you were one of those pure organizations which ambition could not succeed in corrupting.

You cordially invite me to go to Mexico, a city whither you yourself are about to proceed, to the end that we may there have a conference, in conjunction with other Mexican chiefs who are now in arms, promising us all the forces necessary for our escort in the transit, and pledging as security and guarantee your public faith, your word, and your honor. It is impossible for me, sir, to accede to this call; my official occupations will not admit of it. But if, in the exercise of my public functions, I could accept such an invitation, the public faith, the word and honor of an agent of Napoleon the perjured would not be sufficient; of a man whose safety reposes in the hands of Mexican traitors; and of the man who at this moment represents the cause of one of the parties who signed the treaty of Soledad. We know too well in America the worth of that public faith, that word and honor, just as the French people know how much the oaths and promises of a Napoleon are worth.

You say also that from the conference which we might have (in case of my acceptance) you do not doubt that peace will result, and with it the felicity of the Mexican nation, and that in the future the empire, placing me in a post of distinguished honor, would count upon my talents and the aid of my patriotism for the general good. It is certain, sir, that the history of our own times records the names of great traitors, who have betrayed their oaths, their word, and their promises; who have been false to their own party and principles, and even to their antecedents, and all that is most sacred to the man of honor; true, also, that in all these cases of treason, the traitor has been guided by the vile ambition of command and the miserable desire of satisfying his own passions, and even his own vices; but he who is at present charged with the trust of President of the republic, emerging as he has from the obscure masses of the people, will succumb, if in the wisdom of Providence he must

succumb, fulfilling his own to the last, corresponding to the hope of the nation over which he presides, and satisfying the inspirations of his own conscience.

The want of time compels me to conclude, and I will add but one observation. It is given to man sometimes to attack the rights of others, to seize their property, to threaten the lives of those who dare defend their nationality, to make the highest virtues appear like crimes, and their own vices to shine with the lustre of true virtue. But there is one thing that is beyond the reach of the false and perverse, and that is, the tremendous sentence of history. It will judge us.

I am &c., &c., BENITO JUAREZ.

In contrast with the dignified and comparatively temperate tone of this document, was the reply of Porfirio Diaz, commanding the national Army of the South in Oajaca, of which the following is an extract:

When the French Convention in 1793 condemned Louis the XVI. to be beheaded, they desired by such a measure to concentrate and unite their own forces and power, and to throw down a defiance of death to the cause of the past, and proving to Europe that they had full confidence in their means of defence.

* * * In the actual circumstances in which the Mexican republic is placed, measures of equal sternness and decision are imperiously necessary in the attitude which ought to be assumed by those who govern. And for these reasons, without any one pretending to see in them an act of barbarism or a cruel and inhuman deed, but simply a determination in consonance with the political exigencies of the moment, this general command disposes that —, an emissary of the pretended Emperor of the Mexicans, be put to death within the space of twenty-four hours.

Communicate this order for its prompt execution, &c. PORFIRIO DIAZ, General-in-Chief.

HEADQUARTERS, STATE OF OAJACA, June 27, 1864.

It is but proper to say that the sanguinary order was not carried into effect upon the emissary of the emperor, although he was subjected to a temporary imprisonment.

With the exception of a number of new diplomatic appointments, Maximilian availed himself at first of the services of those officials already in charge of administrative functions. No minister was appointed to the United States, and during the greater part of the year that government was represented at the Mexican capital by W. H. Corwin, Secretary of Legation and acting Chargé in the absence of Hon. Thomas Corwin, who returned home in the latter part of April. Owing to a want of accurate information on economical subjects, and also to an inability to deal with practical questions which seems inherent in the Mexican character, little progress was made by the committee on finances. Much time was expended on discussions extraneous to the subject under consideration; personal claims were introduced, and in the examination of general principles, to the exclusion of the immediate, vital questions before the committee, session after session was frittered away. The difficulty of instituting a sound system of finance, in a country where no regular system of taxation or revenue had been in existence for upward of ten years, and where all branches of agriculture, industry, and trade were nearly paralyzed, might, it is true, have

perplexed far more experienced financiers. But the men whom Maximilian had called around him, though possibly having the best intentions, were unfitted, from the almost perpetual contentions amidst which they had lived, as well as from the frequent vicissitudes of political fortune which they had experienced, to discharge the functions of legislators. This was sufficiently apparent from their method of conducting business, the idea uppermost in their minds seeming to be, that devotion to the empire would enable them to manage state affairs, and would make up for all deficiencies in knowledge or capacity. So marked was the inefficiency of the committee, that the opponents of the empire accused Maximilian of having selected it for no other purpose than to afford a pretext for assuming hereafter absolute rule, on the ground that popular bodies could not deal intelligently with great public questions. Hence it was predicted that unless the several commissions should speedily come to some practical conclusions, the emperor would shorten their sessions, and boldly assume the responsibility of deciding for them. After that, the constitutional monarchy which the conservatives professed to hail with so much pleasure would soon degenerate into a despotism of the Austrian type. These predictions have not yet, it is true, been wholly fulfilled, but those who uttered them profess to have full faith that popular government and the empire cannot exist together.

The military commission alone, at the head of which was Gen. Bazaine, proceeded, with some degree of expedition, to put into proper shape the matters committed to their charge. This was in a great measure owing to the experience and business habits of their president, who had much tact in all things connected with his profession. A plan was elaborated for the organization of a Mexican army of 100,000 men, to which are to be added an auxiliary force of 15,000 European soldiers, comprising French, Austrians, Belgians, Poles, and Germans, and known as the "Foreign Legion." As early as February, 1864, the first instalments of this body began to arrive in Vera Cruz, and by the close of the year nearly the whole complement had been received. They relieved a corresponding number of French troops who were sent home from time to time.

The progress of military events up to July, was on the whole favorable to the imperialists, although the relative positions of the contending parties cannot be said to have materially changed. Juarez still occupied Monterey; Uruga and Ortega held their forces in various parts of Durango, Jalisco, and Michoacan; and Diaz and Alvarez had considerable strength in Southern Mexico. On the Pacific coast, the French successively occupied during the year Acapulco, Manzanilla, and Mazatlan, and established a cordon of posts between Guadalajara and the seaport, Tepic, thus connecting the Pacific with the Gulf of Mexico. In April, Alvarez peremptorily declined to recognize the empire, but

as the French were not then prepared to push matters in the south, he and Diaz held the country for some time longer without opposition. A severe blow to the republican cause was the defection of Uruga in July, only a few weeks after he had announced his intention of holding out for the national party to the last. "To a soldier of the republic," he wrote on June 13th, "mutilated in the cause of liberty, bred from infancy in the doctrine of political independence, there can be no other device than this: War to the death with the French; war to the death with those who, betraying the sacred cause of their country, recognize or protect the foreign invader or the petty monarch whom he pretends to enthrone on our soil. This device I have adopted, and to this pledge my country and the world shall see me devoted." He made his escape to the capital, where he subsequently was rewarded with high office for his treachery, and the command of the army which he had deserted was assumed by Gen. Arteaga who issued a spirited address to reassure the troops. Though nothing perhaps approaching in magnitude to a pitched battle took place between March and July, lesser engagements were frequent, and generally resulted to the advantage of the imperialists. In the south, the guerrilla bands of Palacios, Rojas, and Romero, kept the latter constantly on the alert, and sometimes gained signal though temporary successes.

In August, the Franco-Mexican columns which had started from San Luis Potosi in the early part of the year, found themselves at last in a condition to move northward with vigor, and their approach was the signal for the republican forces to draw off to the northwest. The column under Douai and Castagny which had remained so long in Zacatecas, took the direct road for Monterey, and passing through Saltillo, reached the former place early in September. It had already been evacuated by Juarez, who, with the archives and the few remaining officials connected with the national government, passed over the desert of San Carlos to Chihuahua, where he was cordially received on October 12th. An imperial force also, after a sharp fight at Estanzuela, occupied the city of Durango, in the State of that name, during September. Another column under Gen. Mejia meanwhile marched from San Luis Potosi, northeast through the State of Tamaulipas to Matamoras, where, on September 26th, the republican Governor Cortinas capitulated with all his forces. Contemporary with this movement the French fleet reappeared off the Rio Grande, and occupied Bagdad near the mouth of the river, which they fortified and supplied with a garrison. It was while the latter was successfully resisting an attack from the troops of Cortinas that Mejia reached Matamoras, which fell without a shot.

The surrender of Cortinas and his army, and the fall of Matamoras, were the most severe reverses that Juarez had experienced in the

north during the year, and they practically ended the war in northeastern Mexico. Thenceforth the struggle for popular government was to be conducted by the President in the thinly-populated State of Chihuahua, under circumstances which would have disheartened or thoroughly prostrated most men in his position. But Juarez seemed to gather strength by reverses, and regarding himself as the representative of the republic and the repository of a sacred trust, he heroically kept the field with barely 2,000 men against formidable odds, not knowing what fortunate event might not happen to brighten his prospects. One by one his chief generals and advisers had been taken from him by death, by capture, or by submission to the imperial army, until scarcely a man of note, except Negrete, remained near him. In August one of the most trusted of the republican leaders, Doblado, left the country, whether from despair of the cause or on a public mission is not known; but, unlike Uruga and others, without suspicion of treachery. In the middle States matters looked no more favorably for the republicans, who saw their scattered forces frequently worsted in petty engagements. Arteaga, Ortega, and other leaders, maintained an unequal struggle with the imperialists, which could terminate in but one way. Only in the south did the republicans preserve any show of efficient organized opposition.

About the middle of August the emperor started on a tour of observation, intending to go as far as Zacatecas, about three hundred miles north of the capital. Previous to his departure, by the following decree, dated August 7th, he removed the censorship which had been imposed upon the press:

Until the committee charged with organizing the administration of justice shall have presented me with the result of their work, I have considered it convenient to amplify the action of the press. Consequently from the 8th day of this month, and until further orders, the previous censorship is suppressed. Every individual can freely utter his opinions of official acts, to point out their defects, without provoking to disobedience and with a due respect for authority. Offensive allusions, recriminations which tend to keep up discord and foment party spirit, will be repressed, conformably with the last regulations upon this matter, &c.

As a concession to the liberals this was a prudent measure, and it was followed by other acts of clemency during the imperial progress, which undoubtedly made converts to intervention. A more important result of his journey was the determination to treat as outlaws the armed adherents to the republican Government. This policy was first unfolded in the following letter to his Minister of State, Velasquez de Leon, dated a few days after his return to the capital:

MY DEAR MINISTER: Since my return from my arduous voyage to the departments of the interior, during which I have received in each city, town, and village, the most sincere proofs of sympathy and of the most cordial enthusiasm, I have been able to deduce two irrefutable truths: The first, that the

empire is an act firmly based upon the free will of the immense majority of the nation, and in it is embraced the form of a Government of true progress; and that it is the best to correspond to the needs of the people. The second is, that this immense majority is desirous of peace, of tranquillity and of justice—benefits which it expects and anxiously asks of my Government, and which I, having present my sacred duty before God, and the people which has elected me, am resolved to give it. Justice will find its base in institutions adequate to the times, and will be sustained with incessant zeal. For the establishment of peace and tranquillity in all this beautiful and extensive country, and for the prompt development of its prodigious wealth, my Government is determined to employ all its means and energy.

If up to the present time leniency has been shown to its political adversaries to give them time and opportunity to recognize the national will and conform themselves to it, in future it will be an imperative obligation to combat them, for their flag now carries no political creed but a mere pretext for robbery and murder. My duty as a sovereign obliges me to protect the people with an iron arm and to correspond to the wishes expressed on all sides. We declare, as chief of the nation, and with the full knowledge of our sacred mission and of the duty which we have imposed on ourselves, that all the armed bands which are yet overrunning some parts of our beautiful country, pillaging it, alarming and menacing the industrious citizen in his labor and liberty, shall be considered as gangs of outlaws, and will fall in consequence under the inflexible and inexorable severity of the law. Therefore we commend all functionaries, magistrates, and military authorities of the nation to pursue and annihilate them by all means in their power. If our Government does respect all political opinions it cannot tolerate criminals, who destroy the first liberties it is called upon to guarantee, those of person and property.

Given at the Palace, Mexico, 8d of November, 1864. **MAXIMILIAN.**

About this time some changes were made in the ministry, which thereafter comprised the following persons: Minister of State, Don Jose Maria Lacunza; Minister of Foreign Affairs, Jose F. Ramirez; Minister of War, Juan de D. Peza; Minister of Public Works, Luis Robles; Minister of Justice, Pedro Escuden T. Echanove; Minister of Government, Jose Maria Cortes Z. Esparza; sub-Secretary of the Treasury, Martin de Castillo.

By a decree dated December 4th, a consulting body called the Council of State was created, to consist of the following persons: Don Jose Maria Lacunza, Minister of State, President; Don Hilario Elguero, Don Urbano Fonseca, Don Iedoso Laredo, Don Jesus Lopez Postillo, Don Jose Lopez Uruga (the general who deserted the republican cause), Don Vincente Ortigosa, Sr. Obispo Francisco Ramirez, and Don Manuel Siliceo, Councillors. All of these, with the exception of Ramirez, it is said, were old liberals. The following extract from the decree creating the Council will show what duties they were required to perform:

ART. II.—The duties of the Council will be: 1. To draft projects for regulations, decrees, or laws, which we directly, or by some one of the ministers, would have to take charge of, and to present the several projects to us.

2. To form a Court of Appeals.

3. To form of itself a supreme court, to judge re-

sponsible cases of the highest functionaries, when by us it may be ordered, or any other case or business which we, specially for the public interest or convenience, in cases of urgency, may deem proper to consign to it for an express decree.

4. To give opinions on all questions that we, directly or through the ministries, may lay before it.

5. To perform any other duty that by law or by us may be given to it.

ART. III.—The Council will confine itself to giving opinions on all points on which it may be consulted, making on them the observations that it may deem proper.

ART. IV.—The President, Councillors, and Auditors will be at will appointed and removed by us.

ART. V.—The annual salaries will be as follows: President, \$8,000; Councillors, \$4,000; Auditors, \$1,500. No one will have a right to any other remuneration. In no case will he be allowed to draw emoluments from the Treasury, nor from those interested.

ART. VI.—The President, Councillors, and Auditors cannot exercise any functions in any branch of the administration; but we will confer upon them the functions that we believe of use to the public service.

In the formation of this body the opponents of the empire fancied they detected an aping of Napoleonic ideas, and an evidence of the Napoleonic influence. The latter suspicion seemed presently to be amply justified by a decree of the imperial government, forbidding the shipment of bullion from Mexico in any but French bottoms, and to any but French ports, which brought out a protest from leading English bankers to Earl Russell. The signers of this document characterized the decree as "unusual and arbitrary," and deprecated the idea of a hasty recognition of the new government by sending a minister to Mexico. Their action came too late, however, to prevent this, as steps had already been taken to recognize the empire. A similar course had been followed by the other great powers of the world, with the exception of the United States, and during the latter part of the year a considerable number of foreign ministers arrived at the capital.

According to the "Estafette," the official paper of the capital, the committee on finance reported in December that thirty millions of dollars would cover the expenses of the Government for the succeeding fiscal year. This journal, however, was of the opinion that forty millions would scarcely suffice for this purpose, reasoning in this way: For payment of the public debt and indemnities there would be required twelve or thirteen millions; for the French army remaining about five millions; and then, after paying all the costs of the civil administration, salaries of employes, clergy, and officials, the army of foreign and the army of Mexican troops, exclusive of the French, there would remain nothing for instruction and public works. The "Estafette" admitted that there was little money in the country, and that it would be hopeless to attempt at present to raise more by means of taxation, whence the conclusion became inevitable that retrenchment would have to be practised in the public administra-

tion or money raised by loan. So disheartened was Maximilian by the financial embarrassments by which he was surrounded, that he is stated to have written to the Emperor Napoleon asking the assistance of a practical business man to establish the credit of the new Government; and he subsequently sent Don Eustaquio Barron, a wealthy capitalist, to Europe to raise funds. Toward the close of the year a variety of new schemes for railroads and telegraph lines were brought forward; and with a view of opening new avenues of industry, the emperor addressed a note to the Minister of the Interior, directing him to inquire as to the best means of encouraging the cultivation of coffee, cotton, sugar, and other tropical products in Mexico.

In the preceding volume of this work the circumstances which, in the latter part of 1863, brought the regency into collision with the reactionary or Church party, were detailed at length. The ecclesiastica, incensed at the refusal of the new Government to annul the laws of confiscation passed under preceding liberal administrations, awoke to the bitter reflection that the European intervention, for which they had so unscrupulously and successfully labored, instead of inuring to their benefit, would probably prove an additional source of disappointment, and possibly of despoilment. In other words, their property was no safer under Maximilian than under Juarez. A lingering hope, however, seems to have prevailed that the new emperor, himself a member of a strong Catholic family, of absolutist tendencies, would refuse to ratify the action of Gen. Bazaine, and that the Church, reinstated in all her former wealth and privileges, would still be the controlling influence in Mexico. They therefore paid sedulous court to Maximilian on his arrival, but soon found that the "march of events" (as the French officials termed it) would not permit him, however willing he might be to do so, to annul the policy initiated under the regency. The confiscated estates could not be restored, the old privileges could not again be enjoyed, and to their horror the emperor showed a disposition to permit complete religious toleration in his dominions. The clergy found themselves at last, as the Archbishop of Mexico had somewhat prematurely asserted in his correspondence with the French journals, actually in a worse condition than under Juarez, and in consequence their influence was at once directed to pulling down the political structure they had been at such pains to erect. Miramon, their chief champion in the cabinet and the field, commenced to intrigue against the Government, and so far compromised himself that he was sent out of the country. This warned others that in the presence of the material power, swayed by Maximilian, any attempt to overthrow the empire would meet with a bloody repulse. But their efforts, it is said, were not less active, if compelled to be made in secret, and the army of Diaz in Oajaca, the last stronghold of the liberals, was, on good authority,

furnished with supplies and money through the instrumentality of those who, a few months previous, had been its bitterest enemies. The complications which had threatened to disturb the reign of the emperor many months before his arrival, actually became intensified after his assumption of the crown, and the close of 1864 found him, a professed liberal, hated by the liberals, and at the same time, if possible, more detested by the conservatives, who had called him to his throne.

The following letter from the Pope has an important bearing on the subject of the confiscated Church property, and curiously forestalls the sentiments expressed in his Encyclical letter:

SIR: When in the month of April last, before assuming the reins of the new empire of Mexico, your Majesty arrived in this capital in order to worship at the tombs of the Holy Apostles and to receive our apostolic benediction, we informed you of the deep sorrow which filled our soul by reason of the lamentable state into which the social disorders during these last years have reduced all that concerns religion in the Mexican nation.

Before that time, and more than once, we had made known our complaints in public and solemn acts, protesting against the iniquitous law called the law of reform, which attacked the most inviolable rights of the Church and outraged the authority of its pastors; against the seizure of the ecclesiastical property and the dissipation of the sacred patrimony; against the unjust suppression of the religious orders; against the false maxims that attack the sanctity of the Catholic religion, and, in fine, against many other transgressions committed not only to the prejudice of sacred persons but also of the pastoral priesthood and discipline of the Church.

For those reasons your Majesty must have well understood how happy we were to see—thanks to the establishment of the new empire—the dawn of pacific and prosperous days for the Church of Mexico; a joy which was increased when we saw called to the throne a prince of a Catholic family, and who had given so many proofs of religious zeal and piety. Equally intense was the joy of the worthy Mexican bishops who, on leaving the capital of Christendom, where they had presented so many examples of their fidelity and self-denial toward our person, had the happiness of being the first to pay their sincere homage to the sovereign elect of their country, and of hearing from his own lips the most complete assurances of his firm resolution to redress the wrongs done to the Church and to reorganize the disturbed elements of civil and religious administration. The Mexican nation also learned with indescribable pleasure of your Majesty's accession to the throne—called to it by the unanimous desire of a people who, up to that time, had been constrained to groan beneath the yoke of an anarchical Government, and to lament over the ruins and disasters of the Catholic religion, their chief pride at all times and the foundation of their prosperity.

Under such happy auspices we have been waiting day by day the acts of the new empire, persuaded that the Church, outraged with so much impety by the revolution, would receive prompt and just redress, whether by the revocation of the laws which had reduced it to such a state of oppression and servitude, or by the promulgation of others adapted to the suppression of the disastrous effects of an impious administration.

Thwarted hitherto in our hopes, by reason, perhaps, of the difficulties which attend the reorganization of a society long overturned, we cannot now refrain from addressing your Majesty and appealing to the uprightness of your intentions, the Catholic

spirit of which you have given so many striking proofs on former occasions, and the promises made to us by your Majesty of protecting the Church; and we confidently hope that this appeal, penetrating your noble heart, will produce the fruits we have a right to expect.

Your Majesty will undoubtedly perceive that if the Church continues to be controlled in the exercise of her sacred rights, if the laws which forbid her to acquire and possess property are not repealed, if churches and convents are still destroyed, if the price of the Church property is accepted at the hands of its unlawful purchasers, if the sacred buildings are appropriated to other uses, if the religious orders are not allowed to reassume their distinctive garments and to live in community, if the nuns are obliged to beg for their food, and forced to occupy miserable and insufficient edifices, if the newspapers are permitted to insult the pastors with impunity, and to assail the doctrines of the Catholic Church; if this state of things is to continue, then the same evils will certainly continue to follow, and perhaps the scandal to the faithful and the wrongs to religion will become greater than ever before.

Ah, sire, in the name of that faith and piety which are the ornaments of your august family; in the name of the Church, whose supreme chief and pastor God has constituted us in spite of our unworthiness; in the name of Almighty God, who has chosen you to rule over so Catholic a nation with the sole purpose of healing her ills and of restoring the honor of His holy religion, we earnestly conjure you to put your hands to the work, and laying aside every human consideration, and guided solely by an enlightened wisdom and your Christian feelings, dry up the tears of so interesting a portion of the Catholic family, and by such worthy conduct merit the blessings of Jesus Christ, the prince of pastors.

With this purpose, and in compliance with your own wishes, we send you our representative. He will inform you by word of mouth of the sorrow which has been caused to us by the sad news which thus far has reached us, and he will better acquaint you with our intentions and aims in accrediting him near your Majesty.

We have instructed him to ask at once from your Majesty, and in our name, the revocation of the unjust laws which for so long a time have oppressed the Church, and to prepare with the aid of the bishops, and, when it may be necessary, with the concurrence of our apostolic authority, the complete and definite reorganization of ecclesiastical affairs.

Your Majesty is well aware that, in order effectively to repair the evils occasioned by the revolution, and to bring back as soon as possible happy days for the Church, the Catholic religion must, above all things, continue to be the glory and the mainstay of the Mexican nation, to the exclusion of every other dissenting worship; that the bishops must be perfectly free in the exercise of their pastoral ministry; that the religious orders should be reestablished or reorganized, conformably with the instructions and the powers which we have given; that the patrimony of the Church and the rights which attach to it may be maintained and protected; that no person may obtain the faculty of teaching and publishing false and subversive tenets; that instruction, whether public or private, should be directed and watched over by the ecclesiastical authority; and that, in short, the chains may be broken which up to the present time have held the Church in a state of dependence and subject to the arbitrary rule of the civil government. If the religious edifice should be reestablished on such bases—and we will not doubt that such will be the case—your Majesty will satisfy one of the greatest requirements and one of the most lively aspirations of a people so religious as that of Mexico; your Majesty will calm our anxieties and those of the illustrious episcopacy of that country; you will open the way to the education of a learned and zealous clergy, as well as to the

moral reform of your subjects; and, besides, you will give a striking example to the other governments in the republics of America in which similar very lamentable vicissitudes have tried the Church; and, lastly, you will labor effectually to consolidate your own throne, to the glory and prosperity of your imperial family.

For those reasons we recommend to your Majesty the Apostolic Nuncio who will have the honor to present to you this, our confidential letter. May your Majesty be pleased to honor him with your confidence and good will, in order that he may more easily comply with the mission that has been confided to him. Your Majesty will also be pleased to grant the same confidence to the worthy prelates of Mexico, in order that, animated as they are by the Holy Spirit and desirous of the salvation of souls, they may be enabled to undertake with courage and joyfully the difficult work of restoration in all that they are concerned, and thus concur toward the reestablishment of social order.

Meanwhile we shall not cease daily to direct our humble prayers to the Father of light and the God of all consolation, to the end that all obstacles being overcome, the counsels of the enemies of religious and social order turned to nought, political passions calmed, her full liberty restored to the spouse of Jesus Christ, the Mexican nation may be enabled to hail in the person of your Majesty, its father, its regenerator, and its greatest and most imperishable glory.

Confidently hoping to see fully consummated these, the most ardent desires of our heart, we send to your Majesty and to your august spouse our apostolic benediction.

Given at Rome, in our Apostolic Palace of the Vatican, the 18th of October, 1864. PIUS IX.

Monsignor Meglia, the Nuncio referred to by the Pope, arrived in Mexico in December, too late to exercise the expected influence upon Maximilian, who had by this time perfected his policy respecting the nationalization of Church property and religious toleration. For form's sake, however, the latter proposed to open negotiations with the Nuncio, with reference to the adoption of a Concordat between the Holy See and the Mexican Empire, and was informed that the Nuncio had brought no instructions from Rome. The four propositions which Maximilian submitted to the Nuncio were as follows: 1. The ratification, in the name of the Pope, of the sale of all mortmain property. 2. The substitution of the civil contract of marriage, for that which had hitherto been sacramental. 3. Liberty of worship. 4. Endowment of the clergy by the State. The first three of these propositions had already been made law by Juarez in July, 1859; but the last one had been set aside by the republican liberals, on the ground that in a country where liberty of worship prevailed, it was not to the State, but to separate congregations, that the duty of providing for the ecclesiastical ministry belonged.

Immediately after his interview with the Nuncio, the Emperor addressed the following letter to his Minister of Justice, directing him, notwithstanding the advice and solicitations of the Pope, to proceed and frame the laws already decided upon:

MEXICO, Tuesday, Dec. 27, 1864.

MY DEAR MINISTER ESCUDERO:—In order to smooth the difficulties which have arisen on account of the reform law, we propose to adopt a means which,

while satisfying the just requirements of the country, should reestablish peace in the minds and tranquillity in the conscience of all the inhabitants of the empire. For this purpose, when we were at Rome, we opened negotiations with the Holy Father, as universal chief of the Catholic Church.

The Papal Nuncio is now in Mexico; but to our extreme surprise he has declared that he is without instructions, and has to await them from Rome.

The unnatural situation in which we have continued, with difficulty, during seven months, admits of no more delay. It demands an immediate solution. We consequently charge you at once to propose suitable measures in order that justice may be administered without consideration of personal station; that legitimate interests created by these laws may rest secure; correcting the excesses and injustices committed in their name; to provide for the maintenance of public worship and protection of other sacred matters placed under the safeguard of religion; and, finally, that the sacraments may be administered and other functions of the sacred ministry be exercised throughout the empire without cost or charge to the people.

To this end, you will, before any thing else, propose to us the revision of the operations of the mortmain and nationalization of ecclesiastical property, shaping it on the basis that legitimate transactions executed without fraud, and according to the laws which decreed such amortization, shall be ratified. Labor, in fine, according to the principle of free and ample toleration, keeping in view that the religion of the State is the Roman Catholic and Apostolic.

MAXIMILIAN.

Naturally enough this letter called forth a protest from the Archbishop of Mexico, and other prelates, similar in substance, but more temperate in style, than that which they had addressed a twelvemonth previous to Gen. Bazaine. It is scarcely necessary to add that it produced not the slightest effect upon the Emperor. A decree was soon after promulgated substantially ratifying the sales of Church property made in accordance with laws enacted under former republican administrations; and in the following decree religious toleration was declared throughout the empire:

MAXIMILIAN, Emperor of Mexico, having consulted our Council of Ministers, we have decreed and do decree the following:

Article 1. The empire protects the Catholic Apostolic and Roman religion as the religion of the State.

Art. 2. All forms of worship not contrary to morality, civilization, and good manners, shall have free and ample toleration in all the territory of the empire. No worship can be established without the previous consent of the Government.

Art. 3. As circumstances shall demand, the administration, by police regulations, will arrange all that may concern the exercise of worship.

Art. 4. Abuses which may be committed by the authorities against the exercise of worship, and against the liberty which the laws guarantee to their ministers, shall be laid before the Council of State.

This decree shall be placed in the archives of the empire and published in the official journal.

Done at the Palace, at Mexico, Feb. 26, 1865.

MAXIMILIAN.

By order of his Imperial Majesty,
PEDRO ESCUDERO Y ECHANOVE, Minister of Justice.

On April 4th a resolution passed the United States House of Representatives by a unanimous vote, declaring the opposition of that body to a recognition of the Mexican Empire.

It subsequently went in due course to the Senate, where it was referred to the Committee on Foreign Relations, with whom it has since remained, never having been reported for adoption. The French Government asked for an explanation of this vote, and its official organ, the "Moniteur," having announced that "satisfactory evidence of the sense and bearing of the resolution" had been received from the United States, President Lincoln was requested, by the House of Representatives, to communicate the correspondence on the subject which had taken place between the two Governments. The following letters were communicated:

Mr. Seward to Mr. Dayton.

[Extract.]

DEPARTMENT OF STATE, }
WASHINGTON, April 7, 1864. }

SIR: * * * I send you a copy of a resolution which passed the House of Representatives on the 4th inst., by a unanimous vote, and which declares the opposition of that body to recognition of a monarchy in Mexico. Mr. Geoffrey has lost no time in asking an explanation of this proceeding.

It is hardly necessary, after what I have heretofore written with perfect candor for the information of France, to say that this resolution truly interprets the unanimous sentiment of the people of the United States in regard to Mexico. It is, however, another and distinct question whether the United States would think it necessary or proper to express themselves in the form adopted by the House of Representatives at this time. This is a practical and purely executive question, and the decision of it constitutionally belongs not to the House of Representatives, nor even to Congress, but to the President of the United States. You will, of course, take notice that the declaration made by the House of Representatives is in the form of a joint resolution, which, before it can acquire the character of a legislative act, must receive, first, the concurrence of the Senate, and secondly, the approval of the President of the United States, or, in case of his dissent, the renewed assent of both houses of Congress, to be expressed by a majority of two-thirds of each body.

While the President receives the declaration of the House of Representatives with the profound respect to which it is entitled as an exposition of its views upon a grave and important subject, he directs that you inform the Government of France that he does not at present contemplate any departure from the policy which this Government has hitherto pursued in regard to the war which exists between France and Mexico. It is hardly necessary to say that the proceedings of the House of Representatives were adopted upon suggestions arising within itself, and not upon any communication of the executive department, and that the French Government would be seasonably apprised of any change of policy upon this subject which the President might at any future time think it proper to adopt.

I am, sir, your obedient servant,

WILLIAM H. SEWARD.

Mr. Dayton to Mr. Seward.

[Extract.]

PARR, April 23d, 1864.

SIR: I visited M. Drouyn de L'huy's yesterday at the Department of Foreign Affairs. The first words he addressed to me on entering the room were, "Do you bring us peace or bring us war?" I asked him to what he referred, and he said he referred more immediately to those resolutions recently passed by Congress, in reference to the invasion of Mexico by French, and the establishment of Maximilian on the throne of that country. I said to him, in

reply, that I did not think France had a right to infer that we were about to make war against her on account of any thing contained in those resolutions; that they embodied nothing more than had been constantly held out to the French Government from the beginning. That I had always represented to the Government here that any action upon their part interfering with the form of government in Mexico would be looked upon with dissatisfaction in our country, and they could not expect us to be in haste to acknowledge a monarchical Government, built upon the foundation of a republic which was our next neighbor. That I had reason to believe you had held the same language to the French minister in the United States. This allegation he did not seem to deny, but obviously received the resolutions in question as a serious step upon our part; and I am told that the leading secessionists here build largely upon these resolutions, as a means of fomenting ill feeling between this country and some others and ourselves. Mr. Mason and his secretary have gone to Brussels to confer with Mr. Dudley Mann, who is their commissioner at that place. Mr. Slidell, it is said, was to have gone to Austria, although he has not yet got off.

I am, sir, your obedient servant,

WILLIAM L. DAYTON.

Hon. WM. H. SEWARD, Secretary of State, &c.

Mr. Dayton to Mr. Seward.

No. 461.

[Extract.]

PARR, May 2d, 1864.

SIR: Immediately upon the receipt of your despatch, No. 526, I applied to M. Drouyn de L'huy's for a special interview, which was granted for Saturday last. I then said that I knew that the French Government had felt some anxiety in respect to the resolution which had recently passed the House of Representatives in reference to Mexico; and inasmuch as I had just received a copy of that resolution, together with the views of the President of the United States, I begged, if agreeable, to read to him your despatch in reference to the latter. To this he assented, and, as the shortest and most satisfactory mode, following out my instructions, I read to him that entire portion of your despatch which applies to this subject, stating, at the same time, that I thought it was a remarkable illustration of the frankness and straightforwardness of the President. When the reading was closed, M. Drouyn de L'huy's expressed his gratification, and, after asking some questions in regard to the effect of laying a resolution upon the table in the Senate, the conversation terminated.

The extreme sensitiveness which was manifested by this Government when the resolution of the House of Representatives was first brought to its knowledge has, to a considerable extent at least, subsided.

I am, sir, your obedient servant,

WILLIAM L. DAYTON.

Hon. WM. H. SEWARD, Secretary of State.

Toward the end of December a report was extensively circulated in the United States that the States of Sonora, Sinaloa, Chihuahua, Durango, and Lower California had been ceded to the Emperor Napoleon in payment of the French troops sent to subjugate the country, and that they were to be erected into a government under the viceroyship of William M. Gwin, formerly a United States Senator from California. The statement has not yet been officially confirmed, although, in the opinion of well-informed persons, it refers to some impending scheme of colonization to be superintended by Mr. Gwin.

To a superficial observer the year might seem to have closed upon the empire firmly established in Mexico. Everywhere the imperial arms had been triumphant, and forces were about to move into Oajaca, where, notwithstanding Diaz, aided by money obtained by despoiling churches, and by secret subsidies from the Church party itself, had collected a formidable force, and was bent upon a stout resistance, the result could hardly be considered doubtful. But, on the other hand, the country, though apparently subdued, was full of the elements of disturbance and impending trouble. Guerrilla bands infested every State where there was opportunity for plunder; cities which had received Maximilian during his imperial progress with acclamations, gave vent to unqualified expressions of hostility when he had taken his departure; the Mexican civil officers of Vera Cruz, Tampico, Puebla, and many other places, had rendered themselves so obnoxious that they had to be displaced; and the unnecessarily harsh means taken by the French authorities to repress disturbances which had no particular political significance, intensified the feelings of hatred with which the interventionists were regarded. Added to this was the total bankruptcy of the Government and the difficulty of raising funds to carry out its administrative projects; the prostration of commerce; and the growing affiliation of the liberals and conservatives, whose bond of union was hatred of a common enemy. As long as it might be upheld by foreign bayonets, the Empire seemed destined to have permanence and even strength; but in the event of the withdrawal of the French troops no one ventured to predict how long it would last. The military events happening within the United States at the close of the year, of course were too recent to have their proper effect upon the neighboring Empire; but that they would eventually have an important bearing upon the status of Mexico in the catalogue of nations, was not for a moment doubted. Under all these circumstances the first six months of Maximilian's reign could scarcely be considered auspicious of safety or strength in the future.

MEYERBEER, GIACOMO, a German composer, born in Berlin, September 5, 1791 (although 1794 is usually given as the year of his birth), died in Paris, May 2, 1864. He was the son of Jakob Beer, a wealthy Jewish banker, and was named by his parents Jakob Meyer Liebman Beer. In after life he dispensed with the Liebman, joined the Meyer and Beer together so as to make one name, and Italianized the Jakob, thus becoming Giacomo Meyerbeer. From infancy he evinced a remarkable fondness for music, and at seven years of age had already obtained a considerable mastery of the pianoforte. At twelve he was generally recognized as a musician of unusual promise, and in 1808 a Leipzig paper spoke of him as one of the first pianists of Berlin. Placed a few years later under the tuition of Bernhard Anselm Weber,

leader of the orchestra at the opera house of Berlin, he soon learned all in the theory of music and composition which that master could teach him, and in 1810 gladly availed himself of an opportunity to enter the school of the celebrated Abbé Vogler, at Darmstadt, where, in the companionship of Karl Maria von Weber and other young men afterward distinguished in the musical world, he commenced in earnest the study of harmony and counterpoint, and in the course of a few years composed much elaborate sacred music, marked by the severe, scholastic style of his master. The thorough schooling which he received in Darmstadt in the science of composition gave a tone to his subsequent productions, which no foreign influences or studies could ever wholly neutralize, and which at the close of his career reappeared with all its early force. At Darmstadt he composed an oratorio, *Gott und die Natur*, which excited the admiration of his master and procured him the appointment of composer to the Grand-ducal Court; and in 1812 he produced at Munich his opera "Jephthah," a work evincing an abundance of contrapuntal skill, but too deficient in melody to meet the popular taste. Captivated by the pianoforte playing of Hummel, he surrendered himself for six months to renewed practice upon that instrument, and in 1813 made a brilliant début at Vienna, as a pianist. He soon, however, wearied of the public plaudits, and at the invitation of the imperial court wrote another opera, *Die beiden Khalifen*, which had no better success than "Jephthah." Both works were written in the learned, but formal and frigid style acquired from Vogler, and to the Viennese, who had become enamored of the freshness and melodic richness of Rossini's music, they were thoroughly distasteful. Meyerbeer soon saw the disadvantage under which he labored, and yielding to the advice of his friend, Salieri, a composer of merit, repaired in 1815 to Italy to cultivate his taste for melody. In view of his previous musical training the effort seemed almost akin to that of a man, not having the spontaneous gift of poetry, deliberately educating himself to be a poet. But the energy and ambition of Meyerbeer, aided by a natural and deep-seated artistic feeling, which ever impelled him toward perfection, triumphed over all obstacles, and he actually succeeded in composing airs as delicate and graceful as those of the Italian composers, although lacking, perhaps, their ease and spontaneity. With him the impression of art and labor is never entirely forgotten in the unpremeditated flow of the melody.

For five years he studied and composed in Italy, bringing forth a series of operas, written in the Italian style to Italian librettos, which were tolerably successful, though now, for the most part, forgotten. Returning to Germany in 1820 he was received with coldness, as a deserter from the national school of music, and soon resumed his residence in Italy. In 1825 his *Crociato in Egitto* was produced in Venice

At the close of the performance the composer was called before the curtain and crowned amid the plaudits of the audience. The opera was performed with great success in all parts of Europe, and is considered his masterpiece in the Italian style. It marked also a turning point in his career, whence his genius, invigorated and refined by ten years' study of foreign models, though still faithful to the early traditions on which it had been formed, marched forward to greater triumphs. The favorable reception of the *Crociato* in Paris, procured him an invitation to visit that city, where, in 1826, he wrote his *Robert le Diable*. Domestic afflictions prevented him from at once putting the finishing touches to this work, which for four years he kept in his portfolio, supplying occasionally such passages as a naturally fastidious taste dictated, or such, of grander and at times more melancholy tone, as were suggested by his private griefs. In 1830 *Robert* was sold to the director of the grand opera, and in the succeeding year, after many careful rehearsals, was produced with unsurpassed effect. It immediately became famous all over Europe, and to this day has lost none of its original popularity. Written for the most exacting musical audience of Europe, it was elaborated beyond any thing the author had hitherto produced, and proved a marvellously successful attempt to combine melodic beauties and broad harmonic effects with dramatic action. The varying phases of the pathetic, the supernatural, the romantic, or the tragic were expressed with exquisite skill, and in the individuality and character of his music, and especially in his concerted pieces, Meyerbeer was pronounced the first of living composers.

After another interval of five years Meyerbeer produced his next opera, the "Huguenots," a grand and impressive historical pageant, illustrated by music worthy of the theme. Nothing written for the stage had perhaps equalled the massive harmonies, the magnificently-wrought choruses and concerted passages, or the musical, intellectual, and scenic beauties with which this work was crowded. As a drama alone, it was remarkable. The composer seemed returning to the paths he had trod in early life, but with the added strength of a giant, and putting aside the influences of his later Italian training, fairly conquered his audience without the aid of melody. The latter quality was indeed not wanting; but it was subordinated to dramatic propriety. Hence the opera did not immediately create that enthusiasm with which *Robert* had been received. The critics, at first overpowered and astonished, finally acknowledged the merit of the work, which is now generally considered the composer's masterpiece. A long interval of silence was succeeded in 1849 by the production of the *Prophète*, an opera similar in character to the "Huguenots," and possibly written with more pains. The art which had elaborated the later work, however, became too conspicuous in this to afford equal pleasure. Melody occupied a still lower place, and it seemed but too

evident that Meyerbeer was passing into another stage of musical development, in which science and art were to take the place of inspiration. The *Prophète*, nevertheless, aided by the most elaborate scenic effects the stage had then witnessed, and by the interpretation of the first singers of the day, had a great success all over Europe, and is still frequently performed. Two other works succeeded, *L'Etoile du Nord*, produced in 1854, and "Dinorah" (*Le pardon de Ploemel*) in 1858. Both show a decline of power, though in many respects wrought out with consummate art and musical knowledge, and both have enjoyed less popularity than the works immediately preceding them. Among his minor works may be mentioned the "Camp of Silesia," an opera rendered famous by the performance of Jenny Lind, the musical drama, "Struensee," and a number of compositions for the church. For many years previous to his death he had in his possession the finished score of a new grand opera, *L'Africain*, which with characteristic fastidiousness he altered in minute passages as the humor seized him. Scrupulously particular as to whom he selected for his leading parts, he was in quest of a soprano who should meet his requirements when death overtook him. The work has since been announced for representation at Paris, in April, 1865. With the exception of Rossini, he was by all odds the greatest of living composers, and his decease leaves a blank in the musical world which will not readily be filled.

MICHIGAN. The finances of the State of Michigan appear to be in quite a favorable condition. The debt of the State on November 30, 1864, was \$3,541,149, as follows:

State Debt (Interest-Bearing.)	
Canal bonds, 6 per cent., due January 1st, 1878.....	\$100,000 00
Renewal loan bonds, 6 per cent., due January 1st, 1878.....	215,000 00
Two million loan bonds, 7 per cent., due January 1st, 1863.....	250,000 00
Two million loan bonds, 6 per cent., due January 1st, 1873.....	500,000 00
Two million loan bonds, 6 per cent., due January 1st, 1873.....	500,000 00
Two million loan bonds, 6 per cent., due January 1st, 1863.....	750,000 00
War loan bonds, 7 per cent., due January 1st, 1866.....	1,121,000 00
	\$3,426,000 00
Add non-interest bearing debt:	
Adjusted bonds.....	\$9,000 00
"\$5,000,000" loan bonds.....	12,000 00
War loan bonds called in.....	1,150 00
\$140,000 outstanding, <i>part paid</i> .	
"\$5,000,000" loan unrecognized,	
adjustable for.....	80,999 80
	103,149 80
Total State debt.....	\$3,541,149 80

During the last fiscal year the sum of \$231,798 was added to the sinking fund of the State. The principle on which its financial affairs are conducted is, to raise by taxes from year to year the funds required to meet the ordinary and incidental expenses, leaving the sinking fund to clear off the State debt.

The receipts into the treasury during the last

fiscal year were \$2,444,242, and the expenditures \$2,004,194, leaving a balance of \$440,047.

The population of the State, by a census taken in 1864, was 808,745, being a gain of 54,682 since 1860. The exhaustion of the war is shown in the fact, that in 1860 the excess of males over females in the State was 50,275, but in 1864 this excess had declined to 21,182. The area of the State is more than 50,000 square miles, and 10,000 square miles greater than either New York or Pennsylvania, and more than 16,000 square miles larger than Ohio, and nearly as large as all New England. Surrounded on almost all sides by inland seas, her shores are washed by more than 1,400 miles of navigable waters.

The fisheries of the State, by the census of 1860, were returned at the value of \$250,467, which is exceeded only by Massachusetts, Connecticut, Maine, and Rhode Island. The returns of the census are probably too low; citizens estimate them for the present year at a million dollars.

The fish thus taken is known as white-fish. The white-fish, like the salmon and other fall spawning fishes, is short lived and a rapid grower. The spawn is laid in October and November; the hatching takes place in April, May, or June, according to the locality and to the warmth of water. During the first year the young ones attain to minnows of two or three ounces, so small that no net will stop them. Soon after hatching, or as soon as they have attained to the proper fish shape so as to navigate freely, they retire into deep, clear, cold water. This generally takes place from May to June. About this time, or a little later, the young fish of last year's hatching, some thirteen or fourteen months old, show themselves in vast numbers, gradually making their way from the deeper parts of the lake toward the grounds where they were hatched, for the purpose of depositing their spawn and producing their successors. During this period, between June and September, when they return to the place of nativity, they grow most rapidly, having grown from little ones of a few ounces to full sized fishes, of four, five, and in some localities in Lake Superior, to eight or nine pounds, in the space of less than three months. The very large fish known as the Mackinac or Lake Superior white-fish, is not so much larger than those of other localities, by reason of age, but from being of a different species, of a large breed, so to speak. They are no older than the others, and none are over sixteen or seventeen months old at maturity.

It has been observed by all fishermen, that the white-fish in different localities differ from each other in many marked peculiarities, not only in size, but in shape and their general appearance, as much so as different breeds of hogs, cattle, sheep, or horses, in different parts of the country. But the families or tribes keep themselves distinct from each other, never mixing or "crossing the breed," and the same features

will be observed on the same grounds from year to year, all resembling each other, but differing from those of other places, being either larger or smaller, or having other peculiarities; and uniformly so; but all in the same locality are of remarkably uniform size, that is those of the same sex, the females in all cases being the larger. Hence, the large fish are found always in the same place in Lake Superior, and the smaller ones always in the same places in Lakes Michigan and Huron, and the still smaller ones in Detroit River and Lake Erie.

Experiments by marking young fishes prove that this class, the fall spawning, as the white-fish, salmon, etc., always return at maturity to their old spawning grounds, lay their spawn, and retire. And it is believed, and pretty well settled, that the white-fish only breeds once, that is in the fall of the second year; and that during the summer of the third year, just about the time the last year's brood are making their rapid growth to maturity, the old ones retire into deep water to die, never again making their appearance. All the practical experience of fishermen, and what scientific observations have been taken, show that the apprehensions of exhausting white-fish in these waters by any mode of fishing now in use, are groundless. All scientific men agree in the conclusions already stated as to the fact that the white-fish spawns in the fall, suddenly attains its largest size within about three months, and lives only into the third year. The unanimous testimony of the most experienced fishermen also proves that the main enemy of the white-fish is the sturgeon, who lies upon the spawning grounds and devours millions upon millions of spawn, and that fishing with pound nets invariably reduces the number of sturgeon, while the white-fish invariably increase in number on the same grounds, no matter how large the catch may be from year to year.

The copper mines of Michigan on Lake Superior are well known. The annual yield now exceeds 10,000 tons. The yield of iron ore in 1855 was 1,447 tons, but in 1864 it had reached 248,000 tons, besides 25,000 tons supplied to the furnaces in the iron region at Marquette.

Numerous springs of saline waters abound in the Saginaw Valley as well as in other sections of the State. The salt produced in that valley in 1864 was 488,189 barrels, valued at the shipping point at \$2.25 per barrel, or \$1,098,425.

There are extensive fields of coal in the State, much of which is of good quality, and all of it valuable for manufacturing and other purposes. Large quantities of lumber are also made in the State.

At Lakeport large investments have been made and explorations commenced for petroleum, with a favorable prospect of profitable results. The increase in the wheat crop of 1863 over that of 1859 was 1,874,442 bushels, while there was nearly as great a falling off in the corn crop. The clip of wool increased from

4,062,858 pounds in 1860, to 7,249,984 pounds in 1864.

The whole number of troops raised and organized in the State to the end of 1864 was a little in excess of 80,000 men. At that time the State had in the Federal service thirty regiments of infantry, eleven regiments of cavalry, one regiment of light artillery, one regiment of mechanics and engineers, also two independent batteries, and fifteen companies for various arms of service.

A correspondence took place relative to the quota of the State between its military officers and the Provost Marshal General, which is important as showing the principles upon which quotas were estimated:

MILITARY DEPARTMENT, MICHIGAN, ADJT.-GEN.'S }
OFFICE, DETROIT, Feb. 6, 1865.

Hon. E. M. Stanton, Secretary of War :

SIR: I am directed by His Excellency, the Governor of Michigan, to present to your consideration the following statement:

Under the call of the President of Dec. 19, 1864, 800,000 men are required to supply the deficiency under the call of July 18, 1864, and to provide for casualties.

The entire quota of Michigan, under the call of July 18, 1864, as originally assigned by the Provost Marshal General, was 18,282, which, after the enrolment had been amended, was reduced to 15,760.

Up to and including the 31st of December, 1864, there had been enlisted in this State, and credited by the Acting Assistant Provost Marshal General, since the call of July, the following number of men:

For one year	4,016
For two years	50
For three years	10,121

Making a total of men absolutely enlisted and credited of 16,187.

This statement shows that instead of there being a deficiency in this State under the call of July 18th, to be provided for under the additional call now pending, there was on the 31st December an actual surplus standing to the credit of the State of 427, counting each man, without regard to the term of his enlistment, as a unit.

In the calculations, based upon periods of service, made at the office of the Provost Marshal General, and which entirely accord with those made by the Acting Assistant Provost Marshal General of this State, the proportion of men enlisted for three years entitled the State to a surplus credit on the call of July of 20,719, one year men, to be credited to the present call.

On the 31st of December this department was officially notified that the quotas of the several Congressional Districts of Michigan, under the call of December 19th, 1864, after deducting credits, were as follows:

First District	449
Second District	1,404
Third District	1,794
Fourth District	459
Fifth District	None
Sixth District	1,716
Total	5,823

On the 4th of February, however, a further notification was received from the Acting Assistant Provost Marshal General of the State, which placed the entire quota of the State of Michigan, under the call of December, at 80,745 men, or 80,745 years of service, which, after deducting the credits to which they were entitled, placed the quota of the several Congressional Districts as follows:

First District	1,786
Second District	1,991
Third District	1,918
Fourth District	1,966
Fifth District	1,839
Sixth District	1,986

Total, after deducting credits

10,036

A quota for Michigan of over 80,000 on a total call of 800,000, being more than one-tenth of the whole, it is apparent at a glance involves an enormous error in calculation.

The unquestioned fact that there was a surplus in Michigan under the call of July, entirely excludes the State from any computations based upon deficiencies under that call, and limits its liability subject to the modifications produced by allowing the credits promised for long terms of service to the requirements of the demand for 800,000 men.

It is submitted that justice requires that a new and largely reduced quota shall be assigned to this State.

I have the honor to be, very respectfully,

Your obedient servant,

JOHN ROBERTSON,
Adjt.-Gen., Michigan.

The reply of the Provost Marshal was as follows:

WAR DEPARTMENT, PROV.-MAR.-GEN.'S BUREAU, }
WASHINGTON, D. C., Feb. 14, 1865.

Gen. John Robertson, Adjutant General State of Michigan, Detroit, Mich. :

GENERAL: I have the honor to acknowledge the receipt of your letter to the Honorable, the Secretary of War, dated the 6th inst., and in reply thereto, I beg leave to say: The quota of the State of Michigan is her equitable proportion of the 800,000 men called for by the President on the 19th day of December, taking into account her enrolment as it stood on the 31st day of December, the amount of men heretofore furnished and the periods of their enlistment.

A portion of the call of July 18th for 500,000 men was filled by credits allowed to the different States and districts, for men previously furnished, and not heretofore credited, and thus less than 500,000 were put in service under the July call, and hence it is that the December call is said to be a call to make up deficiencies. But as that call was filled, either by men or lawful credits, there is no actual deficiency in the accounts of any State or district, and the December call of 800,000 has been apportioned to all the districts, in proportion to their enrolment, and the amount of service heretofore furnished.

In the assignment of the present quotas the State of Michigan has received credit for 20,719 years of service, which she had as excess, under the July call. But as that call is for 800,000 men, in addition to all men heretofore furnished, that excess is not deducted from the quota, except to the extent that it exceeds the average amount of excess furnished by the other States. If all the States had furnished the same amount of excess (in proportion to their enrolment) then the quotas of all the States would have been in exact proportion to their respective enrolments; but if none of the States had been in excess, then the quota of the State of Michigan would have been to that extent diminished.

But as all the States have more or less excess, and as the call was to obtain additional men, the excess was added to the call, and distributed to the States according to their enrolment, and then the specific amount of excess which each State had was deducted from its quota.

The approximate quotas assigned in December, were made up from incomplete data, and have been revised and corrected, which accounts for the difference alluded to in your communication.

A commission has been appointed by the President to examine and report upon the correctness of the quotas of all the States and districts, and the princi-

ples upon which they are assigned, and the amount of credits allowed to each.

Until I have been advised by the report of the committee, that error has intervened in the assignment of the quotas of the State of Michigan, I am at loss to discover that any injustice has been done to the State.

I have the honor to be, sir, very respectfully, your obedient servant, (Signed) JAMES B. FRY,
Provost Marshal General.

The whole subject relative to Michigan and other States was referred by the President to a committee to investigate Gen. Fry's mode of equalizing credits and assigning quotas, who reported as follows:

The call for three hundred thousand men, made by the President on the 19th of December, 1864, requires that that number shall be raised. But the law requires that the number of men previously furnished by different localities, and the periods of their service, shall be considered, so as to equalize the draft. The number of men liable to military duty is to be determined by the enrolment lists. The number of men which had been furnished by the various localities and their periods of service were ascertained, and previous accounts having been adjusted, the excesses, where they existed, were carried forward under the last draft. The amount of service furnished is determined by multiplying the number of men raised by the number of years for which they enlisted. Having thus ascertained the number of men enrolled on the 31st of December, 1864, the number of men furnished up to that date, the localities from which they came, and the periods of their service, it is proposed to distribute the call for three hundred thousand men among the several districts, and parts of districts, according to the number enrolled in each, and the number of men furnished, and the periods of service previously rendered by each. The rule by which this is accomplished is as follows:

Take the whole number of years of service furnished by the districts of the United States from the commencement of the rebellion to the 31st of December, 1864; from that sum deduct the whole number of men furnished from all the districts of the United States up to that date. The remainder will be the excess of years of service furnished by all the districts. Multiply the call of Dec. 19, 1864, by three, to have the number of years of service upon that call, and to this add the excess as ascertained above. Then, as the number of men enrolled from the whole United States, up to the 31st of December, 1864, is to the period of service as above ascertained, so is the number of men enrolled in a given district to the number of years of service it is required to furnish, including its *pro rata* share of the excess. From this sum deduct the actual excess the district furnished; the remainder is the number of years of service which the district is required to furnish under the call of Dec. 19, 1864, which, divided by three, gives the number of men required from the district.

As this call is for 300,000 men, that number cannot be reduced by men going in for a period longer than one year. Inequalities produced by going under this call for longer periods than one year must be equalized on future calls. It will be perceived that though the aggregate of the excess furnished is added to the whole call, the excess of each district is afterward subtracted from its quota. Thus the number of men called for is neither increased nor diminished, but equally produced, considering the number of men, and the periods of their service. Localities which have heretofore furnished a greater amount of service have, in proportion to their enrolment, a less amount to furnish under this call, and conversely. Men having heretofore enlisted for one, two, and three years, it was necessary to take one of these periods as the basis of the calculation. As three years embraced both the other periods it makes the

calculation more simple to adopt that. The same result would be arrived at by adopting either one or two years as the basis, but the process of calculation would be more complicated. Such we find to be the rule adopted by the Provost Marshal General. The rule is in conformity with the requirements of the laws of Congress, and is just and equitable. We have carefully examined and proved the work done under this rule by the Provost Marshal General, and find that it has been done with fairness. We file in the Provost Marshal General's office our calculation of the quota of each and every district indorsed by us as correct.

JAMES SPEED, Att.-Gen. of the U. S.
R. DELAFIELD, Brig.-Gen. and C. Eng. U. S. A.
C. W. FOSTER, Col. and Asst. Adjutant General.
Approved Feb. 17, 1865. (Signed) A. LINCOLN.
By order of the Secretary of War:
E. D. TOWNSEND, Asst. Adj't General.

Some difficulties occurred in Huron County, arising from an attempt to compel drafted men to report. They were not, however, of a very serious character. With regard to recruiting in States declared to be in rebellion, Gov. Blair said in a proclamation:

For the purpose of filling this quota, only two resources are available, viz.: 1st. Recruiting in the States declared to be in rebellion under the act of July 4th, except the States of Arkansas, Tennessee, and Louisiana. 2d. Recruiting among our own people. The first of these, I believe, will be found of no substantial value to us. I shall not, therefore, appoint any such agents to be paid by the State, but will, under proper regulations, appoint such agents for the benefit of any counties, towns, or sub-districts which may request it, paying the expenses of the agencies for themselves.

On Oct. 30th the city of Detroit was thrown into a great excitement by a report that a raid was to be made during the night by armed parties of the enemy from Canada. Soldiers were called out; artillery was brought from the barracks and posted in the streets; the steam fire-engines were brought forth to be in readiness to extinguish fires, and the depots and public buildings were guarded. No enemy, however, appeared.

The State election was held on the second Tuesday of November. The vote given for President was as follows: Lincoln, 85,352; McClellan, 67,370. Majority for Mr. Lincoln, 17,982. The candidates for Governor were Henry H. Carpo, Republican, and Wm. H. Fenton, Democrat. The vote was as follows: Carpo, 91,856; Fenton, 74,293. ✓

An act was passed by the previous Legislature, authorizing the soldiers in the Federal service to vote. The Supreme Court of the State decided this act to be unconstitutional and therefore void.

MICROSCOPE. The improvements which have been made in various parts of the compound microscope within a few years, have added greatly to its utility as an instrument of research, and they may be noticed briefly as follows: commencing with the object-glasses; or objectives, as they generally termed. Although extreme angles 165° to 175° had already been attained with the higher powers, neither the opticians nor the microscopists were satisfied; there has been a successful attempt to attain

the maximum angle, as far as possible, with the lower powers, such as the $\frac{1}{4}$ th and $\frac{1}{2}$ th inch objectives. These are now frequently made with angles, ranging from 110° to 140° , for direct light, and 140° to 160° for oblique, and possessing most exquisite definition. It has been found by the American artists, that low power objectives of these high angles, cannot be made equally perfect, at the same time, for direct and very oblique light. To meet this difficulty, Mr. Tolles supplies an *extra front*, to be used with extreme oblique illumination, and by thus changing fronts, the objective is made perfect as possible, and with very little trouble. The extra front when not in use, is contained in the objective box, the bottom of which unscrews to receive it. Messrs. W. Wales & Co. of Fort Lee, Bergen Co., New Jersey, whose objectives are now considered as of the highest quality, make the correction, as it appears to us, in a more efficient manner, by means of an *extra back*, which is introduced with but little more trouble than the extra front, producing a most perfect and satisfactory correction. We have a $\frac{1}{4}$ th of their make, thus corrected, now before us; and after comparing it with the best glasses of Ross, Powell, & Leland, Smith, Beck & Beck, Spencer and Tolles, have decided it to be as finely corrected an objective as has yet been made; the angle for direct illumination being about 140° , and for oblique near 160° , performing in the most satisfactory manner upon *Podura*, and easily resolving the *Grammatophora subtilissima* of Providence; we are the more particular to mention this as we omitted to name Messrs. Wales & Co. among the American opticians in our previous article.

While the attempt has thus been successfully made, by both the American and English artists, to push the $\frac{1}{4}$ th inch and $\frac{1}{2}$ th inch objectives, ordinarily, up to 120° and 140° , or more, there has been a slight decrease in the angles given to the higher powers, in order to obtain an increased working distance—as a general rule, the lower powers, such as the $\frac{1}{4}$ th inch have, for a given angle, a much greater working distance than a higher objective with the same angle. The $\frac{1}{2}$ th inch of Wales, above alluded to, has a working distance of over $\frac{1}{4}$ th of an inch, while an earlier $\frac{1}{2}$ th inch of Spencer, of fine corrections, and of only 160° of angle or thereabouts, cannot be used at all through glass of $\frac{1}{16}$ th of an inch in thickness. There can be no question that amplification produced by means of an objective, is far superior to that obtained by a high eye-piece, and that with equal angles and magnifying power, the higher objective, if well made, will surpass the lower in clearness of vision. To meet the demands of physiological investigators, especially, Messrs. Smith, Beck, & Beck now supply a $\frac{1}{4}$ th inch objective, having a single lens front, and the moderate angle of 120° . This objective is corrected, as had been previously done by Nacet, upon the same principle as the dialytic telescopes of Flössel and

Fraunhofer, by means of an over-correction to the posterior lenses. This objective is very highly spoken of, and has a very good working distance. Messrs. Powell & Leland, already justly celebrated for their fine $\frac{1}{4}$ th inch have produced a $\frac{1}{2}$ th inch, also a $\frac{1}{4}$ th inch of extreme angles; the latter is said to bear a power of 9,000 linear on the *Podura* with the utmost distinctness, and to have made revelations as to the ultimate structure and disposition of nerve fibre, unsuspected by other objectives.

Mr. Tolles has supplied as high objectives as $\frac{1}{4}$ th inch of most exquisitely corrected, but not of extremest angle, about 165° . The highest objective yet sent out by Wales & Co. is a $\frac{1}{4}$ th of admirable performance, and large working distance. It has appeared to us, that the only hope of real advance in these high powers, would be to make the first lens single, and a gem, say of garnet; thus giving a much increased working distance, with highest amplification, Messrs. Wales & Co. are about putting this to a practical test. Notwithstanding the determined opposition of a certain class of observers to objectives of high angle, it will be generally conceded by those who have had experience, that there is much greater precision and sharpness of definition, with a finely-corrected high angle objective, than with the same power of lower angle. We noticed in our former article some of the improvements in eye-pieces, and will only here allude to Mr. Tolles' new binocular. It is many years since binocular vision was suggested and employed with the microscope. None of these instruments appear to have given much satisfaction, until Mr. Wenham introduced his ingenious arrangement, which is now generally employed. The arrangement of prisms devised by Dr. Riddell gave pseudoscopic vision. The writer well remembers looking through this first instrument, which was constructed by Messrs. Graunow. A better arrangement of prisms was devised by M. Nacet, whose binocular is highly commended by Dr. Carpenter. Mr. Wenham's single prism was a still greater improvement, the result of a persevering determination of this gentleman, to whom microscopy owes so much, to improve the binocular microscope to the utmost possible. We do not, by any means, intend to disparage it in preferring Mr. Tolles' arrangement, which, we feel quite sure, with perhaps some improvements, Mr. Wenham himself will adopt, after careful consideration of its advantages. Not only is it applied in the same manner as an ordinary eye-piece, and can thus, with the smallest amount of trouble, be applied to any microscope, but it is also an erecting eye-piece of first quality—and hence particularly useful in dissections; and the division of the pencil being made quite near to the eye, the injurious effect of any slight departure of the faces of the prisms from a perfect plane, becomes a minimum. It is impossible that any binocular arrangement shall quite equal in definition the monocular form, however perfect may be the

dividing prism or prisms. The reason of this will appear from a simple experiment, which any one can easily make; and in judging of the performance of a binocular, allowance for this must be made. It will be at once perceived that the images presented to either eye come from separate halves of the objective. If we take a finely-corrected objective, and carefully adjust it on some test, and then, by means of a strip of paper, cover half the opening, at the back, thus cutting off half the pencil, and presenting exactly the condition of the objective as used to form the binocular images, it will be found to have lost considerably in fine definition, but to have gained in *penetration*, using this latter term to signify the power of perceiving as in focus, or nearly so, at the same time, different depths of the object. Now, when the binocular vision is effected, by whatever means, there will be this slight loss of definition almost inappreciable in powers below the $\frac{1}{10}$ th inch, but in some degree compensated by a great gain in penetration, which is of greatest value in assisting in the stereoscopic perception of the objects; and nothing can be more truly wonderful and pleasing than the effect of Mr. Tolles' eye-piece, especially with the lower powers, and upon opaque objects. Anatomical objectives, both transparent and opaque, are exhibited with a beauty entirely lost when viewing them in the ordinary manner. The $\frac{1}{10}$ th inch objective works remarkably well with the binocular eye-piece, as also the $\frac{1}{12}$ th inch, the fields illuminating readily with the achromatic condenser; there is, however, as already stated, some loss in definition, though at times hardly appreciable—with opaque objects this loss of definition is much less perceptible, and the stereoscopic effect is very fine. The principle upon which this eye-piece is constructed is simple; the optician will readily understand it, when told that the division of the pencil is effected at the crossing point of an achromatic erecting eye-piece. The erecting eye-piece of Mr. Tolles consists essentially of two Huyghenian eye-pieces, and is much superior to the old form; the anterior combination, or that nearest the objective, is almost half the power of the ordinary A., and about double its length. The field lens is a double achromatic, and the eye lens a triple achromatic—they are placed much farther apart than in the ordinary negative eye-piece. Immediately above the triple achromatic is placed the dividing prism; the arrangement is that of Nachet, thus giving orthoscopic vision, inasmuch as the image may be considered as a real object. It will be at once perceived, that the bad effect sometimes produced in Mr. Wenham's arrangement, arising from the necessity of placing the dividing prism so far from the posterior lens of the objective, is here entirely obviated, the division being effected exactly at the point required—there is a sliding motion allowed to the lenses anterior to the dividing prism which permits a

perfect compensation when different objectives are employed; it is however, hardly necessary. The eye-piece projects beyond the ordinary tube by the length of the prisms and eye-pieces; the latter are of the usual form of negative eye-pieces, and may be varied to increase the power; they are applied almost in contact with the prisms. The two tubes are parallel, and adjusted by a screw to open or close symmetrically, to suit the width of eyes of different observers. As yet, Mr. Tolles has sent out but the one eye-piece, now before the writer, but will soon be ready to supply the demand which will certainly be made for them.

The next improvement we shall notice is an entirely new method of illuminating opaque objects, to be viewed by the higher powers $\frac{1}{10}$ th inch to $\frac{1}{100}$ th inch, an invention of the writer, and here first described. The difficulty in illuminating opaque objects, to be viewed with the higher powers, is so great, that it is rarely attempted; an ingenious arrangement of Lieberkuhn's has been made by Ross, as suggested by Mr. Brooke, but it is of difficult and limited use. Of course, if it be attempted to illuminate by means of condensers applied at the side, as suggested by Mr. Richard Beck, the light thus thrown in must cast immensely long shadows, and could hardly be sent in at all, under a $\frac{1}{10}$ th inch or a $\frac{1}{100}$ th inch. Mr. Wenham has proposed to effect the illumination of balsam mounted objects, by means of reflection from the glass cover, the light being caused to impinge from below, at such angle as to be totally reflected. This method is only applicable to mounted objects, and has not proved as advantageous as was expected, especially in viewing the diatomaceous frustule, which becomes too transparent when mounted in balsam, to throw back much light, when thus illuminated. It was to meet this latter want that the writer devised the simple plan now to be described. The employment of a collimating eye-piece, with a transit instrument, suggested it. The idea is briefly this: *to make the objective itself the illuminator*. To effect this, a small bit of tube open at one side, carrying a movable perforated silver reflector, is screwed directly behind the objective, and can be turned in any direction toward the light. An ordinary small illuminating lamp gives most intense illumination, with the $\frac{1}{10}$ th inch, without any condensing lens outside. There are some special contrivances necessary, to prevent reflection of light up to the eye-piece, from the surface of the posterior lens of the objective, thus obscuring the vision. This is easily effected, and clear brilliant illumination with a dark field readily obtained. We need not here describe it more particularly, as it will soon be put into the hands of Messrs. Wales & Co., with special care to its proper construction, and it will be described more fully, and the necessary manipulations, in another place. The revelations had by means of this illuminator are wonder-

ful; it can only be employed upon uncovered objects—the diatoms, especially the larger ones, such as Pinnularia, Stauroneis, Surirella, and some of the disc forms, particularly Heliopelta, are exhibited with a beauty scarcely conceivable by those who have seen them only as transparent objects. Even the simplest objects, the stellate hairs of Deutzia for example, are presented under new and hitherto unsuspected phases; while many of the smaller diatoms, such as Cocconeis pediculus, show markings and configurations utterly invisible when viewed as transparent objects. The illuminator works finely in conjunction with Mr. Tolles' binocular; it could not be used with Mr. Wenhams' binocular, as the objective would be removed too far from the dividing prism. We close with a few words upon microscope stands. Without any disparagement to other makers, we can name as unsurpassed, both as to the quality of finish and completeness of adjustments, the stands made by Mr. Joseph Zentmayer of Philadelphia. It is, we believe, generally conceded by the American microscopists, that the microscope stands made by this gentleman are, in many respects, superior to the best English work. Since writing the previous article on the microscope, we have had in use one of his stands, after a previous long trial of Smith, Beck & Beck's best work. We see no reason to regret the change; the stage is very thin, allowing the use of extreme oblique light, remarkably smooth and steady in its movements; and the mounting of the illuminating mirror, a decided improvement, as also the graduated circle on the revolving base, for measuring angular apertures. Messrs. Wales & Co. do not yet supply the stands, but Mr. Tolles furnishes several patterns of most beautiful finish, quite equal to the best English work. We believe Messrs. Wales & Co. intend to supply with their higher objectives an extra front for immersion in water; thus, by the introduction of a drop of water between the objective and the thin covering glass of a balsam mounted object, a much larger pencil of light will be transmitted than can be the case when the rays emerge into the air before entering the objective. The objectives of M. Hartnach of Paris, constructed on this principle, first suggested and employed by Amici, are highly commended. Although the use of these objectives would be troublesome, doubtless there are occasions when their performance will surpass that of any objective constructed in the ordinary manner.

MILITARY SURGERY AND MEDICINE.

At the commencement of the present war there was a great scarcity of surgeons who had any special training in military surgery; a few of the medical officers of the regular army had had some experience in the Mexican war, and occasional practice in the Indian conflicts on the border, and a few others, civilians, had served as volunteers, or visitors, in the European camps during the battles of the Crimea and Italian

campaigns. The great surgeons of our large cities had become familiar with gunshot wounds in their practice, but the rapidity of diagnosis, the promptness of operation, the fertility of resource, the necessity of using often indifferent or ill-adapted instruments or apparatus, and the adaptation of the dressings to the protracted delay which must often occur before their renewal—these were matters concerning which the number of experts was very small. Fortunately those who were familiar with military surgery were mostly in positions where they could impart instruction to hundreds of those who were to become surgeons in the volunteer army, and brief as the time was for study it was zealously improved; the works of the great European military surgeons, Guthrie, Larry, Hennen, Armand, and others, were accessible, and several American treatises on military surgery, by Dr. Mann (written after the war of 1812), Dr. Frank H. Hamilton, an eminent army surgeon, Dr. Gross, and Dr. Stephen D. Smith, were also within reach of the volunteer surgeons, and were studied with avidity. The most valuable assistance in the way of manuals of instruction, however, was derived from a series of pocket monographs prepared by the eminent surgeons connected with the Sanitary Commission, Drs. Van Buren, Hammond, Mott, Agnew, and others on the more important operations, and camp and field diseases. These, furnished gratuitously to the three or four thousand surgeons and assistant surgeons of the army, have proved of great service in guiding the minds of the surgeons to a correct diagnosis, and indicating the best methods of operating, or the most successful plan of treatment.

For the first few months, with the exception of the wounded at the battle of Bull Run, and the minor actions of West Virginia, the duties of the military surgeons were mostly confined to the examination of recruits, the enforcement (very imperfectly accomplished) of hygienic measures in the camps and hospitals, and the care of the epidemic diseases, measles, small-pox, and pneumonia, and the other usual camp disorders, which prevailed to a greater or less extent in the camps of the Union army. The history of the hygienic measures adopted in the army is given at considerable length in the *ANNUAL OYOLOGPEDIA* for 1868, and requires no further notice here. The object of the present article is rather to indicate the peculiarities which distinguish military from civil surgery, and the improvements in instruments, apparatus, and modes of treatment which have been evolved and have borne the test of the vast experience of the four years past. This is not the place, even if there were room for it, for an exhaustive treatise on military surgery and medicine, but it is a part of the sphere of the *ANNUAL OYOLOGPEDIA* to note progress in medical and surgical science as well as on other topics.

Wounds received in battle are almost always attended with considerable, and often with dangerous or fatal, hemorrhage. The checking or

arrest of this hemorrhage before it has produced serious prostration is a matter of the first importance. For this purpose the use of some form of the *tourniquet* has been most generally advised. In the absence of the forms usually employed by the surgeon, an *extempore* tourniquet is often improvised from a handkerchief, cravat, or pair of suspenders, a knot being placed over the wounded blood-vessel and the whole twisted tightly with a stick. If the wounded vessel bleeds in jets and the color is a bright red the tourniquet is placed above the wound; if the blood is dark colored, below. The disadvantage of these extempore tourniquets, and indeed of most of those provided by the surgical instrument-makers, is that in unskilful hands there is danger of ligating the limbs too tightly and cutting off the circulation of blood in the limb through the anastomosing vessels, so as to produce serious ulceration and pain, or even sometimes paralysis of the limb. A field tourniquet (*fig. 1*) recently invented by Dr. Alex. B. Mott, ingeniously avoids this difficulty. His in-

FIG. 1.

Mott's Tourniquet.

strument consists of two ribbons of metal, to one of which a small pad is attached, and which are connected together by straps of webbing at each end riveted upon one and attached to the other by means of a buckle. By this apparatus no pressure is made upon the limb except at two points, over the vessel and at a point directly opposite, the lateral blood vessels being free to maintain the circulation and life of the limb. Tiemann's tourniquet (*fig. 2*) ac-

FIG. 2.

Tiemann's Tourniquet.

complishes the same purpose very well, though, perhaps, with some liability to injurious pressure, if carelessly applied.

The use of powerful styptics, such as the persulphate or perchloride of iron, or the compound alum styptic, to arrest hemorrhage by producing instant coagulation of blood in the wounded artery or vein, has been recommended by some surgeons, and soldiers were advised to carry a small bottle of some of these styptics with them; but the most eminent military surgeons disapprove of their use in wounds of the limbs wherever the tourniquet can be substituted for them, as their use is almost invariably followed by extensive sloughing and ulceration, and they are often unsuccessful in checking the hemorrhage, forming only a huge clot, which, falling away after a short time, leaves the orifice larger and the hemorrhage more profuse than at first. In wounds of portions of the head, face, or neck, or superficial wounds of the trunk involving large blood-vessels, or such as might occasion too severe loss of blood, the styptics are used with advantage, a piece of lint being saturated with the solution, and laid over the bleeding orifice, and a larger pledget of dry lint or a piece of cloth folded, placed over this and moderate pressure being applied for a few minutes to retain it in place. Uniform and moderate pressure with a roller bandage properly applied will generally close sufficiently all the smaller vessels, and materially diminish the danger of further bleeding from the larger ones. In the field-hospitals, however, there is so much difficulty in the proper application of the roller bandages, that they are seldom used, a piece of cloth or lint wetted in cool water being the usual application.

The transportation of the wounded soldier from the battle ground to the field-hospital, as well as to the more remote camp, post, or general hospital, is a matter of importance. If roughly and unskilfully performed the wounded man not only suffers severely but his injuries may be rendered mortal. At first it was the practice in the army for the line officers to detach two men who were uninjured from the ranks to bear off each wounded man, but this weakened the force so much in a severe battle (the bearers seldom returning to their place), that it was finally prohibited, and only the ambulance men of the regiment, or the members of the band, aided sometimes by the chaplain, or by civilians, assisted in that duty. An ambulance corps was organized in connection with the Army of the Potomac in the autumn of 1862, but did not attain much efficiency till the spring of 1863. Congress, at its session of 1863-'4 extended its provisions to the other armies of the republic. By its provisions each regiment in going into battle is entitled to three ambulances, with their drivers, and six stretcher-bearers, who are commanded by a sergeant, the stretcher-bearers marching with the regiment into battle, and the ambulances being drawn up in rear between the army and the field-hospital; the ambulance force of the regiments forming a brigade, being under the command of a second lieutenant, that of a division being commanded

by a first lieutenant, and the force attached to a corps by a captain who is responsible to the medical director of the army. The ambulances to be provided with stretcher-hooks and seats, and with water, cordials, bandages, etc. The wounded are brought off by these arrangements promptly and with comparatively little suffering. As a matter of fact, however, there have been usually but two ambulances to a regiment, and sometimes but one.

The different means of transportation adopted deserve notice. In most of the armies the U. S. army hand-litter or stretcher is now in use for carrying men off from the field, but some of the smaller outlying bodies of troops, and occasionally detachments of cavalry, are not provided with them. For these, as well as for the larger bodies of troops early in the war, the hand-litter made with guns and blankets, has been extemporized; for this purpose the edges of the blanket are rolled over the guns, and tied firmly with twine, and two stout sticks are also tied transversely across at the head and foot serving as handles for the bearers. This being laid on the ground, the wounded man is placed gently upon it with his knapsack under his head, and the bearers, standing between the guns, carry him with comparative comfort. The Indian litter is made by taking two stout saplings, and attaching to them three cross-pieces about two and a half or three feet apart by cords and notches; the sick or wounded man being placed on his blanket, this framework is placed over him and the blanket knotted to it. By three bent twigs and an additional blanket a kind of wagon top can be made to this in case of storm. Dr. James R. Wood has invented an admirable hand-litter of canvas, with the sides bound with very strong rope with loops at suitable distances and the cross-pieces of steel. This can be rolled up in small compass for transportation, and needs only a couple of poles, easily obtainable for use at any time. Panniers to be fitted on the backs of mules or horses (the former are preferable) are of service in mountainous districts where wheel carriages are inadmissible. The French use them to some extent in their ambulance corps. One of the panniers receives a man sitting, the other, one in a recumbent or partially recumbent position. It is necessary that the animals, whether horses or mules, should have been trained specially for this service. A horse or mule litter for transporting a wounded man in a recumbent position, by means of two horses, one before, the other behind the litter, was ordered by the U. S. Army Medical Board in 1860, but has not been very generally introduced. It is convenient for a mountainous country, but requires too many horses and men for a single soldier. The two-wheeled ambulance, known as Cherry's Cart, which may be used either as an ambulance or transport, found at first considerable favor in the army, though Dr. (now Medical Inspector, U. S. A.) Coolidge's two-wheeled ambulance soon superseded it, and

proved an admirable conveyance for wounded men on smooth and good roads, though too light for the rough and horrible routes over which most of our campaigning has been conducted. Surgeon General Hammond ordered, in 1868, four-wheeled ambulances to be drawn by two horses, which proved preferable to any others in the service. They were intended to convey ten or twelve persons sitting, or two sitting and two or three lying down. A still better four-wheeled ambulance, also drawn by two horses, has, within a few months past, been perfected by Dr. B. Howard, late a surgeon in the U. S. Army, and has been adopted in the service, and received the approval of the Sanitary Commission (*fig. 8*). It is beyond question the most admirably contrived conveyance for sick or wounded men over roads of any description which has ever been constructed, and seems to leave no room for further improvement. It admits of the transportation of six persons sitting, or two recumbent, or one recumbent and three sitting, and gives to the sitter all the advantages of a corner seat with cushion, for support, while the jostling and shaking of an ordinary ambulance is entirely prevented by the use of semi-elliptic springs with counterpoise springs inside, and rubber buffers to receive any sudden shock (*figs. 4, 5, 6*). The badly wounded are brought on the litters of the ambulance, which are well cushioned and slid into place in the ambulance on steel rollers, and steadied in their position by loops and guys. A tank of fresh water is placed underneath the seats and beds, and the water can be drawn from the rear end of the ambulances (*figs. 7, 8*). There are also contrivances for the suspension of fractures of the lower extremities without motion, and for suspending, if necessary, additional stretchers in the ambulance. There are also hooks on the sides of the ambulance for carrying folded stretchers, and compartments for the necessary simple cordials, lint, bandages, &c. It is in short a complete flying hospital (*fig. 9*).

It has sometimes been necessary to transport the sick and wounded to hospitals remote from the battle-fields, either for the sake of a more healthful climate, or to afford them better hospital accommodation and greater facilities for recovery. In the earlier years of the war, this was done, when it was possible, on steamboats or steamships chartered as transports. They were often fearfully crowded and exposed to great suffering in their voyages, and where, as was the case after the battles of the Peninsula and Antietam in 1862, the voyage was made by sea, the rolling of the vessels in the gales they often encountered, increased the agony and caused the death of many of the helpless sufferers. Subsequently, where transportation by railroad was necessary, they were carried in passenger cars, or oftener in box or freight cars, with straw laid upon the floors. In this way many thousands were brought from Chattanooga to Nashville and Louisville, in the autumn of 1863, and a large number in the spring

FIG. 2.

FIG. 4.

FIG. 5.

FIG. 6.

FIG. 7.

FIG. 8.

and summer of 1864. The Sanitary Commission, desirous to relieve the suffering thus caused, ordered the construction of a number of hospital cars, from drawings made by Elisha Harris, M. D. In these cars the seats are removed, and the stretchers in which the patients are brought suspended upon gutta percha or rubber loops, and secured from swaying. There were five or six of them on the Atlanta, Chattanooga, Nashville, and Louisville route, with the surgeons' car in the centre of the train, with kitchen, dispensary, nurses, assistant-surgeons, and apothecaries in attendance, and the sick and wounded had the same care and attention they could have had in the best regulated hospitals. The same number have been constantly running between Washington, New York, and Boston.

The introduction of new and more deadly missiles into modern warfare has considerably

modified the methods of treatment as well as the diagnosis and prognosis of gunshot wounds. The old round bullet produced wounds far less formidable than those inflicted by the Minié ball, or the shell, which have played so prominent a part in the battles of this war. The round musket-ball had a much lower initial velocity, was readily deflected from its course by coming in contact with bone, tendon or even firm muscular tissue, and if it penetrated the large cavities usually made a clean perforation of a diameter but little larger than its own. The Minié, on the contrary makes a ragged ugly wound, and passes straight on through muscle, tendon, cartilage, and bone, producing terrible comminuted fractures of the latter; and if it does not pass entirely through, usually comes to the skin on the opposite side from that which it perforated, and lying there, presenting its long diameter to the surface,

FIG. 2.

leaves a large and ragged cavity in its last resting-place. The wounds made by fragments of shell are still more severe, mangling the unfortunate subject most cruelly, and producing destructive fractures and sloughing wounds.

The treatment of these gunshot wounds must necessarily be different in many respects from those of the musket-ball, treated of by the older surgical writers. The extraction of the ball is, as a general principle, the first work of the surgeon, the hemorrhage from the wound having been previously checked. This is often a matter of considerable difficulty, though from the frequency with which the Minié bullet approaches the surface on the opposite side from that which it entered, it may often be reached speedily. Dr. Frank H. Hamilton, late Medical Director in the U. S. Army, has invented a probe (*fig. 11*) and two pair of forceps, one of which is shown in *fig. 10*, for extracting the bullets when lodged in the soft tissues, the other when impacted in the bony structures, which prove very serviceable for this purpose. Surgeon Isaac Moses, of the army, also invented a somewhat complicated instrument working in a canula, through which are forced three hooks to seize the ball when the instrument strikes it (*fig. 12*). This is also said to prove serviceable. George Tiemann & Co. have invented a pair of forceps (*fig. 13*) with two teeth set obliquely forward, like the incisors of a mouse, which proves admirable for removing buckshot, light balls, or fragments of lead,

but does not answer for the removal of fragments of harder metals. Nelaton's probe (*fig. 14*), which has a small ball of unpolished porcelain on the end, is invaluable for discovering the presence of a bullet by the marks of the lead on the ball.

The military surgeon in the field at the present day rejects all those medicaments and processes formerly deemed essential in the primary treatment of gunshot wounds; and having removed if possible not only the missile which caused the wound, but any fragments of clothing, bone, or other foreign substance in the track of the wound, confines himself to the use of water as a dressing for the wound, as the simplest, most convenient, and most efficacious application which can be made. The water is generally applied cool or at its ordinary temperature, but of course becomes tepid speedily. When inflammation sets in the temperature should be lowered, and this is effected best by the method of irrigation, by means which the ingenious surgeon or nurse readily devises even in the rudest or most poorly supplied hospital tent.

The part which is wounded, and several inches of the integument beyond the margin of the wound, being covered with a piece of patent lint, or in default of this woollen or flannel cloth, the water is suspended over the limb, or placed on a table beside the bed, and from it is conducted either by a syphon tube filled with candle-wicking or thread, or in default of any

thing better a piece of candle-wick or a strip of cotton or woollen cloth, the water in small but constant drops falls upon the cloth or lint covering the wound. This usually reduces the temperature sufficiently, and is besides very grateful to the patient. When the wounded man is to be transported a long distance, simple oerate spread upon patent lint is used for a dressing, and this is covered with a broad and pretty thick dressing of cotton-batting, tow, or some other soft material, secured in its place by adhesive plaster or a few turns of a light roller.

The subsequent treatment of gunshot wounds, which is usually conducted in the general hospital, presents little that is novel. In the treatment of secondary hemorrhage (that occurring after the sloughing of the dead tissues), the ligation of the bleeding vessel in the wound, if possible, without embracing a nerve with it, or when this cannot be done the use of perchloride of iron, or what is better, perhaps, Dr. Pancoast's hæmostatic (carbonate potassa, one drachm; castile soap, out fine, two drachms; alcohol, four fluid ounces), is generally resorted to; if these fail, no time is lost in applying a ligature to the main artery above the wound. For the removal of decomposing tissues and acrid pus, the method of irrigation is again adopted, as being the most gentle and speedy, and as imparting a healthier tone to the granulations. When the water develops a fine papular eruption, as it will after a time, it is medicated by the addition of one drachm of

super-acetate of lead to the quart of water, or the milder zinc ointment is substituted. Meddlesome surgery, such as the squeezing of a wound to press out the pus, or probing and picking to remove suspected

spicula of bone, during the suppurating stage, is wholly interdicted. In the treatment of gunshot fractures of the limbs, and especially of the lower extremities, the methods of treatment and apparatus devised for securing perfect rest, easy dressing, moderate extension, and the prevention of bed-sores, are ingenious, efficacious, easily constructed, and of moderate cost.

In gunshot wounds of the head, trephining is sometimes though rarely necessary. In fractures of the skull from blows of blunt instruments, as the butt of a musket, &c., or from injuries from fragments of shell, &c., it is very generally advisable. Among the circular trephines employed for this purpose, we have seen no instrument equal to Galt's spiral trephine (*Fig. 15*).

The tendency with the army surgeons to

FIG. 18.

Galt's Spiral Trephine.

conservatism, in regard to amputation in gunshot fractures of the thigh, has been very strong; amputation having been attempted in not more than one-third of the cases brought under treatment, and in not more than one-half of those of gunshot injuries of the knee-joint. Some of the most eminent surgeons, Dr. F. H. Hamilton among the number, regard this conservatism as excessive, believing that in a considerable number of the cases life, easier locomotion, and sounder health would have been secured by amputation than by the attempt to preserve the limb under the adverse circumstances of transportation to a distant hospital, great comminution of the bones, spasms, or intense and continued pain, great contusion or laceration of the soft parts, or the participation of the principal arteries or nerves in the injury. Still this conservatism is more to the credit of the surgeons than the reckless and indiscriminate resort to capital operations, so characteristic of young and inexperienced surgeons, would have been; and it gives an incidental testimony of great value to the ability and discretion of the thousands of surgeons, called so suddenly from civil life to the serious and unaccustomed responsibilities of the camp and battle-field. Of those cases of gunshot fractures of the femur or thigh bone in which amputation has not been attempted, the proportion of recoveries cannot be stated with certainty; but judging from the results at several of the larger hospitals, it may probably be safely reckoned as at least two-thirds. In some hospitals, as for instance in the City General Hospital, U. S. A., at St. Louis, it has approached three-fourths. The apparatus adopted for the treatment of these cases is entitled to a considerable share of the credit for so satisfactory a result.

The indications to be observed in the successful treatment of a gunshot fracture of the femur, without amputation, are, perfect quiet and rest for the injured limb, without possibility of displacement of the fractured portions of the bone, gentle but continuous extension and counter extension, to obviate the danger of any material shortening of the limb, accessibility to the wound in order to observe its condition, to prevent hemorrhage or the secretion of foul and irritating pus, and the removal of the necessary evacuations and the change of the bed without disturbing the patient. If the knee-joint be involved in the injury, it is necessary to lay it open; and in these cases a somewhat different apparatus is required from that adopted in fractures of the femur at a higher point. Although the treatment of these cases has generally taken place in the larger post or general hospitals of

the United States Army, yet they were so numerous, and the labor devolving upon the dressers and assistant-surgeons was so incessant and exhausting, that a resort to the complicated operation and processes of the old civil hospitals was impossible, and fortunately it has been proved unnecessary. The first and one of the most admirable of the inventions for the treatment of these cases is Dr. Frank H. Hamilton's canvas frame. This is simply a wooden frame, a little longer and wider than the mattress on which the patient reposes, covered with firm canvas, and this reinforced a little above (the side-rails extending perhaps six inches at each end beyond the cross-rails), the centre by a second piece two feet in width, stretched across from one side-rail to the other, and firmly stitched to the upper canvas; through this central portion, or a little above the centre of the canvas, a hole one foot in diameter is cut, and firmly bound with tape. In the foot cross-rail is a broad slot into which an upright board six or eight inches high, and having in it a spool or other contrivance for a pulley, is inserted. The patient is laid upon this frame, it having been previously covered partially by two sheets, folded in half, and laid one above and the other below the central opening. The wounded limb has a long wide strip of adhesive plaster applied to each side of it, and maintained in place by a roller carefully applied to the leg below the knee; the ends of these adhesive straps are firmly attached to a small piece of board applied to the sole of the foot, but wide enough to prevent any pressure by the straps on the malleoli, and the leg from the thigh downward is a little elevated by being placed upon a thin cushion, which should be filled with bran. Attached to the board which is bound to the foot, is a strong cord, which, passing through the pulley in the upright board in the bottom rail, has at its other end a bag of sand or a pail of the same, not exceeding at first five or six pounds in weight, but to be gradually increased afterward as necessary. This constitutes the whole apparatus for extension, and counter-extension is made by raising the foot of the bed from three to six inches by means of bricks, and thus making the weight of the body the counter-extending power. When it is desired to change the bed, use the bedpan, or move the patient, the canvas frame is lifted carefully with the patient on it, and transferred to a couple of movable stands or "horses," or laid on blocks (Figs. 16, 17 and 18). Another form of invalid bed adapted not only to these injuries but to other cases, like severe typhoid or yellow fever, where it is difficult to move the patient, is Dr. Josiah Crosby's invalid bed, recently introduced by the Army Medical Board into several of the U. S. general hospitals. It is so constructed that while the patient lies suspended upon broad and firm bands of webbing, the bed can be lowered, one of the straps loosened, and a bedpan used; or the bed may be run out and aired or changed, or the wounds

exposed and dressed, while at the same time the patient is himself aired and comforted. This bed is fully as well adapted to prevent bed-sores as an air or water bed. The foot-board and extension by weights can be used as well as with Dr. Hamilton's canvas frame.

Other apparatus in the form of cradles or wire-splints, to be applied to the wounded limb alone, and intended for the accomplishment of the same object, have been invented, and extensively adopted by the surgeons in charge of the principal general hospitals. Among these is the cradle invented by Dr. John T. Hodgen, the able surgeon of the City General Hospital at St. Louis (Figs. 19 and 20.) The limb is supported by transverse straps of cloth, two and a-half inches wide,

John T. Hodgen's Cradle for gunshot fractures of the thigh.

extended across from one of the upper bars to the other, and adapted to its inequalities. The extension is made by means of adhesive straps, and the pulley as in Dr. Hamilton's canvas frame, and counter-extension by raising the foot of the bed. Dr. Nathan R. Smith, of Baltimore, has introduced to the profession a double inclined plane made of wire and intended for suspension (*figs. 21 and 22*). It is placed above the limb instead of beneath it, and is therefore known as "Smith's anterior splint." It is composed of a frame made of No. 10 wire, and must be long enough to reach from the anterior superior spinous process of the ilium to a point beyond the

toes, the lateral bars being three inches apart at the upper end, and two and three quarters at the lower end. Before being used it is covered with cotton cloth to protect the limb from direct contact with the wire. The limb is then secured to the splint by successive turns of a roller from the foot to the groin. One of the hooks to which the suspending cord is attached should be made fast to the splint about opposite to the seat of fracture, and the other a little above the middle of the leg, and the point of attachment in the ceiling or frame above should be a little in advance of the knee and not perpendicularly above it, in order to secure a cer-

N. R. Smith's Anterior Splint.

FIG. 22.

N. R. Smith's Anterior Splint applied.

tain amount of extension and counter-extension upon the thigh. The difficulty of applying the splint and roller, when a change of dressing is required without disturbing the limb at the seat of fracture, is a serious objection to this splint.

Dr. Hodgen has invented a wire-splint as a substitute for his cradle which possesses some advantages over Smith's. It is made of No. 2 iron wire, the centre and upper part being kept apart by strong bars of iron, and the limb is suspended in it as in his cradle by strips of cloth, while small hooks on each side serve for the attachment of cords attaching it to a pulley

FIG. 23.

above. Extension is made by adhesive straps as in the cradle (*fig. 28*). As a means of support for fractured limbs during amputation, Dr. Elisha Harris, of the Sanitary Commission, has introduced into the supplies furnished by that Commission, metallic troughs made of perforated tin, which have proved of great value for the purpose.

In fractures of the bones of the leg, the use of some apparatus for the support of the leg, and to keep it in a position of perfect rest, is indispensable; and it is absolutely necessary that this should be raised so as to swing clear of the bed, or shortening of the limb and great irritation of the wounded tissues will ensue.

A suspended box, with bran to pack around the limb, to check the oozing of either blood or pus, to prevent the wound from being infested with maggots in warm weather, and act as a sufficient lateral and back-support to the limb, is one of the simplest and most effective plans for keeping these fractures in place and in a fair way for recovery. "Salter's cradle," in which the box is suspended upon pulleys, which run in an iron groove or rail, is convenient for the purpose of adjusting the position of the wounded limb to any involuntary motion of the body; but perhaps the simplest and most ingenious of all is the suspending apparatus invented by George F. Shradley, A. A. Surgeon U. S. A., by which, by the aid of the clamps which attach it to the bedstead, any degree of elevation can be given to the limb, and it can be placed at any inclination (*fig. 25*).

The old question agitated in all treatises on surgery, and on which military surgeons have differed so widely, of the best time for amputating a wounded limb, has been a matter of serious discussion during the war; the great preponderance of authority among the eminent army surgeons is, however, in favor of primary amputation, and that at as early a moment as possible after the injury. The point to be ascertained, these surgeons say, is, whether the wounds received are of such a nature as to preclude the hope of saving the limb. This decided in the affirmative, the sooner it is removed the better for the patient. The necessity of moving the patients often to great distances, and the danger of poisoning the air of crowded hospitals by the effluvia from suppurating and sloughing wounds, renders amputation necessary oftentimes in military practice, where in civil practice it might be possible to save the limb.

The best method of amputation,

whether by the circular or flap operation, is still an unsettled point. The flap operation has the advantage in point of time, and on that account is preferable where time is a consideration of the greatest moment. But the flaps in operations on the thigh are very apt to loosen and become gangrenous or ulcerate, if the patient is to be transported for a long distance immediately or soon after the operation, and in such cases the circular method, as giving a smaller amount of muscular covering, is preferable. In operations on the leg, the circular method is usually best. To avoid sloughing of the end of the bone, the practice is to dissect up the periosteum from it for an inch or more, and drawing this back, sever the bone at the highest possible point underneath the mass of flesh.

Exsection and resection of the bones of the upper extremities have been practised with very gratifying success in many of the general hospitals, the limbs, though shortened, being serviceable and much better than an artificial limb. The operation, though painful and tedious, is justified by the results attained, and is usually performed while the patient is under the influence of anesthetics. Operations of these descriptions on the bones of the lower extremities have very seldom proved successful. A few cases of successful exsection of the tarsal bones, and four of exsection of the shaft of the

femur, and one of the head of the femur, are all, or nearly all, that have resulted satisfactorily, while large numbers have had a fatal termination, a result which perhaps would have followed in any event.

The instruments used for these purposes are numerous, and most of them are of recent invention. Among them are straight and curved bone cutters; strong forceps for holding the bone, like those recommended by Chapaiguac, and improved by Halstead, of New York (*fig. 26*); chain saws of various kinds, of which the Symanowsky saw (*fig. 27*), improved by Tiemann, is the best, combining, as it does, the advantages of a chain and fixed saw; it is disconnected by a spring on the handle, passed under the bone and reattached instantly, and may be made to cut in any direction, even in the segment of a circle; bone drills of various patterns to make provision for bringing together by wire ununited fractures, among which those of Surgeon Howard, U. S. V., which work with a bow (*fig. 28*), are best. The interosseous knife of Dr. Sands (*fig. 29*) is shown.

The prevalence of hospital gangrene in the large army hospitals has been a not unfrequent occurrence, though always one greatly dreaded by the surgeon, as seriously aggravating the peril of his patients. It is developed by over-

crowding, want of ventilation and cleanliness in hospitals, by dampness, by unfavorable location, by the bad position of the vaults or latrines of the hospital or ward, and once developed it becomes epidemic, and is propagated both by infection and contagion in the wards of the hospital. The scorbutic condition, or the depressed vitality of the patient from excessive hemorrhage, may induce it. It is characterized by a phagedenic destruction of the soft tissues, leaving the tendons, blood-vessels, and nerves completely dissected, and is attended by a most offensive and penetrating odor, and severe gnawing and biting pains, and an almost entire loss of appetite. Unless speedily arrested, it terminates fatally within a few days. The treatment adopted in the United States general hospitals, has been new, but has proved so successful in arresting the disease, that the mortality from it has been considerably less than five per cent. of the cases attacked. In the Spanish peninsula, in 1818, nearly one-third of those attacked died. The prophylactic and constitutional treatment, though important, possesses little novelty, the effort being to remove promptly all predisposing or inducing causes of the disease in and about the hospital, to destroy by burning any thing which could communicate the disease, and to support the patient by stimulants and a most generous diet. The local applications which have proved successful in arresting most promptly this terrible disease, are bromine, applied pure (the surface having first been thoroughly cleansed by the use of soap and water, the dead and gangrenous tissue carefully removed, and carefully dried by the application of lint) to the gangrenous surface, and a solution of a drachm to four ounces of water employed to paint the surrounding tissues. This application is followed immediately by an emollient poultice. A single thorough application is usually sufficient to destroy the gangrene and restore the part to a healthy condition, after the evolution of the slough. For the introduction of this remedy, the profession are indebted to Dr. Middleton Goldsmith, Surgeon U. S. V.

The permanganate of potassa, first introduced by Dr. Hinkle, A. A. Surgeon U. S. A., is perhaps not inferior to bromine as a local application in this disease. The concentrated solution is applied as an escharotic, and the dilute solution applied on lint as a dressing and repeated every three or four hours. Both this salt and the bromine are powerful disinfectants. The use of spirits of turpentine as a local application, as recommended by Dr. Hachenberg A. A. Surg. U. S. A., has proved an efficient and speedy remedy. Leaving no chemical eschar, it is perhaps on that account to be preferred to the others. In default of these remedies, the application of Maunsell's solution of persulphate of iron, pure tincture of iodine, or of nitric acid, will arrest the progress of the gangrene more slowly, though with perhaps equal certainty. In the treatment of scurvy, which has at different periods prevailed somewhat extensively in

the army, in addition to the use of potatoes, onions, sauerkraut, oranges, lemons, and lime-juice, which have been considered as the best antiscorbutics, Dr. William A. Hammond, late Surgeon-General, recommended and introduced, with the best effect, the use of the solution of bitartrate of potassa (cream of tartar), as a beverage among the men. The use of the common dandelion with vinegar, and of sorrel, are also recommended. Both contain salts of potassa, which in some form seems to be the most effectual remedy for scurvy. Wine, cider, spruce beer, and vinegar made from apples, are also valuable for the same cause. The vinegar made by the German process in the acetous fermentation of alcohol, is worthless in this disease. Dr. Hammond also recommends from his own practice, tincture chloride of iron in doses of thirty drops three times a day.

The use of anæsthetics in surgical operations during the war, has been far more extensive than in all the previous history of these agents. An experience of their use in probably fully two hundred thousand cases, ought to throw light on the advantages and injuries resulting from them, and to enable the profession to determine whether their introduction is, all things considered, a bane or a blessing. Yet, strange as it may seem, the opinions of eminent surgeons are at variance on this subject, and that after extended opportunities of observation Dr. Frank H. Hamilton, after a very large experience in surgical operations both before and since the introduction of anæsthetics, states distinctly, that "his success in capital operations, especially in primary thigh operations, has not been so good since he began to use these agents as it was before." "Anæsthetics," he says, "produce certain effects upon the system which tend to prevent union by the first intention; and consequently they must be regarded as indirectly causes of suppuration, pyæmia, secondary hemorrhage, erysipelas, and hospital gangrene. Ether, he thinks, ought to be preferred to chloroform, being less liable to destroy life immediately.

Mr. Cole, an eminent English surgeon, regards chloroform "as a highly pernicious agent," and desires that it should be entirely excluded from field and field-hospital practice." The Director-General of the Medical Department of the British Army states, "that while a majority of the surgeons of that army believe its use desirable in all cases both of slight and severe wounds requiring operations, where no organic disease exists, a large minority object to its use in cases of very severe shock, more especially where much blood has been lost; and a smaller minority believe its use to be dangerous in secondary operations, where the patient's system has been much reduced by large purulent discharges, and more especially when this reduction has taken place with rapidity greater than usual from inordinate amount of discharge, or from the addition of secondary hemorrhage." Dr. Zina Pitcher, of Detroit, a surgeon in the

United States Army in 1812, and now surgeon in St. Mary's Hospital, Detroit, while approving of their use in the severer operations of surgery, whenever there is sufficient force in the circulation, and nervous activity enough to sustain the patient, "feels obliged to remonstrate against their use in cases of syncope or nervous exhaustion." On the other hand, Dr. Valentine Mott, Dr. Gross, an eminent army surgeon, and some others, advocate their use in all capital operations, and Dr. Mott prefers chloroform to ether. The use of the nitrous oxide now becoming so popular with the dentists, is generally regarded as inadmissible in most surgical operations, both from the difficulty and trouble of its daily preparation, and from the fact that the anæsthesia produced by it, is not sufficiently lasting to permit of protracted operations. Its effect on the system is unquestionably less pernicious than that of either chloroform or ether. (See ANÆSTHETICS.)

MINNESOTA. This young State, situated on the extreme northwest of the other States, is rapidly increasing in population. The amount of public land entered by settlers during the year was 665,750 acres, being an increase of 202,454 acres over the previous year. The increase in logs scaled for lumber is 28,000,000 feet. The sales of school lands during the year were 41,510 acres for \$287,675, and during the past three years 181,950 acres for \$639,984, averaging nearly \$6.50 per acre. A hundred miles of railroad within the State are in operation, and two hundred miles more are graded and ready for the rails. The balance in the State Treasury at the end of the year was \$98,530. The number of troops contributed to the Federal service by the State at the close of the previous year was 13,201. Under the call for five hundred thousand men in July, 1864, the State contributed for one year, 2,682 men; for two years, 204; for three years, 61 men. The excess of credits to the State on August 1st, was 1,407 men.

A correspondence took place between Gov. Miller and Provost Marshal General Fry, relative to the quota of the State under the call for troops made in December, 1864. The latter stated that the call of December was intended to supply deficiencies in the call of July arising from credits allowed under that call, and said:

The rule in applying credits is, that they should be deducted from the quota of the call that produced them. All men raised since the call of July 18, 1864, are credited upon the quota under that call; if the quota is more than filled, it is carried as an excess to the credit of the locality, and taken into account in the assignment of the quota under the call of December 19th, 1864, and provost marshals are instructed that, in determining the quotas of sub-districts under the present call, they will apply such excess accordingly; and all men raised since December 19th are of course credited upon the call of that date.

In crediting the excess that is carried forward from the call of July 18th, 1864, and applied to the call of December 19th, 1864, I consider not only the number of men of which the excess is composed, but also the period of their service, and the quotas assigned under the call of December 19th are thus reduced by this excess of service, and hence they should not

be further reduced, except by enlistments subsequent to December 19th, 1864, the date of the call for three hundred thousand men.

The entire vote given by the State at the Presidential election was 42,435, of which Mr. Lincoln received 25,060, and Gen. McClellan 17,875; majority for Mr. Lincoln, 7,685. Soldiers do not vote out of the State. The vote of the State in 1860 was 84,421, being an increase of 8,014. Two Republican members of Congress were chosen at the same election.

The Legislature elected was divided as follows:

	Senate.	House.
Republicans.....	16	82
Democrats.....	5	10
Total.....	21	92

The educational and benevolent institutions of the State made more progress than during the previous year. They are yet, however, in their infancy.

The large Federal force on the western border prevented the incursions of the Indians as in previous years, and the State was comparatively free from disturbance in consequence of the neighboring Indian war.

MISSISSIPPI. After the expedition under Gen. Sherman to Meridian at the commencement of the year (see ARMY OPERATIONS), Mississippi was almost entirely abandoned by the Federal forces. All the northern counties were left, and also other parts of the State excepting Vicksburg and Natchez, where garrisons were stationed, and a small force on the Yazoo. The people on the line of Gen. Sherman's march returned to their homes and endeavored to accommodate themselves to the circumstances which existed. Many of the planters without horses and servants were supplied by those in the districts not overrun to such an extent as to enable them to get in a crop sufficient for their necessities. The railroads and telegraphs were repaired with much vigor.

The efforts which were made to employ freedmen on plantations were generally unsuccessful, owing to the hazardous nature of the business, unless a Federal force was close at hand to afford protection against guerrillas. An order was issued by Gen. Slocum on May 19th, declaring that the residents of a district should be made responsible for all the damage caused by guerrillas to lessees. For every lessee killed an assessment of ten thousand dollars was ordered to be levied upon the disloyal people residing within thirty miles, which should be appropriated to the family of the deceased. Notwithstanding these provisions for the employment of freedmen, the banks of the Mississippi River were almost lined with their rude huts and cabins, and a vast amount of destitution, starvation, and sickness prevailed. The return of Gen. Sherman brought between ten and eleven thousand, which added to the numbers already at the military posts. In Natchez military orders were issued as a sanitary measure, forbidding any contraband to remain in that city after April 1st, who was not

employed by some responsible white person in some legitimate business. A limited number only were allowed to occupy a house. They were also forbidden to rent houses and live to themselves, but required to seek shelter from their employers at the contraband camps.

The corn crop of the year was comparatively a failure in the northern counties of the State, and foreshadowed great destitution during the ensuing winter.

There is a class of persons who have probably been the severest sufferers by the war, of whom comparatively little has been said. These are the white refugees. Their condition in Mississippi was even more deplorable than that of the negroes, for equally with them they have borne the evils of slavery without acquiring the habits of industry which the latter obtained. Many of them were natives of the North, who had become citizens of the Southern States before the war in order to improve their fortunes, and who seized the first opportunity to escape with their lives, leaving every thing else behind. Hundreds of others were deserters from the Confederate army. The greatest sufferers, however, were the more ignorant of these men and women and children. The refugees that returned with Gen. Sherman to Vicksburg, were long compelled to lie in the streets or open squares. The condition of these people is thus described :

Banks' unfortunate expedition brought ruin upon thousands; for the people, feeling confident of his success, openly avowed their attachment to the Union, and after his defeat they were left wholly unprotected. Their houses were burned over their heads, and they themselves were compelled to flee for their lives.

On both sides of the river they are crowded together in miserable buildings, and when those fall they lie often with no bed but the damp ground and no covering but the open sky. No wonder that death makes such awful havoc among them. In an old warehouse we found forty-seven in one room. Of this number only twelve were able to stand—they were so sick and weak from exposure and want of food. A sick woman lay on the floor with a babe a week old by her side; at her feet lay a little child two years old, wasted to a skeleton by want and disease, while her four other children lay near her, all too sick to bring even a drink of water. Her husband is a soldier in our army. On a blanket in the corner, with a few old clothes rolled up to supply the place of a pillow, lay three little children, all very sick. Their mother, a worn, feeble-looking woman, sat beside them on the floor, and as I stooped to examine the little ones and inquire into their wants, she burst into tears and exclaimed: "I am afraid my children will all die! I have no medicines and nothing that they can eat—God knows what is to become of us." Her look of bitter despair, as she said this, haunted me for days afterwards. I found her husband and son had entered our army more than a year ago, but she had lost all track of them and they knew nothing of her whereabouts. A short distance from the building I have described, in a wretched shed where hogs had always been quartered I found three families in a condition which it is impossible to describe. The building had no floor, and the stagnant water stood upon the ground in many places, while the air within was so intolerable, that while dealing out the food and medicines I was several times obliged to go out into the open air. Upon the ground lay a mother, a grown daughter, and

four other sick children. Close beside them was a woman too far gone to speak or notice us. But I need not dwell longer upon these heart-rending scenes; enough has been said to awaken sympathy in every heart that contains one spark of feeling or humanity. I know that many have but little sympathy for these refugees, denouncing them all as Secessionists and not worthy our charity. I can only say that such persons either lack heart or they have been superficial in their investigations. My own experience with them has been quite the contrary.

A number of small military expeditions were made from the posts held by the Federal forces during the year. On May 6th a troublesome band of guerrillas, which had plundered and burned almost to the outskirts of Vidalia, retired for shelter to a swamp. Major Smith, of the Sixth U. S. colored artillery, who commanded the post, sent out a force under Col. Farrar. The enemy were overtaken, and a brief contest, without quarter, ensued. The uncertainty of the number of the assailants caused the enemy to flee with a small loss.

On June 10th an engagement took place at Guntown, in which the enemy obtained considerable success. The Federal force consisted of two brigades of cavalry, under Col. Grierson, two brigades of infantry in company with the First Illinois light artillery and two regiments of colored infantry, all under Gen. Sturgis. The enemy were commanded by Gen. Forrest, and consisted of Bell's, Lyon's, Rucker's, and Johnston's brigades, and Rice's and Morton's batteries. Gen. Sturgis advanced from Memphis until he encountered the enemy in strong force near Guntown, and after a sharp contest was routed. The enemy pursued Sturgis to Colliersville, and his loss was three thousand men, eight hundred mules, five hundred horses, two hundred wagons, twenty ambulances, one hundred and fifty thousand rations, six hundred thousand rounds of ammunition, and fourteen pieces of artillery all spiked and the wheels cut down. The defeat is ascribed to the exhausted condition in which the Federal infantry were brought into action and the overwhelming force of the enemy.

On Oct. 5th Gen. Albert L. Lee moved from Baton Rouge, in Louisiana, marching through Rocky Hill cross-roads, Osyea, and Greenburg, destroying much property and taking a number of prisoners. He returned to Baton Rouge on the 9th.

On Nov. 14th Col. Fonda left Baton Rouge and marched to Williams' Bridge, Liberty, and Brookhaven, Mississippi, capturing a number of prisoners and destroying a bridge, and then returned.

In consequence of the following order, the Catholic Bishop of Natchez was arrested and transported to Vidalia:

HEADQUARTERS U. S. FORCES,
NATCHEZ, MISS., Aug. 12, 1864.

Military authority having been, for the time, vindicated, so much of Special Order No. 11 as requires Rev. William Henry Elder, Bishop of Natchez, to remain within the military lines of the Post of Vidalia, La., is suspended, and he may return to his home and

duties until the pleasure of the War Department be known in his case.

And as all solemn appeals to the Supreme Being not proceeding from honest hearts and willing minds are necessarily offensive to Him and subversive of sound morality, so much of Special Order No. 81, June 18, 1864, as requires public prayer to be pronounced in behalf of the President of the United States and the Union, is suspended until further orders; leaving all persons conducting Divine worship liberty to manifest such measure of hostility as they may feel against the Government and Union of these States, and their sympathy with the rebellion, by omitting such supplication, if so minded.

By order of Brig.-Gen. M. BRAYMAN,
J. H. ODLIN, Ass't Adj't Gen.

The Confederate State Government continued undisturbed through the year. At the session of the Legislature all white males between sixteen and fifty-five were made subject to the Governor's orders. Little else is at present known of its proceedings.

MISSOURI. The session of the Legislature of Missouri, commenced immediately after the close of the election in November, 1863. In February, 1864, a bill was passed, which provided simply for a call of a convention to revise the organic law of the State. The election of delegates to this convention was to be held in November ensuing, at the time of the general election. At the same time the people were to vote on the proposition whether they desired a convention or not. If they decided against a convention, then the delegates were not to assemble. If the vote sustained the proposition, then the convention was to meet in St. Louis on Jan 5th, 1865.

The action of the convention in 1863, on the subject of emancipation, was not satisfactory to a portion of the citizens. It provided for gradual instead of immediate emancipation. The latter was sought to be obtained by a new convention, composed of men more recently elected than those of the adjourned convention.

The annual election was held on Nov. 8th; previous to which Gen. Rosecrans, in command of the department, issued the following orders:

HEADQUARTERS DEPARTMENT OF THE MISSOURI, }
St. Louis, Mo., October 12, 1864. }

General Order No. 196.

Our free government, established and administered by the will of the people, expressed through legal elections, requires from every citizen a sacred regard for the preservation and purity of the elective franchise.

The General commanding expects the united assistance of the true men of all parties, in his efforts to secure a full and fair opportunity for all who are entitled to vote at the approaching election in the State of Missouri, and in excluding from the polls those who by alienage, treason, guerrillism, and other crimes or disabilities, have no just right to vote.

The laws of the State declare who may vote, and prescribe the times and places of voting. But, in the present disturbed condition of the country, the civil power is too weak effectually to enforce the execution of those laws, or adequately punish offenders. Wherefore in compliance with his duty as a citizen and department commander, and with the wishes of all true citizens, and in aid of the law, the General commanding orders as follows:

1. Those, and only those, who have the qualifica-

tions, and who take the oath prescribed by the State, copies of which are hereunto annexed, shall vote.

From the terms of the oath, it is manifest that it was the intention of the Missouri State Convention that no person should vote who, since the 17th day of Dec. 1861, has wilfully taken up arms or levied war against the United States, or against the Provisional Government of the State of Missouri. This excludes from the right of voting all who, since that date, have been in the rebel army or navy anywhere, and all who, since that date, have been anywhere engaged in guerrilla marauding or bushwhacking. If, therefore, any such person offer to vote, his vote may be challenged, and he shall be immediately arrested. And any judge of election shall be arrested and punished who permits the name of any such person to be recorded in the poll book, or his vote to be received, where such judge has personal knowledge of his true character, or the same is shown to him by lawful evidence before the vote is received.

Voting, or attempting to vote, in contravention of law or orders, is declared a military offence, subjecting the offender to arrest, trial, and punishment, if convicted.

2. No one who has borne arms against the Government of the United States, or voluntarily given aid and comfort to its enemies during the present rebellion, shall act as judge or clerk at an election; nor shall any county judge knowingly appoint any such person to act as judge at an election. Violation of this will be promptly noticed, and the offenders brought to trial by the local military authorities.

3. Outrages upon the freedom of election by violence or intimidation; attempting to hinder legal, or to procure or encourage illegal, voting; interfering with the legal challenge of voters; acting as officers of election, in contravention of law or orders; wilful neglect to perform their duties, under the laws and these orders, by officers of elections, and especially taking the voters' or officers' oath falsely; and all other acts and words interfering with the purity and freedom of elections, are crimes against the liberties of the people, and are declared military offences, and will be rigorously punished.

4. The laws of the State provide that those of its citizens who are in the army shall not thereby lose the privilege of voting, provided the voting is done in the manner prescribed. The commanding General, therefore, directs that, on the day of election, every practicable facility be afforded for taking, in camp, or on the field, the vote of citizens of Missouri who may then be in any company of Missouri volunteers or militia, in the service of the United States or the State.

A copy of the ordinance of this State, providing for elections under the supervision of the commanding officers of companies, is hereto subjoined, for the guidance of all concerned. Such commanding officers will not on any account neglect to make arrangements for, and to hold, such elections, where the condition of their commands will admit of their being held without detriment to the service.

The commanding General deems it better that all citizens of Missouri in the military service in this State should vote in their companies, as authorized by said ordinance; but he does not consider that the uniform of the army should be a badge of exclusion of any soldier from voting at the polls where he, as a citizen, would be entitled to vote, and therefore does not prohibit it. At the same time, he directs that any soldier who abuses the privilege of access to the polls, by any disorderly conduct, or by any unauthorized interference with other citizens in the lawful exercise of the right of voting, shall be punished, and all military officers are especially charged to prevent any such act on the part of any soldier.

5. Wherever there is good reason to apprehend that rebel bushwhackers, or other evil disposed persons, will attempt to control the election at any precinct by their acts, threats or presence, a sufficient

State revenue, and for all military and commutation tax, provided for under said act of March, 1863, up to and including the year 1864.

There has been paid into the treasury and cancelled and destroyed, up to the 1st of December, 1864, defence warrants amounting to the sum of one million one hundred and thirteen thousand three hundred and sixty-five dollars. There has been redeemed and paid into the treasury for taxes, etc., up to the first day of December, 1864, Union military bonds, amounting to the sum of one million two hundred and twenty-eight thousand nine hundred and seventy dollars and interest allowed thereon amounting to three thousand four hundred and seventy dollars and seven cents.

During the years 1861 and 1862 the disturbances in all portions of the State utterly suspended and prostrated the common schools in nearly every county. In 1863 many school-house doors were thrown open and children gathered in the schools in all parts of the State. In 1864 nearly all the counties north of the Missouri River had their common schools in full operation, and in many counties south of the river schools were opened. The change about to take place in the condition of the slaves, has already turned attention to their education and to the relations which they shall hold to the institutions of the State.

It was estimated that nearly one-third of the population of 1860 had been lost to the State in consequence of the war. Even at that period the population was hardly sufficient to develop the resources and gather the harvests. Immigration is therefore greatly needed.

The newly-elected State officers were inaugurated on Jan. 6th, 1865. Gov. Fletcher in his address says:

In point of physical advantage, in the combination of all the elements of wealth, in the invitations that are held out to enterprise, and in the magnificent and swift rewards that wait on industry, no area on the Western Continent containing an equal number of square miles, can compare with our own State. While embracing a greater number of acres of good agricultural land than any other State in the Union, Missouri has more iron than all the other States combined; lead in quantities greater than elsewhere discovered in the world; mines of cobalt and zinc, and lodes of copper; whole districts of country underlaid with strata of coal; almost illimitable forests of the most useful timber, including the giant resiniferous pine, inviting the hand of unshackled industry and liberal enterprise to gather its wealth; prairie and forest diversified everywhere by streams affording unequalled water-power; one of the largest rivers of the world flowing through her centre, and another washing the whole length of her border.

The military policy adopted at the present time in Arkansas and Missouri, it is expected, will prevent the return of the Confederate armies to the soil of either State.

That part of the State north of the Missouri River is mostly an agricultural country. Good timber is found in abundance along the streams, and out from one-fourth to half a mile usually, the prairie begins. The land is rich, and the sub-soil is of a loamy clay, making it a very

lasting soil. Coal of a good quality for fires and blacksmiths' use, is found in most of the counties. Fine building-stone is found in nearly every county.

South of the Missouri River minerals are found, with but little farming land except along the Kansas border and Missouri River, and a small section of the southwest corner of the State. The surface of the country is broken and hilly, the Ozark Mountain range crossing the entire breadth of the southern part of the State. Several rivers, that are at times navigable quite a distance, and numerous mountain streams and great springs, will furnish, when improved, immense power for manufacturing purposes.

The minerals are in great abundance; the coal and wood in close proximity, rendering the cost of working the ore very little. Often iron ore, coal, wood, and water power may be had from the same hillside.

On Jan. 8th the Constitutional Convention assembled in St. Louis. It was organized by the election of Arnold Krekel, of St. Charles, as President. On the 11th, a committee reported the following ordinance of emancipation:

Be it ordained by the People of the State of Missouri in Convention assembled, That hereafter in this State there shall be neither slavery nor involuntary servitude, except in punishment of crime, whereof the party shall have been duly convicted; and all persons held to service or labor as slaves, are hereby declared free.

The subsequent proceedings of the Convention are thus reported:

The ordinance having passed to a second reading, Mr. Drake proposed the following amendment:

Sec. 2. That no person can, on account of color, be disqualified as a witness, or be disabled to contract, or be prevented from acquiring, holding, or transmitting property, or be liable to any other punishment for any offence than that imposed on others for a like offence, or be restricted in the exercise of religious worship, or be hindered in receiving education, or be subject in law to any restraints or disqualifications in regard to any personal rights than such as are held upon others under like circumstances.

Mr. Switzler. I desire to offer an amendment to the amendment. I desire to amend the amendment by adding an additional section as follows:

Sec. 4. It shall be the duty of the Legislature to provide by law for apprenticing all slaves emancipated by this ordinance, between the ages of twelve and twenty-one years.

Mr. Drake. That is introducing a new proposition under the name of an amendment, which is in direct contravention to the rules.

The President. I shall rule that proposition out of order under the rules.

A lengthy discussion ensued, in which the subject of negro suffrage was variously handled by members, to cut off which Mr. Budd moved the previous question.

Mr. Drake. What is it?

Mr. Budd. If the question is sustained by a majority of this house, it brings the subject to a vote, first on the first amendment, and second on the second amendment, and third on the original proposition.

The President. The question now before the convention is, on the rejection of the amendment of the gentleman from Franklin; the previous question affects that alone.

Mr. Budd. I withdraw it.

Mr. Drake. The question is on the motion I made

to reject the amendment of the gentleman from Franklin.

Mr. Clover. And upon it the ayes and noes are demanded.

Mr. Drake. Yes, I call for the ayes and noes on that question.

Mr. Strong. I ask, Mr. President, if it is in order to amend that motion? If so, I desire to offer a motion that all amendments be rejected temporarily.

The President. I don't think it is proper at this time.

The vote was then taken and resulted: ayes, 58; noes, 4.

The motion to reject the amendment prevailed: ayes, 87; noes, 25.

After the disposal of several points of order the vote was taken on the adoption of the ordinance, resulting—ayes, 59; noes, 4; absent, 2. The noes were Messrs Gilbert of Platte, Harris, Morton, and Switzler.

The announcement of the vote was received with loud applause and with waving of handkerchiefs and swinging of hats. The president and sergeant-at-arms found it impossible to quell the enthusiasm.

Mr. Owen. I desire to move to reconsider the vote on adopting the ordinance and lay it on the table.

The motion was agreed to.

Mr. Owen. I understand that the Rev. Mr. Eliot is in the hall, and I move that he come forward and give thanks to Almighty God for the passage of an Ordinance of Emancipation in Missouri.

Prayer was then offered by the Rev. Dr. Eliot as follows: Most merciful God, before whom we are all equal, we look up to Thee who hast declared Thyself our Father and our helper and our strong defence, to thank Thee that Thou art no respecter of persons, to thank Thee that Thou didst send Jesus Christ into the world to redeem the world from sin, and that He was the friend to the poor, that He came to break the manacles of the slaves, "that the oppressed might go free." We thank Thee that this day the people of this State have had grace given them to do as they would be done by. We pray that thy blessings may rest upon the proceedings of this Convention, that no evil may come to this State from the wrong position of those who do not agree with the action of to-day, but that we, all of us, may be united to sustain this which is the law of the land. We pray, O God, but our hearts are too full to express our thanksgiving. Thanks be to God for this day; that light has now come out from darkness, that all things are now promising a future of peace and quietness to our distracted State. Grant that this voice may go over the whole land until the Ordinance of Emancipation is made perfect throughout the States. We ask it through the name of our dear Lord and Redeemer. Amen.

Mr. Budd offered the following resolution:

Resolved, That a copy of the ordinance passed by this Convention, freeing all persons in the State heretofore held as slaves, signed by the President and attested by the Secretary as a true copy, be, and the same shall be placed in the hands of a special messenger to transmit to the Governor of the State at Jefferson City; and when received by him, he is requested to issue his proclamation, stating that by an irrevocable act of the Convention, slavery is abolished in the State of Missouri now and forever.

The resolution was adopted, and the Convention adjourned.

The news of the passage of the ordinance was immediately sent by telegraph to Jefferson City, where the Legislature was in session, and a scene of great rejoicing ensued. Several spontaneous gatherings of the people were held, "at which the wildest enthusiasm prevailed." At one of the meetings speeches were made by State senators, the chaplain of the

House, and Congressmen elect, and the report says:

Mr. Bonner, of St. Louis, offered the following resolution, which was adopted:

Resolved, That Col. Jameson, of St. Louis, Mr. Kutner of Hannibal, and Mr. Doan, of Grundy, be invited up in front of the speaker's stand and sing "John Brown."

The song was sung amid immense applause.

The Lieut.-Governor offered the following resolution, which was adopted:

Resolved, That a committee of seven be appointed by the chair to draft joint resolutions suitable to the importance of the occasion, and that the same be submitted to the General Assembly for its action.

The chairman appointed the committee.

Pending the proceedings of the meeting, which was held at night, every window of the Capitol was illuminated, and the very hills of Jefferson were made to lift up their heads and rejoice.

On the next day a message was received by the Convention from the Governor and Legislature of Illinois, expressing their congratulations on the passage of the ordinance. Afterwards a motion was made in the Convention to pay the loyal owners for their slaves. It was laid on the table—ayes, 44; noes, 4.

A motion was also made to submit the ordinances of the Convention to the people. After some discussion it was laid on the table—ayes, 44; noes, 9.

The number of slaves in Missouri, according to the census of 1860, was 114,931.

Measures were introduced before the Legislature to provide for the welfare of the emancipated blacks. These measures, and also the further proceedings of the State Convention, form a portion of the history of 1865, and will be found in a subsequent volume.

At the close of the year Maj.-Gen. Pope was ordered to relieve Gen. Rosecrans in command of the military department.

MOCQUARD, JEAN FRANÇOIS CONSTANT, a French man of letters, and private secretary to Napoleon III., Emperor of the French, born in Bordeaux in 1791, died in Paris, Dec. 9, 1864. He was educated at Paris, and obtained the place of bursar in the college of Louis le Grand, then known by the name of Prylanée. On quitting college he entered the school of law, was called to the bar in 1817, and joined the Liberal party in its opposition to the Government of the Restoration. He was employed as counsel in some of the political trials of the period, and particularly in that of the military conspiracy, in which the four sergeants of Rochelle were implicated, and for which they suffered death. He ceased to practise as a lawyer in 1828, and devoted himself to literary pursuits. It was probably during this period that he prepared his translation of Tacitus, and some other works of less importance. The career and misfortunes of Hortense Beauharnais, the beautiful, though not always discreet queen of Louis Bonaparte, ex-King of Holland, seem to have fascinated the young advocate, and he became a warm adherent to the fortunes of the Bonapartes. In the attempt of Louis Napoleon to incite a revolution at Stras-

burg in 1836, Mocquard was one of his party, and rendered him essential service. In 1840 he started *Le Commerce*, a paper devoted to the interests of the Bonaparte family, and in every way sought to propagate the doctrine of Louis Napoleon. Naturally he was one of the most active opponents of Louis Philippe and the Orleans dynasty in 1848, and aided powerfully in the election of Louis Napoleon as President of the French Republic, and in the *coup d'état* of Dec. 1852, was the confidant, if not the prompter, and certainly the most trusted adviser of his imperial master. He had been his private secretary from the time of his election to the Presidency. From 1852 to his death, he was ever the confidential friend and mouth-piece of Napoleon III. The decrees, proclamations, and manifestoes of the emperor owed their final form to him, and often not a little of their character. If Napoleon wished to feel the pulse of Europe on any great question, like that of the Italian War, the Polish Insurrection, or the European Congress, Mocquard presently put forth a tentative pamphlet on the subject, not always avowing the emperor's determinations, but stating the arguments which would justify a given course of action. With all these duties, he still found time for literary labor in the region of imagination and fancy. He wrote several historic dramas for the stage, between 1857 and 1862, all of which had a remarkable popularity. The most celebrated of them were "*Tireus de Cartes*," 1859; "*Massacres de Syrie*," 1860; "*Priee de Pekin*," 1861. He also published in the "*Revue Européenne*," and afterwards in book form, a novel entitled "*Jessie*," of great merit, and which was very successful.

MORRIS, GEORGE P., an American poet and journalist, born in Philadelphia, October 10th, 1802, died in New York, July 6th, 1864. He commenced his literary career in New York, where, at 15 years of age, he wrote verses for several of the newspapers. In 1828 he associated himself with Samuel Woodworth in the publication of the "*New York Mirror*," a weekly journal of great merit, which, after a successful career of 19 years, succumbed in 1842 to the commercial disasters of the times. It was the first periodical of its kind which relied in any considerable degree upon native talent, and through its columns Bryant, Hoffman, Paulding, Leggett, Halleck, Fay, Willis, and other authors, gave to the world some of their most characteristic productions. In 1843 Mr. Morris started the "*New Mirror*," which did not live beyond its third volume; and in 1844 he established in New York the "*Evening Mirror*," in which he was assisted by Mr. N. P. Willis. This was succeeded in 1845 by the "*National Press*," the title of which in 1846 was changed to the well-known one of the "*Home Journal*." In conjunction with Mr. Willis he edited this paper until a short time previous to his death, when, on account of failing health, he desisted from literary labors and retired. As a journalist he

was sprightly and entertaining, though of late years his contributions in that capacity were few. As a poet, however, and more particularly as a song-writer, Mr. Morris acquired his chief reputation; and many of his lyrical efforts have had a prodigious popularity. The familiar lines "*Woodman spare that Tree*" have circulated, it is said, by millions of copies, and are enjoyed wherever the English language is spoken. Others, as "*We were Boys Together*," "*Land-Ho!*" "*Long Time Ago*," "*My Mother's Bible*," and "*Whip-Poor-Will*," were universal favorites in the concert room while it was still fashionable to sing English songs, and are identified with pleasing melodies written for them by Stephenson, Bishop, Balfe, and other English composers. His remaining writings comprise "*The Deserted Bride* and other Poems," a Revolutionary drama entitled "*Briercliff*," and a variety of miscellanies in prose and verse. The last complete edition of his poems appeared in 1860. He also edited a volume of "*American Melodies*," containing songs by upwards of 250 native authors, and, in conjunction with Willis, the "*Prose and Poetry of Europe and America*." He resided for many years at Undercliff, a beautifully situated country seat among the Hudson River Highlands, and was customarily addressed as General Morris, deriving the title from his commission of brigadier-general in the New York State Militia.

MORTON, MARCUS, an American statesman and jurist, born in Freetown, Mass., February 19th, 1784, died in Taunton, Mass., February 6th, 1864. He was graduated at Brown University with high honors in 1804, and after pursuing his legal studies at the law-school in Litchfield, Conn., where John C. Calhoun was his fellow-student, commenced practice in Taunton in 1807. He soon became a prominent leader of the Democratic party in Massachusetts, and from 1817 to 1821 represented his district in Congress, where he cast his vote against the Missouri Compromise bill. He was Lieutenant-Governor of Massachusetts in 1824-'25, discharging for a part of the time the duties of Acting Governor, and in the latter year was appointed by Gov. Lincoln a Justice of the Supreme Court. In this position he won very high distinction for sagacity and juridical learning, his reputation being in nowise affected by the fact that during the fifteen years he occupied a seat upon the bench he continued to be annually nominated candidate for Governor by the Democratic party, then in a hopeless minority in the State. In 1839, after an animated canvass, he was elected Governor by a majority of one in the popular vote over Edward Everett, and filled the office until January, 1841. At the annual election in November, 1842, there was no choice by the people, and he was elected Governor by the Legislature, holding office until January 1844. In 1845 he was appointed collector of the port of Boston, but resigned that position upon participating in 1848 in the Free Soil movement which nominated Van Buren for Pres-

ident in opposition to the regular Democratic candidate. He remained true to his anti-slavery predilections until his death, advocating the restriction of slavery to its existing limits, and deprecating any tendency of the Democratic party toward the support of that institution. Upon the breaking out of the rebellion of the Southern States he gave his whole influence in support of the Government and Administration. Gov. Morton held various other offices of trust and honor besides those enumerated, and died universally respected and esteemed.

MULLIGAN, COL. JAMES A., an officer of U. S. volunteers, born at Utica, N. Y., June 25, 1830; died July 28, 1864, from wounds received at the battle of Winchester, Va. He was of Irish descent, his parents having emigrated to this country a few years previous to his birth. In the autumn of 1836 his parents removed to Chicago, and after a few years' residence placed him in the University of St. Mary's of the Lake. He graduated in 1850, being the first graduate from the university, and in the same year commenced the study of the law. In 1851 he accompanied John Lloyd Stephens, the American author, on his expedition to the Isthmus of Panama. After remaining at Panama about a year, the deceased returned to Chicago, and in 1855 he was admitted to the bar, and immediately commenced practice in that city. During the winter of 1857 he was appointed to a clerkship in the office of the Interior at Washington. When the war broke out he obtained the requisite authority, and in a few weeks raised a fine regiment of Irishmen,

the 28d Illinois infantry, afterwards known as "Mulligan's Brigade," was made colonel, and in July, 1861, left for the front. During the first month or two of service the regiment was actively engaged in Virginia and Missouri until September, when it was ordered to the defence of Lexington. For nine days Col. Mulligan held the town against heavy odds, praying for reinforcements; but reinforcements came not; Lexington fell into the hands of the rebels, and Col. Mulligan and his command were also captured. He was exchanged on the 25th of Nov., and returned to Chicago as the hero of Lexington. On his return he reorganized his regiment. In January, 1862, he was ordered with his regiment to proceed to New Creek, Va., and hold that post. From that date till the time of his reenlistment (in June, 1864), Col. Mulligan participated in several hard-fought battles.

In the battle of Winchester during a charge on the rebel lines he was mortally wounded; a squad of his men seeing him fall, attempted to carry him off the field, but seeing that the colors of his brigade were endangered, he turned to his bearers and exclaimed, "Lay me down and save the flag," repeating the order upon their hesitation. They obeyed him, and ere their return, he was borne off by the enemy, and soon after died in their hands. Col. Mulligan was at one time offered a commission of brigadier-general, but declined, preferring to remain with his old regiment. He was a peculiarly gifted writer, strictly temperate in all his habits, and an earnest, devoted Catholic.

N

NAVY, CONFEDERATE. Under this title is embraced all the classes of armed vessels fitted out at the expense of the Government at Richmond. These consisted of rams for sea service, others for harbor service, cruisers, and gunboats.

The rams built in England for sea service, and which excited much anxiety near the close of the previous year, under a conviction that they were intended for the Confederates, were detained and bought by the English Government. None of this class of vessels were therefore built in English ports and suffered to enter the service of the Richmond Government. The efforts of the Confederates in England, however, called forth the following protest and remonstrance from the Government:

HER BRITISH MAJESTY'S LEGATION,
WASHINGTON, D. C., April 1, 1864. }

Mr. Jefferson Davis, &c., &c., Richmond, Va.

SIR: I have been instructed by Earl Russell, her Britannic Majesty's Secretary of State for Foreign Affairs, to convey to you the following extract of a despatch which has been forwarded to me by his Lordship. I have chosen the method which appeared to me the only available one, under the present unhappy circumstances in which the country is involved,

and I trust that the absence of all recognized or consular residents or other agents of her Majesty near Richmond, will be recognized as a sufficient reason for its not being sent through usual channels. I need scarcely say that the bearer of this despatch, whom you have consented to allow to visit Richmond, has been authorized by the Government of the United States to pass into your lines on the flag-of-truce boat for the purpose of delivering it, and will desire your permission to return for Washington by the same mode of conveyance.

I have the honor to be, with high respect, your obedient, humble servant,

LYONS.

[COPY.]

You will also convey to Mr. Davis, at Richmond, through such channels as shall be available, and as you may in your discretion deem proper, the formal protest and remonstrance of her Majesty's Government against the efforts of the authorities of the so-called Confederate States to build war vessels within her Majesty's dominions to be employed against the Government of the United States. Perhaps your Lordship might best accomplish this object by obtaining permission from the authorities of both belligerents to send a special messenger to Richmond with the necessary despatch, in which you will transmit this paragraph, or the substance of it, together with all that follows, to the close of this communication.

Her Majesty's Government, in taking this course,

desires Mr. Davis to rest assured that it is adopted entirely in that spirit of neutrality which has been declared the policy of this country with regard to the two belligerents now so lamentably desolating America, and which will continue to be pursued, with a careful and earnest desire to make it conducive to the most rigid impartiality and justice.

After consulting with the law officers of the Crown her Majesty's Government have come to the decision that agents of the authorities of the so-called Confederate States have been engaged in building vessels which would be at least partially equipped for war purposes on leaving the ports of this country; that these war vessels would undoubtedly be used against the United States, a country with which this Government is at peace; that this would be a violation of the neutrality laws of the realm, and that the Government of the United States would have just ground for serious complaint against her Majesty's Government, should they permit such an infraction of the amicable relations now subsisting between the two countries.

Her Majesty's Government confidently rely on the frankness, courtesy, and discernment which Mr. Davis has displayed in the difficult circumstances in which he has been placed during the past three years, for a recognition of the correctness of the position which her Majesty's Government have taken upon this subject. No matter what might be the difficulty of proving in a court of law that the parties procuring the building of these vessels are agents of the so-called Confederate States, it is universally understood throughout the world that they are so, and her Majesty's Government are satisfied that Mr. Davis would not deny that they are so. Constructed as "rams," as these vessels are, they would certainly be in a condition on leaving port to inflict the most serious damage on vessels belonging to the United States, as was shown by the destruction of the Cumberland, United States sloop-of-war, by the "ram" Merrimac, merely by the latter being run into collision with the Cumberland.

Such vessels are to all intents and purposes equipped as war vessels of a certain power, although they be without a gun or any ammunition on board; nor can the frequent use of the word "equip" in the sense of "to furnish with every thing necessary for a voyage," be held for a moment to limit its significance to the furnishing of a war vessel with every thing which it might be possible to put upon her, or the ultimately putting of which on her might be contemplated. Such a construction cannot be entertained for an instant. It is clear that a hundred and twenty gun ship might be equipped for war purposes with any fraction of her armament on board, although she might not be so powerful or so efficient as she would be if she had the whole of it. A ram would be also equipped for war purposes, although the absence of her ordnance and ammunition might render her less effective than she would be with them. This, it is presumed by her Majesty's Government, will be conceded by Mr. Davis without further argument or illustration in support of it.

This much being established to the perfect conviction of her Majesty's Government and the law officers of the Crown, and admitted, as they are convinced it must be, by Mr. Davis, and by every other person of sound and impartial judgment, there is not the slightest room to doubt that it is purposed to use the vessels in question against the United States, a country with which this nation is at peace and on terms of amity, and that the permitting them to leave the ports of her Majesty's dominions would be a violation of the neutrality laws of the kingdom, and such an injurious act toward the United States as would justify the Government of that country in seriously complaining of it as unfriendly and offensive in the highest degree, even to the imminent peril of rupturing the peaceful relations now existing between the two countries.

Under these circumstances her Majesty's Government protest and remonstrate against any further efforts being made on the part of the so-called Confederate States, or the authorities or agents thereof, to build or cause to be built, or to purchase or cause to be purchased, any such vessels as those styled rams, or any other vessels to be used for war purposes against the United States, or against any country with which the United Kingdom is at peace and on terms of amity; and her Majesty's Government further protest and remonstrate against all acts in violation of the neutrality laws of the realm.

I have the honor to be, your Lordship's obedient servant,
RUSSELL.

To this despatch a reply was made on April 6th to Lord Lyons, by the Private Secretary of Mr. Davis, in which the informality of the mode of communication was waived, but a protest was made at the use of the term "so-called" Confederate States; the plea of neutrality is regarded as a cover for hostility. He says:

Were, indeed, her Majesty's Government sincere in a desire and determination to maintain neutrality, the President could not but feel that they would neither be just nor gallant to allow the subjugation of a nation like the Confederate States by such a barbarous, despotic race as are now attempting it.

And concludes as follows:

As for the specious arguments on the subject of the rams, advanced by Earl Russell, the President desires me to state that he is content to leave the world and history to pronounce judgment upon this attempt to heap injury upon insult, by declaring that her Majesty's Government and law officers are satisfied of the questions involved, while those questions are still before the highest legal tribunal of the kingdom, composed of members of the Government and the highest law officers of the Crown, for their decision. The President himself will not condescend to notice them.

I have the honor to be your Lordship's obedient, humble servant.

BURTON N. HARRISON, Private Sec'y.

During the hostilities in which Denmark was involved, a ram was built in a port of France for that Government. On the return of peace this ram was transferred to agents of the Government at Richmond, and placed under the command of Capt. T. J. Page, formerly of the U. S. Navy, and called the Stonewall. She made for the port of Ferrol, in Spain, and was there blockaded by the U. S. frigates Niagara and Sacramento.

The cruisers were more numerous and exceedingly destructive. Previous to January 30, 1864, the number of merchant vessels of the United States destroyed by them was 198; tonnage, 89,704; value of vessels at \$50 per ton, \$4,485,200; value of cargo at \$100 per ton, \$8,970,400. Total, \$13,455,600. The number captured by the different vessels and by the enemy up to the above date, was as follows:

By steamer Sumter....	27	By privateer Calhoun...	8
" " Alabama....	66	" " Savannah....	1
" " Florida....	16	" " Lapwing....	1
" privateer Tacony....	16	" " St. Nicholas....	8
" steamer Georgia....	10	" " Echo....	2
" privateer Jeff. Davis....	9	" " Conrad....	1
" " Retribution....	7	" " Coquette....	1
" " Salto....	1		
" " Winslow....	5		164
" steamer Nashville....	2		

The other merchant vessels (twenty-nine) were captured in Southern harbors and rivers. Of the vessels captured by the cruisers, seventeen were bonded, and all the others burned.

During 1864 a few captures were made by the Alabama before she was sunk by the Kearsarge. (*See NAVAL OPERATIONS.*) The Florida, Captain Morris, appeared off the coast of Virginia in July and captured six vessels, and destroyed afterwards a number, and was finally captured in the harbor of Bahia by a U. S. steamer. (*See DIPLOMATIC CORRESPONDENCE.*)

Three more cruisers also made their appearance during 1864, viz.: the Tallahassee, Olustee, and Chickamauga. The steamer Tallahassee in August visited the entire length of the coast of the Northern States, and destroyed thirty-three vessels in ten days, one of which was a New York pilot-boat. The steamer Olustee was an iron vessel of 1,100 tons burthen, schooner rigged, with two screws and very fast. Several vessels were captured by her off the coast and bound to New York in the month of November. The steamer Chickamauga also captured several vessels, which were valued at \$500,000.

The most important rams for harbor service were the Tennessee and Albemarle. For the details respecting these and also the Confederate gunboats, *see NAVAL OPERATIONS.*

On September 29th the steamer Roanoke, a passenger and freight vessel running between New York and Havana, was captured by Lieutenant Braine and some companions, who had come on board as passengers as the vessel was leaving Havana in the afternoon. The officers and crew were overpowered, made prisoners, and the vessel headed for Bermuda, where a pilot was called on board. Braine went ashore and brought on board a party, and the vessel put to sea, soon overhauling a brig with coal and provisions.

These were taken aboard, and on the next day a vessel was sent to take off the passengers. The transfer was made together with a quantity of cotton, and the steamer set on fire. The passengers and crew were taken into Five Fathom Hole, and the purser and first mate went ashore to have the Confederates as pirates arrested, which was done, but after a trial by the British authorities they were discharged. The Roanoke had on board \$17,000 in greenbacks, and \$4,000 in gold.

A correspondence relative to this affair ensued between the Governor of Bermuda and the Home Government, and with Mr. Adams, the American Minister at London. The reasons on which Lieutenant Braine was discharged are stated in the following letter of Earl Russell to Mr. Adams:

FOREIGN OFFICE, January 31.

SIR: I have had the honor to receive your letter of the 21st ult. protesting against the proceedings of her Majesty's colonial authorities at Bermuda in the case of the steamer Roanoke, and enclosing copies of various documents relating thereto.

These papers refer to two different complaints.

The one complaint is, that persons were enlisted at Bermuda with a view to make war on a State in amity with her Majesty. The other complaint is, that certain passengers proceeding from Havana in the United States vessel Roanoke, when five hours from Havana on their voyage, rose on the captain, made themselves masters of the vessel, destroyed her, and were afterwards permitted to land on the island of Bermuda. The answer to the first complaint is, that sufficient evidence to convict the persons accused was not produced, and consequently they could not be convicted. The answer to the second complaint is, that the person arrested for a supposed piratical act produced a commission authorizing that act as an operation of war, from the Government of the so-called Confederate States, which are acknowledged by her Majesty's Government to possess all belligerent rights.

(Signed,) I am, &c.,

RUSSELL

NAVY, UNITED STATES. Of all the systems adopted by the Navy Department to accomplish the various and arduous objects rendered necessary by the outbreak of the war, not the least interesting is the manner in which an effective blockade of the Southern coast was secured. The length of coast to be blockaded was three thousand five hundred and forty-nine (3,549) miles. This is a greater extent than the whole coast of Europe from Cape Trafalgar to Cape North. The most serious attempts heretofore made by the great maritime powers of Europe consisted in endeavors to interdict trade at a few of the principal ports of a belligerent. The first steps of the department consisted in making every naval vessel available, recalling the foreign squadrons, increasing the force by building new vessels, and procuring for naval purposes from the merchant service every steamer which could be made a fighting vessel, and in enlarging the capacity of the navy yards, putting in requisition the foundries and workshops of the country for supplies of ordnance and steam machinery, augmenting the number of seamen, and supplying the deficiency of officers by selecting experienced and able shipmasters and others from the commercial marine. The next efforts of the department were directed toward securing several harbors, at comparatively equidistant points, as bases of operations for the several squadrons, where our naval vessels could receive their supplies, and maintain themselves at their stations and on their cruising ground without returning to northern ports for repairs and to refit. For this purpose various naval expeditions were organized. The first sailed from Hampton Roads in August, 1861, and captured the forts at Hatteras Inlet. This was followed, a few weeks later, by the capture of Port Royal, which secured a commodious harbor for the ships of the South Atlantic squadron. Early in the spring of 1862 New Orleans was captured. Other harbors and places were from time to time seized and occupied. From the outset, the blockade has been so effective as to be respected by the nations of Europe, and to cause a constant complaint by the enemy of its exhausting severity. Wilmington was the last

port captured, and here blockade running was more successful than at any other. For various causes Cape Fear River is more difficult to blockade than any port on the coast of the United States. The two main entrances are forty miles apart, and these two are subdivided into several others, each of which affords an entrance to vessels. The water shoals gradually and regularly to the shore-line, and numerous isolated batteries are erected along the coast; so that a blockade runner of light draft is not under the necessity of making directly for the entrance, but can, by the lead, run close under the land protected by the batteries, and pass in over the bar at leisure. When coming out a steamer will select her own time, thus securing every advantage; and she can pass either up or down the coast before making an offing, or she may proceed straight out to sea, trusting for her escape to the night and favoring darkness and mists, and the fact that she is under full speed, whilst the steamers blockading must have low steam. Almost every vessel employed in violating the blockade was constructed in England with great skill, regardless of cost and with sole reference to this object. They derived great advantages by having depots of supplies at Halifax, Bermuda, and Nassau.

At Wilmington alone, however, sixty-five steamers, the aggregate value of which, with their cargoes, scarcely falls short of thirteen millions of dollars, were captured or destroyed in endeavoring to enter or escape.

On the interior rivers of the country the department also early commenced to put afloat a large fleet. It comprised more than one hundred vessels. They were to a great extent boats that had been employed in the carrying trade, but which were purchased, strengthened, and fitted for war purposes. They were necessarily inferior to naval built vessels in strength, lightly armed, and more liable to disaster. To insure a systematic and vigorous execution of the duties devolving upon this squadron, the waters traversed by it were divided into ten naval districts, each under the command of an experienced naval officer. The vessels in each district had their appropriate field of duty, but at the same time they were held ready to support each other when occasion required, and could be readily concentrated upon any emergency. The principal rivers thus traversed were the Mississippi, lower Ohio, Cumberland, and Tennessee. The effect of their operations on the Mississippi has been to break up the combinations of the enemy, and sever their organizations. On the other rivers, peaceful citizens have been protected and partisan bands dispersed.

The tabular statement on p. 560 exhibits the number and description of vessels that have been constructed, or put in the course of construction, for the navy since the institution of active measures for the suppression of the rebellion. Some of them have been built by

contract; others by the Government, in the several navy yards. If there is added to the number those constructed under similar circumstances, and within the same period, that have been lost by shipwreck, in battle, &c., viz.: the sloops Housatonic and Adirondack, and the iron-clads Monitor, Weehawken, Keokuk, Indianola, and Tecumseh, the aggregate would be 210 vessels, 1,675 guns, and 256,755 tons.

Picket-boats, and small craft built for especial purposes, are not embraced in this statement.

Various classes of vessels have been constructed to meet the peculiar exigencies of the service. A class of small heavily-armed propellers was needed at the outset, and twenty-three were constructed as gunboats, after the type of the Unadilla, Penola, and Wissahickon. They maintained a good reputation to the close of the war. They were well adapted for guarding the coast. A larger description was needed for ocean service, and four vessels of the class of the Ossipee, mounting each two guns of eleven inch, were built. There were also four vessels of slightly less tonnage constructed, carrying the same armament of which the Kearsarge is a type. The Shenandoah is a type of six vessels mounting each three eleven-inch guns, all of which sustain a high reputation. The heavy guns mentioned constitute the principal armament of the several classes named, but they each have in addition from two to six guns of less calibre. All of these vessels are screw steamers, suitable for sea cruising; but the shallow sounds and bays, the rivers and bayous, often narrow and tortuous, required a different class drawing less water. To turn in these frequently restricted channels is difficult, and sometimes impossible; the necessities of the case, therefore, suggested the principle of a fighting vessel with a double bow and a rudder at each end. Twelve paddle-wheel steamers of this class, of which the Port Royal and Sonoma are types, were constructed. Others of the same class were the Sassacus, distinguished in the attack on the ram in Albemarle Sound, and the Metacomb, conspicuous in Mobile Bay. One of this class was sent round Cape Horn to San Francisco, where she is on duty.

Of the monitor class of vessels only two, the Dictator and Puritan, are proposed for sea-service. Four turreted vessels have been built of wood and cased with iron, thus differing from the original monitors, which are exclusively of iron. One of them, the Monadnock, has performed her trips from Boston to Hampton Roads with entire satisfaction. Her draught of water is twelve feet, and with two independent screws she has a speed of ten knots. Four other similar vessels of a still more formidable and invulnerable character are building. The only other sea-going iron-clad ships besides the two turreted vessels above mentioned, are the New Ironsides and the Dunderberg, a casemate vessel.

COMPARATIVE STATEMENT OF THE NAVY, DECEMBER, 1863 AND 1864.

No. of vessels.	DESCRIPTION.	No. of guns.	No. of tons.
671	Total navy, December, 1864.....	4,610	510,286
568	Total navy, December, 1863.....	4,443	467,967
83	Actual increase for the year.....	167	42,489
26	Total losses by shipwreck, in battle, capture, &c., during the year.....	146	13,064
109	Actual addition to the navy from December, 1863, to December, 1864.....	312	55,518

VESSELS CONSTRUCTED FOR THE NAVY SINCE MARCH 4th, 1861.

No. of vessels.	DESCRIPTION.	Guns.	Tonnage.
7	Screw sloops, Ammonoosuc class, 17 to 19 guns, 3,912 to 3,718 tons each.....	121	28,637
1	Screw sloop Idaho, 3 guns, and 2,638 tons.....	8	2,638

208	Total.....	1,621	249,974

In its iron-clads the department has experimented by the construction of different classes and sizes, both in wood and iron, propelled by one screw and by two screws working independently of each other. In its most recent constructions of the Miantonomah class, a wooden vessel with Ericsson turrets, a high rate of speed, perfect ventilation, impregnability, and the enormous battery of four 15-inch guns, have been combined in a vessel of 1,564 tons, and drawing only twelve feet of water. These vessels are free from the disadvantage of fouling, which so greatly reduces the speed of iron ones.

In the steam vessels nearly every variety and type of engine, of valve gear, of rate of expansion, of surface condenser, of screw propeller, and of boilers, have been thoroughly tested.

A very extensive series of important experiments has been instituted by the department. Nearly all the kinds of coal of the seaboard States have been the subject of careful experiment, with a view to ascertain their compara-

tive value for naval purposes. Petroleum has also been tested as a substitute for coal in naval steamers. As opinion appears to have settled upon the horizontal and the vertical tubular boilers as the only ones proper for naval service, the department has had one of each kind manufactured for the purpose of accurate experiments, to determine their respective merits. These are now in progress. A commission of nine persons eminent in physical science has been appointed to devise the proper apparatus, and make the necessary experiments therewith, to ascertain by practical results the economy of using steam with different degrees of expansion.

A school for boys has been established on board the old frigate Sabine. It is, with some modifications, a revival of the apprentice system in existence some years ago. Measures have also been taken to carry into effect an act of Congress of 1863-'4, which authorizes the education at the Naval Academy of cadet en-

gineers, to be selected from youths not over eighteen years of age, who shall have been engaged at least two years in the fabrication of steam machinery.

The number of vessels captured by the squadrons during the year ending November 1st, 1864, was 324, as follows: schooners, 105; steamers, 88; sloops, 40; brigs, 8; barks, 8; small boats, 88. The total number of captures since the commencement of the war is 1,379, as follows: schooners, 652; steamers, 267; sloops, 171; brigs, 83; barks, 29; ships, 15; yachts and small boats, 117.

The gross proceeds from the sale of condemned prize property amounts to \$14,396,250; expenses, \$1,287,153. One-half is distributed to the captors and the other goes to the United States Treasury.

The expenses and estimates for the navy during the last fiscal year and during the war have been as follows:

On the 1st of July, 1863, there was an unexpended balance of.....	\$29,101,970 84
The appropriations for the fiscal year ending June 30th, 1864, were.....	76,608,567 86
Total available means.....	\$115,765,587 70
The expenditures during the same time, were.....	85,788,399 77
Leaving a balance at the commencement of the fiscal year 1865.....	30,082,244 93
The appropriations for that year were.....	109,266,814 54
Making the total available resources for the fiscal year ending June 30th, 1865.....	\$139,369,069 47

The estimates submitted for the fiscal year ending June 30th, 1866, were as follows:

Pay of the navy.....	\$28,327,723 50
Construction and repair of steam machinery.....	17,145,000 00
Construction and repair of vessels.....	24,580,000 00
Ordnance and magazines.....	9,187,615 00
Fuel, hemp, and equipment of vessels.....	14,060,000 00
Provisions and clothing.....	18,928,280 75
Navy yards and superintendents.....	4,577,318 00
Navigation and Naval Academy.....	562,626 00
Surgeons' necessaries and hospitals.....	815,000 00
Marine corps.....	1,599,087 70
Contingent and miscellaneous.....	2,970,018 88
Total.....	\$112,187,686 98

The expenditures since the 4th of March, 1861, have been as follows:

From 4th of March to close of fiscal year, June 30th, 1861.....	\$6,244,857 68
For fiscal year ending June 30th, 1862.....	42,200,529 06
For fiscal year ending June 30th, 1863.....	63,211,106 27
For fiscal year ending June 30th, 1864.....	85,788,399 77
From July 1st, 1864, to November 1st, 1864.....	41,257,976 73
Estimated expenditures from November 1st, 1864, to March 4th, 1865.....	42,000,000 00
Total for four years.....	\$230,647,261 45

This exhibits an average annual expenditure, through four years of expensive war, prosecuted under many and great disadvantages, of \$70,161,813. Could the transactions of the department have been conducted on the true standard of value, that of gold and silver, or of paper convertible into money at the will of the holder, the naval war expenses would scarcely exceed, perhaps not equal, the current

VOL. IV.—36 A

expenses of either of the great maritime powers during the same period. There is also this great difference: Those powers had a navy already constructed and in commission. We have had to create and pay for one, in addition to our annual current war expenses. Were the cost of our vessels deducted from the amount above stated, the expenses of the navy would fall millions below those of other governments.

The number in the naval service is about 6,000 officers and 45,000 men. Two hundred and fifty boys are on the school-ship Sabine. The consumption of coal has been about five hundred thousand tons.

The number of casualties during the year was 171 killed and 851 wounded. The number of cases of sickness under treatment was 61,229, of which number 1,048 died; 53,070 were returned to duty or discharged, leaving 2,111 under treatment at the close of the year.

NAVY, U. S., OPERATIONS OF. As in previous years of the war the seacoast and inland waters of the United States were, in 1864, in charge of six different squadrons, viz.: 1. The North Atlantic Squadron, Acting Rear Admiral S. P. Lee, relieved October 12th by Rear Admiral D. D. Porter; 2. The South Atlantic Squadron, Rear Admiral J. A. Dahlgren, temporarily relieved between February and May by Commodore S. C. Rowan; 3. The East Gulf Squadron, Acting Rear Admiral T. Bailey, relieved in October by Acting Rear Admiral O. K. Stribling; 4. The West Gulf Squadron, Rear Admiral Faragut, relieved toward the close of the year by Acting Rear Admiral H. K. Thatcher; 5. The Mississippi Flotilla, Rear Admiral D. D. Porter, relieved November 1st by Acting Rear Admiral S. P. Lee; and 6. The Potomac Flotilla, Commander Foxhall A. Parker. The usual squadron in the Pacific was also maintained during the year, under the command successively of Acting Rear Admirals C. H. Bell and G. F. Pearson; while that in the West India waters was, as an organization, discontinued. A number of vessels were actively employed from time to time in cruising after rebel privateers and in special service; and small squadrons were also maintained in the Mediterranean and the East Indies.

1. *North Atlantic Squadron.*—The operations of this squadron, which in the previous year were almost wholly confined to blockade duties, were sufficiently various and important in 1864 to call forth all the resources at the command of the Naval Department. Besides the blockade of Wilmington, which alone required a fleet double in size and effectiveness to the entire naval force in commission previous to the war, the inland waters of Albemarle and Pamlico Sounds had to be guarded against the formidable iron-clads which the rebels had for a long time been constructing in the Neuse and Roanoke Rivers; operations on an extensive scale, in concert with the army, were conducted in the James River; and in the latter part of the year occurred the terrific bombardment of Fort

Fisher by the most powerful naval armament which ever attacked a fortification. In fact, so multiform were the duties required of this squadron, that in order to ensure their proper fulfilment, it was in the spring divided into four separate squadrons, one of which was stationed in the James River, one in the Sounds of North Carolina, and two off Cape Fear River and the adjacent inlets. Each of these squadrons was placed under an efficient officer, and the general headquarters were established at Beaufort, North Carolina. The almost total closing of Charleston harbor, and the vigilant watch kept over Mobile, caused Wilmington to be the only port east of the Mississippi River accessible to blockade-runners; and so daring, and in many cases so successful, were the latter in evading the Federal cruisers, that complaints were freely uttered against the naval department for permitting the rebels to enter and depart from this port at their pleasure. "Many who have failed to make themselves acquainted," observed Secretary Welles in his annual report, "with the facts connected with the Wilmington blockade, have been free and severe in their censures of the manner in which it has been conducted. The intelligent officers of the naval and merchant service who have labored with untiring zeal and assiduity, and watched with sleepless vigilance through weary months of winter and summer, and in all weathers, stimulated by the hope of benefiting their country and receiving its thanks, as well as by every inducement of fame and pecuniary reward, if successful, do not concur in the opinion that the port of Wilmington can be entirely closed by blockade."

To one familiar, however, with the configuration of the land at the mouth, or rather mouths of the Cape Fear River, through which a vessel must pass in order to reach Wilmington, the injustice of condemning the navy for not more effectually blockading the place will be sufficiently apparent. For about thirty-five miles before reaching the ocean the Cape Fear River flows in a direction nearly due south, and directly in front of its mouth lies Smith's Island, on either side of which are the two principal entrances to the river. The southwest, or main channel, is about two and a half miles in width, has a depth of from ten to fourteen feet over the bar, and is protected by Fort Caswell, a casemated stone work on Oak Island, adjoining the mainland, and by the Light House battery on Smith's Island. The northeast entrance, known as New Inlet, is less than two miles wide, and shallower than the other, and is protected by Fort Fisher, a first-class casemated earthwork near Federal Point on the mainland, and by a series of batteries extending thence about six miles in a northerly direction along the seacoast. Owing to an extensive shoal, called the Frying Pan, extending around the southern and western sides of Smith's Island, the distance by sea between the two entrances is forty miles, while inside the island it is not

above eight. To the natural advantages of the locality, greatly enhanced by the artificial defences, on which the best engineering skill of the Confederacy had been expended since the commencement of the war, must be added the shallowness of the water, which decreases in depth gradually and regularly to the shore line, so that none of the blockade-runners of light draught were under the necessity of making directly for either entrance, but could, by the lead, run close under the land, and protected by the batteries, pass in at their leisure. In escaping from the river such vessels found still less difficulty in eluding the Federal cruisers, as they could pass for some distance up or down the coast before making an offing, or proceed straight out to sea, trusting to darkness, fog, or a full head of steam to make their escape. For running the blockade of this port a peculiar class of steamers, of great speed and light draught, was constructed in England, and the enormous profits arising from a successful voyage, a single trip often paying many times the cost of the vessel, tempted the merchants of that country to embark largely in this illicit commerce. Nassau, Bermuda, and Halifax became their chief places of rendezvous, and from one or the other of these ports there was almost a daily departure for Wilmington.

On the other hand, the Federal cruisers were for the most part too deep a draught to run near the shore, or enter the several lesser channels through which the blockade-runners could pass; still less to approach the numerous shallow inlets extending up and down the coast, into which the latter could take refuge. Such, also, was the nature of the coast, and the liability at some seasons of constant stormy weather, that it was almost impossible to station light-draught blockaders there on permanent duty. These facts will explain why, with fifty cruisers stationed at the two main entrances of the Cape Fear River, some of them the fastest in the service, and officered by men who had not their superiors in any service in intrepidity, energy, and professional skill, blockade-runners were nevertheless enabled to pass in and out with seeming impunity. When it is considered, also, that the latter have always a full head of steam on at the critical moment, and that their adversaries cannot be equally prepared, the chances in favor of the blockade-runners are greatly increased. Thus it happened that the blockade of Wilmington was repeatedly broken, and that the port itself became the central depot of the Confederacy for the reception of supplies from abroad. This result, however, was not accomplished without considerable sacrifice, and the steamers captured or destroyed off the mouth of the Cape Fear River averaged one a week subsequent to the closing of Charleston harbor by the monitor fleet under Admiral Dahlgren.

From an official statement of the results of blockade-running at Wilmington from January, 1863, to December, 1864, published in

the "Manchester Guardian," it appears that the total ventures made by English capitalists and speculators, counting the values of ships and cargoes, amounted to more than sixty-six millions of dollars (£13,241,000). The quantity of cotton exported in twenty-two months (January 1st, 1863, to October 31st, 1864) was 187,987 bales, or 62,860,468 pounds, of which the larger part was Sea Island. The value of the export and import trade in one year (July 1st, 1863, to June 30th, 1864) was \$65,185,000; the rebel government rating exchange at five for one. The total number of vessels which ran the blockade in fifteen months (October 1st, 1863, to December 31st, 1864) was 397. The average amount of capital invested by Englishmen in trading ventures with Wilmington during a period of fifteen months (October 1st, 1863, to December 31st, 1864), is stated in detail as follows:

	Entrances. 302.	Cleverages. 154.	Total ventures. 397.
Ships at £15,000 each.....	£2,045,000	£2,910,000	£5,955,000
Cargoes—Inw'd (£12,000)			
Outward (£35,000).....	2,496,000	4,860,000	7,356,000
Total.....	£5,481,000	£7,760,000	£13,241,000

The operations in the Sounds of North Carolina, with the exception of some unimportant reconnoissances and boat expeditions, commenced in April with the engagement between the gunboats Miami and Southfield and the rebel ram Albemarle, at Plymouth, near the mouth of the Roanoke River, of which an account is given under the head of Army Operations. The advantages gained by the Albemarle on this occasion, taken in connection with the reverses sustained at Plymouth by the land forces in garrison there, called for vigorous measures to prevent further disaster, including possibly the overthrow of the Federal naval supremacy in Albemarle Sound. Captain Melancton Smith was accordingly sent to assume command in the Sounds with several vessels of the double-ender class, and was directed to attack the ram at all hazards, and use every means to disable or destroy her. On the afternoon of the 5th of May, the Federal fleet being collected near the mouth of the Roanoke River, the Albemarle came out, followed by the Bombshell, a small armed tender, and at 4:40 proceeded to engage the gunboats. In accordance with instructions, the larger gunboats manœuvred to get alongside of their antagonist, and fire upon her ports or roof, which were her most vulnerable parts; but, owing to the neglect of the smaller vessels to obey the signals from the flag-ship, and to their rapid and indiscriminate fire, it became impossible for the larger ones to take a desirable position without risk of being riddled by their own friends. The contest was, consequently, for the first half hour of a somewhat desultory character. The gunboats eluded the efforts of the Albemarle to ram them, but their guns seemed to make no perceptible impression upon

her. Soon after 5 o'clock the Sassacus, watching her opportunity, struck the enemy fairly abaft her starboard beam, causing her to careen until the water washed over her deck and casemate. In this position the two vessels remained for about ten minutes, the crew of the Sassacus throwing hand-grenades down the deck-hatch of the Albemarle, and trying in vain to get powder into her smoke-stack. Could another of the gunboats at this juncture have got up on the other side of the ram, she might have been seriously disabled, and perhaps compelled to surrender; but before this could be effected she swung clear of the Sassacus, and in parting sent a 100-pounder rifle shot clean through the starboard boiler of her antagonist, who, enveloped in blinding clouds of steam, was compelled to withdraw for a short time from action. About this time the colors of the Albemarle came down, whether by accident or design is not known; but she nevertheless maintained a general engagement with the gunboats until 7:30 P. M., when she retired up the Roanoke River. With the exception of the Sassacus, the gunboats sustained comparatively little injury, although several of them were struck by the rifle shots of the Albemarle. The latter had her boats knocked to pieces, her smoke-stock riddled, and one of her guns partially disabled, but in other respects seemed in as good condition as upon going into action. Her motive power was entirely uninjured, and the rifled projectiles of the gunboats, even when discharged at short range, rebounded harmlessly from her armored sides. Her tender, the Bombshell, was captured early in the fight.

The action, though without any definite results, reflected no little credit on the bravery and skill of the small Federal squadron, and showed that, with a proper effort, even by the class of vessels engaged, the Albemarle might be compelled to remain within the waters of the Roanoke. She showed herself again on May 24th at the mouth of the river, but retired rapidly up the stream toward Plymouth upon being approached by the gunboats. From reports of refugees and deserters, it also appeared that she suffered considerably in the action of the 5th, both in her outer plating and from the concussion caused by the fire of the gunboats. On the 25th a daring but unsuccessful attempt was made by five volunteers from the gunboat Wyalusing to destroy her by a torpedo, while lying at the wharf at Plymouth.

But though manifesting no disposition to re-assume the offensive, the Albemarle was of sufficient importance to induce the naval department to take measures during the summer for her destruction. Lieut. W. B. Cushing, who had on previous occasions shown equal coolness and daring in conducting hazardous reconnoissances, was selected for the undertaking, and a small steam launch was equipped as a torpedo vessel and put under his charge. On the night of Oct. 27th he started up the Roanoke with a crew of thirteen officers and men who chiefly

volunteered for the service, and passing several miles of the enemy's pickets unobserved, arrived within twenty yards of the Albemarle before being hailed by her lookouts. The torpedo boat was then steered under a full head of steam direct for the ram, which lay at her wharf at Plymouth, protected by a raft of logs extending outwards about thirty feet. Upon the alarm being given by the lookout, a confused fire of musketry was opened by the rebels, which had little effect. "Passing her closely," says Lieut. Cushing, "we made a complete circle, so as to strike her fairly, and went into her bows on. By this time the enemy's fire was very severe, but a dose of canister at short range served to moderate their zeal and disturb their aim. In a moment we had struck the logs, just abreast of the quarter-port, breasting them in some feet, and our bows resting on them. The torpedo boom was then lowered, and by a vigorous pull I succeeded in driving the torpedo under the overhang, and exploded it at the same time the Albemarle's gun was fired. A shot seemed to go crashing through my boat, and a dense mass of water rushed in from the torpedo, filling the launch and completely disabling her. The enemy then continued to fire at fifteen feet range and demanded our surrender, which I twice refused, ordering the men to save themselves, and removing my own coat and shoes. Springing into the river, I swam with others into the middle of the stream, the rebels failing to hit us." Lieut. Cushing succeeded in reaching the opposite shore, and during the next day made his way by stealth through the surrounding swamps to a creek some distance below Plymouth, where he found a skiff belonging to a rebel picket, in which he effected his escape to the fleet. Only one other of his party succeeded in escaping, the rest being either captured, killed, or drowned. The Albemarle was completely submerged by the explosion of the torpedo, and so remained long subsequent to the evacuation of Plymouth by the rebels. This daring feat excited the admiration of the rebel no less than of the Federal authorities, and obtained for Lieut. Cushing the thanks of Congress, and promotion to the next highest grade in the service. The main rebel defence of Plymouth being thus removed, Commander Maccomb, the senior naval officer in the Sounds, availed himself of Lieut. Cushing's success to reestablish the Federal supremacy of the lower Roanoke. With the vessels under his command he immediately pushed up the river to Plymouth, drove the rebels from their rifle-pits and batteries, and on Oct. 31st retook the town, capturing a few prisoners, beside cannon, small arms, and ammunition. Thenceforth during the year the Federal forces held undisturbed possession of the Sounds.

For some time previous to May, 1864, the James River had been left almost exclusively to the enemy, who availed themselves of this circumstance to place torpedoes in the channel and otherwise obstruct its navigation. With

the movement of Gen. Butler's forces up the river on May 5th, for the purpose of coöperating in the grand campaign of Gen. Grant against Richmond, commenced a long series of naval operations, which, though of considerable importance, are so intimately connected with the military campaign in that quarter, as to form a subordinate part of the operations of the army. Hence a very brief outline of what was accomplished by this division of the North Atlantic squadron is all that it is necessary to give here. The land forces were safely convoyed up the river to their landing places at City Point and Bermuda Hundred, with no disaster to the fleet beyond the destruction by torpedoes of two small paddle-wheel gunboats, the Commodore Jones and the Shawsheen. Military operations having commenced near Petersburg, five iron-clads, including the captured vessel Atlanta, were stationed some distance above City Point to watch the rebel iron-clads and rams in the upper James, and if possible engage them in action, while the smaller vessels of the fleet were busily occupied in dragging the river for torpedoes, in assailing moving batteries or bodies of the enemy along the shore, or in minor expeditions. During the attack upon the colored garrison at Wilson's wharf, a portion of the fleet rendered good service in repelling the enemy. In June, much to the disappointment of Admiral Lee, who earnestly desired a brush with the enemy, obstructions were sunk in the channel at Trent's Reach, for the purpose of protecting, from any sudden attack by the rebel fleet, the numerous transports collected at City Point, the security of which was deemed of too great importance to the army to permit their defence to be intrusted to the navy alone. During most of the summer and autumn, the iron-clads had frequent combats with the enemy's vessels and the powerful batteries at Howlett's, the advantages from which, owing to the difficult navigation of the river, could never be pushed to any definite result.

The complex yet comprehensive plan which the Government adopted in the spring of 1864, for the overthrow of the rebel power, provided for the capture of the remaining seaports, through which munitions of war and pecuniary aid were received by the Confederacy. Wilmington, from the facility which it afforded for blockade-running, and its easy communication with Richmond, became early in the summer a prominent object of attack; and to guard against any doubtful issue in such an undertaking, preparations commenced early in the summer to equip a squadron, which, while amply able to overcome all resistance, should also represent the commanding position assumed within three years by the United States among the great naval powers of the world. The naval department had on several previous occasions offered to close the port of Wilmington, with the aid of a coöperating land force; but, in view of the failure at Charleston in 1863,

declined, without such coöperation, to assume the responsibility of reducing the strong forts at the mouth of the Cape Fear River. In previous years the exigencies of the service had prevented the employment of land forces for this specific purpose; now it was determined to furnish troops enough to crown the expedition with success. The stubborn fighting between the Rapidan and the James entailed, however, such serious losses upon Gen. Grant, that all the surplus troops at the disposal of the Government were needed during the summer, to replenish the wasted ranks of the Armies of the Potomac and the James, and for months the contemplated expedition remained unorganized. The naval part of it alone, in consequence of the constantly-increasing number of vessels at the disposal of the naval department, seemed to make progress. As early as August, iron-clads and wooden steamers began to rendezvous at Hampton Roads, until in October a formidable fleet, numbering over fifty war vessels, and including the iron-clad *New Ironsides* and four monitors, was collected, of which Admiral Porter assumed command.

Long before December the squadron was at its rendezvous in readiness to sail; but it was not until the winter had fairly commenced that the necessary quota of troops could be furnished. The signal successes of Thomas and Sherman having disarmed all apprehensions with respect to the result of military operations in the South and Southwest, and the Armies of the Potomac and the James having been recently largely recruited, the Government early in December issued orders for the troops designated for the service to repair to Hampton Roads. These consisted of Gen. Ames's division of the 24th corps, and of Gen. Paine's colored division of the 25th corps, numbering together 6,500 effective men, both of which belonged to the Army of the James. Gen. Woitzel was designated as commander-in-chief of the military part of the expedition, but Gen. Butler subsequently accompanied it in that capacity, and on the 9th notified Admiral Porter that he was in readiness to move. Owing to stormy weather none of the vessels sailed until the 12th, when the transports and smaller war vessels, about 75 in number, took their departure, followed on the succeeding day by the *New Ironsides* and the heavy steam frigates.

After careful consideration it was determined that of the two entrances to the Cape Fear River, New Inlet could be the more successfully attacked. The narrow strip of land forming part of the east bank of the Cape Fear River, and terminating in Federal Point, offered, on the whole, better facilities for landing troops than any other part of the coast; and the capture of the works which protected it would not only give to the fleet the command of the river, and thus virtually close the port of Wilmington, but by cutting off Fort Caswell, which commands the other mouth of the river, would render the possession of that

strong work of no further importance to the rebels. For the immediate defence of the inlet the rebels relied chiefly upon Fort Fisher, and a series of batteries, connected by rifle-pits, running thence in a southwest direction along the coast, at an average distance of two hundred yards from the beach, to what was called the "Mound Battery," situated near the extreme end of Federal Point. The fort and its connecting batteries, forming practically a single work, consisted of two fronts: the first, or land front, being four hundred and eighty yards in length and extending nearly across the narrow peninsula, while the sea front has a length of about thirteen hundred yards. The former was intended to resist any attack from troops approaching the fort from the north, and the sea front to prevent vessels from running through New Inlet or landing troops on Federal Point. The following more particular description of both fronts is given by Colonel Comstock, chief engineer of the military part of the expedition: "The land front consists of a half bastion on the left or Cape Fear River side, connected by a curtain with a bastion on the ocean side. The parapet is 25 feet thick, averages 20 feet in height, with traverses rising 10 feet above it and running back on their tops, which are from 8 to 12 feet in thickness, to a distance of from 80 to 40 feet from the interior crest. The traverses on the left half bastion are about 25 feet in length on top. The earth for this heavy parapet and the enormous traverses at their inner ends, more than 80 feet in height, was obtained partly from a shallow exterior ditch, but mainly from the interior of the work. Between each pair of traverses

there was one or two guns. The traverses on the right of this front were only partially completed. A palisade, which is loopholed and has a banquette, runs in front of this face, at a distance of 50 feet in front of the exterior slope, from the Cape Fear River to the ocean, with a position for a gun between the left of the front and the river, and another between the right of the front and the ocean. Through the middle traverse on the curtain is a bomb-proof postern whose exterior opening is covered by a small redan for two field-pieces, to give flank fire along the curtain. The traverses are generally bomb-proofed for men or magazines. The slopes of the work appear to have been revetted with marsh sod or covered with grass, and have an inclination of 45 degrees or a little less. * * * There were originally on this front 21 guns and 8 mortars. * * * The sea front consists of a series of batteries, mounting in all 24 guns, the different batteries being connected by a strong infantry parapet so as to form a continuous line. The same system of heavy traverses for the protection of the guns is used as on the land front, and these traverses are also generally bomb-proofed." There was also a rebel battery, commanding the channel, on Zeke's Island, two miles southeast of Fort Fisher, and several miles north of the latter were the Flag Pond Hill and Half Moon batteries, serving as outworks to it.

On December 15th the transports arrived off New Inlet, where, on the 18th and 19th, they were joined by the iron-clads, which, being obliged to put into Beaufort, N. C., for coal and ammunition, could not reach the rendezvous sooner. The heavy-armed frigates, on account of their slow sailing, arrived also a day or two after the transports. Scarcely was the whole fleet assembled than the weather, which had previously been fair, became threatening, and on the 19th the sea was too rough to admit of landing troops. On the 20th a gale set in from the northeast, and the transports, being now deficient in coal and water, and liable to disaster if they should attempt to remain at their anchorage, were directed to make for Beaufort. The war vessels rode out the gale, which lasted three days, in safety, the monitors acting unexpectedly well; and on the 23d, the wind having veered round to the west, Admiral Porter determined to improve what he considered a favorable opportunity, by commencing operations on his own account without waiting for the return of the transports. An important agent in the destruction or reduction of Fort Fisher was a vessel filled with powder, which it was designed to run ashore as near as possible to the fort and explode. The idea originated with General Butler, and was suggested by the accidental explosion at Erith, on the Thames, in England, on October 1st, of two barges and two adjoining magazines loaded with barrels of powder, by which eight or nine lives were lost, and much surrounding property was destroyed. It was supposed that a similar

explosion of a vast mass of powder near the fort, the fleet meanwhile keeping at a respectful distance, would cause its walls to fall down, or some other serious disaster to occur, of which the attacking party might take advantage. The vessel selected for the purpose was the small gunboat *Louisiana*, purchased for operations on the North Carolina Sounds, and which, with a view of deceiving the rebels as to her true character, was disguised for the occasion as a blockade runner. She was then stored with two hundred and fifteen tons of powder, arranged as follows: Upon the berth deck was stowed a tier of barrels of powder with their heads taken out; over this sixty-pound bags of powder were piled in layers up to the top of the deck, and a house was constructed on the after deck, filled in the same manner. All were connected together by Gomez fuses, penetrating the mass, and uniting it at many points, every precaution being taken to insure, if possible, the instantaneous ignition of the whole mass. A simple method of firing these fuses by clock-work, timed as desired, was provided, three being provided in case one should fail. As a further precaution, in case the clock fuses should miscarry, the ends of the fuses were united at another point, and brought beneath a perforated framework of wood, in which were set lighted tapers, the lower end of the wicks penetrating the quick of the fuses. Five of these tapers were provided to insure success if other means failed; and, as a last precaution, it was arranged to fire the ship at a point remote from the powder at the moment of leaving it.

The vessel thus equipped was put in charge of Commander A. O. Rhind, who had associated with him Lieutenant G. W. Preston, Second Assistant Engineer Mullen, Acting Master's Mate Boyden, and seven men. The weather seeming auspicious for the enterprise on the 23d, Commander Rhind was directed, under cover of the darkness, to run his vessel aground directly opposite the fort, and proceed to explode her. Mr. Bradford, of the coast survey, had, the night previous, ascertained that a vessel of seven feet draught could be placed on the edge of the beach. The result of the undertaking is thus described by Admiral Porter:

At half-past ten P. M. the powder vessel started in toward the bar, and was towed by the *Wilderness* until the embrasures of Fort Fisher were plainly in sight. The *Wilderness* then cast off, and the *Louisiana* proceeded under steam until within two hundred yards of the beach, and about four hundred from the fort. Commander Rhind anchored her securely there, and coolly went to work to make all his arrangements to blow her up. This he was enabled to do, owing to a blockade-runner going in right ahead of him, the forts making the blockade-runner signals, which they also did to the *Louisiana*. The gallant party, after coolly making all their arrangements for the explosion, left the vessel, the last thing they did being to set her on fire under the cabin. Then taking to their boats, they made their escape off to the *Wilderness*, lying close by. The *Wilderness* then put off shore with good speed, to avoid any ill effects that might happen from the explosion. At forty-five minutes past one on the morning of the 24th the ex-

plosion took place, and the shock was nothing like so severe as was expected. It shook the vessel some, and broke one or two glasses, but nothing more.

To those watching the explosion from the fleet at several miles distance from the shore, it seemed scarcely louder than the discharge of a battery of light artillery; but at Newbern it was distinctly heard, and was supposed to be an earthquake. Not the slightest damage, so far as could be ascertained, was inflicted upon the fort, whose immensely thick walls of sand could probably have withstood the explosion of a dozen or more powder-ships.

Although the explosion had proved a failure and the transports were not yet in sight, Admiral Porter determined to proceed at once with the attack, hoping to damage the fort to such a degree that the troops, upon their arrival, would find comparatively little difficulty in carrying it by storm. Accordingly, at daylight of the 24th, the fleet stood in, in line of battle, toward the shore, and shortly before noon took up the positions previously assigned to them by the Admiral. The first line comprised the iron-clads, *Ironsides*, *Monadnock*, *Canonicus*, and *Mahopac*, which were anchored in line, about a length apart, at a distance of three-quarters of a mile from the fort, each having in its rear, within easy supporting distance, a gunboat to serve as a tender. A quarter of a mile behind the iron-clads was a line of heavy frigates, comprising the *Minnesota*, *Colorado*, *Wabash*, and vessels of similar calibre; and behind these another line, each vessel of which was anchored intermediate between those of the first line. Another division, consisting chiefly of gunboats, took position to the south and southeast of the forts, and to the left of the frigates, and still another was posted to the northward and eastward of the iron-clads, for the purpose of enfilading the works. The attacking squadron numbered thirty-three vessels of all kinds, mounting upward of four hundred guns, and was supported by a reserve of seventeen small gunboats with about one hundred guns.

Shortly before one o'clock the *Ironsides* opened upon the fort, followed by the monitors, and within half an hour afterwards the *Minnesota*, holding the left of the second line, succeeded in obtaining the range. The rebels kept up an active fire while the squadron was getting into position, but the terrific broadsides of the *Ironsides* almost immediately silenced all their guns on the northeast face of the fort; and by the time the last of the large vessels anchored and got its batteries into play, but one or two guns were discharged from any part of the fort, the incessant and tremendous fire of the fleet, surpassing any thing previously known in naval warfare, having driven the gunners within the shelter of their bomb-proofs. "In one hour and fifteen minutes after the first shot was fired," says Admiral Porter, "not a shot came from the fort. Two magazines had been blown up by our shells, and the fort set on fire in several places, and such a torrent of missiles

were falling into and bursting over it, that it was impossible for any human being to stand it. Finding that the batteries were silenced completely, I directed the ships to keep up a moderate fire, in hopes of attracting the attention of the transports and bringing them in." In the latter part of the afternoon Gen. Butler arrived with a portion of his transports, and the fleet was signalled to retire for the night for safe anchorage. During the four or five hours that the engagement lasted, only one vessel, the gunboat *Yantic*, left the line to report damages, although several others were struck once or twice. The most serious disasters to the fleet were caused by the bursting of some of its own guns. Accidents of this kind occurred on the *Ticonderoga*, *Yantic*, *Juniata*, *Mackinaw*, *Quaker City*, and *Susquehanna*, resulting in the killing and wounding of between forty and fifty officers and men. The pieces which exploded were 100-pounder Parrott guns, and the effect was to cause a great distrust in this species of ordnance, as unfit for service, and, to use the language of Admiral Porter, "calculated to kill more of our own men than those of the enemy."

On the 25th the remaining transports arrived, and, in accordance with plans matured between the naval and military commanders on the previous evening, another attack upon the fort by the fleet was determined on, in coöperation with an assault by the troops upon the land face. Under cover of a detachment of gunboats, the disembarkation of the troops commenced, shortly after noon, on the beach about three miles above the fort. A portion of Curtis's brigade of Ames's division landed first, and pushed forward to reconnoitre the immediate approaches to the fort, the fleet meanwhile keeping up a slow and deliberate fire of just sufficient force to occupy the enemy's attention and prevent them from opening upon the troops. The reconnoitring column, accompanied by Gen. Weitzel in person, approached so near to Fort Fisher that several men in the skirmish line were wounded by fragments of shells from the fleet. From a point eight hundred yards distant Gen. Weitzel made a survey of the work, and the results of his personal observation, together with information previously received from trustworthy sources, induced him to report to Gen. Butler, upon his return to the transport fleet, that, under the circumstances, it would be "butchery to order an assault." This opinion coincided with that already formed by Gen. Butler, and orders were at once given to reëmbark the troops, all of whom, however, were not taken off until the next evening. During the advance of the reconnoitring column toward the fort, the garrisons of the Flag Pond and Half Moon batteries, numbering nearly three hundred officers and men, were captured.

The following correspondence subsequently passed between Gen. Butler and Admiral Porter:

HEADQUARTERS DEP'T VIRGINIA AND NORTH CAROLINA, }
December 26, 1864.

ADMIRAL: Upon landing the troops and making a thorough reconnaissance of Fort Fisher, both Gen. Weitzel and myself are fully of the opinion that the place could not be carried by assault, as it was left substantially uninjured as a defensive work by the navy fire. We found seventeen guns protected by traverses, two only of which were dismounted, bearing up the beach and covering a strip of land, the only practicable route, not more than wide enough for a thousand men in line of battle.

Having captured Flag Pond Hill battery, the garrison of which, sixty-five men and two commissioned officers, were taken off by the navy, we also captured Half Moon battery and seven officers and two hundred and eighteen men of the 8d North Carolina Junior Reserves, including its commander, from whom I learned that a portion of Hoke's division, consisting of Kirkland's and Haywood's brigades, had been sent from the lines before Richmond on Tuesday last, arriving at Wilmington Friday night.

Gen. Weitzel advanced his skirmish line within fifty yards of the fort, while the garrison was kept in their bomb-proofs by the fire of the navy, and so closely that three or four men of the picket line ventured upon the parapet, and through the sally-port of the work, capturing a horse, which they brought off, killing the orderly, who was the bearer of a despatch from the chief of artillery of Gen. Whiting to bring a light battery within the fort, and also brought away from the parapet the flag of the fort. This was done while the shells of the navy were falling about the heads of the daring men who entered the work, and it was evident, as soon as the fire of the navy ceased because of the darkness, that the fort was fully manned again, and opened with grape and canister upon our picket line.

Finding that nothing but the operations of a regular siege, which did not come within my instructions, would reduce the fort, and in view of the threatening aspect of the weather, wind arising from the southeast, rendering it impossible to make further landing through the surf, I caused the troops, with their prisoners, to reembark, and see nothing further that can be done by the land forces. I shall therefore sail for Hampton Roads as soon as the transport fleet can be got in order.

The engineers and officers report Fort Fisher to me as substantially uninjured as a defensive work.

I have the honor to be, very respectfully, your obedient servant,

BENJ. F. BUTLER.

Maj.-Gen. Comm'g.

To Rear Adm. PORTER, Commanding N. A. Blockading Squadron.

NORTH ATLANTIC SQUAD'N, U. S. FLAGSHIP MALVERN, }
OFF NEW INLET, December 26, 1864.

GENERAL: I beg leave to acknowledge the receipt of your letter of this date, the substance of which was communicated to me by Gen. Weitzel last night.

I have ordered the largest vessels to proceed off Beaufort, and fill up with ammunition, to be ready for another attack in case it is decided to proceed with this matter by making other arrangements. We have not commenced firing rapidly yet, and could keep any rebels inside from showing their heads until an assaulting column was within twenty yards of the works.

I wish some more of your gallant fellows had followed the officer who took the flag from the parapet and the brave fellow who brought the horse from the fort. I think they would have found it an easier conquest than is supposed. I do not desire, however, to place my opinion in opposition to Gen. Weitzel, whom I know to be an accomplished soldier and engineer, and whose opinion has great weight with me.

I will look out that the troops are all off in safety. We will have a west wind presently, and a smooth beach about three o'clock, when sufficient boats will be sent for them.

The prisoners now on board the Santiago de Cuba will be delivered to the Provost Marshal at Fortress Monroe, unless you wish to take them on board one of the transports, which would be inconvenient just now.

I remain, General, respectfully, your obedient servant,

DAVID D. PORTER, Rear Admiral.

To Maj.-Gen. B. F. BUTLER, Commanding, &c., &c.

For various reasons Admiral Porter was strongly opposed to abandoning the attack, and so expressed himself in his subsequent report to the Naval Department. "I don't pretend," he said, "to put my opinion in opposition to that of Gen. Weitzel, who is a thorough soldier and an able engineer, and whose business it is to know more of assaulting than I do, but I can't help thinking that it was worth while to make the attempt after coming so far." This was the view generally entertained by the public, who, accustomed of late to uninterrupted successes, chafed under this temporary check; and to the general dissatisfaction caused by the abandonment of the enterprise and the return of the troops to Fortress Monroe is doubtless partly to be attributed the order issued early in 1865, relieving Gen. Butler from the command of the Army of the James. The enemy, with some degree of reason, claimed that the result of the expedition was a triumph for their arms, notwithstanding that during two whole days Fort Fisher had been silenced by the guns of the fleet; and a congratulatory order was issued by Gen. Bragg, in which a high compliment was paid to Gen. Whiting, Col. Lamb, and the officers and men of the garrison. According to the rebel accounts the fort fired 662 shots on the first day of the attack and 609 on the second, and had 2 guns burst and 4 disabled. The garrison lost 8 killed and 55 wounded.

Admiral Porter remained off New Inlet a day or two after the departure of the transports, but finding it hopeless to attempt the reduction of the fort without the assistance of a land force, he withdrew his fleet to Beaufort, in the confident expectation that the troops would soon be ordered back again from Fortress Monroe. In this he was not deceived, for scarcely had the news of the abandonment of the expedition been received at headquarters, than orders were issued for a renewal of the attempt. On January 2d, Gen. Terry, commanding the 1st division of the 24th corps, Army of the James, was ordered to take command of the two divisions which had participated in the first expedition, to which was added a brigade under Col. Abbott from his own division, and two batteries, the whole numbering somewhat more than 8,000 men. With these he proceeded on the 5th to Fortress Monroe, and thence to Beaufort, where on the 8th he arranged with Admiral Porter a plan of operations against Fort Fisher. Owing to unfavorable weather the transports were unable to arrive off New Inlet until late on the night of the 12th. Next morning commenced the disembarkation of the troops at a point

about five miles above the fort, the fleet, with the exception of the iron-clads, divided into three columns, covering the operation. One column moved a little to the northward of the landing place, to guard against any attack from the direction of Masonboro Inlet, and shelled the woods, which approach within about 800 yards of the shore, without, however, provoking any reply. With the aid of 200 boats from the fleet, besides steam tugs, nearly the whole of the troops were landed between 8 A. M. and 3 P. M., each man carrying three days' rations, and forty rounds of ammunition. A sufficient quantity of intrenching tools was also carried. The iron-clads, increased to five by the arrival of the monitor Saugus, meanwhile, from their old positions in front of Fort Fisher, had maintained a steady fire upon the work, in which, after the disembarkation of the troops was concluded, they received the coöperation of columns 1 and 2 of the fleet, comprising all the large vessels, which were posted very nearly as at the first attack. Column 3 remained to cover the landing and help get the field artillery, munitions, and commissary stores on shore.

The bombardment of the iron-clads was very effective, and that of the combined iron-clads and wooden ships, lasting from 4.30 P. M. to 6 P. M., the most tremendous, perhaps, in the annals of this or of any war, considering the weight of metal thrown, and the force with which it struck the fort. The iron-clads alone, with thirty guns, fired in the course of the day upward of 2,000 shells, or about four per minute; and during the grand bombardment it was reckoned that four shots were fired from the fleet each second, or about 20,000 in all. The rebels were pretty effectually kept within the shelter of their bomb-proofs while this *feu d'infer* continued, and could inflict but a trifling amount of damage upon the fleet. "Indeed," says Admiral Porter, "I do not see how they could fire at all after lines one and two got fairly anchored in position." At dark the wooden vessels drew off for the night, but the iron-clads remained at their anchorage, firing an occasional shell.

As soon as the troops were landed pickets were thrown out, who encountered the enemy's outposts; and from a few prisoners taken shortly afterward, it was ascertained that Hoke's division, stationed at Fort Fisher on the former attack, and which it was supposed had been sent south, was still in the neighborhood. Gen. Terry's first object after landing was to throw a defensive line across the peninsula from Cape Fear River to the sea, to protect his rear from an attack from the direction of Wilmington while he was operating against Fort Fisher. After two impracticable surveys, occupying many hours, a line was finally selected at 2 A. M. on the 14th, having an average distance of about two miles from the fort. Entrenchments were at once commenced, and by 8 o'clock on the morning of the 14th, a good breastwork, reaching from the river to the sea

and partially covered by abatis, had been constructed. During the day this work was considerably strengthened, and the artillery, as fast as it was landed, was placed in position on the line. A careful reconnaissance satisfied Gen. Terry that, in view of the difficulty of conducting a regular siege on the narrow and exposed peninsula in such an inclement season of the year, the better policy would be to attempt an immediate assault. This decision coincided with Admiral Porter's views, and both commanders went heartily to work to arrange a plan of attack, the main feature of which, on the part of the navy, was to be a severe bombardment of the fort by the fleet, to cover the assaulting column, and to be continued against other parts of the work, after the assault had been commenced. It was also decided that the attack should be made at 3 P. M. of the 15th, and that the army should assault the western half of the land face, while a coöperating body of sailors and marines attacked the northeast bastion. A slow and deliberate fire was maintained against the fort during the day, with the object mainly of dismounting or disabling the guns on that part of the work where the assault was to be made, and also of demolishing the palisade sufficiently to admit the passage of troops.

At 11 A. M. of the 15th all the vessels of the fleet were in position and commenced a fire, "magnificent alike for its power and accuracy," which, as on previous occasions, silenced nearly every gun in the fort. Under its cover 1,600 sailors, armed with cutlasses, revolvers, and carbines, and 400 marines, and the whole commanded by Fleet Captain K. R. Breese, were landed on the beach, and by digging rifle-pits worked their way up within 200 yards of the fort. The troops selected for the assault were Ames's division, comprising the brigades of Curtis, Pennybacker, and Bell, while Paine's division of colored troops and Abbott's brigade held the intrenchments facing Wilmington, against which Hoke's troops, estimated at 5,000 strong, had begun to demonstrate. At 3.30 P. M. signal was made from the shore to the fleet to change the direction of the fire, in order that the troops might assault; and soon afterwards the sailors rushed with reckless energy toward the parapet of the fort, which at once swarmed with rebel soldiers, who poured in upon them a murderous fire of musketry. The marines, who were to have covered the assaulting party, for some unexplained reason failed to fire upon the rebels on the parapet, all of whom, in the opinion of Admiral Porter, an eye-witness of the fight, might have been killed. "I saw," he said, "how recklessly the rebels exposed themselves, and what an advantage they gave our sharpshooters, whose guns were scarcely fired, or fired with no precision. Notwithstanding the hot fire, officers and sailors in the lead rushed on, and some even reached the parapet, a large number having reached the ditch. The advance was swept from the parapet like chaff, and, notwithstanding all the efforts made by

the commanders of companies to stay them, the men in the rear, seeing the slaughter in front, and that they were not covered by the marines, commenced to retreat; and, as there is no stopping a sailor if he falls on such an occasion on the first rush, I saw the whole thing had to be given up." The attack on this part of the fort, though a failure, diverted a part of the enemy's attention, and rendered the work laid out for the main storming column of troops much easier.

At the word of command, the division of General Ames, which had been gradually drawn forward under the shelter of hastily-formed breastworks, rushed toward the fort, the brigade of Curtis taking the lead. The palisades had been so much injured by the fire of the fleet that a few vigorous strokes from the axemen sufficed to clear gaps for the passage of the troops, and in the face of a severe enfilading fire a lodgment was soon effected on the west end of the land front. Pennybacker's and Bell's brigades followed in rapid succession, the latter moving between the work and the river. "On this side," says General Terry, "there was no regular parapet, but there was an abundance of cover afforded to the enemy by cavities, from which sand had been taken for the parapet, the ruins of barracks and storehouses, the large magazine, and by traverses behind which they stubbornly resisted our advance. Hand to hand fighting of the most desperate character ensued, the huge traverses of the land face being used successively by the enemy as breastworks, over the tops of which the contending parties fired in each other's faces. Nine of these were carried, one after the other, by our men." At five o'clock, when about half of the land front of the fort had been thus captured, it became apparent that more troops were needed to support the assaulting column, and Abbott's brigade was ordered up, its place in the defensive line facing Wilmington being supplied by the sailors and marines. The attack then went on with redoubled fury, the fire of the navy meanwhile continuing upon that part of the work not occupied by the Federal troops, and upon the beach on Cape Fear River, under the apprehension that reinforcements might be thrown over there by the rebels from the right bank of the river. All this time signals between the land and naval forces were exchanged with great exactness, and the coöperation between the two services was in the highest degree harmonious and useful. By 9 p. m. two more traverses were carried, and an hour later Abbott's brigade drove the enemy from their remaining stronghold, and the occupation of the work was complete. The enemy fell gradually back to Federal Point, where, being cut off from further retreat, they surrendered unconditionally about midnight. About 4 p. m. Hoke had advanced against Paine's division, as if intending a general assault, but retired after a slight skirmish with the outposts. The garrison originally numbered over

2,800 men, of whom 1,971, with 112 officers, were captured. The rest were killed and wounded. Their commanders, General Whiting and Colonel Lamb, were captured, badly wounded. Of the three brigade commanders of Ames's division, Curtis and Pennybacker were severely, and Bell was mortally wounded, and the total Federal loss, according to official accounts, footed up as follows:

	Killed.		Wounded.		Miss'g.
	Officers.	Men.	Officers.	Men.	
Curtis's brigade.....	2	85	18	166	9
Pennybacker's brigade.....	7	24	16	183	73
Bell's brigade.....	2	15	4	106	—
Abbott's brigade.....	—	8	2	18	11
Total.....	11	77	29	473	93
Aggregate.....					691

The fleet suffered a loss of between two and three hundred in killed and wounded, principally in the assaulting column of sailors and marines, and two 15-inch guns were exploded on board the monitors. In other respects the ships experienced little damage.

The greater part of the guns of the fort were dismounted, or otherwise injured by the fire of the fleet, but the work itself received no damage which was not susceptible of immediate repair, its strength being about the same as before the bombardment. According to Admiral Porter, who had visited the Malakoff during the siege of Sebastopol, it was a much more formidable work than that celebrated stronghold, and its capture caused an almost unprecedented rejoicing throughout the United States. The capture of the fort having sealed the fate of the rebel supremacy in Cape Fear River, their remaining works covering the mouth of the river, including Fort Caswell and the forts at Smith's Island, Smithville, and Reeves' Point, together with the gunboats Chickamauga and Tallahassee, were destroyed or evacuated, whereby 169 guns and large amounts of ammunition and commissary stores fell into the hands of the Federals. Among the guns were some English ones of Sir William Armstrong's make. Admiral Porter immediately sent some of his light draught gunboats into the river, and by a skilful ruse decoyed several blockade-runners under the shelter of Fort Caswell, where they were of course speedily captured.

2. *South Atlantic Squadron.*—The operations of this squadron, which in 1863 were of the first importance, were much curtailed in the succeeding year by a variety of circumstances, the chief of which was the withdrawal of the greater part of the troops of the Department of the South, under Gen. Gillmore, to reinforce the Army of the James. Deprived of this necessary coöperative branch, Admiral Dahlgren found it impossible to make any serious demonstration against Charleston, and the fleet in that quarter was principally employed in blockade duties. A detachment of vessels coöperated in the St. John's River with

the army movements in Florida in the spring, and subsequently in demonstrations against James's Island, Bull's Bay, and other places. On Feb. 17th the gunboat Housatonic was destroyed by a torpedo off Charleston, and two small armed steamers, the Columbine and Water Witch, fell into the enemy's hands in the course of the year.

3. *East Gulf Squadron*.—With the exception of a few boat expeditions and armed incursions for the destruction of salt manufactories on the Florida coast, nothing occurred during the year in this department to interrupt the routine of blockading duties, which were effectually performed. In the summer months the squadron was temporarily reduced by the withdrawal of a number of vessels infected with yellow fever.

4. *West Gulf Squadron*.—The chief events in the history of this squadron were those connected with the capture of the fortifications guarding the entrance to the bay of Mobile, and the consequent closing of that port against the blockade-runners. Although in many respects it was desirable to obtain possession of these works, the exigencies of the service in other quarters had not previously permitted the coöperation of so large a body of troops as was needed for the undertaking. The rebels availed themselves of this circumstance to construct several iron-clads and armed vessels, and threatened to raise the blockade of Mobile. Early in the year Admiral Farragut reconnoitred the approaches to the city, and offered, with the assistance of an iron-clad or two and a few thousand troops, to gain full possession of the bay; but as neither of these could at once be obtained, he was forced to confine himself to threatening demonstrations, although, as he privately informed the Naval Department, should the rebel iron-clads come out to attack his wooden fleet, the issue would necessarily be a doubtful one. He, however, expressed himself in readiness to measure his strength with Admiral Buchanan, whenever the latter should venture to offer battle, and kept his fleet in constant readiness for such a contingency.

At length, in the latter part of July, Admiral Farragut received an addition of four monitors to his squadron, the *Tecumseh*, *Winnebago*, *Manhattan*, and *Chickasaw*, and a co-operative land force under Gen. Granger was promised by Gen. Canby, commanding the military division of the Southwest. The entrance to Mobile Bay is divided by Dauphin Island into two passages, the easterly of which is about four miles wide and twenty feet deep, and the other a shallow strait of not above five feet depth. On either side of the main channel stand Forts Gaines and Morgan, the former occupying the east end of Dauphin Island, and the latter the end of a long, sandy point which makes out into the bay directly opposite. The channel runs close under the guns of Fort Morgan, and a large part of it had been obstructed with piles and torpedoes. Fort Morgan was a

powerful stone, casemated work, mounting forty-eight guns, including some of very heavy calibre, and the armament of Fort Gaines consisted of twenty-one guns. About a mile distant from Fort Gaines, on Dauphin Island, was Fort Powell, a lesser work, adjoining which were a water battery and some earthworks. On the evening of Aug. 4th the monitors and wooden vessels were all assembled off the bar of Mobile Bay, and at 5.40 A. M. of the 5th the whole fleet moved up the bay in the following order, two abreast and lashed together: the *Brooklyn* with the *Octorara* on the port side, the *Hartford* and *Metacomet*, the *Richmond* and *Port Royal*, the *Lackawanna* and *Seminole*, the *Monongahela* and *Kennebec*, the *Ossipee* and *Itasca*, and the *Oneida* and *Galena*. Between the four first couples and Fort Morgan, at a distance of about two hundred yards from the latter, moved the monitors, headed by the *Tecumseh*, for the double purpose of keeping down the fire of the water-battery and parapet guns of the fort, and attacking the rebel iron-clads when the fort was passed. The object of coupling the wooden ships, an expedient as novel as it was ingenious, was to insure mutual protection by enabling each to tow along its consort, in case the latter should be crippled. The Admiral was on board his flag-ship the *Hartford*, and in order to get an unobstructed view of operations, and to give his orders with clearness, caused himself to be lashed to the main top.

At about seven o'clock, as the head of the column came abreast of the fort, the latter opened fire, and the action soon became general. The enemy confidently expected, from the close quarters at which the fighting was to take place, to be able to sink or disable several of the attacking vessels. But here, as at the passage of the forts in Mississippi, in 1862, Farragut converted what might well have seemed a disadvantage into a positive advantage to himself, by pouring such continuous broadsides into the fort as to drive the gunners from their guns, and enable the ships to pass with comparatively slight damage. At 7:40, while the firing was at its height, and the fleet making rapid progress in spite of the obstructions in its path, the monitor *Tecumseh* struck a torpedo, which blew a large hole through her bottom, just under the turret, and almost immediately she filled with water and sank. At this moment the *Brooklyn*, by backing her engines to avoid torpedoes, temporarily arrested the progress of the fleet, and the Admiral, regardless of torpedoes, at once dashed to the head of the column, first despatching a boat from the *Metacomet* to pick up the survivors of the *Tecumseh*. Of these only four officers and seventeen men were found; four swam ashore, and were made prisoners, and the rest, with her commander, T. A. M. Craven, were drowned.

Soon after eight o'clock the whole column had passed the forts, with no serious disaster beyond the loss of the *Tecumseh*. The *Oneida*,

which brought up the rear, and was consequently more exposed to the fire of the fort than the rest of the fleet, had her boiler penetrated by a 7-inch rifle-shell, and was deprived of motive power; but she was towed safely along by her consort, the Galena, and made good use of her guns until the fort was passed. Meanwhile the rebel fleet, consisting of the iron-clad ram Tennessee and the gunboats Selma, Gaines, and Morgan, had held a position inside the bay, a little north of Fort Morgan, whence they poured a galling fire upon the fleet. The Tennessee, under the immediate command of Admiral Buchanan, made a dash at the Hartford and several other ships, during the passage of the fort, but subsequently sought shelter under its guns; and under the supposition that she had retired from the fight, Admiral Farragut ordered the fleet to cast off their couplings and come to anchor, with the exception of the light-draught gunboats, which were directed to pursue and destroy the Selma, Morgan, and Gaines. The Metacomet captured the Selma after a brisk engagement, but the Morgan and Gaines succeeded in getting under the protection of Fort Morgan. The former subsequently crept along the shore during the night into Mobile, but the latter was so seriously injured that she had to be destroyed. Several of the large ships were already at anchor, when, shortly before nine o'clock, the Tennessee was seen standing toward the Hartford, with the desperate intention apparently of fighting single-handed the whole fleet. Of the singular combat that followed, the following description is given by Admiral Farragut:

I was not long in comprehending his intentions to be the destruction of the flag-ship. The monitors, and such of the wooden vessels as I thought best adapted for the purpose, were immediately ordered to attack the ram, not only with their guns, but bows on at full speed, and then began one of the fiercest naval combats on record. The Monongahela, Commander Strong, was the first vessel that struck her, and in doing so carried away his own iron prow, together with the outwater, without apparently doing her adversary much injury. The Lackawanna, Captain Marchand, was the next vessel to strike her, which she did at full speed; but though her stem was cut and crushed to the plank ends for the distance of three feet above the water's edge to five feet below, the only perceptible effect on the ram was to give her a heavy list. The Hartford was the third vessel which struck her, but, as the Tennessee quickly shifted her helm, the blow was a glancing one, and as she rasped along our side, we poured our whole port broadside of 9-inch solid shot within ten feet of her casemate. The monitors worked slowly, but delivered their fire as opportunity offered. The Chickasaw succeeded in getting under her stern, and a 15-inch shot from the Manhattan broke through her iron plating and heavy wooden backing, though the missile itself did not enter the vessel. Immediately after the collision with the flag-ship, I directed Captain Drayton to bear down for the ram again. He was doing so at full speed when, unfortunately, the Lackawanna ran into the Hartford just forward of the mizen-mast, cutting her down to within two feet of the water's edge. We soon got clear again, however, and were fast approaching our adversary, when she struck her colors and ran up the white flag.

She was at this time sore beset; the Chickasaw was pounding away at her stern, the Osagee was approaching her at full speed, and the Monongahela, Lackawanna, and this ship were bearing down upon her, determined upon her destruction. Her smoke-stack had been shot away, her steering chains were gone, compelling a resort to her relieving tackles, and several of her port-shutters were jammed. Indeed, from the time the Hartford struck her until her surrender, she never fired a gun. As the Osagee, Commander Le Roy, was about to strike her, she hoisted the white flag, and that vessel immediately stopped her engine, though not in time to avoid a glancing blow. During this contest with the rebel gunboats and the ram Tennessee, and which terminated by her surrender at 10 o'clock, we lost many more men than from the fire of the batteries of Fort Morgan.

The Tennessee, as was effectually shown by the determined resistance which she made, was perhaps the strongest vessel ever constructed by the enemy. She was 209 feet in length, with a breadth of beam of 48 feet, had in the centre an external casemate, with sloping sides, about 80 feet in length by 30 feet in breadth, and drew about 14 feet of water. Her deck was plated with 2 inches of wrought-iron, her sides with 4 inches, and her casemate with from 5 to 6 inches. Her armament consisted of 4 6-inch broadside rifles, and 2 7-inch pivot rifles, all of the Brooks pattern. But one shot, a 15-inch one from the Manhattan, penetrated her armor, and, in view of the hard pounding which she received, her injuries were on the whole inconsiderable. Admiral Buchanan lost a leg in the action, and ten or twelve of the crew were killed and wounded. The prisoners surrendered numbered 20 officers and about 170 men; and those on the Selma, 90 officers and men. The casualties in the fleet, exclusive of those on board the Tecumseh, were 53 killed and 170 wounded.

Meanwhile, on the 4th, a coöperative body of troops under Gen. Granger had landed on Dauphin Island, in accordance with an arrangement between Admiral Farragut and Gen. Canby, and commenced the siege of Fort Gaines. The rebel commander, Colonel Anderson, seeing that the Federal fleet held uninterrupted possession of Mobile Bay, concluded that further resistance was hopeless, and on the 7th surrendered his garrison of 818 men unconditionally. Fort Powell had been blown up by the rebels on the evening of the 5th. These obstructions being removed and Grant's Pass secured, the fleet was relieved from any apprehensions with regard to obtaining supplies; but it was nevertheless determined to complete the work originally undertaken by the capture of Fort Morgan, which still held out. The troops were accordingly transferred to the rear of the fort, and lines of investment drawn across the sandy spit on which it is situated. On the 22d, fire was opened from the shore batteries and the fleet, and on the next day Gen. Page, the rebel commander, surrendered unconditionally. When possession was taken of the work it was found that, with what Admiral Farragut called "childish spitefulness," he had destroyed many

of the guns and other property which had been surrendered. Thenceforth during the year Mobile was effectually cut off from external commerce.

5. *Mississippi Flotilla.* The most important operations of this squadron during the year were undertaken in connection with Gen. Banks' Red River campaign in the spring, and will be found described at length in the history of the Army Operations. The vessels composing the squadron were widely scattered over the vast network of waters embraced by the Mississippi and its main affluents, and performed much important patrol and convoy service, besides undertaking minor expeditions on Washita, Arkansas, Black, and Yazoo Rivers.

6. *Potomac Flotilla.* The duties assigned to this department were chiefly in the nature of police service, and included the arrest of the contraband trade carried on across the Potomac between Virginia and the lower counties of Maryland, and an occasional coöperation with military movements.

Miscellaneous.—In the course of the year, says the Secretary of the Navy, "the three English-built piratical cruisers which, under the rebel flag, have, during the last two years, roamed the seas, robbing and destroying our merchantmen, shunning all armed antagonists, and have found refuge and protection, and too often supplies and other assistance in neutral ports, have terminated their predatory career." These were the *Alabama*, the *Florida*, and the *Georgia*—the first sunk off Cherbourg by the *Kearsarge*, the second captured in Bahia harbor by the *Wachusett*, and the third captured at sea, off the coast of Portugal, by the *Niagara*. Early in June the *Alabama*, after a prosperous career among the American merchantmen in the Southern Atlantic and Indian Oceans, returned to northern waters and put into Cherbourg. The *Kearsarge*, Captain John A. Winslow, then lying at Flushing, immediately sailed for Cherbourg to watch the movements of the *Alabama*; and on June 15th her commander received a note from Captain Semmes of the privateer, announcing his intention to fight the *Kearsarge*, and begging Capt. Winslow not to depart until the two vessels could have an opportunity to measure their strength. As this was precisely what the Federal commander desired, he willingly awaited the movements of his adversary. The relative proportions and armaments of the two antagonists were as follows:

	<i>Alabama.</i>	<i>Kearsarge.</i>
Length over all.....	220 feet	214½ feet.
Length on water line.....	210 "	198½ "
Beam.....	32 "	38 "
Depth.....	17 "	18 "
Horse-power, two engines of.	800 each.	400 h. power
Tonnage.....	1,150	1,080

Armament of the Alabama.—One 7-inch Blakely rifle; one 8-inch smooth-bore 68-pounder; six 32-pounders.

Armament of the Kearsarge.—Two 11-inch smooth bore guns; one 80-pounder rifle; four 32-pounders.

The *Kearsarge* had twenty-two officers and one hundred and forty men, and the *Alabama*, so far as can be ascertained, about one hundred

and forty officers and men, the greater part of the ship's company consisting of British subjects. Her gunners were trained artillerists from the British practice-ship *Excellent*. Availing himself of an ingenious expedient for the protection of his machinery, first adopted by Admiral Farragut in running past the rebel forts on the Mississippi in 1862, Capt. Winslow had hung all his spare anchor-cable over the midship section of the *Kearsarge* on either side; and in order to make the addition less unsightly, the chains were boxed over with inch deal boards, forming a sort of case, which stood out at right angles to the side of the vessel.

At twenty minutes past ten on Sunday morning, June 19th, the *Alabama* was seen standing out from Cherbourg harbor, accompanied by the French iron-clad *Couronne*, and followed by the steam yacht *Deerhound*, whose owner, an Englishman named Lancaster, was on board with his family, ostensibly to witness the engagement, but really, as it subsequently appeared, to act as a tender to the *Alabama*. Upon seeing the *Alabama* approach, Capt. Winslow kept out to sea a few miles, in order "that the positions of the ships should be so far off shore that no questions could be advanced about the line of jurisdiction." Upon reaching a point about seven miles from the land the *Kearsarge* put about, and steered directly for the *Alabama*, which first opened fire at a range of about a mile. The following account of the fight that ensued is given by Capt. Winslow:

Immediately I ordered more speed; but in two minutes the *Alabama* had again loaded, and fired another broadside, and following it with a third, without damaging us except in rigging. We had now arrived within nine hundred yards of her, and I was apprehensive that another broadside nearly raking as it was, would prove disastrous. Accordingly I ordered the *Kearsarge* sheered and opened on the *Alabama*.

The positions of the vessels were now broadside to broadside, but it was soon apparent that Capt. Semmes did not seek close action. I became then fearful lest, after some fighting, that he would again make for the shore. To defeat this I determined to keep full speed on, and with a port helm to run under the stern of the *Alabama*, and rake, if he did not prevent it by sheering and keeping his broadside to us. He adopted this mode as a preventive, and, as a consequence, the *Alabama* was forced, with a full head of steam, into a circular track during the engagement.

The effect of this manoeuvre was such that, at the last of the action, when the *Alabama* would have made off, she was near five miles from the shore; and had the action continued from the first in parallel lines, with her head in shore, the line of jurisdiction would no doubt have been reached.

The firing of the *Alabama* from the first was rapid and wild; toward the close of the action her firing became better. Our men, who had been cautioned against rapid firing without direct aim, were much more deliberate; and the instructions given to point the heavy guns below rather than above the water line, and clear the deck with the lighter ones, were fully observed. I had endeavored with a port helm to close in with the *Alabama*, but it was not until just before the close of the action that we were in a position to use grape; this was avoided, however, by her surrender. The effect of the training of our men was evident; nearly every shot from our guns was

telling fearfully on the Alabama, and on the seventh rotation on the circular track she winded, setting fore trysail and two jibs, with head in shore.

Her speed was now retarded, and by winding her port broadside was presented to us with only two guns bearing, not having been able, as I learned afterward, to shift over but one. I saw now that she was at our mercy, and a few more guns, well directed, brought down her flag. I was unable to ascertain whether they had been hauled down or shot away, but a white flag having been displayed over the stern, followed by two guns fired to leeward, our fire was reserved. Two minutes had not more than elapsed before she again opened on us with the two guns on the port side. This drew our fire again, and the Kearsarge was immediately steamed ahead and lay across her bows for raking.

The white flag was still flying, and our fire was again reserved. Shortly after this her boats were seen to be lowering, and an officer in one of them came alongside and informed us the ship had surrendered and was fast sinking. In twenty minutes from this time the Alabama went down, her mainmast, which had received a shot, breaking near the head as she sunk, and her bow rising high out of the water as her stern rapidly settled. The fire of the Alabama, although it is stated she discharged three hundred and seventy or more shell and shot, was not of serious damage to the Kearsarge. Some thirteen or fourteen of these had taken effect in and about the hull, and sixteen or seventeen about the waste and rigging.

The boats of the Kearsarge were at once sent to receive the officers and crew of the Alabama, but so rapidly did she go down that it was impossible to save them all without assistance. Capt. Winslow accordingly requested the Deerhound, which had meanwhile come alongside, to assist in the rescue of his prisoners. The crew of the privateer were by this time struggling for their lives in the water, and many of the wounded men went down. In the confusion of the moment the Deerhound, after picking up forty-one persons, including Semmes, who was wounded, steamed off toward the English coast, and when observed had got too much the start to be overhauled. The total number brought on board the Kearsarge was sixty-nine, of whom seventeen were wounded; and twelve were picked up and carried into Cherbourg, by two French pilot boats. Several of the wounded died soon after, and the total number of officers and men belonging to the Alabama who were landed in France or England, amounted to one hundred and fifteen. The casualties of the Kearsarge amounted to only three wounded. This most remarkable sea fight between single ships that has occurred within the century was witnessed by thousands of spectators on the French shore, and the result produced a profound impression in Europe and America. The conduct of Semmes in throwing his sword into the sea after surrendering, and also in allowing himself to be carried into a neutral port by the Deerhound, formed the subject of severe strictures in the United States.

The Florida, while lying in the neutral port of Bahia, Brazil, was captured by Capt. N. Collins of the Wachusett, as appears by the following brief report:

St. Thomas, W. I. Islands, Oct. 31.

Hon. GIBSON WELLES. *Sir*: I have the honor to report the arrival here of this ship, with the rebel steamer Florida in company. The Florida, with 56 men and 12 officers, was captured about 3 o'clock on the morning of the 7th of October, in the bay of San Salvador, Brazil, by the officers and crew of this vessel, without loss of life. We also captured five of the officers, including her commander. The remainder of her crew were on shore.

The Florida had her mizen-mast and main-yard carried away and her bulwarks cut down. This vessel sustained no injury. A detailed report will be handed to you by Paymaster W. W. Williams.

Very respectfully your obdt serv't,

N. COLLINS,

Commander U. S. Steam-sloop Wachusett.

On November the Florida was brought into Hampton Roads, and while lying there to await the decision of the delicate international questions which her capture evoked, was accidentally run into by a steam transport and sunk.

The Georgia was captured by the Niagara, on August 15th. Although having no armament on board at the time, she was seized as a lawful prize, and sent to the United States for adjudication.

NEVADA. This territory having formed a State Constitution under an enabling act previously passed by Congress, was admitted as a member of the Federal Union, "on an equal footing with the original States." The State Convention was held at so late a period of the year, that it was necessary to telegraph the Constitution to Washington, in order that it might be received there in time to secure the admission of the State previous to the Presidential election. Immediately on its reception the President issued the following proclamation:

Whereas the Congress of the United States passed an act, which was approved on the 21st day of March last, entitled "An act to enable the people of Nevada to form a Constitution and State Government and for the admission of such State into the Union on an equal footing with the original States:"

And whereas the said Constitution and State Government have been formed pursuant to the conditions prescribed by the fifth section of the act of Congress aforesaid, and the certificate required by the said act and also a copy of the Constitution and ordinances have been submitted to the President of the United States:

Now, therefore, be it known, that I, ABRAHAM LINCOLN, President of the United States, in accordance with the duty imposed upon me by the act of Congress aforesaid, do hereby declare and proclaim that the said State of Nevada is admitted into the Union on an equal footing with the original States.

In witness whereof I have hereunto set my hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, this thirty-first day of October, in the year of our Lord one thousand eight hundred and sixty-four, and of the independence of the United States the eighty-ninth. ABRAHAM LINCOLN.

By the President:

WILLIAM H. SEWARD, Secretary of State.

The vote of the State at the Presidential election was 16,420; of which Mr. Lincoln received 9,826, and Gen. McClellan 6,594; majority for Mr. Lincoln 3,232. At the same election H. G. Blasdel was chosen Governor by 9,884 votes; in opposition to David E. Buell,

who received 8,590 votes; majority for Blasdell 3,244. A Republican member of Congress was also chosen.

The Legislature is entirely Republican.

The boundaries of the new State, as defined by Congress, are as follows: Commencing at a point formed by the intersection of the thirty-eighth degree of longitude west from Washington with the thirty-seventh degree of north latitude; thence due west along said thirty-seventh degree of north latitude to the eastern boundary line of the State of California; thence in a northwesterly direction along the said eastern boundary line of the State of California to the forty-third degree of longitude west from Washington; thence north along said forty-third degree of west longitude and said eastern boundary line of the State of California to the forty-second degree of north latitude; thence due east along the said forty-second degree of north latitude to a point formed by its intersection with the aforesaid thirty-eighth degree of longitude west from Washington; thence due south down said thirty-eighth degree of west longitude to the place of beginning.

The enabling act passed by Congress, contained the following proviso.

And provided, further, That said convention shall provide, by an ordinance irrevocable, without the consent of the United States and the people of said State:

1. That there shall be neither slavery nor involuntary servitude in the said State, otherwise than in the punishment of crimes, whereof the party shall have been duly convicted.

2. That perfect toleration of religious sentiment shall be secured, and no inhabitant of said State shall ever be molested in person or property on account of his or her mode of religious worship.

3. That the people inhabiting said Territory do agree and declare that they forever disclaim all right and title to the unappropriated public lands lying within said Territory, and that the same shall be and remain at the sole and entire disposition of the United States; and that the lands belonging to the citizens of the United States residing without the said State shall never be taxed higher than the land belonging to the residents thereof; and that no taxes shall be imposed by said State on lands or property therein belonging to, or which may hereafter be purchased by, the United States.

The conditions of this enabling act were a limitation on the powers of the Government of the new State. That is, all power was withheld from the new Government to organize an institution of slavery within the State, etc. The President, in his proclamation, states the title of the enabling act of Congress passed for such and such purposes, and "for the admission of such State into the Union on an equal footing with the original States." The original States have not yet limited themselves by a surrender of the power to create or to abolish slavery within their limits. This inconsistency between the title and the contents of the act were evidently overlooked by its authors.

Five per centum of the net proceeds of all public lands sold within the State, is appropriated to the State for the purpose of making and improving public roads, constructing ditches or

canals, to effect a general system of irrigation of the agricultural land.

Nevada is probably the richest State in the Union in respect to mineral resources. No region in the world is richer in argentiferous leads. These are found scattered over the entire Washoe country, the richest of which is that known as the Comstock lead, of Virginia City. The localities of the other principal mines in the region east of the Sierra Nevada are the Esmeralda mines, one hundred miles south-southeast of Virginia City; the Humboldt, one hundred and sixty miles northeast; the Silver Mountain, sixty miles south; Peavine, thirty miles north, and the Reese River country, one hundred and seventy miles east-northeast, embracing many districts, and flanked by two of more than ordinary promise—the Cortez, seventy miles north, and the San Antonio, one hundred miles south of Austin, now the principal town on the Reese River.

During the year, another deposit of mineral wealth was brought to light, which has proved of incalculable value to the silver miners. This was an immense basin of salt, five miles square, near the sink of the Carson River. This basin appears once to have been the bottom of a lake, and the salt is found good even on the surface. A covering of about three inches is loose and indifferent; but beneath this, for a depth of fourteen feet, pure rock salt is found as clear as ice, and white "as the riven snow." Beneath there is water, which seems to be filtered through salt for an unknown depth. The whole of the fourteen feet in thickness does not contain a single streak of any deleterious matter or rubbish, and is ready for quarrying and sending to market. The locality is one hundred miles west of the Reese River, and seventy miles east of Virginia City, on the overland road.

At the close of the year there were one hundred and twenty-five quartz mills in operation in Nevada, which were erected at a cost ranging from \$10,000 to \$100,000. About three-fourths of the mills of Nevada are driven by steam, and the balance by water power. Of the entire number, four-fifths are in the vicinity of Virginia City. There is an average of one hundred mills in constant operation.

NEWCASTLE, HENRY PELHAM FIENNES PELHAM CLINTON, Duke of, an English statesman, born in London, May 22, 1811, died October 18, 1864. He was the eldest son of Henry Pelham, 4th duke, and was educated at Eton and Christ Church College, Oxford. Upon coming of age he entered the House of Commons under his courtesy title of Lord Lincoln, as a Conservative, for the family borough of Newark, and during the short-lived administration of Sir Robert Peel, in 1834, held the office of a junior Lord of the Treasury. From 1834 to 1841 he was an active member of the opposition, and upon the return of Peel to power in the latter year, he was appointed Commissioner of Woods and Forests, which position he held with credit until 1846, when, adhering to the premier in

his advocacy of the repeal of the Corn Laws, he became obnoxious to the Conservatives. He immediately exchanged his office for that of Chief Secretary of Ireland, and in a new election again appealed to the constituency of South Notts, which he had for some years represented. The canvass was a most animated one, the old Duke of Newcastle, a large landholder in the county, and an uncompromising Tory of the old school, using his powerful influence against his son, and resulted in the defeat of Lord Lincoln, who soon after accepted a seat for the Falkirk district of burghs, which was in the gift of his father-in-law, the Duke of Hamilton. He retired from the cabinet with Peel in the autumn of 1846, but retained his seat in the House of Commons until 1851, when he succeeded to his title and became a leading member of the Upper House. In 1852 he entered the Aberdeen ministry as Colonial and War Secretary, and upon the division of the office in 1854, retained the War Department. In this capacity he was obliged to share the odium falling upon the ministry in consequence of the gross mismanagement for which the first months of the Crimean war were noticeable. He retired from office with his colleagues in January, 1855, having first vindicated himself in an able speech, and in 1859 reentered the cabinet as Colonial Secretary. In 1860 he accompanied the Prince of Wales in his tour through the United States and Canada, and in both countries won many friends by his intelligence and unassuming manners. He was married in 1832 to the only daughter of the Duke of Hamilton, from whom, in 1850, he was divorced; and subsequent to his return to England from America, ill health, caused in a measure, it is said, by domestic unhappiness, prevented him from appearing often prominently before the public. He was a judicious, if not a brilliant statesman, of late years a decided liberal in politics, and is said to have been the model of Disraeli's "Coningsby."

NEW HAMPSHIRE. The annual election for Governor and other State officers took place on March 8th, with the following result:

Joseph A. Gilmore, Republican.....	\$7,006
Edward W. Harrington, Democrat.....	31,340
Republican majority.....	5,666

In 1863, when three candidates for Governor were in the field, Gilmore was 3,798 votes behind his Democratic competitor; and there being no choice by the people, he was elected by the Legislature. It was charged by the Democrats that the large Republican majority of 1864 was caused by the return of New Hampshire soldiers to vote at the State election, those only being furloughed who were Republicans. Their opponents admitted that many soldiers had returned on furlough to vote, but denied in positive terms that any discrimination, suggested by the political opinions of the soldiers, had been exercised in granting the furloughs. The Legislature chosen at the election of 1864 stood as follows:

	Senate.	House.	Joint Ballot.
Republicans	9	210	219
Democrats.....	8	128	136
Republican majority..	6	87	98

There was no election in 1864 for members of Congress.

The Legislature assembled on June 1st, and on the same day Governor Gilmore was inaugurated and delivered his annual message. He stated that the State debt, including \$600,000 paid to the families of volunteers, amounted to about \$1,900,000, an increase of \$600,000 since the last annual message, and recommended the funding of this by the issue of six per cent. bonds, payable in fifteen or twenty years. Except in financial matters, the condition of the State was represented as prosperous. The action of the Legislature appearing to the Governor incomplete on financial and military matters, he summoned an extra session on August 9th, and in his message showed that it was exceedingly difficult to raise money to supply the immediate wants of the State, and suggested a forced loan from the banks for that purpose. On the merits of the military bill passed at the previous session, to provide means to fill the New Hampshire quotas under the various calls for troops, he expressed himself in strong terms of disapprobation, characterizing it as incomprehensible, cumbrous, and inefficient. He showed that at the date of his message the quota of New Hampshire lacked 5,000 men of being full, that but twenty-three working days remained to raise that number by voluntary enlistments, and that unless the Legislature authorized larger bounties, and put a stop to the extravagant competition between cities and towns, some of which were offering as much as \$1,000 for a one-year recruit, the State would be subjected to the rigors of the draft.

The Legislature and the Executive failed to agree in their views of the course to be pursued to place the credit of the State on a healthy footing. A resolution was adopted recommending the Governor to apply to the banks and other moneyed institutions of the State for a temporary loan; and in case this project was unsuccessful, to apply "elsewhere." To this the Governor replied, "that he regarded the scheme of obtaining so large a sum of money as the State immediately requires by the payment of exorbitant rates of interest, regulated only by the option of the lender, as wholly impracticable; and he recommended the appointment by the Legislature of a Committee of Finance to raise the amount of money necessary and sufficient to save the credit of the State from disgrace."

In response to this, the Special Committee on Finance reported that the appointment of such a commission would involve a radical change in the financial system of the State, which it would be inexpedient to inaugurate at this late day of the session. The committee were also of opinion that proper effort under the existing laws would readily obtain the ne

cessary temporary loan and at a reasonable rate of interest. The report was adopted.

A new military bill was adopted at this session fixing bounties for recruits enlisted in insurgent States, and compensation for agents employed in that service. State bounties were also provided, ranging from one hundred to three hundred dollars, according to the number of years for which the recruit was offered. Town bounties were similarly limited, except where enrolled citizens should enlist and be credited to the localities in which they reside, in which case no limit was to be affixed to the town bounties. Under the impulse given by this latter provision, volunteering from among the enrolled citizens soon went on with such rapidity, that in the last week of August, just before adjourning, the Legislature by resolution requested the Governor to notify the War Department that, with the allowance of a few days' grace, the whole quota could probably be filled without a draft.

The Governor and the Legislature were brought into somewhat sharp collision in reference to the "Soldiers' Voting Bill." This having passed both Houses, was on August 17th sent to the Governor for his approval, and by him kept for more than five days after the date of presentation. On the 26th he sent a message to the House of Representatives, vetoing the bill, on the ground that, in order to enable soldiers in the national service outside the limits of the State, to vote for electors of President and Vice-President and for members of Congress, it was first necessary to amend the Constitution in that behalf. The Legislature, on the other hand, claimed that as the bill had not been returned within five days, as required by the Constitution of the State, it became a law in spite of the Governor's veto, and resolutions to that effect passed both Houses after a scene of considerable excitement. Decisions of the Supreme Court in favor both of the constitutionality of the act and of its validity, in spite of the veto, having been obtained, it became a law, and the New Hampshire soldiers voted in accordance with its provisions at the ensuing election.

The political parties conducted the Presidential canvass during the autumn months with great animation, and the vote was more evenly balanced than in almost any other State. The result of the vote for Presidential electors was as follows:

	Lincoln.	McClellan.
State vote.....	84,893	32,300
Soldiers' vote.....	2,018	671
	86,911	32,971

At the spring session of the Legislature, Aaron H. Cragin, Republican, was elected a United States Senator for six years from March 4th, 1865, to succeed John P. Hale, receiving a majority of ninety-three on joint ballot over John H. George, Democrat.

NEW JERSEY. This State appears to have made equal progress in prosperity with the

most successful States of the Union. At the close of 1864, for the first time in many years the public debt on State account had been paid. It was unnecessary to levy a tax in the ensuing year for State purposes. The receipts into the treasury from the usual sources in 1864 were \$481,028, and the balance on hand at the commencement of the last fiscal year \$104,654; total \$585,682. The disbursements for ordinary expenses and special appropriations were \$396,410. Making a balance on hand November 30, of \$189,278.

The receipts of the State on account of a war fund were \$1,765,608 during the year; and the disbursements for the same fund in the same time were \$1,728,087; balance \$42,570. The liabilities of this fund on November 30th, were \$2,774,600.

The amount claimed for advances to the United States up to the same period is \$2,494,196; on which the State has received \$1,554,159.

The State has a sinking fund to defray the interest and principal of the war debt, the balance in favor of which is \$328,958.

The State has contributed to the Federal service over 70,000 men. Until May, 1864, they were furnished by volunteering, principally through the State authorities. Since that time they have been raised chiefly through United States officials, by the operation of the conscription act. The Governor of the State thus speaks, in his address to the Legislature, of the operation of the draft:

The officers who have been intrusted with the execution of the draft in this State have generally performed their duty without undue severity, and yet the system is extremely obnoxious to the people, in many cases produces difficulty and distress, is expensive, does not obtain the men with expedition, and supplies an inferior class of troops. Some good men have been obtained by it, but usually they are unwilling soldiers, or strangers who go as substitutes for the bounty, and in many instances fail to reach the front. It is the opinion of officers most conversant with the subject, that the men raised in this way have not added materially in numbers or efficiency to the strength of the army. If the Government wants good troops, composed of residents of the State, who feel a pride in the service and an interest in the result, it should return to the system practised in the earlier stages of the war. The best way to raise troops is to authorize recruiting officers to work in conjunction with the local authorities in their respective neighborhoods and among their acquaintances, with the expectation of a commission. During the ten months immediately preceding the draft in this State, about fifteen thousand volunteers were recruited and mustered into the United States service.

In addition to the amounts sent by private hands, the soldiers of the State forwarded to their families, through an arrangement originally made, \$812,892. Like most of the other States, New Jersey has a special agency to provide for the sick and wounded of her soldiers. In conjunction with other States, measures have been adopted to secure a cemetery for the soldiers who fell at Gettysburg, and for the establishment of one at Antietam.

Measures have been taken to complete the organization of the reserve militia of the State, and she is now provided with arms sufficient to equip all the militia that would be required for actual service in any emergency within the State. Within the last two years the State has paid for ordnance and ordnance stores, including arms of all descriptions purchased for State use, \$277,408. From the militia, a limited number of companies are designated each year to compose a State guard. In case of actual or threatened invasion, riot or insurrection, this force is to be called out first for duty, in consideration of which certain privileges are granted to them. Under the act of Congress to raise troops which allowed recruiting in the insurrectionary States, application was made to Gov. Parker by individuals, to recruit for townships in the State. In reply, he stated that he had determined not to appoint any general agents for the State, and thus stated his objections, which were similar to the views of the Governor of New York:

When I appoint an agent to transact business for the State of New Jersey I expect to protect him while in the discharge of his duties. I cannot give protection to agents appointed to recruit in the rebel States. My letter of authority would not ensure their treatment as prisoners of war.

I think it will be found that but few recruits can be obtained in the rebel States. The New York "Times" of this morning alleges that men cannot now be had there, and gives this as the opinion of Gens. Grant and Sherman, and counsels that we should not rely upon filling our quota from that source, and thereby neglect recruiting elsewhere.

I am satisfied that the Union army would to-day be stronger, both in numbers and efficiency, if the Government had never recruited in the rebel States. The emancipation proclamation, and the consequent arming of the negroes, while adding to the desperation of the enemy, and building up an almost insurmountable barrier to the terms of pacification, quenched the spirit of volunteering among the people of the North. Soon after these measures were adopted it was thought necessary to pass a conscription act, although but a few weeks previous to this radical change of policy the chairman of the Military Committee in the United States Senate advised against the acceptance of volunteers then flocking in regiments to our standard.

The great change wrought by this policy is demonstrated by the present almost unanimous desire of the people to keep out of the army, and the running to and fro of nearly the whole population to seize upon any expedient to avoid personal military service, regarding not the fitness of the substitute, if the certificate of exemption can be procured. So long as the governmental policy disheartens to such an extent, a successful issue cannot be expected. To insure success the people should have a heart in the struggle, be willing to do their own fighting, and not place their reliance on a distinct and inferior race. There can never be a sufficient number of negro troops in the army to compensate for the injury done the Union cause by arming them.

Each sub-district is responsible for its own quota of men, and I recognize the right of the people of each district to raise their own men in their own way. I will not, therefore, interpose my individual opinion in opposition to the will of the people of any locality to prevent them from availing themselves of the law of Congress to fill their quota and avoid a draft. Without any knowledge, desire, or action on my part, I have been made the medium through

whom the people, who desire to recruit in this way, may attain the object; and I will, on petition of the proper authorities of any sub-district, give to such person as may be named credentials to procure recognition from the United States authorities. The power of such agents to recruit is derived from the law of Congress, and to the General Government they must look for protection. I hope that all the districts in this State will be able to fill the quota with volunteers, and that there may be no further drafting in New Jersey.

I am, very respectfully, your obedient servant,

JOEL PARKER.

The number of children who attended the public schools during the year is 149,672, being an increase of 6,146 over the number in 1863. The amount of money raised by tax for schools during the year was \$427,067; ditto from the State, \$80,000; total from all sources, \$637,079. The amount of available school fund belonging to the State is \$511,439. To this sum a certain amount is added annually to become a part of the permanent fund. The Normal School is no longer an experiment in the State; its beneficial influence on the cause of education has been fully demonstrated.

The grant of land made by Congress to each State, for the purpose of establishing a college for the benefit of agriculture and the mechanic arts, was accepted by the trustees of Rutgers College in New Brunswick, and preparations made to carry out the conditions and objects of the grant. The State geological survey is now progressing, after having been for a few years entirely suspended. In the Insane Asylum there are 326 patients; 158 were discharged during the year, of whom 62 had recovered, and 44 improved in their mental condition.

The measures taken in the Federal Congress to make a post road of the railroad extending from Raritan Bay to the Delaware River were, on March 24th, the subject of a special message by the Governor to the Legislature. After reciting the bill, two questions were considered by the Governor: 1st. Whether the proposed action of Congress would affect the pecuniary interest of the State; 2d. Whether it would infringe upon the sovereignty of the State. He then reviewed the history of the contract with the joint companies, Camden and Amboy Railroad and Delaware and Raritan Canal, which would not now be repudiated, and referred the subject to the Legislature in whose province it was to inquire whether the State interests would be affected. This, however, he regarded as of small importance compared with the principle of State sovereignty which was involved. Against any infringement of the rights of the State he protested, and insisted that if the Federal Government needed a road for the transportation of the mails or for war purposes, it must operate it for those purposes itself, and not through private parties for their own benefit as provided in the bill before Congress. The passage of such a law, he considered, would be an indignity to the State, although not binding. It would make parties now under judicial injunction from violating the State

laws, independent of the State. He concluded as follows:

Let it be distinctly understood, by those who would inflict this wrong and indignity upon our State, while New Jersey will comply with every legal obligation, and will respect and protect the rights of all, she will not permit any infringement of her rights, without resorting to every lawful means to prevent it.

The result of the Presidential election in New Jersey was as follows: Lincoln, 60,723; McClellan, 68,024. Majority for McClellan, 7,301. Of the members of Congress chosen at the same time, two were Republicans and three Democrats.

One-third of the Senate and all of the Assembly of the State Legislature were elected at the same time. That body was divided as follows:

	Senate.	House.
Republicans.....	8	30
Democrats.....	13	30
Total.....	21	60

NEW YORK. The vast military strength of the State of New York is strikingly shown by the number of men contributed by her to the Federal service. Since the commencement of the war on April 15th, 1861, to December 1st, 1864, the State furnished 437,701 men, including the credits under the draft of 1863. Of this number 409,426 entered the army, and 28,275 the navy. During the year 1864, 161,604 men were sent into the field. Three calls were made by the President for troops during that period, under which the quota of the State was 204,105. The credits to which the State was entitled for surplus men at earlier periods, secured to it an excess on credits on December 1st, of 5,301 men. A bureau of military statistics is kept by a suitable officer of the State, in which is preserved a record of every man in her forces, together with the battle-flags, trophies, and other evidences of the valor of her sons. To raise and maintain these troops has required immense contributions from towns, cities, and counties, to be applied as bounties to the volunteer, and as a monthly contribution toward the support of his family in his absence. In a few instances counties have by a single and vigorous effort of taxation paid up the debt thus contracted.

The enrolment of the militia so far as completed during the year, contained the names of 314,808 men. There is a National Guard organized out of this number, which upon the last inspection composed a force of 45,910 men, divided into 108 regiments and comprising 5 batteries. The Governor (Fenton), on alluding to the future condition of the military force of the State, expressed himself thus: "The importance of a thoroughly organized State Militia, in maintaining the nicely-adjusted distribution of power between the State and Federal Governments, so necessary to the well-being of our peculiar institutions, is not unworthy of consideration. This distribution, so satisfactory

in times of peace, has, in some degree, been disturbed by the accessions of authority and influence to the latter, growing out of the needs and operations of this war. I am not disposed to question the constitutionality or expediency of the action of the Federal Government in the pressing emergencies of the rebellion. But it may be questioned not only how far the feeble character of the military organizations of the Northern States compelled the national authorities to resort to the present method of raising forces, but encouraged and made possible the rebellion itself. It is certain, however, that a numerous, well-disciplined militia, ready and prompt to act in any exigency, will hasten the time when the National Government may relieve itself from the burden, and the State from the danger of large standing armies."

The deficiency in the receipts of the general fund of the State as compared with the disbursements, was less than in the previous year. The receipts were \$7,787,536; the disbursements, together with the deficiency of the previous year, were \$8,657,351; deficit on September 30th, \$868,814. The general fund debt was reduced during the year \$240,700, and amounted on September 30th to \$6,273,954. During the year a direct tax of 5½ mills was levied for the following purposes: ¼ of a mill for schools; 1½ mill for general purposes; 1 77-80 mill for bounties; 48-80 of a mill for canals, and 3-16 of a mill for the Albany and Susquehanna Railroad.

The gross earnings of the canals of the State for the four years from September 30, 1860, to 1864, were \$17,722,384. After paying the expense of superintendence, collection, and ordinary repairs for the same period, the net balance of surplus revenue was \$14,442,408. The surplus revenue for the year ending September 30, 1864, was \$3,817,356. The canal debt is \$22,327,810, on which annual interest is \$1,290,262.

The tonnage of produce going eastward on the Erie Canal, derived from the Western States and the Canadas, rose from 1,034,768 tons in 1859, to 2,594,837 in 1862. The freight, both through and way, carried eastward by the two great railroad lines from 1859 to 1864, inclusive, was as follows:

	CENTRAL RAILROAD.	ERIE RAILROAD.
Year.	Tons.	Tons.
1859.....	570,927
1860.....	730,258
1861.....	881,023	827,807
1862.....	1,064,128	973,883
1863.....	1,044,259	1,088,109
1864.....	1,537,148	1,382,954

On Sept. 30th there were 295 banks in the State conducting the usual business of banking, with an aggregate capital of \$107,806,948; at the same time 62 banks were closing their business voluntarily and through insolvency. The amount of outstanding circulation at the same date, was \$40,118,635. At the same period

the number of National Banks in operation in the State was 102; of these seventy-seven were organized subsequent to Jan. 1st, 1864. Their aggregate capital was \$21,113,800, and circulation \$13,134,200. The number of these banks which had changed from the State bank system was 24.

A bill was brought before the Assembly of the State Legislature to authorize the State banks to become banking associations under the laws of the United States. The majority of the Committee on Banks, in that body, reported against the measure. Their dissent was founded on several objections, both political and financial, against the entire system. They close their report by saying:

In the mean time, your committee can see no desirable end to be attained in furnishing facilities to the banking institutions of the State to withdraw themselves from legislative jurisdiction and State control. Their obligations to the public and from the public to them, have all been incurred under State sanction, and should be so continued until they are extinguished. Under existing law, every bank has the option to wind up its business and distribute its assets by the consent of its stockholders, and no present necessity would seem to demand a more rapid process of liquidation. Without assuming to judge for others in matters of business, your committee would yet express unhesitatingly the opinion, that when some of the madness of the present hour shall have been dissipated in the sober experience of coming events, there will be no cause for regret on the part of those who trusted their interests to theegis of State protection.

The agriculture of the State continued in a flourishing condition. The recruiting of the armies did not seriously diminish its productions, as the labor-saving machinery which had been introduced compensated in a great degree for the lack of men engaged in manual labor.

The immigration at the port of New York was 182,766 persons during the year, being an increase of 25,000 over the previous year.

The number of children in the State between the ages of five and twenty years, is 1,807,822, and the number who attended school some portion of the year, is 881,144. The amount of money to be apportioned for the support of common schools for the ensuing year, is \$1,445,749.

The Legislature, at its session early in the year, adopted a resolution declaring that no distinction should be made between the foreign and domestic creditor in the payment of interest on the State debt. This action of that body led the Governor to address them in the following message:

EXECUTIVE DEPARTMENT, ALBANY, April 22, 1864.

To the Legislature:

My attention has been called to a concurrent resolution which has passed both branches of the Legislature, in the following words:

Whereas, All the stocks issued by this State were made payable and negotiable in this State; therefore,

Resolved, That no distinction should be made between the foreign and domestic holders of such bonds as to the currency in which the principal and interest thereon should be paid.

To the principle laid down in this resolution, in terms, there can be no objection offered. All the

creditors of the State, whether they be of our own people or foreign, should be alike paid; paid promptly and in full all that was promised them.

The Legislature, last year, adopted a concurrent resolution on this subject, in the following words:

Resolved, That the interest accruing on so much of the State debt on the first day of April as was, on the first day of March, eighteen hundred and sixty-three, held by persons residing out of the United States, and is still held by them, be paid in gold or its equivalent.

And an appropriation was made for the purchase of coin to an extent sufficient to enable the comptroller to pay in gold the interest on the stocks of New York held by persons residing abroad; and only to that extent. Although the resolution of last year did not in terms forbid the payment of the interest due to our creditors residing in this country, in coin, yet the absence of any appropriation for the purpose obliged the comptroller to forego such payment.

In practice, a distinction was thus made between the non-resident creditor and the resident creditor. We kept faith with the stranger who had trusted us; we broke faith only with those of our own household.

The effect of the resolution of this year, in the absence of any appropriation, will be, that no part of the interest will be paid, as it was promised to be paid, to wit, in coin or its equivalent.

When we sought the markets of the world with our securities, we pledged ourselves to redeem them in the currency of the world. The partial neglect of plighted faith last year is now to be followed by an open refusal to pay any of our promises according to their plain sense. The disgrace of last year was limited; it was kept within ourselves; now our shame and dishonor are to be borne in the face of the world.

I look upon this matter as of so much moment to the welfare and to the character of New York and of its people that I feel constrained to ask you to give the subject a reconsideration; and to urge you to pass a concurrent resolution that shall enable the comptroller to pay all the interest which may fall due before the next session of the Legislature, in coin. In this way your resolution of this year can be carried into effect consistently with the good credit of the State, and "no distinction" will "be made between foreign and domestic holders" of the bonds. If you do not do this, let me urge you to provide, at least, for the interest that is due residents of other countries being paid in coin.

The refusal to pay in coin to our own citizens may justify itself to some minds, although not to mine, as a measure of *quasi* taxation; special, discriminating, and unfair, but excused by our present extraordinary condition. In dealing with our creditors in other countries no such considerations can come in. We have over them no legitimate power of taxation; these creditors of ours have no voice nor part in our political action; we have no claim upon them that they should take a share in the misfortunes that befall us in our career. They are not of our household, nor bound to take part of our domestic calamities upon themselves. The burdens and the misfortunes of this war belong to us; it is ungenerous to shift any portion of them upon others who are not a part of us. These foreign creditors of ours are strangers who lent us their money when we wanted it; upon no security but our word of honor. If we do not pay them back their money to the strict letter of our bargain we incur a shame that can never be removed from us. We deprive New York of an element of strength which heretofore has been wisely used, and which its people have found profitable, to wit, its unquestioned credit.

Principle and policy unite to urge the action I recommend to you. It is the only way in which the State can, in truth, fulfil its contracts. It is the only way in which the State can keep itself in a position

to go into the market hereafter decently as a borrower.

The State is even now in the market for money to pay its bounties to volunteers. The whole amount of the appropriation I urge upon you will be more than repaid in the first negotiation the State may make, by the enhanced price of its securities. We shall lose more in our immediate transactions than the cost of providing the coin for this interest. Not only our future profit but our immediate gain will be served by adhering now to the strictest letter of our contracts.

The saving proposed by not paying in coin is small and temporary, while the dishonor is lasting, and the pecuniary loss consequent upon this dishonor, will be in the end enormous.

Bad faith on the part of New York, the leading member of our confederacy, must, inevitably, weaken very greatly, if it do not destroy the credit of our Government securities in foreign markets. Compared with the importance of this State action in its effect upon the credit of the Government, the cost of paying our interest in coin is insignificant.

Aside from the consideration of interest or policy, our duty, in my judgment, was plain. It is to pay the debts of the State; to pay them in precisely the mode in which they were promised to be paid; to keep the honor of the State unsullied; and to this plain duty we should be true, cost what it may.

HORATIO SEYMOUR.

The Governor on the same day made an appeal "to men of capital, the bankers, the merchants, and others of the people of the State who have its honor at heart, whereby at least so much of the interest as belongs to non-resident creditors, if not the whole," might be paid in gold or its equivalent. This appeal was successful.

Provision was also made at this session of the Legislature to secure the votes of soldiers in the field at elections. By the Constitution of the State, adopted in 1846, it was provided "that for the purpose of voting no person shall be deemed to have gained or lost a residence by reason of his presence or absence, while employed in the service of the United States." A soldier in the field, however, could not vote, because the Constitution at the same time required that each person should vote "in the election district of which he shall at the time be a resident, and not elsewhere." Governor Seymour suggested to the Legislature of 1863, by special message, an amendment of the Constitution by which the absent soldiers could be entitled to vote. The views of this body and the Governor being in conflict, they failed to concur in an act relative to the subject, and a constitutional amendment was prepared and passed by the same body. It was subsequently concurred in by the Legislature of 1864, and submitted to and adopted by the people at a special election in March, 1864. The vote given was 306,874, and the majority in favor of the amendment, 210,716.

The necessary power having been given to the Legislature, a law "to enable the qualified electors of the State, absent therefrom in the military service of the United States, in the army or navy thereof, to vote," was passed by the Legislature and approved by Gov. Seymour on the 21st of April.

It extends the right to vote, in time of war, to qualified electors "in the actual military service of the United States, in the army or navy thereof, who shall be absent from the State of New York on the day of election." This extension is expressly limited, by the language used, to commissioned officers and enlisted men. Butlers, clerks, teamsters, officers' servants, and the rest of the crowd of non-combatants around every army, cannot vote except at the polls of their respective election districts. Nor can soldiers or sailors in the State on the day of election vote elsewhere than in the election districts in which they reside. Qualified electors of the State in the regiments of the regular army, or in such of the militia regiments as are in the service of the United States, have the same right to vote that volunteers have, if absent from the State on the day of the election.

An elector authorized to vote by the provisions of the law, can do so at any time within the sixty days next previous to the election. For that purpose he must execute a proxy, authorizing any elector of the town or city in which he resides, whom he may name in the proxy, to deliver his vote to the inspectors of the election district in which the voter resides, on the day of the election. The proxy must be signed by the person voting, and must also be attested by a subscribing witness and sworn to before any field officer, captain, adjutant, or commandant of any company or detachment on detached service, in the service of the United States, and commissioned as officers in the volunteer force of the State of New York; or, if the absent elector is in the navy, before "the captain or commandant of any vessel in the naval service of the United States to which the said absent elector may belong or be attached." The voter is also required to make and subscribe before any such officer an affidavit of his qualification as an elector.

The elector can vote "for all officers for whom he would have a right to vote if he were present" at the election. He must fold his ballots and inclose them with his proxy in an envelope, duly sealed, on the outside of which must be his affidavit of qualification as an elector. The envelope must be inclosed in another envelope, which must be sealed and directed to the person authorized by the proxy to cast the vote, and transmitted to him "by mail or otherwise."

The person to whom the proxy is directed may open the outer envelope, but not the inner one. On the day of the election he must deliver the inner envelope to the inspectors at the polls. If the name of the soldier making the affidavit of qualification as a voter, indorsed on the envelope, is on the list of registered electors, the inspectors will open the envelope and deposit the ballots in the appropriate boxes. If the name is not on the list, an affidavit must be made by a "householder of the district," that he knows the soldier to be "a resident of the district," or the envelope will not be

opened, and the soldier will lose his vote. The affidavit required is only to prove residence, and the law provides no separate affidavit of qualification of colored men, as required by the Constitution.

Conventions were held in September by the Republican and Democratic parties, and nominations made for State officers. The resolutions adopted by each convention were like in spirit and similar in views to those adopted by the Presidential conventions. The nominations of the Republicans were, for Governor, Reuben E. Fenton; Lieut.-Governor, Thomas G. Alvord. The nominations of the Democrats were, for Governor, Horatio Seymour; for Lieut.-Governor, David R. Floyd Jones.

On September 30th Gov. Seymour addressed the following circular with reference to the act to authorize soldiers to vote, to the commanders and surgeons of New York regiments in the field:

STATE OF NEW YORK, EXECUTIVE DEPARTMENT, }
ALBANY, Sept. 30, 1864. }

To—, — of N. Y. S. Vols.

The Legislature of this State, at its last session, passed an act which received my signature and became a law, on the 21st of April, 1864, entitled "an act to enable the qualified electors of this State, absent therefrom in the military service of the United States, in the army or navy thereof, to vote."

This act inaugurates a new feature in our system of elective franchise, and I feel it incumbent upon me to call your attention to its provisions, and to ask that you see it faithfully and impartially carried out. The act provides for this in the following section:

Sec. 18. Any officer of this State or of the United States, or any other person, who shall directly or indirectly control or attempt to control any such enlisted elector in the exercise of any of his rights under this act, by menace, bribery, fear of punishment, hope of reward, or any other corrupt or arbitrary measure or resort whatever, to annoy, injure, or otherwise punish any such officer or man, for the manner in which he may have exercised any such right, shall be deemed guilty of an offence against the sovereignty of this State, which shall be punished as a misdemeanor, and for which he may be indicted and tried at any future time, when he may be found within the limits of the State; and upon conviction he shall be imprisoned for a term not exceeding one year, and fined in a sum not exceeding one thousand dollars, and he shall also thenceforth be ineligible, after conviction thereof, to hold any office in this State.

The twelfth section of the act herein referred to, provides for the preparation, by the Secretary of State, of blank forms and envelopes, which, together with copies of the soldiers' voting act, have been forwarded by express to the different regiments and battalions of New York State volunteers in the United States service, and to the sick and wounded New York soldiers in U. S. hospitals, under the following order:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, August 3, 1864. }

Special Orders No. 265.

19. All officers in the military service of the United States will render every facility to such Express Companies as may be charged by the Governor of New York with the delivery of the necessary forms and blanks required to secure the votes of soldiers of that State in the field, with a view to the blanks being delivered with the least practical delay.

By order of the Secretary of War,

E. D. TOWNSEND,
Assistant Adjutant General.
E. D. TOWNSEND, Assistant Adjutant General.

I send you a set of ballots prepared by the friends of General McClellan, and have requested the Secretary of State to forward to you a set prepared by the friends of Mr. Lincoln.

The State and Local Committees of the two political parties will send you the necessary number of ballots.

You can do much toward securing to your officers and men a fair expression of their political preferences, if you will detail one or more officers of your command of each political party, to distribute the ballots and to aid soldiers and commissioners in filling up the requisite powers of attorney. You are also requested to use every effort to send forward the envelopes, containing the powers of attorney and ballots, to the electors in the several election districts of this State, named on the back thereof—either by express or mail, or through such reliable commissioners as may visit your command.

I feel confident that every officer from New York will feel an honorable pride in seeing that the laws of his State are carried out according to their letter and spirit, and that they will protect all under their care in the full and free exercise of their personal and political rights.

Truly yours, &c.

HORATIO SEYMOUR.

On October 28th, Major-Gen. Dix, commanding in the Department of the East, issued the following order relative to interference with the election:

HEADQUARTERS DEPARTMENT OF THE EAST, }
NEW YORK CITY, Oct. 28, 1864. }

General Orders No. 80.

Satisfactory information has been received by the Major-General commanding, that rebel agents in Canada design to send into the United States, and colonize, at different points, large numbers of refugees, deserters, and enemies of the Government, with a view to vote at the approaching Presidential election; and it is not unlikely, when this service to the rebel cause has been performed, that they may be organized for the purpose of shooting down peaceable citizens and plundering private property, as in the recent predatory incursions on the Detroit River and at St. Albans. Against these meditated outrages on the purity of the elective franchise and these nefarious acts of robbery, incendiarism, and murder, it is the determination of the Major-General commanding to guard by every possible precaution, and to visit on the perpetrators, if they shall be detected, the most signal and summary punishment. All the classes of persons enumerated, whether citizens of the insurgent States who have been in the rebel service or engaged in acts of hostility to the Government, deserters from the military service of the United States, or men drafted or subject to draft, who have fled to evade their duty to their country, are liable to punishment for the crimes they have already committed; and no effort will be spared to arrest them. For this purpose all provost marshals and their deputies within this department are commanded to exercise all possible vigilance, and to adopt such measures as may be necessary to detect persons coming into the United States for the purpose of voting or of committing depredations on private property and to prevent their escape; and it is earnestly recommended to the electors of the States in this department to take, within their respective election districts, such measures as may be required for their own security, and to aid the military authorities in frustrating the designs of rebel agents or emissaries, or in bringing the perpetrators to punishment.

Should any of these malefactors succeed in perpetrating their crimes, effective measures will be taken to prevent their return to Canada, and for this purpose special directions will be given, and suitable guards for the frontier will be provided before the day of election.

As a further precaution, all persons from the insurgent States now within the department, or who may come within it on or before the third of November proximo, are hereby required to report them-

selves for registry on or before that day; and all such persons coming within the department after that day will report immediately on their arrival. Those who fail to comply with this requirement, will be regarded as spies or emissaries of the insurgent authorities at Richmond, and will be treated accordingly. The registry in this city will be at the headquarters of Major-Gen. John J. Peck, second in command in the department, at No. 37 Bleecker street; and in all other places out of this city at the offices of the nearest provost marshals. The registry will contain a complete description of the persons reporting, and also their places of residence, which must not be changed without notice at the place of registry.

By command of Major-General DIX.

D. T. VAN BUREN, Colonel and Ass't Adj.-General.

Several hundred persons from the Southern States appeared at the rooms designated in this order, and were registered. Each person was examined privately, and a record taken of his or her name, a description of his personal appearance, his former and present place of residence, his business or pursuit, and a general examination of his antecedents, intentions for the future, &c., was made. If the person subscribed to the oath, and his answers were considered satisfactory, he was allowed to depart; but if he refused to take the oath of allegiance, or the officer (Major Haines) entertained any suspicions in regard to his character, he was sent to report to Gen. Dix.

On the next day, October 29th, Brig.-Gen. Green commanding the militia forces of the State, issued the following order:

HEADQUARTERS FRONTIER DEFENCES, }
SYRACUSE, October 29. }

General Order No. 2.

Pursuant to an order of his excellency the Governor and commander-in-chief, issued on the 12th day of August last, the General commanding assumed command of the district lying along the Canadian frontier, extending from the east line of the county of Monroe to the boundary line of the State of Vermont, and embracing the counties of Wayne, Cayuga, Oswego, Oneida, Jefferson, St. Lawrence, Franklin, and Clinton. The General commanding now again enjoins upon all subordinate officers within the said district to exercise a special vigilance in guarding against any hostile invasions of this State by persons in the Canadian provinces, to the end that the peace of the State may be preserved from violation or disturbance. A State election is to be held on the 8th day of November next, and it has been suggested that evil-disposed persons across the border may deem this a favorable occasion to pass the frontier for the purpose of depredation upon the property of our citizens. Officers of the National Guard, within the department, are therefore reminded that unusual vigilance to intercept all such attempts will be required. But persons peacefully coming to or attending the polls at the election are not to be interfered with under any pretext whatever. The election is to be held solely under the authority of the State, and is regulated by State laws, carefully framed and eminently adapted to prevent as well as punish all improper and fraudulent voting. The people in their sovereignty and by their Constitution have regulated their right of suffrage, and this right can only be challenged and tried before the inspectors and judges of election. No military interference can be permitted. The General commanding recognizes danger to the public peace in the proposed attempt of a major-general, holding his commission under the Federal Government, to take under his care and supervision within the said district the election to be held as aforesaid. For this contemplated interference there

is no necessity, authority, or excuse. The Federal Government is charged with no duty or responsibility whatever relating to an election to be held in the State of New York. Officers in the National Guard in this department, will therefore vigilantly repress all attempts to disturb the peace, will do their utmost to preserve order and quiet on the day of the election, and, if necessary, will prevent all interference with the right of any person or persons peacefully to attend at the places where the polls shall be held.

By order of

JOHN A. GREEN, Brig.-Gen. Commanding.

MILTON H. NORTHERF, Captain and A. A. G.

On Nov. 2d Maj.-Gen. Dix issued the following instructions to the provost marshals and their deputies in his department:

HEADQUARTERS DEPARTMENT OF THE EAST, }
NEW YORK CITY, Nov. 2. }

General Orders No. 85.

To Provost Marshals and their Deputies in the Several States in this Department.

In pursuance of the intimation contained in Department General Orders No. 80, you are hereby instructed to make such arrangements within your respective districts as may be practicable, for the detection of persons coming into the department for the purpose of voting, who have been in the service of the authorities in the insurgent States, who have deserted from the service of the United States, or who have fled to evade the draft. All such persons will be promptly arrested and sent to these headquarters. For this purpose detectives should be employed for two or three days before the election, and the aid of the inspectors is solicited in furnishing any information which may be obtained at the polls, and which may lead to the detection of the guilty parties. Through this information, and that obtained by detectives and challengers, it is believed that those who have the hardihood to attempt to add to their other crimes that of fraudulent voting, may be brought to punishment.

No military force will be embodied at or in the vicinity of any of the polls, and there must be no interference in any manner with the exercise of the right of suffrage, or with those who are charged with the performance of any duty connected with the election in any of the States in this department under their constitutions and laws. But if the civil authorities shall call on you to aid them in keeping the peace, you are authorized and required to do so, acting in strict subordination to them.

After the election the greatest vigilance will be exercised in regard to persons crossing the frontier into Canada; and if, in any case, there is good reason to believe that they belong to any of the classes above enumerated, they will be detained and promptly reported to these headquarters for instructions.

By command of Major-General DIX.

D. T. VAN BUREN, Col. and Ass't Adj't-Gen.

On the same day Governor Seymour issued the following proclamation to the people of the State:

EXECUTIVE CHAMBER, ALBANY, November 2, 1864.

In a few days the citizens of this country are to exercise their constitutional duty of electing a President and Vice-President of the United States, at a time when the condition of our country excites the deepest interest.

The questions of the day not only affect the personal welfare of all, and the happiness of their homes, but also are of a character to arouse the passions and lead to angry controversies between parties.

The existence of a terrible civil war and the assertion of the right of military commanders in some sections of our country to interfere with elections, have caused painful and exciting doubts in the minds of many with regard to the free and untrammelled exercise of the elective franchise. I therefore appeal to

all men of all political parties to unite with those holding official positions, in their efforts to allay undue excitement, soften the harshness of party prejudices and passions, and to avoid all measures which tend to strife or disorder.

However we may differ in our views of public policy, we are alike interested in the maintaining of order, in the preservation of the rights and the promotion of the prosperity of our State.

While we do not agree as to the methods by which these ends are to be gained, they are earnestly sought by all.

It is certain they cannot be reached by angry controversies, unreasonable suspicions or disorderly actions.

There are no well-grounded fears that the rights of the citizens of New York will be trampled upon at the polls.

The power of this State is ample to protect all classes in the free exercise of their political duties. In doing this the public authorities will be upheld by good citizens of all parties.

There is no reason to doubt that the coming election will be conducted with the usual quiet and order.

Sheriffs of counties, and all other officers whose duty it is to keep the peace and protect our citizens, will take care that every voter shall have a free ballot in the manner secured to him by the Constitution and laws. It will be their duty to see that no military or other organized forces shall be allowed to show themselves in the vicinity of the places where elections are held, with any view of menacing or intimidating citizens in attendance thereon. Against any such interference they must exercise the full force of the law, and call forth, if need be, the power of their districts.

In witness whereof I have hereunto signed my name, and affixed the Privy Seal of the State, [L. s.] at the city of Albany, this 2d day of Nov., in the year of our Lord 1864.

By the Governor: HORATIO SEYMOUR.

D. WILLIAMS, Jr., Private Secretary.

On the same day, Nov. 2, the Secretary of State, Mr. Seward, sent by telegraph the following despatch to the Mayors of New York, Albany, and other cities:

WASHINGTON, Nov. 2, 1864.

This department has received information from the British provinces, to the effect that there is a conspiracy on foot to set fire to the principal cities in the Northern States on the day of the Presidential election. It is my duty to communicate this information to you.

W. H. SEWARD.

The Mayor of New York replied as follows:

MAYOR'S OFFICE, NEW YORK, NOV. 3.

Hon. William H. Seward:

Your despatch is received. I have no fears of such threats being carried out, or even attempted. However, I shall take all precautionary measures, and am amply prepared. Should any Federal assistance be necessary, I shall invoke the same without delay.

C. GODFREY GUNTHER, Mayor.

On Nov. 4th, Maj.-Gen. Butler arrived at New York City, from Fortress Monroe, and took command in this city. On the Monday afternoon preceding the election, the 6th, 7th, and 10th Conn., under Maj. Hawley, and other regiments, making about 7,000 men, arrived at Fort Hamilton and Governor's Island, in New York Bay. On Tuesday morning, the day of election, they were placed on board of steamers, and the vessels were stationed at various points opposite the Battery, and in the North and East Rivers. They were within call on Tuesday, Wednesday, and Thursday, and could have been marched to any part of the city in half an hour.

For the order of Maj.-Gen. Butler, on assuming command, see UNITED STATES, p. 797.

On Nov. 7th Maj.-Gen. Peck, at Buffalo, issued the following order:

HEADQUARTERS DEFENCES OF THE FRONTIER, }
BUFFALO, NOV. 7.

General Orders No. 12.

In pursuance of orders from the East, the undersigned assumes command of the forces on the frontier. The Government has not been unmindful of the exposed condition of this portion of the country now menaced by piratical invaders. The Government was slow to believe that any considerable force of the rebels would assemble in Canada for the sole purpose of murdering and pillaging undefended towns along the border. Such is, however, the fact, and rumor says plans have been matured for the commission of crimes of a blacker character than has marked any former civilization.

Maj.-Gen. Dix has made ample preparations for any emergency, and my mission is to insure full protection to the frontier and to any of the civil authorities in maintaining order. No interference in elections will be permitted. Communications of the civil authorities from localities along Central Railroad and Lake Ontario will receive attention. All orders from department headquarters will remain in force; reports will be made as heretofore.

JOHN J. PECK, Maj.-Gen.

Col. S. H. BURTON, Chief of Staff.

Lieut. J. S. McVey, A. D. C.

On Oct. 27th Moses J. Ferry and Edward Donahue, jr., State agents to receive the votes of soldiers at Baltimore, were arrested by the provost marshal, and the State agency closed. At the same time the State agency at Washington was closed, and Col. North and other persons arrested and confined in prison. The charges alleged against the parties were the commission of frauds in connection with soldiers' votes. On the same day the military commission sitting in Washington, of which Gen. Doubleday was president, adjourned to assemble at Baltimore. Before this commission the persons arrested in Baltimore were arraigned on a charge of fraud and forgery in procuring soldiers' votes. Ferry made a confession to the Court:

I do not recollect the time when the first papers were forged, but it was in the presence of O. K. Wood, of Clifton County, N. Y. It was done in my office, No. 85 Fayette Street, Baltimore. I am and have been for the past two years agent for the State of New York, appointed by Gov. Seymour to look after the sick and wounded soldiers of New York.

I first saw Wood on Wednesday of last week, at my office. He came and represented himself as an agent of the Central Committee of his county to look after its local ticket. He talked about the way in which votes should be taken. It was agreed that we should sign the names of soldiers and officers, and then send them home to have local tickets filled in. I made out small papers. I signed the names of soldiers on quite a number of them. I cannot tell what names we signed. The names we signed to the papers are now in the bundle on the table. I did not sign the names of officers, but Donahue signed any quantity of them.

There was a large package of these papers left with me which I destroyed. That package contained over 200. Donahue signed them all. The idea of forging these was first suggested by a man named Stephen Maxon. He is from the western part of the State of New York. He is a State Agent. It was first pro-

posed almost two weeks ago. I do not know how many forged papers were sent off, but I heard they say they were sent from Washington by the dry-goods box full. I sent a package of forged papers to Gen. Farrell, with the following letter:

BALTIMORE, 22d.

If you are energetic you will be able to get the within votes all arranged for the 8th of November. I should have done more to them, but I have not time. They are all on the square, the same as the blacks got theirs; neither would bear close scrutiny. Ed. Donahue said send this to you, and I have done it.

Yours truly, DEMOCRAT.

P. S. They are all soldiers—company and regiment all O. K. The rest I have nothing to say. If you have no use for them send them back.

M. J. FERRY.

Mr. Ferry then entered a plea of guilty, which was accepted, and the Judge Advocate recommended him to the clemency of the Court.

On the 28th the trial of Donahue came up. The military commission consisted of the following members: Maj.-Gen. Doubleday, Brig.-Gen. Feasenden, Col. R. Butler Price, Lieut.-Col. T. A. Barker, Capt. J. H. Platt, and Capt. M. H. Ellis, with Judge-Advocate John A. Foster. The prisoner objected to the jurisdiction of the Court, on the ground that the offence charged was one which should be tried not by a military but a civil court, and pleaded guilty to having signed certain blanks with the name of C. G. Arthur, A. A. G.; and that there was no such person in existence, therefore it did not constitute a crime. The Judge Advocate replied:

The offence is not one against the State of New York. To constitute a crime against the State of New York, the offence must be committed within the State. This crime was committed within the State of Maryland. If the State of New York were to attempt to punish it, it would not be known in what court to try the prisoner. The crime was not committed in that State, consequently the State of New York would have no jurisdiction. On the other hand, it is not a crime against the State of Maryland. It is neither a common law crime of forgery, which requires that it should be for the sake of gain—money; nor is it a statutory crime in Maryland. It is not a crime against the civil laws of the United States; it is not a common law forgery in the United States. Hence, if a military court have no power to try the case, it cannot be tried at all. The act of the State of New York, entitled "An Act to enable the qualified electors of this State, absent therefrom in the military service of the United States, in the army or navy, to vote," is only intended to be a law in time of actual war, when *quasi* military law is the law of the land.

This crime goes directly to the efficacy of the service. The deprivation of a soldier of his right to vote, the knowledge that he was defrauded of it, would have a demoralizing effect. If his false vote be received at the polls, his true vote, when presented afterward, will be rejected. The very foundation of the Government, which guards the rights of citizens as electors, is by that act attacked. And the only mode in which the offence can be punished is by the military authorities. The offence is to a great extent a violation of General Order No. 265, which commands officers to take measures to secure the freedom and fairness of the election, and to see that it shall be conducted with due regard to good order and military discipline. What greater attack on good order and military discipline than this?

The Court decided that it had jurisdiction in the case.

Witnesses swore that Donahue signed the names of soldiers, and he was found guilty and sentenced to the penitentiary for five years. Ferry was also sentenced for a term

of years. The Court then adjourned to meet at Washington on Nov. 8d for the trial of Col. Samuel North, Levi Cohen, and M. M. Jones. These persons, together with others by the names of Reeves and Schofield, were charged with conduct prejudicial to good order and military discipline, and with fraud toward the New York State electors, in that they forged the names of officers and soldiers to what purported to be ballots of said soldiers to be used at the election. They were also charged with falsely and fraudulently issuing divers and sundry blanks, which purported to be signed by officers and soldiers in the military service of the United States, authorizing certain parties to cast their votes at the ensuing State and national election with intent to defraud the true elector of his rights.

Meantime, on Oct. 30th, Gov. Seymour issued the following order:

ALBANY, October 30.

To Amasa J. Parker, William F. Allen, and William Kelly, greeting:

It being reported that Col. Samuel North, agent of the State of New York at Washington, together with certain other citizens of this State, not in the military or naval service of the United States, have been placed in arrest by the military authorities of the United States, and no reason for such arrest having been given to me, and being anxious to learn the fact of such arrest and the grounds therefor, to the end that no innocent persons may be imprisoned without a fair and speedy trial, and that no obstacle may be put in the way of soldiers of this State having a fair ballot, according to its laws;

Know you, that I, Horatio Seymour, Governor of the State of New York, do hereby appoint you, Amasa J. Parker, William F. Allen, and William Kelly, Commissioners for and in behalf of the State of New York, and do authorize and direct you and each of you forthwith to proceed to the city of Washington as such Commissioners, there to inquire into the facts and circumstances relating to such arrests and alleged causes thereof, and to take such action in the premises as will vindicate the laws of the State and the rights and liberties of its citizens, to the end that justice may be done, and that all attempts to prevent soldiers from this State, in the service of the United States, from voting, or to defraud them to coerce their action in voting, or to detain or alter the votes already cast by them in pursuance of the laws of this State, may be exposed and punished, and that you report your proceedings to me with all convenient speed.

(Signed)

HORATIO SEYMOUR.

D. WILLIAMS, Jr., Private Secretary.

This Commission reported to the Governor on Nov. 8d. They arrived in Washington and entered upon the business committed to them on Monday, Oct. 31st. After a preliminary interview with the Secretary of War, the following written request was submitted to him:

WAR DEPARTMENT.

WASHINGTON CITY, October 31, 1864.

The undersigned request the Secretary of War that he will give them an order to receive the soldiers' votes which have been taken and are now in the custody of the provost marshal at the New York agency in this city, as further delay to forward the votes may make it too late to use them at the approaching election.

They also request that the blanks in the office of the New York agency in this city may be handed over to an agent of the State of New York, to be

used, and that the agents may be permitted to proceed and take further soldiers' ballots, to be forwarded to the State of New York; and that a military officer of the New York Volunteers may be designated by the Department to attend at the New York agency to administer oaths to voters.

The undersigned also request a copy of the charges against Col. North, and the others in custody.

Also, a permit for the undersigned to see Colonel North and the others in custody, and to make provision for furnishing counsel to defend them.

AMASA J. PARKER,
W. F. ALLEN,
WILLIAM KELLY, } Commissioners.

The Secretary assented to the request, and gave directions to his subordinates for their compliance. Several hundred ballots were obtained in different parcels through the Judge Advocate, which were all that had been seized. They had been detained five days on their way. They also visited Col. North in prison, which visit they thus report:

The undersigned availed themselves of the permit granted them to visit Col. North, M. M. Jones, and Levi Cohn. They found them in the "Carroll prison," in close confinement. They then learned that Messrs. North and Cohn had been confined together in one room, and had not been permitted to leave it for a moment during the four days they had been prisoners, even for the purpose of answering the calls of nature. They had been supplied with meagre and coarse prison rations, to be eaten in their room where they constantly breathed the foul atmosphere arising from the standing odor. They had no vessel out of which to drink water, except the one furnished them for the purpose of urination. They had but one chair, and had slept three of the nights of their confinement upon a sack of straw on the floor. They had not been permitted to see a newspaper, and were ignorant of the cause of their arrest. All communication between them and the outer world had been denied them, and no friend had been allowed to see them. The undersigned complained to the acting superintendent, who seemed humanely disposed, but justified his course by the prison rules and the instructions of his superiors. The undersigned afterwards complained of the treatment of these persons to the Judge Advocate, and also to the Secretary of War and the Assistant Secretary, and were happy to learn at subsequent visits to the prisoners that the severities were relaxed and their condition made more tolerable. But at neither of these visits made to the prisoners by the undersigned, were they permitted to see them without a special permit, and only in the presence of an officer of the prison.

Application was next made to the Judge Advocate for a copy of the charges against Col. North, without success. The Commissioners then say: "From the best investigation the undersigned have been able to make, though there may have been irregularities, they have found no evidence that any frauds, either against any elector or the elective franchise, have been committed by any person connected with the New York agency."

They then delivered to the Secretary of War the following communication as presenting their case, together with a copy of their commission, with the request that they might be filed in the office of the War Department:

WILLARD'S HOTEL, WASHINGTON, NOV. 1.

To Hon. Edwin M. Stanton, Secretary of War:

SIR: We beg leave to submit to and leave with

you a copy of the commission from his excellency the Governor of the State of New York, under which we act in behalf of that State. From it you will perceive the nature of the duties assigned us.

In accordance with the suggestion made by yourself at our first interview yesterday, we take the liberty of submitting in writing our claims in respect to the imprisonment of Col. Samuel North, Mr. Levi Cohn, and Mr. Morven M. Jones, now and since Thursday last in close confinement in the Old Capitol prison.

You are aware that they were, at the time of their arrest, in this city (Washington) as agents of the State under authority from the proper departments, to look after the interests and care for the soldiers from the State of New York in the service of the United States. They were not in the military or naval service of the United States, and by no law of which we are aware were they subject to the martial and military laws of the United States, or to the orders of the War Department.

Since our interview with yourself yesterday, we have seen Col. North in the presence of his keeper. By an inadvertent omission in our permit, we did not see the other prisoners.

We have also had interviews with Col. Foster, the Judge Advocate, having, as we understand, charge of the cases of the persons named, and have endeavored to learn the character of the offences charged against Col. North and the others named, and the nature of the charges made against them, and the character of the proofs. This was important to enable us to inquire into and prevent any attempt or anticipated frauds upon the election laws of our State, if any such were threatened. The proofs are withheld from us.

The charges, so far as we can learn, are not for the violation of any law of the United States, but relate to acts purporting to have been done under the law of the State of New York concerning elections, and making provisions for soldiers voting in that State, it being claimed that certain irregularities have intervened which give reason to suspect that frauds and forgeries are intended, and may be consummated.

These suspected and anticipated frauds have respect solely to the election laws of the State of New York, and the action of the Government in making the arrest is claimed to be justified upon the ground that unless thus prevented frauds will be perpetrated against the ballot-box at the approaching election in the State of New York.

We beg leave, in behalf of the State, respectfully to protest against this jurisdiction, assumed as well over the alleged offence as over the persons of the accused, who are citizens of the State, in its employ, and entitled to its protection.

The proper business of the State agency is greatly interfered with by the arrest and detention of the agents, and the State is deprived of its proper jurisdiction over its agents and citizens, over offences against its laws, and over its own ballot-box, and the exercise of the elective franchise within its limits.

We therefore most earnestly, and at the same time most respectfully, demand, as we think we may properly do in behalf of the State, the release of the persons named from arrest, that they may resume their business at the agency, if the Governor shall see fit to continue them.

We also ask and would urge a compliance with our request that all the proofs in possession of the Government of the United States tending to show any wrongful acts or irregularities on the part of these agents may be furnished us, that we may report them to the Governor or other proper authority, to the end that the unfaithful agents may be removed, and if guilty of any offence, that they may be properly punished.

We do not consider this a proper occasion to argue the question of jurisdiction; but it may be fit and

proper to suggest some grounds upon which we think the arrests are without jurisdiction, that you may have them before you when you pass upon our demands.

1st. We claim that the military authorities of the United States have no jurisdiction of the persons of the individuals named; that they are not in the military service of the United States, or in any way subject to the orders of the military authorities; that they are the servants of the State of New York, subject to its authority and amenable to its laws.

2d. We claim that the acts charged, if proved to have been committed, are not offences against any law of Congress or any rule or order of the War Department made by authority of law.

3d. We claim that the acts, if offences at all, are only offences against the laws of the State of New York, and punishable by those laws only.

4th. The papers, whether incomplete and irregular and simply giving evidence, as is claimed, of an intended violation of the laws of New York, or complete in form, although forgeries in fact (if it is claimed there are any such, of which we are not informed), are evidence of no crime against the United States, and are of no value anywhere except in New York, where alone they can be used in the perpetration of any fraud, and that fraud would be against the sovereignty, the laws, and the people of that State.

5th. It is not to be presumed that the laws of New York are insufficient to guard against fraud of the character anticipated, or that they would be so badly administered that the frauds can be successfully accomplished, or if accomplished that the guilty will go unpunished.

But if this were not so, and it were morally certain that the frauds could and would be accomplished with impunity, the General Government would have no jurisdiction in the premises.

6th. The alleged fraudulent act would not be an offence against the soldier in the field. He cannot be deprived of his proper vote by any number of forgeries, and the presentation and reception of fictitious votes affect the whole people of the State and not the soldier alone.

7th. If the acts alleged could deprive the soldier of any right, it would be a right pertaining to him as a citizen and not as a soldier. He votes, if he votes at all, as a citizen of the State, and not as a soldier of the United States. For protection in his rights as a citizen he looks to the State only.

We will add that the laws of the State provide that parties guilty of the acts of which the parties named are suspected, shall upon their return to the State be punished.

In this connection we would refer to the cases of Ferry and Donahue, who, we learn, have been recently tried at Baltimore for acts to some extent of the same character as those charged upon Messrs. North, Cohn, and Jones.

Ferry and Donahue were, at the time of their arrest, in Baltimore, in the capacity of State agents, under authority from Gov. Seymour, and if we are not entirely mistaken in our views of the case, their trial was a nullity, for want of jurisdiction in the court or commission by which they were tried.

We therefore ask that these men be surrendered by the United States Government to the State Government, that they may be tried, and if guilty of any offence against the laws, be suitably punished.

Permit us also respectfully to suggest, without desiring to reflect on any of the agents of the departments, that the haste with which such trials were pressed through, and their *ex parte* character, the accused being without counsel, especially in a time of intense partisan feeling like the present, and before a court of supposed party bias, without at all bringing in question the integrity of the court, may well lead the public to distrust the fairness of the trial. We submit that if jurisdiction of the alleged

offences is to be assumed and exercised by a military tribunal, it should not be the means of depriving the accused of the presumption of innocence, or the aid of counsel, or of ample time to prepare for the defence.

The undersigned beg leave to ask for an early reply, and are, respectfully,

Your obedient servants,
AMASA J. PARKER,
W. F. ALLEN,
WILLIAM KELLY.

This communication was referred to the Judge Advocate General, Holt. The Commissioners then requested that the trial might be postponed until after the election, and that the prisoners might be released, in case their request of Nov. 1st was refused, on parole, to which the following answer was given:

WAR DEPARTMENT,
WASHINGTON CITY, November 1. }
Messrs. Amasa J. Parker, W. F. Allen, William Kelly,
Commissioners, &c.

GENTLEMEN: In reply to the request contained in your letter of this date, that the trials of Col. North, Mr. Cohn, and Mr. Jones, may be postponed until after the approaching election, I am directed by the Secretary of War to say that the Chief of the Bureau of Military Justice, Brig.-Gen. Holt, to whom the letter was referred, reports as follows: "The within paper is not regarded as presenting any legal grounds for postponing the trials referred to. It is believed that the cases should be allowed to take the ordinary course."

With regard to your request of this date for the release on their parole of the persons alluded to, General Holt further reports as follows: "It is expected that the trial of these parties will be proceeded with to-morrow. No reason is perceived, therefore, for paroling them."

Such being the view of the chief of the Bureau of Military Justice, the Secretary of War does not feel authorized to pursue a different course on the applications presented by you.

The Secretary regrets that it has not been in his power to make an earlier response to your application. I am, very respectfully, gentlemen,

Your obedient servant,
JAMES A. HARDIE,
Col. Inspector-Gen. U. S. A.

The Commissioners then addressed a letter to the President, enclosing a copy of their communication of Nov. 1st, and stating the other proceedings in the case. They also addressed a final note to the Secretary of War, saying:

Although no formal reply has been made to our demand of the 1st inst., for the discharge of the prisoners, we think we may regard the answer to the requests referred to as clearly indicative of the determination of the Government to hold the persons accused, and try them by a military commission.

In this view, our duties as Commissioners have been fully discharged, and we expect to leave during the day for New York.

The report to the Governor then closed with a summary of the results of their commission:

Under these circumstances, after having retained counsel for the persons accused, the labors of the undersigned are brought to a close, their power is exhausted, and nothing remains but to report their proceedings.

The demands made in behalf of the State of New York are thus refused. The persons arrested are to be summarily tried before a military commission, clearly, in our opinion, without jurisdiction, in viola-

tion of their personal rights, in usurpation of the just powers of our State, and in the midst of an exciting political contest; and, though up to this time, the morning of Thursday, the 3d of November, when we are leaving Washington, no charges have been served on the accused, and perhaps none have yet been framed, yet we are told the trial shall proceed immediately, and that the time asked for to procure witnesses for the defence shall not be afforded.

The trial of Col. North proceeded with numerous adjournments through several weeks, when he was acquitted and discharged.

At the election there were 730,821 votes polled, taking the highest elector on each ticket, of which Mr. Lincoln received 368,785, and Gen. McClellan 361,986; being a majority of 6,749 for Mr. Lincoln.

For Governor the total vote was 730,821, of which Mr. Fenton received 369,557, and Mr. Seymour 361,264, being a majority for Mr. Fenton of 8,293. By the vote for members of Congress, 20 Republicans and 12 Democrats were elected. The Legislature elected was divided as follows:

	Senate.	House.
Republicans.....	21	76
Democrats.....	11	52
Total.....	32	128

On Nov. 15 Maj.-Gen. Butler issued an order taking leave of his command in the State, and tendering his thanks to the provisional division under Brig.-Gen. Hawley, from the Army of the James, and the regiments of regulars from the Army of the Potomac detailed for special duty, for their promptness, efficiency, &c., and to other officers who had tendered their services.

Considerable correspondence took place between the War Department and the Governor, relative to the quota of the State under the calls for troops during the year.

On November 25th an attempt was made by incendiaries to set on fire a large number of hotels in New York City. The attempt was made during the evening. The Maj.-Gen. (Dix) commanding the department immediately commenced an investigation, and one of the culprits, Robert Kennedy, was arrested and subsequently hung. Previous to his execution he made the following statement:

After my escape from Johnson's Island I went to Canada, where I met a number of Confederates. They asked me if I was willing to go on an expedition. I replied, "Yes, if it is in the service of my country." They said, "It's all right," but gave me no intimation of its nature, nor did I ask for any. I was then sent to New York, where I stayed some time. There were eight men in our party, of whom two fled to Canada. After we had been in New York three weeks we were told that the object of the expedition was to retaliate on the North for the atrocities in the Shenandoah valley. It was designed to set fire to the city on the night of Presidential election, but the phosphorus was not ready, and it was put off until the 25th of November. I was stopping at the Belmont House, but moved into Prince street. I set fire to four places—Barnum's Museum, Lovejoy's Hotel, Tammany Hotel, and the New England House. The others only started fires where each was lodging, and then ran off. Had they all done as I did we would have had thirty-two fires and played a huge joke on the Fire Department. I know that I am to be hung

for setting fire to Barnum's Museum, but that was only a joke. I had no idea of doing it. I had been drinking and went in there with a friend, and, just to scare the people, I emptied a bottle of phosphorus on the floor. We knew it wouldn't set fire to the wood, for we had tried it before and at one time had concluded to give the whole thing up.

There was no fiendishness about it. After setting fire to my four places I walked the streets all night, and went to the Exchange Hotel early in the morning. We all met there that morning and the next night. My friend and I had rooms there, but we sat in the office nearly all the time, reading the papers, while we were watched by the detectives, of whom the hotel was full. I expected to die then, and if I had it would have been all right; but now it seems rather hard. I escaped to Canada, and was glad enough when I crossed the bridge in safety.

I desired, however, to return to my command, and started with my friend for the Confederacy via Detroit. Just before entering the city he received an intimation that the detectives were on the lookout for us, and, giving me a signal, he jumped from the cars. I didn't notice the signal, but kept on, and was arrested in the depot.

I wish to say that killing women and children was the last thing thought of. We wanted to let the people of the North understand that there are two sides to this war, and that they can't be rolling in wealth and comfort while we at the South are bearing all the hardships and privations.

In retaliation for Sheridan's atrocities in the Shenandoah valley, we desired to destroy property, not the lives of women and children, although that would of course have followed in its train.

Done in the presence of Lieut.-Col. Martin Burke.

MARCH 24—10.30 P.M.

For the commerce of New York, see *COMMERCE*.

NORTH CAROLINA. The dissatisfaction with the government at Richmond which existed in North Carolina at the close of 1863 and the first part of 1864, arose from the lack of efforts on the part of the Richmond government to seek by negotiations a peace with the United States. A large portion of the people of the State desired peace; but instead of witnessing efforts to obtain it by negotiation, they beheld the war pressed forward, the exactions of the government for men and money constantly increasing, and the loss and destruction of the war unsuspended. So far did this discontent proceed, that Gen. Vance found it to be necessary to address a letter to Mr. Davis on the subject. This letter, with the reply to it, will be found under the title "Confederate States." Mr. Davis says that all his efforts to open negotiations have been rejected by Mr. Lincoln, and that honor would not permit them to be renewed. This state of affairs led to various suggestions for reaching the object so much desired. In the Senate of the State Legislature, which was in session at this time, it was proposed to open negotiations through commissioners appointed by the States respectively. For this purpose the following resolutions were brought forward in that body:

Resolved, That five commissioners be elected by this General Assembly, to act with commissioners from the other States of the Confederacy, as a medium for negotiating a peace with the United States.

Resolved, That each of the other States of the Confederacy be respectfully requested to create a similar commission, with as little delay as practicable, and

to cooperate with North Carolina in requesting of President Davis, in the name of these sovereign States, that he tender to the United States a conference for negotiating a peace through the medium of these commissioners.

Resolved, That the Governor make known to each of the other States of the Confederacy this action of the General Assembly of North Carolina, and endeavor to secure their cooperation.

Resolved, That whenever any five of the States shall have responded by the appointment of commissioners, the Governor communicate the proceedings, officially, to President Davis, and request his prompt action upon the proposition.

This proposition failed to be adopted. In the Assembly it was proposed that the efforts to negotiate should be renewed by the regular appointment of Commissioners by Mr. Davis, with the approval of the Senate of the Confederate Congress, and that such appointment should be made known to the whole world; that it might be seen by all nations, whether Mr. Lincoln would refuse to treat with regular commissioners. For this purpose, the following resolutions were offered in the Assembly:

Resolved, That the President of the Confederate States, by and with the advice and consent of the Senate, being the constituted authority under the Constitution for the negotiation of peace, is hereby requested to appoint commissioners for the purpose of negotiating an honorable peace, and that publication thereof be made to the world.

Resolved, That a copy of these resolutions be furnished to the President of the Confederate States, our Representatives in Congress, and also to the Governors of the several States composing the Confederacy, with a request that they be laid before their respective Legislatures, to the end that their cooperation may be secured in the attainment of this object.

This proposition likewise failed to be adopted. It was well understood by those who comprehended the true state of affairs, that Mr. Lincoln could not receive any individuals or commissioners appointed or sent by the government at Richmond, without thereby recognizing the existence of that government. Doing thus much would change the issue in the contest between the hostile parties. The advocates of peace, therefore, took now the position that the State alone should attempt to negotiate a peace with the Federal Government. Those who opposed this view, took the position that the State should act in cooperation with the other States engaged with her in the war. This became the issue in the election for Governor in August. Governor Vance represented the latter view, and Mr. Holden the former. They thus were both in favor of peace, and became the opposing candidates. Holden was stigmatized as "the peace-at-any-price candidate;" in the same manner as the peace men in several of the northern States were designated. The arguments urged in the political campaign show the earnestness of the people. On the side of Mr. Holden it was said: "We went to war to protect the State sovereignty and to defend and perpetuate the institution of slavery; but if it should appear that we are likely to lose both, as rational beings we should pause and consider well the direction we are taking. If the war

should continue twelve months longer, with no greater success to our arms, there is great danger that the institution of slavery will be hopelessly destroyed."

Gov. Vance to support his views said: "Secession from the Confederacy will involve us in a new war—a bloodier conflict than that which we now deplore. So soon as you announce to the world that you are a sovereign and independent nation, as a matter of course the Confederate Government has a right to declare war against you, and President Davis will make the whole State a field of battle and blood. Old Abe would send his troops here also, because we would no longer be neutral, and so, if you will pardon the expression, we would catch the devil on all sides."

The friends of Holden proposed to carry out their plan by means of a State Convention. To this it was objected that the proposition for a State Convention so closely upon the heels of Mr. Lincoln's proposition to let one-tenth of the people form a State Government, had a very strong odor of disloyalty and treason. The "peace-at-any-price men" were also aided by the great number of deserters from the army within the State. In the mountain frontier on the western border, bands of them swarmed. Some of the interior counties were also infested by them. They represented nearly every State in the Confederacy, and lurked in the swamps and mountains, stealing, plundering, and in many instances murdering the inhabitants. They took possession of the town of Yadkin and released all the prisoners in the jail, who, doubtless, says the "Richmond Examiner," a radical secession print, "immediately joined them, and all became peace men together."

The election took place in August. The vote polled was 74,771; of which Gov. Vance received 54,828, and Mr. Holden, 20,448. The soldiers voted almost unanimously for Gov. Vance. The vote in the hospitals at Richmond was thus reported:

At the Camp Winder Hospital, where there are over thirteen hundred North Carolinians, the polls were opened late, but by 1 P. M. three hundred and fifty-four votes were recorded for Vance. One inmate, said to be crazy, got up and voted for Holden, and went back to bed. In all the hospitals of Richmond, where North Carolina soldiers were quartered, the aggregate vote was: For Vance, 887; Holden, 25.

The vote of the State in 1860 was 96,280. The result of the election decided that the State should seek to obtain peace only in cooperation with the other States of the Confederacy.

The blockade running operations of the State became nearly suspended toward the latter part of the year. The resort of the Tallahassee and other cruisers to the commercial port of Wilmington, tripled the stringency of the blockade, and caused the loss to the authorities and citizens of many valuable steamers. One steamer, the *Advance*, was stated by Gov. Vance to be worth more in solid benefits to the Confederate Government than all the cruisers it had ever put afloat. The State of North Carolina made

a profit by the blockade running. Her soldiers were thereby abundantly supplied with necessities, and many indispensable articles were furnished to the citizens at cost and expenses.

When the Legislature assembled near the close of the year, the Governor recommended that the State should assume the support of the families of the soldiers, instead of the counties, and asked for an appropriation of two millions in currency, and a tax of one-tenth in kind. He recommended the extension of the military age to fifty-five years, and opposed the arming of slaves as a policy entirely inadmissible. He urged that the common schools should be kept in operation at any cost. The crops of the year were fair, and in some places excellent.

At the loss of Plymouth, and its subsequent recapture, were the most important military operations during the year within the State. Several raids, however, were made from the posts held by the Federal troops. On June 19th a force left Newbern under command of Col. Jordan, which was out five days skirmishing with the enemy. On the 21st another force, under Col. Olsson, advanced towards Kinston, meeting and driving back a small body of the enemy. A number of prisoners were taken on each expedition, with some horses and small arms. On June 30th a small force from Tennessee, under Capt. Booth, came into Western North Carolina, and captured Camp Vance at Morgantown, taking about three hundred junior reserves of the enemy prisoners. A raid was also made by Gen. Wild with his colored troops into Camden County, which resulted in bringing off about 2,501 slaves, 350 ox, horse, and mule teams, and 60 horses. Ten dwelling-houses and thousands of bushels of corn were burned, two distilleries and four camps, with a loss to the brigade of twelve killed and wounded, and one taken prisoner.

The Siamese twins, well known some years ago as two young men, natives of Siam, who were connected together by a short ligament from each breast, settled on a plantation in North Carolina. A physician who came within the Federal lines, being a resident in their neighborhood, stated as follows:

Since the war began they have continued to reside on their plantation, and lived in the same quiet and harmony as ever until within two years. No one ever thought of drafting *them*, and their negroes prospered, except that when out of temper from any cause, it was apt to work itself off in striking the first one that came to hand, from which the best escape was to keep out of the way. The brothers probably never would have had any difficulty, but that their wives, though sisters, turned away their hearts, and children were the cause of this estrangement.

Up to the period that each had five children all prospered, but one of them had a sixth, and this awoke envy and jealousy to such a degree, that the two sisters, not being bound together like the twin brothers, would no longer live under the same roof, though still in different houses on the same plantation. The brothers are now about fifty years of age, but one, the smaller and feebler of the two, looks now fully ten years older than the other. They can turn back to back or face to face, but that is as far as

the remarkable bond that unites them permits. A few years since they corresponded with some of the leading surgical operators in London, as to the possibility of the umbilicus which unites them being cut, so that in case of the death of one, the life of the other might be saved. At the request of the London Surgeon they visited that city, and many experiments were tried to determine the safety of such an operation. Among other things, a ligature was tied firmly for a few minutes round the connexion between them, so as to prevent the circulation of blood through the artery. But it seemed as if each would expire if this were longer persisted in.

The smaller of the two fainted away and lost all consciousness, and there were symptoms that the same effect would follow to the other, but that the process could not be continued long enough without endangering the life of him who was first to faint. Should the smaller and feebler die, it might be worth while making the experiment of operating, but the prospects of prolonging the life of the other would be very small. Should, however, the larger and more healthy of the twin brothers die, there would seem absolutely no hope of saving the feebler of the two.

NOYES, WILLIAM CURTIS, an American jurist, born at Schodack, Rensselaer County, N. Y., August 19, 1805, died in New York City, December 25, 1864. He early turned his attention to the study of law, and although deprived of a collegiate education, was a laborious student, and in 1827 was admitted to the Bar. After practicing his profession in Oneida County, and establishing for himself a reputation as a sound lawyer and discreet advocate, he removed in the year 1838 to New York City, where he at once took a position in the front ranks of the profession. Nor was this the result of good fortune; it was the natural growth of steady labor, undeviating rectitude, and elevated ambition. His experience was varied and extensive, his knowledge of the law and its history exact and comprehensive, and his apprehension of legal distinctions clear and precise. He had compared the codes of different States and nations more extensively, perhaps, than any American lawyer who has survived him. His political affiliations were with the Whig party, and upon its dissolution in 1856 he sought, and found a reunion with many of his old political friends in the Republican party. In 1861 Mr. Noyes was one of the delegates from New York to the Peace Convention. For many years he had been connected with the New England Society, in which he took a deep and active interest as one of the almoners of the Charity Committee, amid all the labors of his profession faithfully attending all the business meetings of the society with unflinching zeal. He had been repeatedly requested to accept the Presidency of the Society, but had as often declined, with the feeling that none but a native of New England should hold that post. He had finally given his consent, and upon the last anniversary was elected President. The next day he suffered an attack of paralysis, which he survived but a few hours. Mr. Noyes had for several years, in connection with other distinguished lawyers, been engaged in preparing a codification of the Laws of the State of New York, which volume is now in process of publication.

O

OBITUARIES, AMERICAN.—The following names of persons deceased in 1868, but omitted in the last volume of the *ANNUAL CYCLOPÆDIA*, in consequence of the pressure of other topics, are inserted here, and biographical sketches of them will be found under the titles referred to:

April 5, 1863.—**REID, DAVID BOSWELL**, LL. D. (*See REID, DAVID B.*)

May 12.—**SCHMUCKER, SAMUEL MOSHEIM**, LL. D. (*See SCHMUCKER, S. M.*)

Aug. 17.—**ROGERS, Commander GEORGE W.** (*See ROGERS, G. W.*)

Oct. 16.—**WAYLAND, JOHN, D. D.** (*See WAYLAND, JOHN.*)

Dec. 23.—**TAPPAN, BENJAMIN, D. D.** (*See TAPPAN, B.*)

Jan. 1, 1864.—**HUBBARD, Hon. HENRY**, died in Pittsfield, Mass., aged 80 years. He was for many years a prominent member of the Berkshire bar, for a time conducted a political paper, "The Berkshire County Whig," and was repeatedly a member of the Massachusetts legislature. At the time of his death he was one of the commissioners to New Orleans to inquire in regard to the protection of colored Massachusetts sailors while in that port.

Jan. 2.—**BOWDEN, Hon. LEMUEL J.**, United States Senator from Virginia, died of small-pox at Washington, D. C. He was a native of East Virginia, where he occupied a prominent position as jurist and advocate, and was greatly esteemed for his private virtues.

Jan. 2.—**HERRICK, JACOB B.**, died at his residence, Hunter's Point, Westchester County, N. Y., in the 64th year of his age. He was one of the oldest and most eminent of the produce merchants of New York, his house ranking with the first in that branch of trade. Upon the announcement of his death, the Directors of the Produce Exchange Association convened a special meeting, and adopted a series of resolutions of appreciation and sympathy.

Jan. 3.—**HUGHES, JOHN**, Archbishop of New York. (*See HUGHES, JOHN, Archbishop.*)

Jan. 3.—**MAYER, CHARLES F.**, died in Baltimore, aged about 67 years. He was an eminent jurist, and held a high and honored position at the Baltimore bar, in the Court of Appeals at Annapolis, and in the United States Court at Washington.

Jan. 5.—**CAMP, Rev. AMZI**, died in New York City. He was for nearly thirty years in the employ of the American Tract Society as city missionary. His life was one of earnest, patient, self-denying labor among the neglected classes, in the performance of which he finally contracted the disease of which he died.

Jan. 7.—**LOOMIS, Rev. WILBUR FISK**, died of typhoid fever at Nashville, Tenn., aged 36 years. He was pastor of a congregational church in Shelburne Falls, Mass., but feeling a strong

desire to devote himself to the care of disabled soldiers in the hospitals, offered his resignation, which, however, his people refused to accept, but granted him a furlough. He at once entered the service of the Sanitary Commission, as hospital visitor and relief agent, laboring with the utmost faithfulness and devotion at Nashville, Murfreesboro', and Chattanooga, until prostrated by the disease which terminated his life.

Jan. 7.—**SMITH, Hon. CALEB BLOOD.** (*See SMITH, CALEB B.*)

Jan. 8.—**STORER, GEORGE H.**, Rear-Admiral in the United States Navy, died at Portsmouth, N. H., in the 75th year of his age. He was born in Portsmouth, obtained a midshipman's warrant in 1809, and served more than twenty-one years at sea and twenty years on shore. He was Governor of the Naval Asylum in 1855, and since that time had performed no active duty afloat. He had been for many years out of health, though continuing an active member of various Boards until a few days previous to his death.

Jan. 9.—**TOUSLEY, LORIN BAILEY**, died in Canandaigua, N. Y. He was born in Sharon, Vt., in 1804, but removed in childhood to Aurora, N. Y., where he early entered upon an active Christian life. In 1834 he was employed as a city missionary in Buffalo, and in 1842 became the agent of the American Sunday-school Union for Western New York. Wholly devoted to his work, he became widely known as "The Children's Minister." In 1858, while superintending the removal of a building, he was crushed by the falling of a heavy beam; and, from that time, though laid aside from active duty, and a victim of unutterable bodily agonies, served the cause by his pen.

Jan. 12.—**ROSE, Col. EDWIN**, died at Jamaica, L. I. He was born in Bridgehampton L. I., Feb. 14, 1817, graduated at West Point, but resigned his position in the army in 1837, to enter the service of the State of Michigan as civil engineer. He reentered the service in 1861, as Colonel of the 81st New York volunteers, and served with honor through the Peninsular campaign, when, his health becoming impaired, he accepted the appointment of Provost-marshal of the First Congressional district of New York. He twice represented Suffolk County in the Legislature.

Jan. 19.—**FOSTER, STEPHEN C.** (*See FOSTER, STEPHEN C.*)

Jan. 20.—**SAUNDERS, T. M.**, a captain in the United States Army, died at St. Paul, Minn. He was a native of Virginia. During the Crimean war he obtained a furlough and joined a British regiment. He was twice wounded at the battle of Inkerman. At the breaking out of the Rebellion he continued firm in the sup-

port of the Government; and, upon receiving an autograph letter from Jefferson Davis, enclosing a commission as a brigadier-general in the Confederate Army, he returned it with the utmost indignation.

Jan. 20.—WILEY, FREDERICK S., a clergyman of the Protestant Episcopal Church, died in Florence, Italy. He was formerly assistant-pastor of St. Anne's Church, Brooklyn. Subsequently he went to Philadelphia, and from thence returned to New York, where he was one of the ministers of Grace Church for a number of years.

Jan. 21.—TARBELL, DR. JOHN ADAMS, died in Boston, aged 53 years. He was a native of Boston; graduated at Harvard College, in the class of 1832; studied medicine with his uncle, Dr. Samuel Adams, of that city; and, in 1833, went to Paris, where he spent nearly two years in the study of his profession. He then returned to Boston, received his medical diploma from Bowdoin College in 1836, and entered at once into practice. In 1843 he turned his attention to the principles of Homœopathy, and soon after adopted that system of practice. In 1852 he became associate-editor of the "Quarterly Homœopathic Review," and also edited Epps's "Domestic Homœopathist." He published "The Pocket Homœopathist" (1849), and "Sources of Health" (1850).

Jan. 24.—MARON, CHARLES W., died in Alexandria, Egypt. He was born in Portsmouth, N. H., Dec. 15th, 1815; graduated at Harvard College in 1837, studied law, and settled in Portsmouth in the practice of his profession. He was at one time a representative in the New Hampshire Legislature, and was nominated by one of the political parties for the speakership. Subsequently he removed to the city of New York, and was engaged for a time as an editorial writer on the New York "Tribune," contributed to the New York "Times," and also wrote for the Boston "Courier," under the signature of "Pequot." His published travels in Madeira and Spain, and "Reminiscences of Congress," as well as brilliant essays in literature contributed to magazines and journals, gave him a creditable place in American literature. He was appointed United States Vice-Consul for Cairo, and was making a visit to Alexandria when he was seized with typhoid fever, which in a few days terminated fatally.

Jan. 26.—CLAY, JAMES B., died in Montreal, Canada. He was a son of the distinguished statesman, Henry Clay. In 1849 he was appointed by President Taylor *Chargé d'Affaires* to Lisbon, and in 1857 was elected from his father's district in Kentucky to the Congress of the United States. Soon after the commencement of the Rebellion he espoused the Confederate cause.

Jan. 27.—HITZ, JOHN, Swiss Consul-General, died at his residence in Washington, D. C. He emigrated to this country in 1831, and had held the office of Consul-General since 1853. At one time he occupied an important position in

the United States Arsenal, where he made the composition for the United States standard of weights and measures. He was also from time to time in the employ of different mining companies throughout the country as mineralogist. As a member of the German Relief Association he spent much of his time in the hospitals.

Jan. 28.—MEAD, DARIUS, M. D., died in Greenwich, Conn., aged 77 years. He graduated from Yale College in 1807, studied medicine in Philadelphia under Dr. Rush, and received his diploma in 1809. He practiced his profession for a few months in New York, but removed to Greenwich in 1810. In 1845 and in 1846 he represented his district in the Senate of Connecticut. As a man, he was stern in his integrity; as a citizen, loyal and patriotic; and as a Christian physician, was ever ready to minister to the spiritual as well as physical needs of his patients.

Jan. 29.—CHAMPLIN, STEPHEN G., brigadier-general of United States volunteers, died at Grand Rapids, Mich. He entered the service as Major of the 8d Michigan, was severely wounded at Fair Oaks, participated in the battles of Bull Run, Antietam, and Fredericksburg, and received his commission of brigadier in 1862. He was in command of the Grand Rapids camp of conscripts at the time of his death.

Jan. 31.—BORLAND, SOLOM, formerly a United States Senator from Arkansas, and brigadier-general in the Rebel Army, died in Texas. He was born in Virginia, educated in North Carolina, studied medicine, and settled in Little Rock, Ark., where he practiced his profession. He served in the Mexican War as major of volunteers and aide-de-camp, and was taken prisoner; was elected United States Senator 1849, and in 1858 appointed minister to Central America, where, in consequence of an altercation, he returned in 1854, and Graytown was bombarded by Com. Hollins in consequence of the insult offered him. He was afterwards appointed Governor of New Mexico, but declined. He was ardently in favor of Secession, and on the 24th of April, 1861, long before the secession of the State, raised a body of troops and captured Fort Smith, Ark., in the name of the Southern Confederacy.

Jan. 31.—GAMBLE, HAMILTON R., acting and provisional Governor of Missouri, died at Jefferson City, Mo. He had been an active member of the Constitutional Convention called in the winter of 1861, with the intent of carrying Missouri over to Secession, but which proved loyal and thwarted the designs of the Secessionists. When Claiborne F. Jackson, then Governor of the State, joined the Secession party and fled from Jefferson City before Gen. Lyon, the Convention was reassembled, and Mr. Gamble elected by it Provisional Governor, to serve out the remainder of Gov. Jackson's term. Though infirm in health, and naturally conservative in his views, Gov. Gam-

ble was heartily loyal; and, while his administration was not satisfactory to the ultra-radical party, he was very generally esteemed, and his death greatly lamented.

Jan. 31.—**HOPPIN, Hon. CHARLES A.**, died at Los Cruces, New Mexico. He was born in Providence, R. I., about 1820, and was a son of Gov. Hoppin of that city. For some time he had filled a Government appointment in New Mexico.

Jan. 31.—**LAWSON, L. M., M. D.**, a physician, and medical professor and author, died at Leavenworth, Kansas. He had been successively professor in the medical school of the University of Louisville, in that of Transylvania University, in the Cincinnati Medical College, and in the New Orleans Medical College. Transylvania University sent him to Europe in 1849 to investigate the progress of medical science in England, France, and Germany. He edited, from 1842 to 1850, the "Western Lancet," a medical periodical of decided ability. He also edited an American edition of "Hope's Anatomy," and published a treatise on pulmonary diseases, of high reputation among the profession. He removed to Kansas on account of a tendency to pulmonary disease.

Feb. 1.—**GODDARD, Hon. CHARLES BACKUS**, died in Zanesville, Ohio, aged 67 years. He was a native of Plainfield, Conn.; graduated at Yale College, in the class of 1814; studied law with his father, Hon. Calvin Goddard, in Norwich, and Judge Griswold, of Lyme; was admitted to the Connecticut bar, and in 1817 to the bar in Ohio, making his residence in Zanesville, where he continued in the practice of his profession until his death. He was twice elected to the House of Representatives of the State, and twice to the State Senate, and was Speaker of the latter during one term.

Feb. 1.—**BIBB, LOUIS**, died in Tippecanoe County, Indiana, at the advanced age of 107 years.

Feb. 1.—**STARK, CALER**, died in Dunbarton, N. H., aged 59 years. He was a native of New Hampshire, and grandson of General John Stark, of Revolutionary memory; graduated at Harvard College in the class of 1823; studied law in Litchfield, Conn., and afterwards in New York City, and from thence removed to Cincinnati and entered upon the practice of his profession. The climate proving unfavorable to his health, he returned to his native State and opened an office in Concord, and subsequently retired from public life and removed to Dunbarton. He was the author of a history of Dunbarton, and Memoirs of General John Stark.

Feb. 2.—**MEIER, Dr. KARL THEODORE**, died in New York City of congestion of the brain. He was born in Königsberg, Prussia, in 1810, and studied at the Universities of Greifswald, Jena, Göttingen, Halle, and Berlin. He was then for some years assistant physician to the renowned Dr. Dieffenbach, and published several essays on surgery. In 1848 he emigrated

to this country, on account of the unsatisfactory condition of Germany. In 1859 he was chosen surgeon of the Bellevue Hospital, and in the same year appointed a Professor of the New York Medical College.

Feb. 5.—**STAPLES, Rev. N. A.**, a Unitarian clergyman, died in Brooklyn, in the 84th year of his age. He was a native of Mendon, Mass.; studied theology at the Meadville Seminary, under Dr. Stebbins; was for a time pastor of a church in Lexington, Mass., and subsequently of a church in Milwaukie. At the beginning of the war he was appointed chaplain to one of the Wisconsin regiments, resigning his pastorate to accept the post. Here, as ever, he was earnest and faithful in the discharge of his duties, and contracted the disease which finally terminated in death. He succeeded the Rev. Mr. Longfellow in the Second Unitarian Church of Brooklyn, where he discharged his duties as a pastor as long as his failing strength allowed.

Feb. 6.—**MORTON, Hon. MARCUS, Sr. (See MORTON, MARCUS.)**

Feb. 8.—**ASCHWANDEN, Rev. JOSEPH**, died in Georgetown, D. C., aged 49 years. He was for many years pastor of Trinity Church, Georgetown, and alternately Professor of Theology, Philosophy, Scripture, and Hebrew in Georgetown College. He was doubtless one of the most erudite Greek and Hebrew scholars in the country.

Feb. 8.—**WILCOX, Hon. JOHN A.**, member of the Confederate Congress from Texas, died in Richmond.

Feb. 10.—**EMBURY, DANIEL**, President of the Atlantic Bank of Brooklyn, died in that city, in the 70th year of his age.

Feb. 11.—**BUTLER, Col. ALBERT J.**, died in New York City, of consumption, aged 49 years. He was an only brother of Major-General Butler.

Feb. 11.—**McCLUNEY, Commodore Wm. J.**, of the U. S. Navy, died at his residence in Brooklyn, of dropsy of the heart, in the 69th year of his age. He had been in the service of his country over half a century, having entered the navy Jan. 1, 1812. He participated both in the war of 1812 and the Mexican war; was commissioned as a lieutenant in 1818, and attached to the United brig *Saranac*; was detached the same year and ordered upon duty at the New York Navy Yard. In 1821 he served upon the *Dolphin*, and returning to New York in 1825, was subsequently ordered to the *Constellation* frigate for a two years' cruise in the West Indies and Gulf of Mexico. In 1832 he was again stationed at the N. Y. Navy Yard as lieutenant on board the Receiving ship at that place. In 1839 he was commissioned as a commander, and was employed on shore duty until 1846, when he was ordered to command the *John Adams* sloop. In 1850 he was placed in command of the Naval Rendezvous at New York, until ordered a few months later to the Navy Yard at Washington. Receiving his commission as captain in 1851, he was de-

tached from that station, and in 1853 was ordered to command the *Powhatan*, of Commodore Perry's Japan Expedition. He returned to the United States in February, 1856, and after a brief respite was ordered to New York on duty as general supervisor of the construction of the war steamer known as the "Stevens' Battery." In 1858 he was placed in command of the Home Squadron, which position he held until May, 1860. He was commissioned a Commodore July 16th, 1862, and being too feeble for further service, was placed upon the retired list.

Feb. 12.—COOKE, REV. PARSONS, D. D. (See COOKE, PARSONS.)

Feb. 12.—CRANSTON, HON. HENRY Y., died at his residence in Newport, R. I., aged 74 years. He was a native of that city. After studying the profession of law, he held the office of Clerk of the Court of Common Pleas from 1818 to 1833. He took a part in the conventions called for framing a constitution for the State of Rhode Island; was a member of the House of Representatives of Rhode Island from 1827 to 1843, and was repeatedly elected Speaker. From 1843 to 1847 he was a representative in Congress.

Feb. 13.—BULLIONS, REV. PETER, D. D. (See BULLIONS, PETER.)

Feb. 15.—KELLEY, HANNAH, died at Cross Creek Township, Washington County, aged 108 years. She is believed to have been the last slave in Pennsylvania.

Feb. 15.—RAMSAY, Capt. ALLAN, of the United States Marine Corps, died at the headquarters of the Marine Corps, of small-pox. He was a son of Commodore William Ramsay, U. S. N., and was on the *Richmond* during all her service on the Mississippi, before and after running past the batteries. He had been in fifteen engagements during the war.

Feb. 16.—DUNCAN, Brigadier-General WILLIAM, died in Philadelphia, at the advanced age of 92 years. He was born and educated in Adams County, Pa., and in early youth removed to Philadelphia, where he entered into mercantile pursuits. In the war of 1812 he was Superintendent of the United States Military Stores, and stationed at the Arsenal in Philadelphia. He was one of Governor Snyder's special aids, and commanded a brigade at Camp Dupont, near Wilmington, Del., when Philadelphia was threatened by the approach of the British, before their defeat under Lord Ross at Baltimore. General Duncan was for many years a member of the Legislature of his native State, and in 1829 was commissioned by President Jackson as Surveyor of the Customs for the port of Philadelphia, a post which he held during the two terms of that administration. He was throughout his long life conspicuous for his sterling integrity, purity of character, and energy of purpose.

Feb. 17.—PACKARD, REV. CHARLES, a clergyman of the Congregational denomination, died at Biddeford, Me. He was born in Chelms-

ford, Mass., April, 1801; graduated at Bowdoin College in the class of 1817, being but sixteen years of age, engaged in teaching, for a time, and subsequently studied law, finishing his course with Hon. Benjamin Orr, of Brunswick, Me., where he opened an office and practiced successfully for eleven years. Having been led to consecrate himself to a higher service, he abandoned the law and devoted himself to the ministry of the gospel. He pursued his theological studies at Andover, Mass., and at Lane Seminary, Ohio. In the ministry he labored successfully at Hamilton, Ohio, until the ill health of his family compelled removal; then at Lancaster, Mass., seventeen years; at Cambridge Parish, North Middleborough; and for the five years preceding his death, at Biddeford. He was an earnest and devoted minister of the gospel, and a fearless, uncompromising advocate of schemes and measures relating to popular education, public morals, and the welfare of mankind.

Feb. 18.—BARNARD, THEODORE, correspondent of the Associated Press with the Army of the Potomac, died at headquarters, Washington.

Feb. 18.—WARD, ANDREW HENSHAW, died in Newtonville, Mass., aged 79 years. He was born in Shrewsbury, Mass.; graduated at Harvard College in the class of 1808; studied law, and was admitted to the bar in Northampton, Mass., September, 1811. He then returned to his native town and entered upon the practice of his profession. In May, 1827, he received an appointment in the custom-house and removed to Boston. This position he filled for many years, and in May, 1853, accepted a seat in the Convention for revising the Constitution of Massachusetts, to which he had been elected a delegate from Newton. In 1837 he was appointed United States Commissioner of Insolvency for the district of Massachusetts, and held that office for nine years. He was an early member of the New England Historic-Genealogical Society, to which he rendered much valuable aid by his contributions in history and geology to the pages of its periodical. His principal publications were "A History of the town of Shrewsbury and of its People, from its first settlement in 1718," published in 1847; "A Genealogy of the Ward Family," and a "Genealogy of the Rice Family."

Feb. 19.—NEWELL, GEORGE W., died at Albany. He was Canal Auditor in 1851-'2, and at the time of his death was engaged in preparing a biography of Gov. Marcy.

Feb. 19.—WILLET, JAMES C., ex-Sheriff of New York, died at Tubby Hook, N. Y., aged 54 years.

Feb. 20.—BOULIGNY, HON. JOHN EDMOND, died in Washington of consumption. He was born in New Orleans, La., Feb. 5th, 1824. He occupied several important public positions in his native city, and represented the first Congressional district of Louisiana in the thirty-

sixth Congress of the United States. An opponent of the tenets of secession, he maintained from personal conviction, and as the advocate of his constituents, an unalterable loyalty to the oath he had taken to maintain the Union and preserve the Constitution. He was a happy example of that union of decision of opinion and firmness of purpose, in public station, with the amenity of disposition which constitutes one of the greatest charms of private life.

Feb. 20.—PHENIX, Commander DAWSON, U. S. N., died in Philadelphia, aged 86 years. He entered the naval service in 1841, having been appointed from Maryland, his native State. His first orders were to join the *Independence*, then attached to the Home Squadron. Subsequently he served on board the frigate *Savannah*, of the Pacific Squadron, and during a cruise of the *Brandywine*, also upon the steamer *Princeton*. In July, 1847, he was ordered to the naval school for promotion; was a passed midshipman in 1848, and the following year was ordered upon the Coast Survey, where he remained until July, 1850, when he was ordered to the *Raritan*, but was transferred to the sloop *St. Mary's*. In 1852 he was detached from that vessel and ordered to the Observatory at Washington, where he remained until October, 1853, when he was sent to the receiving ship *Philadelphia*, and again to Coast Survey duty. In Sept., 1855, he was promoted to a lieutenantcy, and afterwards served upon the *Fredonia* and the *Lancaster*. In 1861 he was promoted to be lieutenant commander, and ordered to ordnance duty at Old Point Comfort, Va. A few months previous to his death he was assigned to the command of the gunboat *Pocahontas*.

Feb. 21.—TRUE, GEORGE, U. S. Consul at Madeira, died at Funchal.

Feb. 21.—WHELPLEY, EDWARD W., Chief Justice of the Supreme Court of N. J., died at Morristown, aged 46 years. He commenced the practice of law in 1839, and soon rose to eminence in his profession. In 1858 he was appointed Associate Justice of the Supreme Court of the State, and in 1861 Chief Justice. In 1848 he was a member, and in 1849 Speaker of the Assembly.

Feb. 21.—WILLIAMS, AUSTIN B., died at the Hydropathic Institution, New York, aged 31 years. He was a native of Exeter, N. H., and had been for twelve years a printer upon the New York "Times." He was the heaviest man in the city, his weight being 420 pounds.

Feb. 22.—FRIBLEY, Col. of the 8th U. S. volunteers (colored), was killed at Olustee, Florida, aged 28 years. He enlisted at the commencement of the war as a private in the 84th Pennsylvania, and rose to his position through good conduct and courage alone.

Feb. 23.—DEWEY, Hon. JOSHUA, died at Watertown, Jefferson County, N. Y., aged 97 years. He was born in Lebanon, Conn., graduated at Yale College in 1787, and devoted his

attention to agricultural pursuits until 1798, when he was elected to the Legislature, where he served three consecutive terms. The following year he was commissioned by President John Adams as Inspector and Collector of the Internal Revenue. In 1809 he was sheriff of St. Lawrence. In the war of 1812 he enlisted as a volunteer to repel the British attack upon the frontier.

Feb. 24.—TOWN, SALEM, LL.D., died at Greencastle, Indiana, aged 85 years. He was a native of Belchertown, Mass., born March 5th, 1779, but soon after attaining manhood removed to the State of New York, where he resided during the remainder of his life. He early commenced teaching, a profession which he followed for about forty years. He was led by his experience as a teacher to prepare a series of text-books for the use of schools, which, with their various revisions, have had an immense sale in all parts of the United States. He was a member, at one time, of the State Senate, and, we believe, also of the Constitutional Convention. His residence was at Aurora, N. Y., but he was on a visit to Indiana at the time of his death.

Feb. 24.—TUDOR, FREDERICK, an enterprising merchant of New England, died at Boston, aged 80 years. He was the first exporter of ice to the tropics, commencing, in 1805, by the shipment of a cargo of 180 tons to the island of Martinique.

Feb. 25.—RANDALL, Maj.-Gen., New York State Militia, died in Buffalo, of disease of the brain.

Feb. 26.—HARRISON, Mrs. WILLIAM HENRY, widow of President Harrison, died at North Bend, Ohio. She was a daughter of John Cleves Symmes, the original purchaser of the Miami Country, and was married to Capt. Harrison, who commanded Fort Washington, soon after the departure of Gen. Wayne for the Atlantic States, about the year 1796. She was with her husband as he passed through all the gradations of civil and military life, as Captain, General, Commander-in-Chief, Member of Congress, Senator, Governor, and President, but through all these changes quietly pursued the humble, discreet, self-denying offices of a Christian woman.

Feb. 26.—McLANE, Rev. JAMES W., D.D., a clergyman of the Presbyterian Church, died in Brooklyn (E. D.), N. Y. He was born in Charlotte, North Carolina, May 22, 1801, came north in 1819, entered Phillips Academy, Andover, Mass., and graduated from Yale College in 1827. He taught in New London and at Phillips Academy, Andover, and in 1835 graduated at the Theological Seminary at Andover. He was for eight years pastor of the Madison Street Presbyterian Church in New York City, and in 1845 accepted a call to the First Presbyterian Church in Williamsburgh, where he remained as pastor until December, 1863, when, at his own request, on account of failing health, he was relieved of his charge. He was long a di-

rector of the American Bible Society, and rendered valuable service in correcting and preparing the present standard edition of the Bible published by that society; was a director of the Union Theological Seminary of New York, and Secretary of the Church Erection Fund of the Presbyterian Church of the United States. Dr. McLane was a fine classical scholar, a well-read theologian, and an active, earnest, Christian man.

Feb. 27.—GEORGE, PAUL R., of New Hampshire, died in Boston. Under John Tyler's administration he was Navy Agent in New York. After his removal from office he returned to New Hampshire, and took an active part in politics there. At the commencement of the present war he took decided ground in favor of the South, and continued in a position of determined hostility to the administration till his death.

Feb. 27.—HITCHCOCK, EDWARD, D.D., LL.D. (See HITCHCOCK, EDWARD.)

Feb. 29.—TILESTON, THOMAS, a New York merchant, died in that city. He was born in Boston, Mass., April 13, 1796. At the age of 13 he apprenticed himself to a printer in his native city, and subsequently became a partner in the firm. In 1818 he formed a business relation with Mr. Spofford, then of Haverhill, for the sale of boots and shoes. In 1822 the firm became the agents of the Boston and New York line of packets, afterwards extending this enterprise to the South American and Cuba trade. In 1850 Mr. Tileston became the owner of a popular line of packet ships between New York and Liverpool. In 1840 he was elected President of the Phoenix Bank, New York, which position he held until his death. He was also chairman of the Clearing-House Association, and for many years was a leading spirit in the Atlantic Insurance Company. He was widely known and highly appreciated.

March 1.—KETCHUM JOSEPH, Sen., died at his residence in Brooklyn, aged 82 years. He was one of the oldest merchants in the produce trade in New York. On the organization of the old Corn Exchange, in 1853, he was chosen President, and was subsequently elected President of the Corn Exchange Insurance Company.

March 1.—RAY, WM. PORTER, Ph.D., died of malignant small-pox at the hospital at Portsmouth, Va., aged about 40 years. He was a native of Massachusetts, and a pupil of Maj.-Gen. Butler when the latter was a schoolmaster; graduated at Harvard College, and subsequently studied at the University of Heidelberg, Germany, from which he received the degree of Doctor of Philosophy. Upon the completion of his studies he undertook a journey over the various countries of Europe on foot, his travels in this way being perhaps more extensive than those of any other man living. He returned to his native country and studied for the ministry of the Episcopal Church, upon the

duties of which he entered in Indianapolis. He subsequently removed to New York City and devoted his attention to literature. After the capture of Norfolk he went thither and engaged in various journalistic enterprises, and latterly was a correspondent of the New York "Times" under the signature of "Tewksbury."

March 4.—APPLETON, JOHN JAMES, died at Rennes, France, aged 71 years. He was a son of Mr. John Appleton, who was for several years United States Consul at Calais; was a native of France, but came to this country when a youth; was fitted for college in Andover, Mass., and graduated at Harvard in the class of 1818. During the Administration of President Monroe he was appointed Secretary of Legation at Brazil. Subsequently he was appointed Chargé d'Affaires for the United States at Madrid and Stockholm, at which latter city he negotiated the treaty of commerce which still serves as the basis of the relations between North America and Sweden. He also held a similar situation at Naples. Coming into the possession of a valuable estate in France which required attention, he returned to that country, where, with the exception of two or three visits to the United States, he spent the remainder of his days.

March 4.—DAHLGREN, Col. ULRIC. (See DAHLGREN, Col. ULRIC.)

March 4.—KING, Rev. THOMAS STARR. (See KING, Rev. THOMAS STARR.)

March 6.—BUEL, Hon. NORTON J., died in New Haven, Conn., aged 51 years. He was a native of Salisbury, Conn., studied in the famous Litchfield Law School, and in the offices of Judge Seymour and Gen. Sedgwick, and commenced practice in 1835 in his native town. From thence he removed to Naugatuck, and afterwards to Waterbury, where most of his professional life was spent, and where he acquired his reputation as a leading lawyer of the State. While in Waterbury, he was on several occasions elected to the House of Representatives and the State Senate, and also held for several years the office of Judge of Probate. A few months previous to his death he removed to New Haven, where he was warmly welcomed as a valuable accession to the legal talent of the city.

March 7.—GILBERT, Hon. RALPH, died at Hebron, Conn., in the 74th year of his age. He was a native of Hebron, graduated at Brown University, and after the necessary course of study entered upon the practice of law. He was at one time a member of the State Senate.

March 7.—MARTIN, Rev. C. F., an American Congregational clergyman, died at Nashville, Tenn., aged 87 years. He was a native of Illinois, a graduate of Knox College, Galesburg, Ill., taught in an academy at Lisbon, Ill., for four years, entered Union Theological Seminary, N. Y., and after a three years' course there, was sent by the American Missionary Association as a missionary to the Copts in Egypt.

After three years' service he was compelled to return home on account of ill health. On recovering he became pastor of the Congregational Church in Peru, Ill., where he remained till the autumn of 1863, when he was appointed associate secretary of the western branch of the American Tract Society, and almost immediately went to Chattanooga to look after the religious interests of the soldiers. In January he was taken ill, and died after two months' sickness.

March 8.—PERIT, PELATIAH. (See PERIT, PELATIAH.)

March 9.—SCOTT, OTHO, died in Baltimore, Md. He was a native of Harford County, Md. As a lawyer and statesman he had no superior in Maryland. In the former capacity he was appointed one of the commissioners to codify the State laws, and in the latter, filled many important public trusts.

March 9.—STRONG, HON. MARSHALL M., died at Racine, Wis., aged 50 years. He was a native of Amherst, Mass., where he spent his early years at the academy and college of that place, but completed his collegiate course and graduated at Union College, Schenectady, N. Y. He then entered upon the study of law at Troy, and was there admitted to the bar. In June, 1836, he removed to Racine County, Wis., and in 1838 was elected a member of the Territorial Council, and was one of a committee of three from that body to revise the laws of the territory. In 1846 he was elected a member of the House of Representatives, and while in the discharge of his duties in that position was called to mourn over the loss of his family by fire. In 1848 he was again elected to the Legislature, took an active part in the revision of the present statutes of the State, and soon after retired from political life. He was a large contributor to the establishment of the Racine College, and was always forward in enterprises for the public good.

March 11.—MIHOLOTZI, COL. GEZA, died at Chattanooga from the effects of a wound received at Buzzard Roost. He was born in Pesth, Hungary, received a military education, and took part in the Hungarian revolution of 1848-'9; came to this country in 1850, settled in Chicago, and commenced the study of medicine under Dr. Valenta of that city. At the outbreak of the rebellion he raised a company for the three months' service, and was elected Captain. In November, 1861, he was elected Lieutenant-Colonel of the 24th Illinois volunteers (infantry), and on the resignation of Col. Hecker, became Colonel of that regiment. He served in several important battles, and as a regimental commander stood very high in the estimation of his military superiors.

March 13.—COZZENS, WM. B., died suddenly at West Point, N. Y., aged 77 years. He was a native of Newport, R. I., was for ten years proprietor of the American Hotel in New York City, and subsequently opened the hotel at West Point which is identified with his name.

He was particularly well known to the officers of our army and navy.

March 15.—CHAPMAN, HIRAM, died at Augusta, Me. He was at one time President of the State Senate, and for many years occupied a prominent position in his native State.

March 15.—KENNEDY, STEWART, M. D., surgeon in the United States Navy, died in Philadelphia, aged 81 years. He was born at Easton, Pa.; graduated at Jefferson College in 1854, and the following spring was appointed to the navy. Not being assigned immediately to duty he joined a merchant vessel, but hearing of the ravages of yellow fever at Norfolk and Portsmouth, he volunteered for service there, and was soon prostrated by the disease. On his recovery he joined the Preble, and participated in the battle between the rebel navy and the blockading squadron at the mouth of the Mississippi. At the capture of New Orleans he was on the Hartford, and was especially commended in the official report of that battle. In the summer of 1863 he was again ordered to the Gulf on board the Ticonderoga, and was with her until she returned to the Philadelphia navy yard for repairs.

March 15.—MOORE, GEORGE W., died in Portland, Me., aged about 40 years. He was a native of Sears Mount, Me.; in early life was a practical printer, and subsequently editor and proprietor of "The Republican Journal," Belfast, and for a time Deputy Collector at Camden. At the time of his death he was chief editor of the Portland "Advertiser."

March 16.—BADEAU, PETER, died in New York City in the 89th year of his age. He was probably the oldest Sunday School teacher in the United States, if not in the world, and had been actively engaged in teaching since the first formation of Sunday Schools in New York.

March 19.—BACHE, FRANKLIN, M. D. (See BACHE FRANKLIN.)

March 19.—FLINT, JOSHUA BARKER, M. D., died in Louisville, Ky., aged 62 years. He was a native of Cohasset, Mass., and a son of Rev. Jacob Flint; pursued his early studies under his father's instruction, and graduated at Harvard College in 1820. Soon after graduating he was chosen Usher in the English Classical School in Boston, of which George B. Emerson was the Principal, and continued there two years, after which he began the study of medicine. In 1825 he received the degree of M. D., and entered upon the practice of his profession in Boston, where he remained twelve years. In 1837 he was called to the chair of surgery in the Louisville Medical Institute, then just organized. In 1849, upon the establishment of a new medical school, called the "Kentucky School of Medicine," at Louisville, Dr. Flint was appointed Professor of the Principles and Practice of Surgery in the institution, and continued in that position until his death. While a resident in Boston Dr. F. was several times elected to the State Legislature.

March 19.—MERIAM EBEN. (See MERIAM EBEN.)

March 20.—DE CHARMS, RICHARD, died in Philadelphia, aged 67 years. He was a native of Philadelphia, was in early life a printer, graduated at Yale College in the class of 1826, and the year previous engaged in the study of Swedenborgian theology under Thomas Worcester, D. D., at the same time superintending the publication of the "New Jerusalem Magazine." His theological studies were continued in Baltimore with Rev. John Hargrove, and his first sermon on the "Paramount Importance of Spiritual Things," was published at that place in 1828, and was afterwards reprinted in London. After a year of pastoral labor in Bedford, Penn., he went to London and studied under Rev. Samuel Noble. On returning to this country in 1832, he became pastor of the First New Jerusalem Church in Cincinnati, and conducted a periodical called "The Precursor." He subsequently preached in Philadelphia, Baltimore, and New York. In his later days he devoted much attention to various mechanical contrivances and inventions of his own. He was the author of "Sermons illustrating the Doctrine of the Lord," "Series of Lectures delivered at Charleston, S. C." "The New Churchman," and "Freedom and Slavery in the Light of the New Jerusalem."

March 22.—COXE, JOHN REDMAN, M. D., died in Philadelphia, aged 91 years. He was a native of Trenton, N. J., was educated in Philadelphia, but completed his classical course in Scotland, returned to America in 1790, studied medicine with Dr. Rush, and after receiving his diploma in 1794, again went to Europe, studying at London, Paris, and Edinburgh. In 1796 he settled at Philadelphia, and in 1798, during the visitation of yellow fever, was appointed by the Board of Health Physician to the Port. He was for several years one of the physicians of the Pennsylvania Hospital, and also of the Philadelphia Dispensary. In 1809 he was elected Professor of Chemistry in the University of Pennsylvania, from which chair he was transferred, in 1818, to that of Materia Medica and Pharmacy, which he held until 1835. Dr. Coxe was the first to introduce the practice of vaccination in Philadelphia. Although he attained to so great an age, Dr. Coxe never had a sick day in his life, and died without any appreciable disease.

March 22.—GARDINER, HON. ROBERT HALLOWELL, died in Gardiner, Me., aged 82 years. He was a native of Bristol, England, and a grandson of Dr. Gardiner, one of the proprietors of the Kennebec purchase. In 1792 the subject of this notice came to this country, fitted for college in the Boston Latin School, and graduated from Harvard College in the class of 1801, having the salutatory oration assigned to him at commencement. After graduating he spent sixteen months in foreign travel, and in 1803 returned and settled upon his estate, devoting much of his time thenceforward to its

improvement and to the benefit of the town which bears his name. A church, a lyceum, and a public library owe their existence to him. He was an active member of the Maine Historical Society, and was its president from 1846 to 1855. He was also a corresponding member of the Massachusetts Historical Society.

March 23.—VAN RENSSELAER, COL. HENRY, Inspector-General of the United States Army, died in Cincinnati, aged about 53 years. He was a son of the late Stephen Van Rensselaer, graduated from the Academy at West Point in 1831, but soon after resigned his connection with the army, married a daughter of the Hon. John A. King, of Jamaica, L. I., and went to take possession of a patrimonial landed estate in St. Lawrence County. In 1841 he was elected a member of the House of Representatives from his district, and served through the three sessions of the 27th Congress. For some years past he had resided in Cincinnati, but upon the breaking out of the rebellion offered his services to his country, and was made by Gen. Scott chief of staff, with the rank of brigadier-general. Upon the retirement of Gen. Scott, the subject of this notice was made inspector-general in the regular army, with the rank of colonel, and continued in the faithful discharge of the duties of his post until a few days prior to his death.

March 25.—DAVENPORT, W. W., died in Boston, aged 100 years.

March 25.—JANVIER, REV. LEVI, a missionary of the Presbyterian Board of Missions, was murdered by a fanatic Sikh at Mela, in Lodiana, Northern India. He was born at Pittsgrove, N. J., April 25, 1816. His early studies were pursued under the instruction of his father, who was a Presbyterian clergyman. He subsequently entered Lafayette College, Easton, Pa., and studied for awhile at Lawrenceville, and then entered the junior class of Princeton College, where he graduated in 1837 as salutatorian of his class. Having united with the Presbyterian Church, and decided to prepare for the ministry, he entered the Theological Seminary at Princeton, and while a student there offered himself to the Board of Missions as a missionary to Lodiana. He sailed for India, accompanied by his wife, in September, 1841, and reached his destination in the spring of 1842. During his voyage he had commenced the study of the Urdu language, which is largely spoken in Lodiana; and possessing a remarkable facility for acquiring languages, he was able to preach in it soon after his arrival, and a few months later to translate some tracts and books into it. He next acquired a thorough familiarity with the Panjabi language, and with the aid of Dr. Newton, of the same mission, undertook the preparation of a Panjabi Dictionary, which was completed in 1854. It is a quarto volume of 438 pages, in three columns. He continued his labors as a preacher and translator up to the time of his death. He had gone to Mela to preach and distribute tracts, and in the evening was met by the

fanatic Akali Sikh, and without the slightest provocation felled to the ground with a club. He lingered till morning, but was insensible. The murderer was arrested, tried, and hanged.

March 25.—LOVEJOY, Hon. OWEN. (*See LOVEJOY, OWEN.*)

March 26.—GOODERSON, MATHIAS, N., died in New York, aged 44 years. He was a native of Philadelphia, but early in life moved to New York City, was a prominent politician, and from a position in the Custom House was appointed Commissioner of Repairs and Supplies, and afterwards Superintendent of Markets.

March 26.—MARMADUCE, M. M., died in Saline County, Missouri, aged 78 years. He was formerly Lieutenant-Governor and *ex-officio* Governor of Missouri, was a thoroughly upright and loyal man, though his three sons espoused the Confederate cause.

March 26.—WOOD, FRANK, died at Haverstraw. Though but a young man he had already made his mark in literature, having been the editor of "Vanity Fair" for a considerable period, and afterwards the dramatic critic of "Wilkes' Spirit of the Times." He assisted also in the authorship of "The Taming of a Butterfly."

March 27.—CAMPBELL, JOHN N., D.D. (*See CAMPBELL, J. N.*)

March 27.—SCHENKL, JOHN P., the inventor of the *Schenkl* projectile, died in Nuremberg, Germany, whither he had gone for his health. He was a native of Prussia, but had resided many years in the United States. His age was about 42 years.

April 2.—CROMWELL, HENRY BOWMAN, died at his residence in Brooklyn, L. I., aged 86 years. At an early age he exhibited peculiar mercantile abilities, being a member of the firm of Cromwell, Haight & Co., before he was twenty years of age. In 1850 he took a partnership in the firm of John Haight & Co., in Huddersfield, England, a large and prominent commission house, and resided there until 1854, when he returned to his native city, and soon entered into the shipping business, running a line of screw propellers in connection with the Baltimore and Ohio Railroad, his business increasing until he had connection with nearly all the important domestic seacoast ports. During the few years previous to 1861, he had in successful operation steam lines from New York to Savannah, Charleston, Wilmington, Norfolk, Alexandria, and Washington, Portland, and Baltimore; also from Baltimore to Charleston and Savannah, which connected with all the principal railroad lines leading from the seaboard into the interior. When the war broke out he sold nearly all his vessels to the Government, and immediately proceeded with the construction of two fine steamers, the *George Washington* and *Oliver Cromwell*, which for the last two years have been plying between New York and New Orleans. Although Mr. Cromwell's commercial interests were so largely connected with the South, he

was a true patriot, and firmly upheld the cause of the Government.

April 2.—TAYLOR, Hon. JOSEPH N., died at his residence in Paterson, N. J., of congestion of the brain. At the time of his death he was Speaker of the New Jersey House of Assembly.

April 8.—BANKS, Hon. JOHN, died at Pittsburgh, Pa., aged 71 years of age. He was born in Juniata County of that State, his father being a Scottish immigrant to this country; in 1819 was admitted to the bar in his native county, and soon after removed to the western part of the State, where he speedily attained to eminence in his profession. Fourteen years afterwards he was sent to Congress, where his opinions, legal and otherwise, always commanded respect. In 1836 he was appointed President Judge of the Third Judicial District of the State. In 1841 he was the Whig candidate for governor, but was unsuccessful, and in 1847 he became State treasurer, retiring from the bench and returning to the bar, where he continued in a large and lucrative practice until his death.

April 4.—DEVLIN, HENRY J., M.D., died in New York City of typhus fever contracted in the discharge of his duties as one of the resident physicians of Bellevue Hospital. He was a young man of great promise and decided moral worth.

April 4.—RINGGOLD, Lieut.-Col. GEORGE H., an officer of the United States Army, died at San Francisco, California, aged 50 years. He was a native of Hagerstown, Maryland, graduated at West Point Military Academy, July, 1833, as brevet second lieutenant in the 6th infantry, but resigned in 1837. During the Mexican war he was reappointed to the army as major and paymaster, and in 1862 was promoted to deputy paymaster-general, with the rank of lieutenant-colonel. He was truly loyal to his country; and although of southern birth, firmly withstood all influences exerted to draw him from her allegiance. As a scholar he was endowed with rare attainments, was possessed of a decided poetic talent, an accomplished draughtsman, and amateur painter. He was the author of a book of poems, entitled "Fountain Rock, Amy Weir, and other Metrical Pastimes," published in 1868, and dedicated "To my Children."

April 8.—BRANDGEE, JOHN JACOB, D.D., a clergyman of the Episcopal Church, died in Utica, N. Y., aged 41 years. He was a native of New London, Conn., graduated at Yale College in 1843, pursued a course of study in the General Theological Seminary in New York, and was ordained deacon by Bishop Brownell, in Hartford, July, 1846. The following autumn he accompanied an invalid brother to the West Indies, and for a time was associated with one of the ministers of the English Church in St. Croix in his pastoral work. Thence he went to St. Thomas, where he labored awhile, and upon his return to this country in 1849, was ordained priest, and became rector of St.

Michael's Parish, Litchfield, Conn. In 1854 he became rector of Grace Church, Utica, N. Y., where, also, a church was erected under his auspices. The honorary degree of D. D. was conferred on him by Hobart and Hamilton Colleges in 1863.

April 6.—CLAY, MRS. LUORETIA HART, widow of Henry Clay, died at the residence of her son, John M. Clay, near Lexington, Kentucky, aged 83 years. She was a devoted wife, a faithful mother, and an earnest, active, and self-sacrificing Christian.

April 6.—DRINKER, W. WALN, died suddenly at Albany, N. Y., in the 64th year of his age. He was formerly a police magistrate of New York City. He was engaged in an argument before one of the Committees in the Capitol, and while stooping to read from a document, fell dead upon the floor.

April 6.—KIRKLAND, MRS. CAROLINE M. (See KIRKLAND, C. M.)

April 8.—KITTRIDGE, JONATHAN, died at his residence in Concord, N. H., aged 65 years. He was one of the earliest pioneers in the temperance cause, and his lectures and essays, in the infancy of that movement, contributed greatly to its success.

April 9.—MOUTON, ALEXANDER, a major-general of the rebel army, formerly acting Governor of Louisiana, and for some years a Senator from that State in Congress. He was killed near Mansfield, La., in the severe battle between the Union troops under Gen. A. J. Smith, and the rebels, during the Red River expedition.

April 9.—PARSONS, M. M., a brigadier-general in the rebel army from Missouri, killed in the battle near Mansfield, La.

April 10.—RIVES, JOHN C. (See RIVES, J. C.)

April 10.—TAGGART, THOMAS, an eminent jurist of Pennsylvania, died at Lycoming, Pa., aged 84 years.

April 10.—THAYER, WILLIAM SIDNEY, United States Consul General to Egypt, died in Alexandria, Egypt. He was born in Haverhill, Mass., 1830, graduated at Harvard University in 1850, delivering the commencement poem on that occasion; and after engaging in literary pursuits in Boston, became in 1852 an attaché to the New York "Evening Post," with which journal he remained connected until his appointment in 1861 as consul general. For several years he was the Washington correspondent of the "Post," and in that capacity exhibited a sagacity and ripened judgment rarely seen in so young a man, and which gained him the esteem of eminent men of all political parties. It may be doubted whether any contemporary journalist of his age possessed so many influential friends in political or social life. By Mr. Seward and Mr. Sumner he was held in special regard; and during the illness of the latter, in consequence of the assault of Preston S. Brooks, Mr. Thayer spent many hours of each day with him, and was entrusted with the delicate task of reading and an-

swering his correspondence. During the latter part of his connection with the "Evening Post," he performed, with rare tact and skill, the duties of associate editor. His own contributions were written with great perspicuity of style and knowledge of his subject, and not unfrequently were pervaded by a pleasant vein of humor, which formed a marked feature in his conversation. Ill health finally compelled him to desist from editorial labors to seek a more genial climate. His appointment to Egypt, it was hoped, would enable him to recruit his health, and at the same time to serve the country in a useful public capacity. Although the field was of limited extent for the display of diplomatic ability, it was the opinion of the Department of State that he was one of the most useful and successful of our representatives abroad. The manner in which he interposed in favor of Faria, a Christian missionary, and secured the punishment of his enemies, showed the energy and address of a practiced diplomatist. His health, however, was too shattered to enable him to derive much benefit from his residence in Egypt, and he gradually sank under the pulmonary disease which affected him, his death being accelerated by official labors, from which he could not be persuaded to desist.

April 10.—TICKNOR, WILLIAM D., an eminent publisher of Boston, died at the Continental Hotel, Philadelphia. He was born in Lebanon, New Hampshire, in 1811, and entered a broker's office in Boston, Mass., at the age of 15, and accumulated considerable property by the time he was 21. Subsequently he was for two years a bank teller, and then entered upon the bookselling and publishing business, in which he continued till his death. He early formed the acquaintance and became the publisher of some of the most eminent of the poets of Boston and its vicinity, and his editions of the poems and prose works of Longfellow, Lowell, Holmes, Whittier, and Saxe, as well as Tennyson, Leigh Hunt, Massey, Dobell, Bulwer, and other English poets, and of De Quincey, Sir Walter Scott, Dickens, Kingsley, Hawthorne, Holmes, and other eminent English and American novelists and essayists, had established for his house a high reputation on both sides of the Atlantic. The house of which he was the head established also some years since the "Atlantic Monthly," so well known as a magazine of high character and extensive circulation.

April 11.—WILLARD, HON. JUSTICE, died in Springfield, Mass., aged 74 years. He was a native of Greenfield, Mass., graduated at Dartmouth College in 1811, studied law in his native town, and soon after completing his studies settled in Springfield, where for half a century he manifested an active interest in all its public affairs. In 1815 he was appointed Deputy United States Collector of internal revenue, and subsequently was for several years a member of the Legislature—first of the

House, and then of the Senate. In 1829 he was appointed Register of the Court of Probate for Hampden County, which position he held for over twenty years. From 1820 to 1822 he edited the Hampden "Patriot," afterwards succeeded by the "Republican." Throughout his life he was a frequent contributor to the newspaper press, and on every variety of subject.

April 12.—GREEN —, a brigadier-general in the rebel army, from Louisiana; mortally wounded in the battle of Pleasant Hill, La.

April 18.—LOVETT, A. A., died in New York city. He was the Superintendent of the People's Telegraph Line, and it was under his active supervision and direction that the line was built and put into operation.

April 16.—BLANCHARD, THOS. (See BLANCHARD THOMAS.)

April 16.—OAHILL, J. A., was killed by the explosion of the United States gunboat Chenango, of which he was acting chief engineer.

April 16.—MURRAY, ALBERT, was killed by the explosion of the United States gunboat Chenango, of which he was assistant engineer.

April 16.—ROOT, FRANK P., was killed by the explosion of the United States gunboat Chenango, of which he was assistant engineer.

April 17.—GILDER, REV. WILLIAM H., Chaplain of the 40th New York regiment, died of small-pox at Oulpepper, Va., aged 52 years. He was educated in the Wesleyan University, at Middletown, Conn., joined the Philadelphia Conference in 1838, and after preaching for several years in New Jersey, returned on account of failing health to Philadelphia, where he edited the "Christian Repository." He was for seventeen years engaged in the work of education: first as Principal of the Female Institute at Bordentown, N. J., and afterwards as President of Flushing Female College, L. I. In 1859 he resumed preaching, and in 1862 accepted a chaplaincy in the army, following his charge to every battle, until prostrated by disease terminating in his death.

April 18.—TRACY, HENRY, died in Hancock County, Tenn., aged 46 years. He was probably the heaviest man living, his weight being 600 pounds.

April 19.—ANDREWS, Capt. WILLIAM B., died at Sacramento City, Cal. He was a native of Charlestown, Mass., but emigrated to California in 1849. Happening to be in San Francisco when that city was held in terror by a lawless band of ruffians, and a Vigilance Committee was organized in consequence, he volunteered to go with two selected men and bring the leader to justice. His offer was accepted and the duty performed, and in consideration of the service he was made Chief of Police. He accompanied the celebrated Kit Carson upon one of his expeditions across the mountains.

April 19.—BARLOW, BENJAMIN R., late Superintendent of the Five Points House of Industry, died at that institution aged 44 years. He was born in Syracuse, N. Y., but removed to

New York City when quite a young man, where he conducted a printing office for some years. Subsequently he relinquished his business, and for a time was connected with the Children's Aid Society. In March, 1858, he entered upon the duties of Superintendent of the House of Industry, and from that time devoted all his energies to the welfare of the poor unfortunates who came under his charge, with a most encouraging degree of success. He died from a third attack of typhus fever, contracted in the discharge of his duties.

April 19.—FLUSSER, Lieut.-Com. CHARLES W. (See FLUSSER, CHARLES W.)

April 19.—MORGAN, Capt. ELISHA E., died at his residence in New York City, in the 58th year of his age. He was a native of Connecticut, but early removed to New York City. For twenty-five years he was a commander in the Star Line of London Packets, and the New York agent of that line for the balance of his life. He filled various positions of public trust and responsibility in the maritime world, including the office of Harbor and Pilot Commissioner, Trustee of the Seaman's Savings Bank, Seaman's Friend Society, and Marine Society.

April 20.—FAILE, EDWARD G., died at his residence in West Farms, Westchester County, N. Y., in the 66th year of his age. He was for many years one of the most prominent merchants in New York, was the late President of the Agricultural Society of the State of New York, and had filled other prominent positions in public life.

April 20.—SLIDELL, Hon. THOMAS, died at Newport, R. I., aged 75 years. He was a brother of John Slidell, the rebel commissioner to France, and was for many years a prominent judge of the Supreme Court of Louisiana, and a man of undoubted honesty and integrity of character. Some ten years previous to his death he was struck upon the head by a slung-shot at an election, causing an injury to the brain which resulted in imbecility. The only cause alleged for this ruffian's assault was his attempt to exercise a citizen's rights. He was shortly afterwards removed to Newport, where he died.

April 22.—FIELD, Mrs. HARRIET DAVIDSON, wife of David Dudley Field, died at her residence in New York, from bilious fever, produced by exhaustion from excessive labor in behalf of the Metropolitan Sanitary Fair.

April 22.—KIBBE, Hon. WALTER RALEIGH, died in Somers, Conn., aged 82 years. He was a native of that town, graduated at Yale College in 1804, studied law and was admitted to the bar in 1807, represented his native place in the Legislature during the years 1828, '29, '31, '34, and '38, and in 1832 was a State Senator from the 20th district. He held the office of Judge of Probate during a period of ten years, and was Postmaster from 1821 to 1828. In the latter year he was one of the Presidential Electors.

April 22.—TOTTEN, Major-General JOSEPH G. (See TOTTEN, JOSEPH G.)

April 24.—CLACK, FRANKLIN HULSE, died from wounds received during the battles of Mayfield and Pleasant Hill, Louisiana. He was a son of Commander Clack, U. S. N., was born in Florida, 1828, graduated at Mount St. Mary's College in 1845, and took the degree of Bachelor of Laws at Yale College, 1847. In 1851 he was appointed Secretary of Legation to Brazil, and after his return and settlement in New Orleans, was appointed U. S. District Attorney for Louisiana. On retiring from this position he continued the practice of law with great success.

April 24.—LINCOLN, LEDYARD, died in Cazenovia, Madison County, N. Y., aged 44 years. He was the founder of that village.

April 25.—SCHNEIDER, REV. JAMES H., died at Key West, of yellow fever, aged 25 years. He was a son of Rev. Dr. Benjamin Schneider, missionary of the A. B. C. F. M. at Aintab, Syria, and was born at Broosa, Turkey, graduated at Yale College in 1860, and spent the three years following in teaching in the State Normal School, Bridgewater, Mass. It was his desire to enter into the service of his country, and being drafted, he at once reported in person for duty, was appointed lieutenant in the 2d regiment of U. S. colored troops, and subsequently chosen chaplain of the regiment, being ordained at Bridgewater, Oct. 27, 1868. In entering the military service he declined an appointment as Tutor in Yale College, and postponed his preparations for the work of a foreign missionary, upon which he had determined.

April 27.—LÖWENTHAL, REV. ISIDORE. (See LÖWENTHAL, I.)

April 27.—PARSONS, LEMUEL SPRAGUE, died in Cohoes, N. Y., aged 55 years. He was a native of Wolcott, Conn., was educated at the Academy in Troy, N. Y., and at Yale College, from which he graduated in 1837. In 1839 he removed to Albany, N. Y., where, with his sister, he established a select family school, and was at the same time principal of the Pearl Street Academy for Boys. In 1845 he was chosen principal of the Albany Female Academy, the duties of which he discharged with success until 1855, when he resigned his office, and subsequently engaged in the manufacturing business in Cohoes, where he remained until his death.

April 28.—HOLBROOK, JAMES, special agent of the Post Office Department, died at Brooklyn, Conn., at the age of about 52 years. He was a self-made man, and, we believe, originally a printer by profession. He was for some years connected as editor with the "Norwich Aurora," and in 1839 started the "Patriot and Eagle," at Hartford, Conn. In 1840, this paper, which had previously been Democratic in its politics, became the organ of the "Conservative" party, which had a short-lived existence in that State. In 1845 Mr. Holbrook was appointed special agent of the P. O. Department, and continued to hold that position

under each successive administration till his death. He proved a remarkably expert and skillful detective officer, and brought every considerable mail robber to justice with unerring certainty. In 1855 he published a volume of sketches of his experience as a detective, under the title of "Ten Years among the Mailbags," and in 1859 established "The United States Mail," a journal devoted to postal matter, which he edited with decided ability till his death.

April 29.—WARE, JOHN, M.D., died in Boston, aged 68 years. He was a native of Hingham, Mass., studied at Phillips Academy in Andover, and graduated with honor at Harvard College, in the class of 1813. After leaving college he studied medicine with Dr. John Gorham, of Boston, received his degree of M.D. in 1816, and in 1817, after a practice of one year in Duxbury, removed to Boston, where he resided the remainder of his life. In 1832 he was appointed Professor of the Theory and Practice of Medicine in the Medical Department of Harvard College, which office he held until 1858. He published various medical lectures and discourses; essays on "Croup," on "Delirium Tremens," and on "Hæmoptysis;" a volume on the "Philosophy of Natural History," and a "Memoir of Henry Ware, Jr." He was for several years President of the Massachusetts Medical Society, and was also a member of the American Academy of Arts and Sciences.

April —.—HARRISON, JOHNSON, colored, died at Ypsilanti, Mich., aged 119 years.

April —.—KINGSBURY, REV. CYRUS, for forty-five years a missionary among the Choctaws, died at the Mission Station in the Choctaw Nation. He was one of the first missionaries of the American Board to that tribe.

April 30.—SOLOMON, AMY, died in Attleboro', Vt., aged 107 years.

April 30.—PUGH, EVAN, Ph.D., died at Bellefonte, Penn., of typhoid fever, aged 36 years. He was a native of Chester County, Penn., where he resided until the summer of 1852, when he sailed for Europe. While there he pursued the study of agricultural chemistry in the best German universities, making some new and important discoveries in chemical science, which gained him a high reputation abroad. In the autumn of 1858 he returned to this country to accept the appointment of President of the Pennsylvania Agricultural College, Centre County, Pa., a position he filled with singular ability and success.

May 1.—DUNCAN, WILLIAM CECIL, D.D. (See DUNCAN, W. C.)

May 1.—PORTER, Commodore WM. D. (See PORTER, WM. D.)

May 2.—MARSTON, HON. NYMPHAS, died in Barnstable, Mass., aged 76 years. He was a native of Barnstable, was a pupil, and subsequently Preceptor of Sandwich Academy, graduated at Harvard College in 1807, studied law, and began the practice of his profession at Nan-

tucket, Mass., but soon returned to his native town, where he rapidly rose to eminence in his profession. In 1816 he was appointed County Attorney, was a member of the Constitutional Convention in 1820, and repeatedly represented his native town in the State Legislature. He was twice elected to the Senate of Massachusetts, and in 1828 was appointed Judge of Probate, filling that office with honor to himself, until his resignation in 1854.

May 3.—MOTLEY, THOMAS, died in Boston, aged 82 years. He was the father of J. C. Motley, the historian, and was for many years a prominent merchant in Boston.

May 5.—CHAPMAN, Col. ALFORD B., was killed at the battle of the Wilderness, aged about 27 years. He was a native of New York City, and had been for eight years previous to the war connected with the 7th militia regiment, N. G. At the commencement of the rebellion he raised a company, which was attached to the 57th regiment of New York Volunteers, and, after several promotions, rose to the command of the regiment.

May 5.—HAYS, Brig.-Gen. ALEXANDER, an officer of U. S. volunteers, was killed in the battle of the Wilderness, aged 40 years. He was a native of Pittsburg, Pa., graduated at West Point in 1844, was appointed brevet second lieutenant of the 4th United States infantry, and in June, 1846, was fully commissioned a second lieutenant of the 8th infantry. He was engaged in the Mexican war, and distinguished himself in several important battles. In 1848 he resigned his connection with the army and became engaged as an iron manufacturer in Venango County, Pa., from which occupation he was called at the outbreak of the rebellion. Entering the volunteer service as colonel of the 63d Pennsylvania volunteers, he was appointed captain of the 16th regular infantry, dating from May 14, 1861, which regiment was attached to the Army of the Potomac, and during the Peninsular campaign formed a portion of the 1st brigade, 8d army corps. He participated with gallantry in the battles of Seven Pines and Fair Oaks, and was nominated for a brevet of major of the United States army, distinguished himself during the seven days' battles, and was nominated brevet lieutenant-colonel, took part in the Maryland campaign, and was made brigadier-general of volunteers September 29, 1862. He was wounded at the battle of Chancellorsville, and at the battle of Gettysburg was in command of the 3d division of his corps, and of the whole corps for a time, after the wounding of Gen. Hancock. He led the 3d division through the battles of Auburn, Bristoe Station, and Mine Run. Upon the reorganization of the Army of the Potomac for the next campaign, Gen. Hays was placed in command of the 2d brigade, Birney's 3d division, 2d corps, under Gen. Hancock.

May 5.—JENKINS, Brig.-Gen. A. G., a Confederate officer, killed in the battle of the Wilderness. He was a native of Virginia, had re-

ceived his military education at the Virginia Military Institute at Lexington, and had distinguished himself in several actions in Western Virginia. He was in the advance of Lee's army before the battle of Gettysburg, and took part in that battle.

May 5.—JONES, Maj.-Gen. SAMUEL, a Confederate officer killed in the battle of the Wilderness. He was a graduate of West Point, appointed from Virginia, of which State he was a native, and at the opening of the war was captain in the 1st regiment of artillery, U. S. A. He resigned his commission in the army April 27, 1861, and was immediately appointed colonel, and soon after brigadier-general by the Confederate War Department, and early in 1860 was promoted to the command of a division, with the rank of major-general. He had been in command of the rebel forces in West Virginia until the spring of 1864, when he brought his contingent to reinforce Lee's army on the Rapidan.

May 5.—LLOYD, Gen. JOHN, died in New York City, aged 67 years. He was a native of Dutchess County, N. Y., was for many years a prominent dry goods merchant in New York, and latterly the head of the firm John Lloyd & Sons, real estate brokers. In his younger years he held the rank of major-general in the State militia.

May 6.—COOPER, THOMAS COLDEN, a captain in the 67th regiment N. Y. S. Vols., was killed while leading a charge in the battle of the Wilderness. He was a native of Ohio, a man of fine education and culture, and previous to 1862 had been the Principal of the New York Institution for the Blind for several years. Resigning his position there, he accepted an appointment as captain in the 67th New York volunteers.

May 6.—WADSWORTH, Brig.-Gen. JAMES S., (See WADSWORTH, JAMES S.)

May 7.—PIKE, BENJAMIN, a celebrated optician, died at his residence at Astoria, L. I., of congestion of the lungs.

May 9.—SEDGWICK, Maj.-Gen. JOHN. (See SEDGWICK, JOHN.)

May 10.—HACKER, HERMANN, Count, was killed in the battle of Spottsylvania. He was a native of Prussia, and connected with the Prussian army, but obtained a furlough, and coming to this country procured a commission as First Lieutenant in the 7th New York volunteers. Upon the expiration of his term of service he procured a commission as First Lieutenant in the 52d New York volunteers, Hancock's corps, and fell while leading a charge at the head of his company. He was a brave and gallant soldier.

May 10.—JONES, JOHN M., a brigadier-general in the Confederate service, killed near Spottsylvania, Va., aged about 48 years. He was a native of Virginia, and graduated at West Point in the class of 1841. After serving as second lieutenant in the 5th and 7th regiments of infantry, he was appointed in 1845 as-

sistant instructor in infantry tactics at West Point, which position he filled for several years. In 1847 he was promoted to a first lieutenancy and in 1853 to a captaincy in the 7th infantry, and accompanied his command in the Utah expedition. He resigned his commission in May, 1861, was appointed colonel of a regiment of Virginia volunteers, and in 1863 was promoted to the command of a brigade in Ransom's division of Longstreet's corps. In the latter capacity he took part in the rebel attack on Knoxville in the fall of 1863, and in the operations in the Wilderness and in the neighborhood of Spottsylvania immediately preceding his death.

May 10.—**KING, THOMAS BUTLER.** (*See KING, THOMAS BUTLER.*)

May 10.—**SANFORD, HON. DAVID C.,** died at New Milford, Conn., aged 64 years. He was a native of that town, was educated for the law, and commenced practice in Litchfield County at a time when its bar was distinguished for its array of talent. He was a member of both branches of the State Legislature, was State Attorney of Litchfield County, and in 1854 was elected a Justice of the Supreme and Superior Courts.

May 10.—**STEVENSON, THOMAS G.,** a brigadier-general of U. S. volunteers, killed near Spottsylvania, Va., aged 28 years. He was the son of Hon. J. Thomas Stevenson, of Boston, and early manifested a predilection for military life, having risen from the ranks to be major of the 4th battalion of Massachusetts infantry, which position he held at the commencement of the war. He had an unsurpassed reputation as a drill-master, and his command, which was brought to a high degree of discipline, became the school of many young officers since distinguished in the national service. In the fall of 1864 he recruited the 24th regiment of Massachusetts volunteers, which originally formed part of Foster's brigade in Burnside's expedition to North Carolina, and as its colonel participated in the capture of Roanoke Island and Newbern, February and March, 1862, and in various minor operations immediately succeeding those events. After holding for some months the outpost defences of Newbern, he conducted several expeditions within the rebel lines, and on Sept. 6th successfully defended Washington, N. C., against an attack by a superior force. He had charge of a brigade in the movements on Goldsboro' and Kingston, and in December, 1862, was appointed a brigadier-general; and when Gen. Foster, in Feb. 1863, organized the expedition for operations against Charleston, received command of a brigade in Gen. Naglee's division. Shortly after his arrival at Port Royal he was temporarily put under arrest by order of Gen. Hunter for a casual expression of his disbelief in the policy of arming slaves, but was subsequently honorably acquitted of blame. His appointment as Brigadier-general was confirmed in March, 1863, and during the succeeding summer he saw much

active service in the neighborhood of Charleston, assisting in the reduction of Morris Island and the assault on Fort Wagner, where he commanded the reserves. He returned to the north in the fall to recruit his health, and subsequently was appointed by his old commander, Gen. Burnside, who had a high appreciation of his capacity, to command the 1st division of the 9th corps. He was killed at the head of his troops. As a disciplinarian he was greatly esteemed, and he showed also an energy and a maturity of judgment which gave promise of a brilliant career as a soldier.

May 11.—**DANIELS, JULIUS,** a brigadier-general in the rebel army from Virginia, killed in the battle of Spottsylvania.

May 11.—**DOUBLEDAY, Colonel THOMAS D.,** died in New York City from injuries received by being run over by a stage, aged 48 years. He was a brother of Major-General Doubleday, United States Army, and had served in a regiment of heavy artillery, New York volunteers.

May 11.—**GOODRICH, Rev. CHAUNCEY E.,** died at Utica, New York. He had been for several years Chaplain of the New York State Lunatic Asylum in that city, and was a man of fine taste and culture.

May 11.—**GORDON, Brig.-Gen. J. B.,** an officer of the rebel army, wounded in the skirmish between Sheridan's cavalry and the rebels near Richmond, died at Richmond, Va. He was a native of North Carolina, and entered the rebel service as major of the 1st regiment of North Carolina cavalry, and was advanced first to the command of his regiment and then to that of a brigade in Gen. Fitz Hugh Lee's division of rebel cavalry.

May 11.—**PERRIN, Brig.-Gen. —,** an officer of the rebel army from South Carolina, killed in the battle of Spottsylvania.

May 11.—**RICE, Brig.-Gen. JAMES C.** (*See RICE, JAMES C.*)

May 11.—**STAFFORD, L. A.,** a brigadier-general in the rebel army, died at Richmond of wounds received at the battle of the Wilderness. He was a native of Virginia.

May 12.—**STREUBEN, BARON VON,** was killed at Spottsylvania. He was a Prussian officer, came to this country and joined the 52d New York volunteers, and proved himself a gallant and faithful officer.

May 12.—**STUART, Major-General JAMES E. B.** (*See STUART, JAMES E. B.*)

May 18.—**BROWN, CHARLES BROOKS,** died in a field hospital from wounds received the previous day in the battle at Spottsylvania Court House, Va., aged 29 years. He was a native of Cambridge, Mass., graduated at Harvard College in 1856, studied law, and was admitted to the Suffolk bar in 1858. He soon after removed to Springfield, Illinois, and entered upon the duties of his profession. In 1860 he returned to his native State and opened an office in Charlestown, and subsequently in Boston. Upon the outbreak of the war he enlisted as a private in a Cambridge company attached to

the 8d regiment of Massachusetts volunteers, and afterward in the 19th regiment Massachusetts volunteers, serving in the Peninsular and other campaigns of the Army of the Potomac. Was wounded at the battle of Fair Oaks and again at Fredericksburg, and upon the expiration of his term of three years, reenlisted for another three years service.

May 13.—CALVERT, HON. CHARLES B., died near Bladensburg, Md., of paralysis. He was a representative in the late Congress.

May 18.—FARRAR, SAMUEL, died in Andover, Mass., aged 90 years. He was a native of Lincoln, Mass., graduated at Harvard College in 1797, and in 1800 was appointed tutor in that college, which office he held one year. He then entered upon the study of law, and soon after commenced the practice of his profession in Andover. He was one of the chief founders of the Theological Seminary, and for thirty-eight years was treasurer of that institution and the academy, for much of that period devoting a large share of his salary to their support. He was the first President of the Andover Bank, and held the office thirty years.

May 14.—LLOYD, Lieut.-Col. —, was killed at Resaca. He was an officer of the 119th regiment of New York volunteers, and fell while leading a desperate charge upon the enemy.

May 14.—TYLER, HUGH, died at Washington, D. C. He was a native of Pennsylvania, and resided at Athens in that State. He was well known as a prominent Government contractor.

May 16.—SPENCER, PLATT R., died at his residence in Geneva, Ohio, aged 68 years. He was a native of Greene County, N. Y., but removed to Ohio in his boyhood, and soon after devoted himself to teaching. He was the author of the well-known "Spencerian" system of Penmanship.

May 19.—HAWTHORNE, NATHANIEL. (See HAWTHORNE NATHANIEL.)

May 20.—SHAW, PETER B., a Revolutionary pensioner, died near Nashville, Tenn., aged 101 years. He was present at the surrender of Cornwallis.

May 22.—FISKE, Rev. SAMUEL, a Captain of United States volunteers, died at Fredericksburg of wounds received at the battle of the Wilderness. He graduated at Amherst College in the class of 1848. He was the author of a series of Letters from Europe written some years since for the Springfield "Republican," signed by "Dunn Brown," and also a well-known college text-book, a translation of Eschenberg's "Manual of Greek and Roman Antiquities." When the war broke out he was pastor of a church in Madison, Conn., but from a patriotic love of his country entered the army, and after fighting bravely in several battles, was taken prisoner by the enemy, and detained for some time in Richmond. He was promoted to a captaincy previous to the battle of the Wilderness, in which he lost his life.

May 24.—HALL, Col. GEORGE B., an officer

of United States volunteers, died at his residence in Brooklyn, from disease contracted in the service, aged 88 years. He was a son of ex-Mayor Hall of Brooklyn, entered upon his military career at the early age of 19 years as a private in the 265th regiment N. Y. S. M., rapidly rising through the several grades of promotion, until the commencement of the Mexican war, when he was offered and accepted the position of first lieutenant in the 1st regiment of New York volunteers. He distinguished himself at Vera Cruz, Cerro Gordo, Contreras, and particularly at Cherususco, and for his gallantry on several occasions was remembered by Gen. Scott, who, in 1863, recommended him to the Secretary of War as worthy of promotion to the rank of Brigadier-General. In April, 1850, he was commissioned as Major of the 18th regiment N. Y. S. M., and the following September was made Lieutenant-Colonel in the same regiment. While occupying a position in the City Inspector's Department, New York, the rebellion broke out, when he at once resigned and entered into the work of raising troops for the defence of the Union, was made Colonel of the "Jackson Light Infantry," or 71st regiment N. Y. S. V., and was with it in every battle and skirmish in which it was engaged, from the Stafford Court House raid of 1862, to the battle of Fredericksburg.

May 24.—LYNDALL, JOSEPH, died at Washington, D. C., of typhoid fever. He was a native of London, and at the breaking out of the war was Superintendent of the Cape Town and Wellington Railroad, Cape of Good Hope, and feeling a deep interest in the welfare of this country, resigned his position, and hastened home to England to obtain letters to come hither. Arriving in London he was induced by the state of feeling then to connect himself with the London Emancipation Society, with which he was actively engaged for a year and a half; he then obtained letters from the London Young Men's Christian Association, to the Association in New York City, where he was warmly welcomed, and through whom he was assigned a place in the War Department, but soon after reaching Washington was attacked with the fever which resulted in death.

May 24.—MAFFIT, SAMUEL S., late Controller of the Treasury of Maryland, died at his residence in Elkton, aged 45 years.

May 27.—GIDDINGS, HON. JOSHUA R. (See GIDDINGS, JOSHUA R.)

June 1.—HINCKLEY, Z. R., an American pomologist, died in New York. He was known as a successful cultivator of the grape, and his writings on the subject were numerous and of standard authority. During the last two years of his life he was one of the editors of the "Practical Farmer."

June 2.—DOLES, Brig.-Gen. GEORGE E., an officer of the rebel army from Georgia, commanding a division in Ewell's corps, was killed at Cold Harbor, Va., aged 34 years. He entered the rebel service as captain in the 4th

Georgia regiment, and soon after was promoted to a colonelcy, and in November, 1862, made brigadier-general. His brigade had a high reputation for bravery.

June 2.—**DRAKE**, Col. JEREMIAH C., an officer of U. S. volunteers, was killed in the action at Cold Harbor, Va., aged about 88 years. He was a native of Herkimer County, N. Y., but removed to Wisconsin, and was for some time engaged in mercantile pursuits. Subsequently he removed to Rochester, N. Y., and commenced the preparatory studies for a collegiate course. He then entered the Madison University, passed through the academic course, studied theology, and upon the outbreak of the rebellion was occupying the pulpit of the Baptist Church at Westfield. Having a strong desire to enter into the service of his country, he volunteered in the 49th regiment New York, was elected captain, and shared in the disasters of the Peninsular campaign. Upon the organization of the 112th New York, he accepted the colonelcy of the regiment, and served with it during the siege of Suffolk, and afterwards in the siege of Charleston, under Gen. Gilmore. Col. Drake was appointed to command the 2d brigade, 3d division, 10th army corps, in the attack upon Richmond *via* James River, under Gen. Butler.

June 2.—**KEEN**, Prof. ALPHEUS AUGUSTUS, died in Somerville, Mass., aged 89 years. He was born in Buckfield, Me., graduated at Harvard College in 1849, and soon after became Principal of the High School in Marblehead. In 1855 he removed to Pomeroy, Ohio, where he took charge of a similar institution, and in 1857 was chosen Professor of the Latin language and literature in Tuft's College, acting also as Secretary and Librarian.

June 2.—**KEITT**, Colonel LAWRENCE M., an officer in the Confederate army, died at Richmond of wounds received in the battle of the preceding day. Gen. Keitt was a native of South Carolina; born Oct. 4, 1824; graduated at the College of S. C. in 1848; studied law, and was admitted to the bar in 1845. In 1848 he was elected to the State Legislature, and in 1858 to Congress, to which he was thrice re-elected—his last term expiring in March, 1861. At the time of Preston Brooks' assault on Senator Sumner, in 1856, he was with Brooks, and exerted himself to prevent any of those present from interfering to rescue Sumner, and by word and act justified the ruffianly attack. In the winter of 1861 he left his seat in Congress, before the close of the session, to aid in carrying out the secession measures of South Carolina. He raised a regiment, and was in several of the earlier battles of the war as Colonel. In 1868 he was an acting Brigadier-General, but was at the time of his death in command of the 20th South Carolina regiment, esteemed one of the finest regiments in the rebel service till the campaign of 1864.

June 2.—**McCONIHIE**, Col. JOHN, an officer of U. S. volunteers, was killed in battle at Cold

Harbor, Va., aged 29 years. He was a native of Troy, N. Y.; studied law with his father, Hon. Isaac McConihe, of that city, and at the law school at Albany; graduated at Union College in 1853, and was subsequently chosen one of the Board of Education. In 1856 he went to Omaha, and was appointed Private Secretary to the Governor, and was afterwards Adjutant-General of the Territory. On the breaking out of the rebellion he raised a company, was made its captain, participated in the Missouri campaign of 1861 and part of 1862, and was severely wounded in the battle of Shiloh. Returning to Troy, he was appointed Lieutenant-Colonel of the 169th New York, and did provost duty at Washington, participating also in the siege of Morris Island. Subsequently he served in Florida, in the Peninsula under Gen. Butler, and finally under Gen. Grant.

June 2.—**PRICE**, FRANCIS, a well-known and influential citizen of New York City, died at his residence, in the 77th year of his age. He was a native of New Jersey, and father of ex-Governor Price of that State.

June 3.—**HASKELL**, Col. FRANKLIN A., an officer of U. S. volunteers, was killed at the battle of Cold Harbor, Va., aged 35 years. He was a graduate of Dartmouth College in the class of 1854.

June 3.—**MORRIS**, Col. LEWIS O., an acting brigadier-general of volunteers, and captain in the 1st artillery in the regular army, was killed in the battle of Cold Harbor. He was a native of New York. His father was an officer in the regular army, killed at the siege of Monterey, and young Morris, though not educated at West Point, received a commission as 2d lieutenant on the 8th of March, 1847, and took part in the siege of Vera Cruz and the subsequent advance upon Mexico. From that time to the commencement of the present war he has been almost constantly in the field, and in April, 1861, had attained the rank of captain in the 1st artillery. In the winter of 1860-'61 he was stationed in Texas, and his company was the only one not surrendered to the rebels. He was immediately called to active service, and in the winter of 1862 was designated to direct the operations against Fort Macon, N. C., which he captured and afterwards commanded. In the summer of 1862, his health being impaired, he obtained a short leave of absence and returned to his home in Albany, N. Y., when he was soon after appointed colonel of the 118th N. Y. vol. infantry, with whom he started for Washington, and reached that city when it was menaced by Lee's troops. He converted the regiment into one of heavy artillery in a very short time, and contributed materially to the defence of the city. The regiment was stationed at Fort Reno, but this inactive life did not suit the fiery spirit of Col. Morris, and he plead earnestly and repeatedly to be sent into the field. At the beginning of the campaign of 1864 his wish was gratified, and during all the battles from Spottsylvania

till his death he commanded a brigade. He was greatly beloved and admired as an officer, and while a strict disciplinarian his urbanity and kindness of heart made him the idol of his men.

June 8.—**MORRIS, COL. ORLANDO H.**, an officer of U. S. volunteers, was killed in the action at Cold Harbor, Va., aged 29 years. He was a son of Gen. Wm. L. Morris, and, when the war broke out, was a promising young lawyer in New York City. He assisted in the organization of the 66th regiment of New York volunteers, was commissioned its Major in November, 1861, and served in that capacity through the Peninsular campaign; was subsequently promoted to the colonelcy, and led his regiment at Chancellorsville, acting during part of the engagement as Brigadier-General. During the recent severe battles under Lieut.-Gen. Grant, the 66th was very conspicuous, being in the advance of the attack which resulted in the capture of Gen. Johnson and his division.

June 8.—**PORTER, COL. PETER A.**, an officer of U. S. volunteers, was killed at the head of his division, in the battle on the Chickahominy, aged 36 years. He was a son of Gen. P. B. Porter, a Major-General in the U. S. Army, and now an extensive landholder in Niagara County, N. Y.; was a member of the Assembly in 1862, and, by his talents and integrity, won a position of influence in the Legislature. When the President called for troops to repair the losses of the Peninsular campaign, he raised a regiment, and taking command of it went to the war. He was stationed for some time on garrison duty at Baltimore, and while there was offered the nomination for Secretary of State on the Union ticket, but, true to his patriotism, declined the honor. He subsequently joined the Army of the Potomac, and was killed at the close of the first month of active service, while leading on a division which he was temporarily commanding.

June 8.—**SCHALL, COL. EDWIN**, an officer of U. S. volunteers, was killed in battle at Cold Harbor, Va., aged 29 years. He was a son of Gen. Wm. Schall, and a native of Montgomery County, Pa.; was favorably known in civil life, and was twice elected Burgess of Norristown, Pa. He was educated for the law, and was also a graduate of Captain Partridge's Military Academy. At the commencement of the war he was editor of the "National Defender," published in Norristown, but abandoned his occupation, and in company of four brothers, joined the 4th regiment of Pennsylvania volunteers, and was commissioned its Major. He served with his regiment throughout its whole career, and participated in all its engagements, passing rapidly through the usual promotions. Subsequently he was transferred to the command of the 51st, and during several months of service in East Tennessee was in command of a brigade.

June 8.—**STRYKER, JAMES**, an American lawyer, died in Sharon, Conn., aged 72 years. He was for many years a leading member

of the bar in Buffalo, N. Y., and between 1837 and 1841 filled the office of judge of the court of common pleas for Erie County. By the appointment of Gen. Jackson he served as commissioner to negotiate a treaty with the Six Nations, and was instrumental in causing the Cayugas and portions of the Senecas, Oneidas, and Onondagas to migrate to the west. He published the "American Register" from 1849 to 1855.

June 8.—**WEAD, COL. FREDERICK F.**, an officer of U. S. volunteers, was killed at the battle of Cold Harbor, Va., aged 29 years. He was born in Malone, Franklin County, N. Y., graduated at Union College in 1856, studied law at Poughkeepsie, was admitted to the bar, and practiced his profession in his native town until the breaking out of the rebellion in the spring of 1861, when he entered the U. S. service as First Lieutenant in the 16th regiment of New York volunteers. In October, 1861, he was appointed one of Gen. Slocum's staff, with which he served through the Peninsular campaign, and in 1862 was appointed Lieutenant-Colonel of the 98th regiment New York volunteers, and afterwards Colonel. Subsequently his regiment was assigned to Gen. Hickman's brigade, forming a portion of the 18th army corps, under Gen. Smith. During the battle of South Richmond Gen. Heckman was taken prisoner, and the command of the brigade temporarily devolved upon Col. Wead. At the time of his death the 18th army corps was serving under Gen. Grant.

June 5.—**DUTTON, COL. ARTHUR H.**, an officer of U. S. volunteers, was killed in the engagement near Bermuda Hundred. He was a native of Wallingford, Conn., graduated at West Point in the Engineer Corps in 1861, and at the time of his death held the rank of Captain of Engineers in the regular army. While on duty in North Carolina with his regiment, the 21st Connecticut volunteers, he served as Chief of Staff for Maj.-Gen. Peck, and subsequently held a similar position upon the Staff of Maj.-Gen. W. F. Smith. After the battle of Drury's Bluff, in which he greatly distinguished himself, he was placed in command of the 8d brigade, which position he had held but a few days when he lost his life.

June 5.—**JONES, WILLIAM G.**, a Major-General in the rebel army from Virginia, a graduate of West Point, killed at the battle of Mount Crawford, Va. He had been in command in West Virginia for nearly two years, and had been promoted to the Major-Generalship in 1863.

June 7.—**WINSLOW, GORDON, M. D., D. D.**, a clergyman of the Episcopal Church, fell overboard from a transport and was drowned in the Potomac, aged 60 years. He was a native of Williston, Vt., graduated at Yale College, studied for the ministry, and became rector of a church in Troy, N. Y., and subsequently in Annapolis, Md. Afterwards he was for many years rector of St. Paul's, Staten Island, and

chaplain of the Quarantine. At the commencement of the war he was appointed chaplain of the Duryee Zouaves, and accompanied that regiment in all its hard-fought battles. He also served with the Sanitary Commission, and, upon the return of his regiment in 1863, was appointed Inspector of the Army of the Potomac for that Commission, and was returning from his labors in its behalf at Belle Plain, having in charge his wounded son, Col. Cleveland Winslow, when he met his untimely death. He had been a frequent contributor to the press, and was a man of high and liberal intellectual culture, and of a most genial and amiable disposition. His wife had been for many months engaged in ministering to the sick and wounded soldiers in Washington, and his two sons were officers of the Union Army. Rev. Hubbard Winslow, D.D., of New York, and Rev. Myron Winslow, D.D., missionary in Ceylon, were both brothers of the deceased.

June 8.—ADAMS, DANIEL, M. D., an author of text-books for schools, died at Keene, N. H., aged 90 years. He was a native of Townsend, Mass.; studied in New Ipswich Academy; graduated at Dartmouth College in 1797; studied medicine, and commenced the practice of his profession in Leominster, Mass., where he also assisted in editing a newspaper called the "Telescope." Here he commenced the preparation of school books, his "Scholar's Arithmetic," his "Grammar," and "Understanding Reader," being first published from his own press in Leominster. He removed to Boston about 1806, where he opened a select school which was largely patronized, editing also, during a part of the time, a monthly periodical called "The Medical and Agricultural Register," and preparing a "School Geography" and some other books for the press. In 1818, his health failing, he left Boston and removed to Mount Vernon, N. H., where he resumed practice and also engaged in mercantile pursuits. But he could not relinquish his mathematical tastes, and revised his Scholar's Arithmetic, and in 1827 published it under the title of "Adams' New Arithmetic." This was the most popular of all his school books. In 1846 he removed to Keene, N. H., where he spent his later years. He was the author of a large number of school books, among which are the "Understanding Reader" (1804); "Monitorial Reader" (1841); "The Agricultural Reader" (1824); "The Thorough Scholar," an "English Grammar" (1803); a "Geography and Atlas" (1814); a "Primary Arithmetic," "Scholar's Arithmetic" (1805); "The New Arithmetic" (1827); "The Improved Arithmetic," "Book-Keeping," "Mensuration," &c. Dr. Adams was for many years President of the New Hampshire Bible Society, and of the State Medical Society.

June 8.—THAXTER, A. WALLACE, died in Boston aged 32 years. He was a native of Boston; graduated at Harvard College in 1852, being the poet of his class, and having the val-

edictory ode. After graduating he entered the Law School at Cambridge, and in 1854 received the degree of LL.B., but did not enter upon the practice of his profession. He was for seven years connected with the Boston "Evening Gazette," as a dramatic and literary critic, until ill health compelled him to withdraw. He was a graceful and easy writer, and author of several light acting plays for the stage.

June 10.—ORALL, RICHARD K., the biographer of John O. Calhoun, died in Virginia. He was a native of South Carolina and a relative of Calhoun, who employed him as confidential clerk or amanuensis while he was Secretary of State under John Tyler. He had previously been an editor in Washington, and also filled the pulpit of a New Church Society in that city. His publications comprise an edition of the works of John O. Calhoun, in six volumes, with a memoir founded on private papers and authentic materials, beside some polemical works, which have circulated among the followers of Swedenborg.

June 11.—HORNBLOWER, HON. JOSEPH O (See HORNBLOWER, JOSEPH O.)

June 11.—PYE, COL. EDWARD, an officer of U. S. volunteers, died from wounds received at the battle of Cold Harbor, Va., aged 40 years. He was educated for the law, and soon after entering upon the practice of his profession rose to a high rank at the bar. When quite young he was appointed District Attorney for Rockland County, N. Y., and soon after County Judge and Surrogate. At the breaking out of the rebellion he at once made preparations for winding up his practice, accepted the command of a company in the 95th regiment New York State volunteers, then organizing under the name of the "Warren Rifles," and in the fall of 1861 entered into active service with the Army of the Potomac. Being promoted to a Lieutenant-Colonelcy, he led his regiment through the carnage of Antietam, followed the enemy across the Potomac to the Rappahannock, and shared in the battles of Fredericksburg, Chancellorsville, and Gettysburg, receiving after the latter his commission as Colonel. In the battles of the Wilderness and Spottsylvania he was often in the front ranks of the army, and in the battle of Cold Harbor, while leading an assault upon the breastworks of the enemy, received a rifle ball in the shoulder, and at the same moment was wounded by a shell, surviving these injuries but a few days.

June 14.—POLK, Rt. Rev. LEONIDAS, D.D. (See POLK, LEONIDAS.)

June 15.—MIX, COL. SIMON H., an officer of U. S. volunteers, was killed in a charge upon the rebel intrenchments at Petersburg. He was a native of Fulton County, N. Y., and learned the printing trade of his father, Peter Mix, for many years editor of the "Schoharie Patriot." Both father and son were among the earliest and firmest Republicans, and the latter was, in 1860, Republican candidate for Congress, but was beaten by a few votes by

Hon. Chauncey Vibbard, Superintendent of the Central Railroad. At the commencement of the war the subject of our sketch dedicated himself to the service of his country. He was appointed Major and finally Colonel of the 3d cavalry regiment New York, which he was instrumental in raising, and died at its head.

June 16.—**EWING, HON. ANDREW**, an officer in the Confederate service, died in Atlanta, Ga. He was a lawyer of eminence, and a politician of considerable importance, having for many years participated in the political controversies which mark the history of Tennessee. He represented the Nashville district, Tenn., in Congress during one term, and in February, 1861, was elected to represent Davidson County in the proposed State Convention, which was voted down by the people, being at that time a sincere Union man. Unfortunately he was subsequently drawn away from his allegiance to the Union, and took an active part against the Government. After the fall of Fort Donelson he left his home and became an exile, holding until he died some position in the rebel army.

June 16.—**WEYMAN, GEORGE WASHINGTON**, a chemist, died at Pittsburg, Pa., aged 32 years. He studied in Europe three years at the Universities of Göttingen and Munich, receiving the degree of Ph. D. from the University of Göttingen in 1855. At the time of his death Dr. Weyman was established at Pittsburg as a Pharmaceutist and Analytic Chemist.

June 17.—**SANGER, HENRY K.**, died at his residence in Detroit, Mich., aged 65 years. He was in early life a resident of Utica, N. Y., graduated at Hamilton College, and devoted his attention to the study of law, but subsequently abandoned it and took a position in the Bank of Utica. In 1836 he was tendered the position of cashier of the Bank of Michigan, in Detroit. In 1861 he was appointed United States Depository in that city, which responsible position he filled with great honor to himself until his death.

June 20.—**CUBAS, ISABELLA**, a Spanish dancer and actress, died in New York City in the 27th year of her age. She was born at Valencia del Oid, Spain. Her family name was Blasco, and her parents were artists of considerable skill and reputation. At an early age she exhibited much grace and taste as a dancer, in which capacity she travelled through Spain, Russia, Turkey, Austria, and France. In 1860 she came to this country, where she at once achieved success in her profession. She died of consumption.

June 20.—**HARDENBROOK JOHN K.**, Acting Assistant Surgeon U. S. A., died at Rush Barracks, Washington, D. C., in the 62d year of his age, of typhoid fever, contracted while in the discharge of his duties at L'Ouverture Hospital, Alexandria, Va. Dr. Hardenbrook was one of the oldest physicians of New York City, and for several years Secretary of the New York County Medical Society; also one of the first trustees of the Rutgers Female Institute,

and was a member of one of the oldest Masonic lodges in New York. He promptly offered his services in response to a call for more surgeons for the army, and was assigned to duty at Alexandria, where he labored faithfully in the discharge of his duties until attacked with the disease which terminated in death.

June 22.—**CORSON, EDWARD F., M. D.**, Surgeon U. S. N., died at Plymouth, Montgomery County, Pa. He was born in Montgomery County, Pa., October 14, 1834, entered the navy in May, 1859, and was ordered to China and Japan in the U. S. steamer "Hartford," where he remained until the winter of 1861. He was subsequently, for a short time, at the Naval Asylum, Philadelphia, and upon application for sea service, was ordered to the Mohican, returning after a cruise of 40,000 miles, without the loss of a man by sickness.

June 22.—**WHEELER, WILLIAM**, an officer of United States volunteers, was killed near Marietta, Ga., aged 28 years. He was a native of New York City, graduated at Yale College in the class of 1855, and studied law until 1857, when he sailed for Europe. After passing the summer in travel, he continued the study of law at the University of Berlin, and subsequently visited Italy and Greece. In July, 1858, he returned to New Haven, and the following spring entered the Law School at Cambridge, Mass., where he received the degree of LL.B., in 1860. Soon after he opened an office in New York, and entered upon the practice of his profession, but upon the outbreak of the rebellion his patriotic impulses led him to accompany the 7th regiment of N. Y. S. N. G. to the defence of the Capital. After this temporary service he raised a company and was made lieutenant, and subsequently captain of the 13th Independent battery of N. Y. In the Shenandoah valley, and at Gettysburg, with the Army of the Potomac, and subsequently in the battle of Lookout Mountain, he bore an honorable part. He was afterwards appointed Chief of Artillery on the Staff of Gen. Geary, 2d division, 20th army corps, and met his death while bravely holding an exposed position with his battery in the face of the enemy.

June 22.—**YOUNG, WILLIAM H.**, a prominent member of the Baltimore bar, was accidentally killed by being crushed under a railroad car in that city. He was a native of Maryland, and at one time Deputy State's Attorney, and on several occasions acted as special judge of the Criminal Court. He also stood high in the Independent Order of Odd Fellows, being formerly Grand Master of the Grand Lodge of Maryland, and a Representative to the Grand Lodge of the United States. At the time of his death he was Deputy Grand Sire of the United States, and was starting for Philadelphia upon business of the Order.

June 24.—**WYATT, WILLIAM EDWARD, D. D.**, a clergyman of the Episcopal Church, died at Baltimore, Md., in the 76th year of his age. He was rector of St. Paul's Church, Baltimore,

for more than half a century, and was widely known and venerated throughout the State.

June 26.—HYER, THOMAS, died in New York City, aged 45 years. He was for many years the champion of the American prize ring.

June 27.—HARKER, Brig.-General CHARLES G., an officer of United States volunteers, was killed in the battle at Kenesaw, Ga. He graduated at West Point about 1857, and was appointed second lieutenant of the 9th United States infantry, and afterward captain in the 15th regulars. At the breaking out of the war he was appointed to the colonelcy of the 65th Ohio, known as Sherman's brigade; participated in the battles of Stone River, Chickamauga, and Mission Ridge, in the latter being the first to pass the enemy's works, and took an active part in the East Tennessee campaign with the 4th army corps. He was commissioned brigadier-general for his gallantry at Chickamauga. He fell while bravely leading on his brigade, and within a few yards of the enemy's works.

June 27.—HARMON, Col. OSCAR F., an officer of United States volunteers, was killed at the battle of Kenesaw Mountain, Ga. He was a native of Wheatland, Monroe County, N. Y., studied law in the school of Prof. John W. Fowler, at Ballston Spa, N. Y., and in the office of Smith and Griffin, at Rochester, N. Y. In 1853 he removed to Danville, Ill., where he practised his profession with distinguished success until the summer of 1862, when, from a strong desire to serve his country in the army, he accepted the proffered command of the 125th regiment of Illinois volunteers, which position he held with increasing popularity until his death. In the terrible assault upon the rebel position at Kenesaw Mountain, his regiment was assigned a difficult point. The brigade commander, Gen. McCook, being dangerously wounded, the command devolved upon Col. Harmon, and while nobly cheering on his men he was struck by a ball in his breast, which immediately proved fatal.

June 29.—DANIEL, ISAAC, died in New York City, aged 109 years. He was a native of Westchester County, N. Y. During the Revolutionary war he served under the immediate command of Gen. Washington, and was conspicuous for his bravery in the battles of Monmouth, Trenton, and White Plains, was one of the first who entered the city of New York after its evacuation by the British, and assisted in hauling down the enemy's flag and planting the American banner in its place. He also served through the war of 1812.

June 29.—TAYLOR, Gen. JOSEPH P. (See TAYLOR, J. P.)

June 30.—WILSON, Col. WILLIAM, an officer of United States volunteers, killed by a fall from his horse at his farm in Westchester County, N. Y. He was the leader of the famous Wilson Zouaves, and served with his regiment in many positions of great danger and exposure, being stationed for several months at Santa

Rosa Island, previous to the capture of Fort Pickens. His camp was once surprised while there, and made a gallant fight.

July 1.—CLANON, JOHN, a New York editor, died at his residence in that city, aged 34 years. He was of Irish parentage but a native of New York City, was educated for the law, and in 1857 was chosen President of the Board of Aldermen. In 1859 he was elected County Clerk. Having been for some time a correspondent of the New York "Leader," he became connected with that paper as editor in 1857, his ability as a writer contributing much to its subsequent success.

July 1.—QUINCY, Hon. JOSIAH. (See QUINCY, JOSIAH.)

July 4.—BLYTHE, Brig.-Gen. JAMES E., an officer of the Indiana militia, died at Evansville, Ind., aged 45 years. He was a native of Lexington, Ky., graduated at Hanover College, Ind., in 1838, studied law in New Jersey, and was admitted to the bar in that State in 1840, and the following year removed to Evansville, where he entered upon the practice of his profession. His talents and learning enabled him in a short time to take his position among the leading members of the profession in the Supreme and inferior Courts of the State, and in the Courts of the United States. He was a prominent and influential member of the Constitutional Convention of Indiana in 1850-'51, and also of the House of Representatives of that State in 1859. During the years 1862 and 1863 he was brigadier-general of the active militia or Legion of Indiana, and through his exertions and influence the Legion of the border counties in the southwestern part of the State was organized and rendered sufficiently formidable for the prevention of raids.

July 5.—HOGG, Rev. WILLIAM J., D.D., a Presbyterian clergyman, died at Dellwood, Chesterfield County, Va., aged 38 years. He was a native of Athens, Ohio, in which State he commenced his pastoral labors, but subsequently removed to Richmond, Va., where he spent some years in teaching. In 1859 he removed to New York City, and was settled as colleague to the Rev. Dr. Spring over the Brick Church. Soon after the outbreak of the rebellion he went South, and became pastor of the Presbyterian Church in Petersburg, Va., where he remained until his death.

July 5.—REEDER, Hon. ANDREW H. (See REEDER, ANDREW H.)

July 6.—MORRIS, Gen. GEORGE P. (See MORRIS, GEORGE P.)

July 6.—RICE, Brig.-Gen. SAMUEL A., an officer of U. S. volunteers from Iowa, died at Oskaloosa, Iowa, of wounds received in the battle of Jenkins' Ferry, in Arkansas. He was a native of New York, but had removed to Iowa, and engaged in civil pursuits, and soon after the opening of the war entered the service as colonel of the 33d Iowa volunteers. He soon distinguished himself for military skill and courage, and was put in command of a brigade.

and on the 4th of July, 1863, at the battle of Helena, Ark., his command was conspicuous for its bravery and good conduct. For his meritorious conduct in this and subsequent battles, he was appointed brigadier-general, his commission dating August 4, 1863. He took an honorable part in every battle of the arduous campaigns of that and the succeeding year in Arkansas, up to the time of receiving his fatal wound.

July 7.—WINSLOW, COL. CLEVELAND, an officer of U. S. volunteers, died in the hospital at Alexandria, Va., from wounds received at the battles near Mechanicsville, Va., aged 28 years. He was a native of Medford, Mass., and the eldest son of the Rev. Gordon Winslow, D. D. When the war commenced he was engaged in mercantile pursuits in New York City, but having some military knowledge from his connection with the militia, he raised a company of men and departed with the famous Duryea Zouaves for the seat of war, continuing with them for two years in all their engagements. Immediately upon the return of his regiment he raised another, and with it was engaged in all the important battles of the Potomac since that period.

July 11.—DAVIS, COL. P. STEARNS, 39th regiment Mass. volunteers, an officer in the volunteer service, killed near Petersburg, Va.

July 11.—DUNLAP, THOMAS, a lawyer, and for many years president of the United States Bank at Philadelphia, died in that city aged 71 years.

July 12.—BOWERYEM, GEORGE, a correspondent of the Press, was drowned near Newport News, aged about 33 years. He was a native of England, and had resided in this country but ten years. He was formerly a correspondent of "The Tribune" at Charleston, and subsequently of the "Philadelphia Press" with the Army of the Potomac, and had published melodies of considerable merit.

July 12.—REYNOLDS, MARCUS T., an eminent lawyer of Albany, died in that city. He was born in Florida, Montgomery County, N. Y.; graduated at Union College in 1808, studied law at Johnstown in the office of Attorney-General Hildreth and Judge Harris, and in 1811 commenced the practice of the law at Amsterdam, N. Y. In 1828 he removed to Albany, where for the next quarter of a century he occupied the first rank of his profession.

July 12.—VAIL, STEPHEN, an enterprising machinist, died in Speedwell, Morris County, N. J., aged 84 years. He built the engines of the first steamship that ever crossed the Atlantic, and assisted Mr. Morse in perfecting the magnetic telegraph.

July 14.—GARDNER, SAMUEL JACKSON, an editor and author, died at the White Mountains, N. H., aged 76 years. He was a native of Massachusetts, graduated at Cambridge in 1807, practiced law for many years in Roxbury, Mass., and held various county and State offices of honor. He was Deputy Grand-Master of

the Masonic Society of Massachusetts for some years. In 1838 he removed to Newark, N. J., and in 1850 became editor of the "Daily Advertiser," which position he relinquished on account of his health at the commencement of the war. Mr. G. was the author of a volume of Essays entitled "Autumn Leaves."

July 14.—SIMMONS, HON. JAMES F., died at his residence in Johnson, R. I., in the 70th year of his age. He was a native of Little Compton, R. I., and in early life had no other means of education than those supplied by common schools. In 1827 he entered the Rhode Island legislature, in which he continued with brief intermissions until 1840, when he was elected a Senator in Congress. In 1847 he retired, and returned again to the Senate in 1857, for one term. The subject to which he gave his principal attention was the national finances, particularly the bearings and value of the tariff.

July 17.—BOONE, Rt. Rev. WILLIAM JONES, Protestant Episcopal Missionary Bishop to Shanghai, China, died in that city, aged 58 years. He was a native of South Carolina, and in early life studied law with Chancellor De Saussure of that State. Subsequently he fitted himself for the ministry at the Theological Seminary in Alexandria, Va., and in January, 1837, offered his services as a missionary to China, where he arrived in July of the same year. After several years of incessant labor he returned to the United States, and in October, 1844, was consecrated Missionary Bishop. During the last twenty years of his life, with the exception of two visits to America, he labored assiduously at his post in Shanghai, and acquired an unusually profound knowledge of the Chinese language and literature. In 1846 he commenced his translation of the Prayer-Book, and engaged in a revision of the New Testament; and in 1847 he was appointed one of the committee of delegates from the several missions to review the translation of the Bible. In this work, and in the discussion which grew out of it, he displayed an amount of ability and learning which challenged general admiration. His death was hastened by severe labor in an unhealthy climate.

July 17.—MCCOOK, COL. DAN, an officer of U. S. volunteers, died in Steubenville, Ohio, of wounds received in the battle of Kenesaw Mountain, making the fourth member of the family who have fallen in the service of their country, and leaving two brothers only, who are at present commanding Ohio regiments in the field.

July 18.—LAMSON, REV. ALVAN, D. D., a Unitarian clergyman and author, died in Dedham, Mass., aged 72 years. He was a native of Weston, Mass., studied at Phillips' Academy, Andover; graduated at Harvard College in 1814, and immediately after was appointed tutor in Bowdoin College, where he remained two years. He then studied theology at the Divinity School at Cambridge, and in 1818 was

ordained pastor of the First Church in Dedham, where he labored for more than forty years. He was a vigorous writer, and contributed frequently to the "Christian Examiner," besides publishing one or two valuable volumes.

July 18.—MARSH, NATHANIEL, President of the New York and Erie Railroad, died on Staten Island, aged 52 years. He was a native of Haverhill, Mass., graduated at Dartmouth College in 1835, studied law in his native State, and after his admission to the bar removed to New York. He was at one time First Assistant Postmaster of New York City. He entered the service of the Erie Railroad about seventeen years since, and had gradually risen to the position of President of the new company, having been Receiver of the original company when it passed into the hands of the bondholders. He was regarded as one of the ablest, if not the ablest, railroad manager in the United States.

July 20.—FEATHERSTONE, Brig.-Gen. Wm. S., an officer of the rebel army from Mississippi, killed at the battle of Peach Tree Creek, Ga.

July 20.—LONG, Brig.-Gen. ARMISTEAD L., an officer of the rebel army from Georgia, killed at the battle of Peach Tree Creek, Ga.

July 20.—PETTUS, Brig.-Gen. John J., an officer of the rebel army from Mississippi, formerly Governor of that State, killed at the battle of Peach Tree Creek, Ga.

July 20.—STEVENS, Brig.-Gen. GEORGE M., an officer of the rebel army from Maryland, killed at the battle of Peach Tree Creek, Ga.

July 21.—GREATHOUSE, Brig.-Gen. LUCIEN, of U. S. volunteers, killed in a skirmish near Atlanta, Ga., aged 21 years. He was a native of Carlinville, Ill., graduated at Bloomington, studied law, and was admitted to the bar. At the commencement of the war he volunteered as a private, and after passing through every intermediate grade was commissioned colonel of the 48th Illinois, his regiment bearing a conspicuous part in the achievements of the Army of the Tennessee. He was made brigadier-general only a day or two previous to his death.

July 22.—McPHERSON, Maj.-Gen. JAMES B. (See McPHERSON, JAMES B.)

July 22.—WALKER, Maj.-Gen. Wm. H. T., an officer in the Confederate army, killed in battle at Decatur, Ga. He was a native of Georgia and a graduate of West Point.

July 25.—LANSING, Gen. A. DOUW, ex-Major-General of Militia, died suddenly at Albany, N. Y. For more than forty years he had almost exclusive charge of the large manorial estates of the Van Rensselaers, and had in many ways identified himself with the business affairs of the city in which he resided.

July 25.—WAGNER, PETER K., a printer, died at New Orleans, La., aged 75 years. He was a native of Maryland, but removed to New Orleans in 1818, and soon after became editor and proprietor of the "New Orleans Gazette," continuing it until 1836, when the depression of the times forced him to give it up. In 1827 he connected himself with the Louisiana "Ad-

vertiser" until 1829, when Gen. Jackson, then President, conferred upon him the appointment of naval officer of the port. Subsequently he assumed the editorship of the Louisiana "Courier."

July 26.—MULLIGAN, Col. JAMES A. (See MULLIGAN, JAMES A.)

July 27.—BARLOW, Mrs. ARABELLA GRIFFITH, wife of Brig.-Gen. Francis C. Barlow, of U. S. volunteers, died at Washington, D. C., of fever contracted while in attendance upon the hospitals of the Army of the Potomac. She entered the service of the Sanitary Commission at an early period of its existence, serving faithfully throughout the Peninsular campaign, and subsequently both in hospitals and on the field.

July 27.—BONNEY, Rev. SAMUEL W., American Missionary to Canton, China, died in that city of fever, aged 49 years. He was a native of New Canaan, Conn., pursued his studies in part in the New York University, but subsequently removed to Cincinnati, Ohio, and completed his course in Lane Seminary. He arrived in China in 1845, and has since then, with the interval of a brief visit to America, been an active and useful missionary.

July 27.—HALLETT, SAMUEL, a New York banker and railroad manager, was assassinated at Wyandotte, Kansas, by a discharged engineer named Talcott. His age was about 39 years. Mr. Hallett's early life was passed in poverty, but he early displayed a rare aptitude for business, and great executive ability. About 1850 he first attracted attention as a banker, and the bold and daring character of his enterprises gained him enemies as well as friends. In 1857 he became embarrassed and lost most of the property he had previously amassed, but soon recovered himself, and though implicated to some extent in the alleged over-issue of Indiana State bonds, he succeeded in relieving himself from the charges brought against him, and becoming the financial agent and manager of the Atlantic and Great Western Railroad, and carried that magnificent enterprise through to a complete success. He also became the financial agent and principal contractor for the Union Pacific Railroad, the first section of the Pacific Railroad, whose success had become assured under his management. He was heartily loyal and patriotic, and though a man of marked faults, was not devoid of compensating virtues.

July 27.—MILLER, SILAS, Colonel of the 36th regiment Illinois volunteers, died at Nashville, Tenn., from wounds received at the battle of Kennesaw Mountain, Ga., aged 25 years. He was born in Tompkins County, N. Y., but when very young removed to Aurora, Illinois, learned the printer's trade, pursuing his education in the mean time, and when the war broke out was diligently engaged in the study of law. In April, 1861, he enlisted in the volunteer service as a private, passing rapidly through the different grades of promotion, and doing important service in the early campaign of Missouri and Arkansas, and in Mississippi and East Ten-

nessee; was taken prisoner by the enemy at the battle of Murfreesboro, and after his exchange was commissioned colonel of his regiment, participating with it in the fearful battles of Chickamauga and Mission Ridge, where he commanded a brigade. From thence he went with his command into East Tennessee, enduring with them one of the severest campaigns of the war. In January, 1864, he reenlisted, accompanied Gen. Sherman on his eventful campaign, and participated in all the engagements between Chattanooga and Kenesaw Mountain, where he received the fatal wound.

July 29.—COX, ABRAHAM SIDDON, M. D., Surgeon-in-chief of the 1st division, 20th corps, Army of the Cumberland, died in the officers' hospital, Lookout Mountain, Tenn., aged 64 years. Dr. Cox was a native of New York, and had been for many years one of the most eminent medical practitioners of New York City. At the opening of the war, with a rare patriotism, he relinquished his large practice and took an appointment as a surgeon in the army. His abilities were recognized, and he was promoted to be surgeon-in-chief of division; but the hardships and exposures of the Chattanooga and Atlanta campaigns had broken down his health and terminated his useful life.

July 29.—PALMER, VOLNEY B., died in New York, aged 65 years. He was a native of West Jersey, educated a printer, removed to Pottsville, Pa., in the infancy of the coal trade, and was largely engaged in business there for some years, when he removed to the Atlantic seaboard and originated the system of comprehensive and systematic advertising through the journals of the whole country, which has since grown into such importance. He had offices in New York, Boston, Philadelphia, and Baltimore.

July 29.—PATCHEN, AARON D., a banker and railroad manager of Buffalo, died in that city of softening of the brain. He was born in Hoosack, N. Y. His family were in very humble circumstances, and the death of his father left him when a mere child the head of the family. His industry, integrity, and business ability, won him friends and the confidence of capitalists; he entered at an early age the banking business, and filled important positions of trust prior to his removal to Buffalo in 1844, where he started an individual bank known for many years as "Patchen's Bank." He early perceived the importance of connecting Buffalo with New York by way of the Erie Railroad, and projected and built almost wholly from his own resources the Buffalo and New York City Railroad, extending from Buffalo to Corning, N. Y. Involved in debt by this enterprise, which for a time proved unremunerative, he exhibited rare versatility of resource in maintaining the vast burden, but at last it proved too much for even his vigorous and well-balanced mind, and the wearied brain gave way.

July 30.—WALDO, Rev. DANIEL. (See WALDO, DANIEL.)

July 30.—DUNBAR, Rev. DUNCAN, a Baptist clergyman, died in New York City, aged 73 years. He was a Scotchman by birth, but had resided in this country nearly forty years, being most of that period pastor of the McDougal Street Baptist Church. He was deeply interested in the work of Bible distribution, and was for twenty years a most active and zealous member of the Board of Managers of the American and Foreign Bible Society.

July 30.—MAGINNIS, Rev. JOHN, a Roman Catholic priest, died in San Francisco, Cal., aged 68 years. He was a native of Ireland, was ordained a priest by the late Bishop England, of Charleston, S. C., and officiated at St. James' Catholic Church, New York, until 1841, and afterwards at St. Andrew's until 1850, when he removed to California. On his arrival there he became pastor of St. Patrick's Church, holding that position until 1862.

August 2.—GRIGG, JOHN. (See GRIGG, JOHN.)

August 2.—HADLEY, Prof. HENRY HAMILTON. (See HADLEY, HENRY HAMILTON.)

August 2.—MALLOREY, Hon. GIBSON, a State Senator of Kentucky, was assassinated near Louisville. He was a native of Virginia, but had long been a resident of Kentucky, and one of the most successful agriculturists of the State; was a Director of the State Agricultural Society, and had filled many offices of public trust.

August 5.—CRAVEN, Capt. TUNIS AUGUSTUS, U. S. N., killed by the explosion of the *Tecumseh* by a torpedo, in Mobile Bay. He was a native of New Hampshire, and entered the navy as a midshipman, June 2, 1829, serving on different vessels until 1837, when, upon his own request, he was placed on the Coast Survey. In 1841 he was promoted to a lieutenantancy, and was attached to the sloop-of-war *Falmouth* till 1843, when he was transferred to the receiving ship *North Carolina*. Subsequently he was connected with the Pacific squadron, and again from 1850 to 1859 upon the Coast Survey, from which he was appointed to the command of the steamer *Mohawk*, of the home squadron, stationed off the coast of Cuba to intercept slavers. When the war broke out Capt. Craven was placed in command of the *Crusader*, and had an important share in preserving for the Union the fortress of Key West. In April, 1861, he was appointed commander of the new sloop, *Tuscarora*, and was sent after rebel cruisers. At his own request he was placed in charge of the monitor *Tecumseh*, early in the present year, and joined the James River flotilla. Recently he was ordered to reinforce Admiral Farragut, and bravely met his fate during the assault on the defenses of Mobile.

August 5.—FABON, JOHN, Chief Engineer U. S. N., was lost by the sinking of the Monitor *Tecumseh*, in Mobile Bay. He entered the service in 1840, being appointed from the State of New Jersey, of which he was a native. Upon the completion of the U. S. steam frigate *Powhatan*, he was attached to her as one of

her officers, and served three years and a half in her, making a cruise in the Gulf, thence to China and Japan. He served as senior Assistant on the *Niagara* during the laying of the Atlantic Cable, and was in charge of the engine department of the *San Jacinto* when the rebel commissioners, Slidell and Mason, were captured, since which time he has been superintendent of the Monitors built at the iron ship-building yard at Jersey City. Previous to the *Tecumseh* being commissioned, he was ordered to the *Onondaga*; but preferring to go to sea in a vessel of his own construction, he succeeded in getting detached and ordered to the *Tecumseh*, and had left a sick bed to be present at the engagement during which he lost his life.

Aug. 6.—STEDMAN, Brig.-Gen. GRIFFIN A., an officer of U. S. volunteers, killed near Petersburg. He was a native of Hartford, Conn., a graduate of Trinity College, and entered the service in 1861, as major of the 11th regiment Conn. vols. On the resignation of the lieutenant-colonel he was advanced to that position, and in the battle of Antietam, where Col. Kingsbury, the commander of the regiment, was killed, he was wounded, but not fatally. Recovering, he commanded the regiment at Fredericksburg, and Chancellorsville, and Gettysburg. At the commencement of the campaign of 1864, he was put in command of a brigade, and fought through all the terrible battles of the campaign in such a way as to win the frequent commendation of his superior officers. After the explosion of the mine at Petersburg his brigade was much exposed to the assaults of the enemy, and in one of the frequent skirmishes which occurred he lost his life. His commission as brigadier-general did not arrive till after his death, though he had been acting in that capacity for several months.

Aug. 9.—FISK, Miss FIDELIA, an American missionary and authoress, died at Shelburne, Mass. She was formerly a teacher in the Mount Holyoke Female Seminary; but in 1843 resigned her position there and went to Persia, where she labored as a missionary for fifteen years, being much of the time connected with a female seminary as teacher. Owing to the failure of her health she was obliged to return to this country, and subsequently assisted in preparing for publication "A Memorial of Mount Holyoke Female Seminary," "Woman and her Saviour in Persia," and at the time of her death was engaged upon "Reminiscences of Miss Mary Lyon."

Aug. 9.—FRANCIS, Ex-Gov. JOHN BROWN. (See FRANCIS, JOHN BROWN.)

Aug. 11.—MCALL, JAMES, a prominent merchant of New York, died in that city of rheumatism of the heart. He was a native of Ireland, came to this country at an early age, and entered into the mercantile trade. Upon retiring from business he was elected President of the Metropolitan Bank of New York, which position he filled for many years.

Aug. 11.—VARIAN, ISAAC L., ex-Mayor of New York City, died at his residence in Peekskill, aged 75 years. He was a descendant of the Knickerbockers, and was for near half a century identified with the history of New York.

Aug. 12.—VAN DOREN, Rev. ISAAC, a distinguished teacher and clergyman of the Dutch Reformed Church, died at Perth Amboy, N. J., in his 92d year. He graduated at Princeton College, studied Divinity with Dr. Romaine of Schenectady, and Dr. Livingstone, was licensed to preach by the Collegiate Dutch Church of New York, and in 1800 was settled in Hopewell, Orange Co., N. Y., where he labored twenty-three years. He then removed to Newark, N. J., where he was principal of the academy four years, from thence to Brooklyn, and after establishing the Collegiate Institute in that city, removed to Lexington, Ky., continuing in the work of teaching until quite advanced in life.

Aug. 13.—COLLIER, Rev. JOSEPH AVEET, died at Kinderhook, N. Y., aged 86 years. He was a native of Plymouth, Mass., studied at the Monson Academy, and graduated at Rutgers College, N. J., July, 1849. The succeeding fall he entered the Theological Seminary of the Reformed Dutch Church, New Brunswick, and upon the completion of his studies was ordained pastor of the churches of Bronxville and Greenville, Westchester Co., N. Y. In the spring of 1855, he accepted a call to the pastorate of the Reformed Dutch Church of Geneva, N. Y., and after a successful ministry of four years resigned on account of ill health, and accepted a call from a church at Kingston, N. Y., over which he was installed Nov. 15, 1859. He was the author of "The Christian Home; or, Religion in the Family;" "The Right Way; or, the Gospel applied to the Intercourse of Individuals and Nations;" "The Young Men of the Bible;" "Little Crowns and How to Win Them;" "Pleasant Paths for Little Feet;" and the "Dawn of Heaven."

Aug. 13.—WINSLOW, Rev. HUBBARD, D. D. (See WINSLOW, HUBBARD.)

Aug. 16.—GIRARDET, VICTOR J. B., a brigadier-general in the rebel army, killed in the action near Richmond, Va. He was quite young, and had previously to the campaign of 1864 been provost-marshal of Richmond.

Aug. 16.—STREIGHT, Col. ABEL D., U. S. volunteers, killed during an engagement at Dalton, Ga. He was a resident of Indianapolis when the war broke out, and when the call was made for three years' men, raised a regiment, of which he was made colonel, and took part in the campaign which placed Kentucky and Tennessee in the possession of the Union armies. In 1868 he led a cavalry force on a raid through Alabama, which though well conducted was but partially successful, and resulted in his being taken prisoner and confined in Libby prison. After a long period of privation and suffering, he made his escape and re-

turned to his home in Indiana, but soon after rejoined his regiment in the field.

Aug. 16.—**WOODBURY**, Brig.-Gen. **DANIEL PHINEAS**, U. S. volunteers, died at Key West, Fla., of yellow fever. He graduated at West Point in 1836, and was first commissioned in the 8d artillery, but in 1838 was made second lieutenant in the corps of engineers. In 1847 he was engaged in the survey of the Oregon route. In 1858 he was promoted to a captaincy, and previous to 1860 was engaged in the work of constructing Fort Jefferson, in the Tortugas. In May, 1861, he was appointed to superintend the construction of a part of the defences of Washington under Gen. Barnard, and the following year was made lieutenant-colonel of volunteers, and subsequently brigadier-general of volunteers, to date from March 19, 1862, and assigned to the command of the Engineer Brigade of the Army of the Potomac. During the whole of the Peninsular campaign Gen. Woodbury's command was engaged in constructing bridges, railroads, earthworks, etc., and greatly assisted the army in its movements. After the appointment of Gen. Hooker to the army, Gen. Woodbury accepted an assignment to the Department of the Gulf, as commander of the district of Key West and Tortugas, arriving at his new post April, 1863. In June, 1863, he was promoted to be lieutenant-colonel of Engineers in the U. S. Army. He was the author of a work entitled "Sustaining Walls," 1864; also, "Theory of the Arch," 1868.

Aug 17.—**GRIDLEY**, **PHILO**, LL. D. (See **GRIDLEY**, **PHILO**.)

Aug. 21.—**DUNCAN**, Commander **JAMES M.**, an officer of the U. S. Navy, died in Brooklyn, N. Y., of disease of the heart, aged 44 years. He was a native of Madisonville, Ohio, entered the navy in 1837, and subsequently passed through a course of study at the naval school, Philadelphia. He took an active part in the Mexican war, and especially distinguished himself in the contest which preceded the annexation of California. The commencement of the present war found him serving as a lieutenant on the U. S. steamer *Crusader*, then just completing a two years' cruise after slavers on the coast of Cuba. In 1862 he was appointed commander, and assigned to the storeship *Reliance*, and subsequently to the Monitor *Weehawken*, of which he had command when she went down in Charleston harbor, but was providentially on board the flag-ship at the time of the disaster. He was in command of the *Norwich*, and assisted in the bombardment of Fort Pulaski, and of Jacksonville, Fla. During his service on the Gulf blockade, Commander Duncan contracted the disease which terminated his life.

Aug. 21.—**DUSHANE**, Col. **A. F.**, an officer of U. S. volunteers, killed before Petersburg, Va. He was at the time of his death acting as brigadier-general of the Maryland brigade.

Aug. 22.—**APPLETON**, Hon. **JOHN**. (See **APPLETON**, **JOHN**.)

Aug. 28.—**VAN VLECK**, Col. **CARTER**, an officer of U. S. volunteers, died in a field hospital, near Atlanta, Ga., from a wound received in action. He was an eminent lawyer of Illinois, joined the 78th Illinois volunteers at the commencement of the war, and had recently been made colonel.

Aug. 24.—**KNIGHT**, Dr. **JONATHAN**. (See **KNIGHT**, **JONATHAN**.)

Aug. 28.—**MARSH**, Hon. **EPHRAIM**, President of the Morris Canal and Banking Company, died at Schooley's Mountain, of disease of the heart, aged about 68 years. He was one of the leading men of the State of New Jersey, and for some years a judge of one of the county courts.

Aug. 29.—**RULISON**, Dr. **W. H.**, Medical Director of the cavalry corps of the Army of the Shenandoah, killed near Winchester by a rebel sharpshooter. He was from Ohio, and had attained a high reputation for ability in his profession.

Sept. 1.—**ANDERSON**, **ROBERT H.**, a brigadier-general in the Confederate army from Georgia, a graduate of West Point, killed in the battle of Jonesboro, Ga.

Sept. 1.—**CUMMING**, **ALFRED**, a brigadier-general in the Confederate army from Georgia, a graduate of West Point, killed at the battle of Jonesboro, Ga.

Sept. 1.—**GROWER**, Col. **WILLIAM T. O.**, an officer of U. S. volunteers, killed at Jonesboro, Ga., while leading his troops against the rebel intrenchments, aged 25 years. He was a resident of New York previous to the war, and for several years was connected with the Metropolitan Bank. He entered the volunteer service in May, 1861, as captain in the 17th regiment N. Y. S. M., was promoted to the position of major, and passed through the various campaigns of the Army of the Potomac until the second battle of Bull Run, when he was wounded and disabled for nearly a year. He afterward reorganized the regiment, serving with it in the Army of the Tennessee, and subsequently in the Army of the Cumberland.

Sept. 1.—**PATTEN**, —, a brigadier-general in the Confederate army, killed at the battle of Jonesboro, Ga.

Sept. 2.—**HARGOUS**, **PETER A.**, a prominent shipping-merchant of New York, died at his residence in that city, aged 65 years. He was of French descent and born in Philadelphia, whence he removed to New York nearly forty years since, and engaged in the shipping trade, principally with Havana. He maintained a high reputation for his strict integrity, remarkable business ability, and generous disposition.

Sept. 2.—**IRELAND**, Col. **DAVID**, an officer of U. S. volunteers, died at Atlanta, Ga., from a wound received at Resaca some months previous. He was a native of Scotland, entered the service in the 187th New York, and distinguished himself at the battles of Lookout Mountain, Mission Ridge, and Resaca, where he was severely wounded. At the time of his death

he commanded the 3d brigade, 2d division, 20th corps.

Sept. 2.—WEST, Rev. NATHANIEL, D. D. (*See* WEST, NATHANIEL.)

Sept. 3.—MCGILVER, Col. FREEMAN, an officer of U. S. volunteers from Maine, died while under the influence of chloroform, undergoing an operation made necessary by a wound received at the battle of Chaffin's Farm. He was a skilful artilleryman, and at the battle of Gettysburg, on the 2d of July, as chief of artillery in Sedgwick's corps, turned the fortunes of the day by the skill and promptness with which he planted his batteries, and the tenacity with which he held them to their work. At the time of his death he was chief of artillery in the 10th corps, Army of the James.

Sept. 8.—MORGAN, Brig.-Gen. JOHN H., an officer in the Confederate service, was shot while trying to make his escape from a company of Union cavalry who had surrounded and seized him at Greenville, Tenn.; aged 38 years. He was a native of Huntsville, Alabama. His military training was acquired in the war with Mexico, and subsequently as a captain of Kentucky volunteers, with whom he entered the service of the Confederate States. During the winter of 1862-'3 he commanded a cavalry force in Gen. Bragg's army, and greatly annoyed Gen. Rosecrans' outposts and communications. In the summer of 1863 he headed an extensive raid through Indiana and Ohio, in which he was captured, with a large number of his command, and imprisoned in the Ohio Penitentiary; but a few months after he, in company with six of his officers, made his escape. He subsequently made several raids into Kentucky and Tennessee, distinguishing himself by his brutality and his adroitness in avoiding a collision with the Union troops.

Sept. 8.—SANDERS, Major REID, an officer in the Confederate service, a son of the Confederate Agent, George N. Sanders, died at Fort Warren, Boston, aged 27 years. He was sent as bearer of despatches from the Confederate Government to Europe, on a blockade-runner, but was captured and confined in Fort Warren as a prisoner of state.

Sept. 8.—WHITTIER, Miss ELIZABETH H., an American poetess, died at her residence at Amesbury, Mass. She was a sister of the poet John G. Whittier, a member of the Society of Friends, and a lifelong advocate of liberty.

Sept. 4.—COOK, Rev. RUSSELL S. (*See* COOK, RUSSELL S.)

Sept. 4.—FRENCH, Hon. A. C., ex-Governor of the State of Illinois, died at his residence in Lebanon, Ill. He was a native of New Hampshire, educated at Harvard University, emigrated to Illinois, and entered the public service of that State not far from 1835. He was a lawyer by profession, and was made President of the Board of Trustees of McKendree College, and for some years was in charge of the law department of that institution.

Sept. 4.—HASCALL, Brig.-Gen. MILO S., an officer of U. S. volunteers from Indiana, who entered the service as colonel of one of the Indiana regiments, but was promoted to a brigadier-generalship in 1862. He handled his brigade with great skill and bravery in the battle of Stone River, where he was wounded, but returned to his command and participated in the battles of Chickamauga and Mission Ridge, and was active as division commander in the early battles of the Atlantic campaign. He was killed in an engagement near Franklin, Tenn.

Sept. 4.—JOHNSON, Hon. HENRY, ex-Governor of Louisiana; died in the parish of Pointe Coupee, La., in the 90th year of his age. He was a native of Mississippi, was educated for the law, and in 1809 was appointed clerk of the Second Superior Court of the Territory of New Orleans, and two years after Judge of the Parish Court of St. Mary. He was a member of the convention which framed the State Constitution of 1812, and in 1818 was elected to the State Legislature; was Governor from 1824 to 1828, and a senator from 1835 to 1839, and again from 1844 to 1849, soon after which he retired to private life.

Sept. 4.—WHITE, Hon. ALBERT S., died at his residence, near Stockwell, Ind., aged 61 years. He was a native of New York, graduated at Union College in 1822, studied law at Newburgh, and removed to Indiana, where, for several years, he was Clerk in the House of Representatives. He was a Representative in Congress from 1837 to 1839; Senator from 1839 to 1845; and again a Representative in the 37th Congress. At the close of his term he was elected one of the three Commissioners on Indian depredations. On the death of Judge Caleb B. Smith he was appointed Judge of the U. S. Court for the District of Indiana, a position which he held at the time of his death. Judge White was also President successively of the Lafayette and Indianapolis Railroad and the Toledo and Wabash Valley Railroad, and was at all times a zealous supporter of public improvements.

Sept. 5.—CLARK, Col. JAMES C., an officer of U. S. volunteers; died in Troy, from illness contracted during service in Louisiana, aged 49 years. He served in the Peninsular campaign, and distinguished himself by his gallantry at Port Hudson. He was colonel of the 79th colored regiment, and at the time of his death was acting as brigadier-general.

Sept. 6.—BAETOW, EDGAR J., a prominent citizen of Brooklyn, died at Morristown, N. J. He was a man of great enterprise and liberality, and was the principal contributor to the erection of the magnificent church of the Holy Trinity in Brooklyn. He also held several civil positions of distinction.

Sept. 6.—SMITH, Rev. THOMAS MATHER, D.D. (*See* SMITH, THOMAS MATHER.)

Sept. 9.—CHAMBERS, Rev. R. D., a clergy-

man of the Methodist Episcopal Church and President of Emory Female College, Carlisle, Pa.; died of consumption. He entered the Baltimore Conference in 1845, and served in various appointments until 1859, when he became Professor of Languages in Irving College. Subsequently he established the Institution of which he was president at the time of his death.

Sept. 10.—THOMSON, GEORGE, a government official, died in Georgetown, D. C., aged 78 years. He was for many years chief clerk of the Topographical Bureau, and was subsequently transferred to the same position in the Bureau of Engineers.

Sept. 11.—FAXON, HENRY W., an editor and author, died at Harwood Hospital, Washington, D. C. He was a native of Buffalo, entered the navy as an apprentice, and after two or three years' service returned home, and became connected with a telegraph office in Troy, and subsequently accepted a clerkship in a candle manufactory. In 1855 he became one of the editors of the Buffalo "Republic," and afterwards of the "Times," continuing in that capacity after it was merged into the "Republic" until August, 1860, when he became army correspondent for some of the New York papers, and occasionally for the Buffalo "Courier." He was the author of the "Silver Lake Snake Story," the "A. P. L. Parin Papers," and other humorous effusions, and ranked high among the humorous writers of the Press.

Sept. 12.—ALVERSON, JAMES LAWRENCE, LL.D., Professor of Mathematics, and Acting President of Genesee College, died at Lima, N. Y., aged 48 years. He was a native of the State of New York, graduated at the Wesleyan University at Middletown, Conn., in 1838, and soon after took charge of an Academy in Elmira, N. Y. In 1841 he became a teacher in the Oneida Conference Seminary, and in 1844 returned to Lima as teacher in the Genesee Wesleyan Seminary, of which he became principal in 1847, holding this office until appointed Professor of Mathematics in 1849.

Sept. 12.—BENJAMIN, PARK. (See BENJAMIN, PARK.)

Sept. 14.—HOWELL, Brig.-Gen. JOSHUA B., an officer of U. S. volunteers, was accidentally killed near Petersburg, Va., by being thrown from his horse, aged about 65 years. He was a brave officer, and had been wounded in several battles during the war. He was colonel of the 85th regiment of Pennsylvania volunteers, and had recently been made brigadier-general.

Sept. 14.—PATTEN, Major (Acting Colonel) HENRY L., an officer of U. S. volunteers, died of wounds received in battle, near James River, aged 28 years. He was a native of Kingston, N. H., graduated at Harvard College in 1858, spent a few years in teaching, and when the war broke out was studying law. He entered the army with the 20th Massachusetts regi-

ment, served in the Peninsular campaign, and especially distinguished himself at Fredericksburg, Gettysburg, and the battles of the Wilderness.

Sept. 15.—PORTS, Rev. GEORGE, D. D. (See PORTS, GEORGE, D. D.)

Sept. 19.—GODWIN, Brig.-Gen. A. C., an officer in the Confederate service, killed at the battle of Winchester, Va. He was a native of Portsmouth, Va., was formerly Provost-Marshal of Richmond, and was subsequently promoted colonel of a North Carolina regiment. A short time previous to his death he was made brigadier-general.

Sept. 19.—RHODES, Maj.-Gen. ROBERT E., an officer in the Confederate service, killed in the battle at Winchester, Va. He was a native of Lynchburg, Va., graduated at the Virginia Military Institute, in the class of 1848, and after a few years of professorship at that institution, removed to Alabama. In 1861 he entered the Confederate service as captain of the Mobile Cadets, and, upon the organization of the 5th Alabama regiment, was appointed its colonel. Soon after the first battle of Manassas, he was promoted to the rank of brigadier-general; was wounded at the battle of Seven Pines, and also at Sharpsburg; was present at Fredericksburg, and at Chancellorsville, when he was made major-general; served through the Pennsylvania campaign, with Early, in the defence of Lynchburg, and with the army of the valley of Virginia in 1864, throughout its marches and battles, commanding one of the two army corps of which it was composed, until he fell at Winchester.

Sept. 19.—RUSSELL, Brig.-Gen. DAVID A., an officer of U. S. volunteers, killed in battle near Winchester, Va. He graduated at West Point in 1845, served in the Mexican war, and was brevetted "for gallant and meritorious conduct at National Bridge and Cerro Gordo. In 1854 he was promoted to a captaincy in the 4th regiment of infantry, in the regular army, and in August, 1862, was made major in the 8th infantry. He entered the volunteer service at the commencement of the present war as lieutenant-colonel of the 7th Massachusetts volunteers, attached to the 6th army corps, served with distinction through the important battles of 1862-'3, having been commissioned a brigadier-general November, 1862, and subsequently was in command of Gen. Howe's division, 6th army corps, and in that command served with distinction at Gettysburg, and in the campaign of Gen. Grant from the Rapidan to the James. In the summer of 1864 he was transferred to the command of a division in the Army of the Shenandoah, where he met his death, fighting gallantly at the head of his troops.

Sept. 22.—MARSHALL, Hon. THOMAS F., an orator and politician of Kentucky, died at his residence near Versailles, Woodford County, Ky., aged about 64 years. He was a son of Chief Justice Marshall, and in his youth was

an earnest and persevering student, disciplining his mental powers with extraordinary diligence and success; but in early manhood, owing, it was said, to a disappointment which deeply affected him, he became addicted to occasional habits of intoxication. He repeatedly attempted to reform; and such was his remarkable eloquence, logical and rhetorical power, and so extensive his attainments, that in spite of his occasional lapses, he attained to high distinction. He entered upon the practice of law at an early age, and in 1831 removed to Louisville, where he acquired a reputation for forensic power which brought him an extensive practice. In 1844, and for several years subsequently, he was a member of the State Legislature, and electrified that body by his brilliant speeches. In 1840, having removed to Woodford County, he was elected to Congress from the Ashland District, and while there added to his high reputation by the remarkable eloquence of some of his speeches. Of one of them, that against John Quincy Adams, in the Haverhill petition case, Mr. Adams himself said that "it united the eloquence of Burke and Sheridan." While in Congress he again attempted to abandon the use of intoxicating liquors, taking the Washingtonian pledge, and adhering to it for two or three years; and giving evidence of his intellectual vigor in several temperance addresses, which brought great numbers to sign the pledge. In 1845 he was a candidate for Congress as a Democrat (he had previously been a Whig), in the Scott, Harrison, and Bourbon Cos. District, but was defeated by Hon. Garrett Davis, and lapsing into his previous unfortunate habits, never entered upon public life again.

Sept. 22.—WELLS, Hon. ROBERT W., Judge of the U. S. District Court for the western district of Missouri, died in Bowling Green, Kentucky. He was a resident of Jefferson City, and had been for nearly thirty years on the United States Bench of Missouri, never missing a term of either the Circuit or District Court until two months previous to his death. As a jurist he had few superiors. It was his fortune to decide upon many of the most complicated questions presented to a judicial tribunal for solution, and his views were always highly respected by the Supreme Court of the United States.

Sept. 24.—BATES, JOSHUA. (See BATES, JOSHUA.)

Sept. 24.—CONOVER, Commodore THOMAS A., U. S. Navy, died at South Amboy, N. J., aged 73 years. He entered the navy in January, 1812, his first cruise being on the *Essex*, commanded by Captain David Porter, during the war with England. His next service was under Commodore McDonough, on Lake Champlain. Promoted to a lieutenancy shortly after, he served on board the *Guerrriere* in the Mediterranean, and subsequently in other vessels in various portions of the world until his promotion to the position of commander about 1835,

in which capacity he commanded the *John Adams* sloop-of-war some years. In 1848 he was promoted to the rank of captain, and in the years 1857-'8 commanded the squadron on the coast of Africa, the old *Constitution* being his flagship. In July, 1862, on the creation by law of the grade of commodores in the navy, he received a commission as such. He had been in the service fifty-three years.

Sept. 29.—BURNHAM, Brig.-Gen. HIRAM, an officer of U. S. volunteers, killed in battle at Chaffin's Farm. He entered the service as colonel of the 6th Maine volunteers, leading them with skill and gallantry through the Peninsular campaign, at Antietam, and subsequently. At the second battle of Fredericksburg he distinguished himself for bravery and courage, and again at Gettysburg. In April, 1864, he was made brigadier-general, and during the campaign from the Wilderness to Petersburg, he bore a conspicuous part. A few weeks previous to his death he was assigned to a brigade in Stannard's division 18th corps.

Sept. 29.—WELCH, Col. N. E., an officer of U. S. volunteers, killed in battle near Chaffin's Farm. He was commissioned colonel in 1863, and was placed in command of the 16th Michigan regiment, at the head of which he was gallantly fighting when he met his death. He was regarded as one of the bravest and most skillful officers of the volunteer service.

Sept. 29.—WILLIAMS, Hon. JARED W., ex-Governor of New Hampshire, died at Lancaster, N. H. He was long in public life, and besides holding the office of governor for one year, had served two terms in Congress, and several terms in the State Legislature.

Sept. 30.—BALDWIN, Hon. JOSEPH G., ex-Chief Justice of California, died at San Francisco. He was elected one of the judges of the Supreme Court of California in 1857, and was Chief Justice from January, 1863, to January, 1864.

Sept. 30.—GREENHOW, Mrs. ROSE A., a spy of the Confederates, drowned in Wilmington Harbor, N. C., in attempting to land from a blockade runner in which she had come from Europe. She was the widow of a Mr. Greenhow, for many years translator of the State Department at Washington, and at the commencement of the war resided in that city, and was arrested for communicating information to the officers of the Confederate army relative to the position and movements of the United States armies. She was imprisoned for some time in her own house, and afterwards in the Old Capitol Prison, but was finally discharged, when she went to England, and there published an account of her imprisonment. It was on her return from that country that she lost her life.

October 1.—BELLAMY, Rev. DAVID, a Baptist clergyman, died at his residence in Rome, N. Y., in the 60th year of his age. In 1833 he was pastor of a church in Skeneateles, Onondaga County, N. Y., and from thence was called to Manlius, where he labored until 1839, when ill

health compelled him to resign. He then engaged in the service of the American and Foreign Bible Society, and finding his health somewhat benefited by travel, entered again the pastoral office at Ithaca, Tompkins County, and in 1841 became pastor of the Stanton Street Baptist Church, New York City, where he remained until 1846; he then united with others in forming Hope Chapel (now Calvary) Baptist Church, of which he was pastor three years. Subsequently he preached in Arcadia, at Mount Morris, and at Rome, where he labored successfully until his death.

October 1.—WOOD, HON. REUBEN, ex-Governor of Ohio, died at Rockport, Ohio, aged 73 years. He was formerly a resident of New York, but removed to Cleveland, Ohio, where he commenced the practice of law in 1817, and in 1840 was appointed Judge of the Supreme Court of that State. In 1849 he was elected Governor by the Democratic party, and re-elected in 1850, when the new constitution took effect, vacating the office. In 1852 the Democratic Convention discussed the nomination of Mr. Wood for the Presidency, but ultimately agreed upon Franklin Pierce. In 1853 Gov. Wood was made U. S. Consul to Valparaiso, holding that position for eighteen months, when he resigned and retired to the quiet of a farmer's life.

Oct. 2.—PIATT, MRS. LOUISE KIRBY, an American authoress, died in Cincinnati. She was the author of a series of essays which appeared in the "Home Journal," over the signature of "Bell Smith." Her letters from Paris were collected and published in a volume entitled "Bell Smith Abroad."

Oct. 2.—WINSLOW, MRS. NATHANIEL, died at Williston, Vt., aged 95 years. She was the mother of the deceased brothers Winslow, Gordon, Hubbard, and Myron.

Oct. 3.—MEIGS, Lieut. JOHN R., an officer of U. S. volunteers, killed by guerrillas near Harrisonburg. He was the only son of Maj.-Gen. Meigs, Quartermaster-General; graduated at West Point in 1863, at the head of his class, and with the highest honors, and was immediately sent to the field, where he highly distinguished himself during the campaigns in Maryland, Harper's Ferry, and the Shenandoah valley. At the time of his death he was engaged in making a military survey, in his capacity of Chief Engineer of the Army of the Shenandoah.

Oct. 5.—REDFIELD, Col. JAMES, an officer of U. S. volunteers, was killed at the head of his regiment in the battle of Allatoona Pass, Ga., aged 40 years. He was a native of Clyde, Wayne County, N. Y., graduated at Yale College in 1845, studied law, and was for some time in the office of the Secretary of State (New York). He subsequently removed to Iowa, and was elected State Senator. At the outbreak of the rebellion he assisted in raising the 39th Iowa regiment, which he led through nearly all the hard campaigns of the Western army.

Oct. 6.—AMORY, Col. THOMAS J. C., an officer of U. S. volunteers, died of yellow fever at Newbern, N. C. He graduated at the Military Academy, West Point, in 1851, and was assigned to the 7th infantry, in which he obtained a first lieutenantcy in 1855, and in 1861 a captaincy. In the latter year he was appointed colonel of the 17th Mass. volunteers, with which regiment he took part in Gen. Burnside's North Carolina expedition, participating in the capture of Newburn, where he remained stationed up to the time of his death. During nearly the whole of his service in North Carolina he was in command of a brigade.

Oct. 7.—GREEG, Brig.-Gen., an officer in the Confederate service, killed in battle near Petersburg, Va. He was commanding a Texas brigade at the time of his death.

Oct. 8.—YOUNG, EDMUND M., a prominent leather merchant of New York City, died of paralysis, aged 50 years. He was a man of great benevolence, and had taken an active interest in many of the philanthropic institutions of the city.

Oct. 9.—WILLARD, HON. JOHN D., LL. D., an American jurist, died at Troy, N. Y. He graduated at Dartmouth College in 1819, and was admitted a member of the New York bar about 1823. He had been Judge of the Circuit Court for some years, and subsequently a member of the State Senate from the Rensselaer district. He left by will a legacy of \$10,000 to Dartmouth College.

Oct. 12.—TANEY, ROGER B., Chief Justice U. S. (See TANEY, ROGER B.)

Oct. 13.—OHLENSCHLAGER, Dr. EMIL, late medical inspector on Gen. Sheridan's staff, was murdered by guerrillas near Winchester, aged 29 years.

Oct. 13.—WELLES, Col. GEORGE D., an officer of U. S. volunteers, died of wounds received in the battle near Strasburg. He was made colonel of the 94th regiment Massachusetts volunteers, August 1862.

Oct. 14.—SANDERSON, Col. JOHN P., an officer of U. S. volunteers, and Provost Marshal General of the Department of Missouri, died at St. Louis. He had filled many important offices of trust during the war, among which was that of chief clerk of the War Department, during Mr. Cameron's term as Secretary. Before resigning that, he was appointed lieutenant-colonel of the 15th U. S. infantry, and soon after was commissioned colonel of the 18th U. S. infantry, with which he passed through the fearful contest of Chickamunga. Some months previous to his death he was appointed to the responsible office of Provost Marshal General at St. Louis.

Oct. 14.—WADKINS, Brig.-Gen., an officer in the Confederate service, killed in the battle of Resaca, Ga.

Oct. 17.—MOTT, HON. JOHN M., late U. S. Marshal for the Northern District of New York, died at Washington, D. C. He was a resident of Lansingburg, and had been a mem

ber of Congress. At the time of his death he was in Washington by appointment of Governor Seymour, as commissioner of elections.

Oct. 17.—PORTER, LEMUEL, D. D., an American Baptist clergyman, and at the time of his death Associate Secretary of the Western Department of the American Tract Society (Boston), died in Chicago, Ill. He had been in the ministry about thirty years, and had had a long and successful pastorate at Lowell, and subsequently at Pittsfield, Mass. He was a man of fine culture, an excellent preacher, and the author of several religious works. He had been appointed to the secretaryship in May, 1864, and had had but a short experience in its duties, but had won the esteem of all those with whom he was brought in contact.

Oct. 18.—BIENEY, Maj.-Gen. DAVID BELL. (See BIENEY, DAVID BELL.)

Oct. 19.—BIDWELL, Brig.-Gen. DANIEL D., an officer of U. S. volunteers, killed in the battle of Cedar Creek, Va., aged about 48 years. He was born in the township of Buffalo, N. Y., where he became a prominent and influential citizen, and for more than twenty years was identified with the military organizations of the city. When the war broke out he was holding the office of police justice, but resigned his position and entered the 65th regiment of volunteers as a private, and was subsequently appointed brigade inspector. Upon the death of the captain of his company he resigned that position, accepted the command vacated, and withdrawing it from the regiment, reorganized it as an independent citizen's corps, thus forming the nucleus of what has since been known as the 74th regiment. In September, 1861, he was commissioned colonel of the 49th regiment, served with it through the Peninsular campaign, and during the "seven days' battles" was in command of a brigade, continuing in charge from Harrison's Landing to Washington, and up to the time of the battles of South Mountain and Antietam, when he resumed command of his regiment. Col. Bidwell took a prominent part in the battles of Fredericksburg and Chancellorsville, commanded a brigade at Gettysburg, and when Gen. Grant took command of the armies in Virginia, was again placed in charge of a brigade, participating in all the battles near Petersburg. He was commissioned brigadier-general in July, 1864, and had served with honor in all the late battles in the Shenandoah valley, under Gen. Sheridan.

Oct. 19.—LOWELL, Col. CHARLES R. (See LOWELL, CHARLES R.)

Oct. 19.—THOBURN, Col. JOSEPH, an officer of U. S. volunteers, who entered the service in 1861 as colonel of the 1st regiment West Virginia volunteers, killed in the battle of Cedar Creek. He was a brave and able officer, and at the time of his death was commanding the 1st division of the Army of the Shenandoah. While rallying his men he was treacherously surprised and shot by a rebel officer in the Union uniform.

Oct. 20.—CHANDLER, Rev. AMARIAH, D. D., a Congregational clergyman, died at his residence in Greenfield, Mass., aged 82 years. He was a native of Deerfield; fitted for college with Rev. Dr. Packard of Shelburne, graduated at the University of Vermont, studied theology, and commenced preaching in Waitsfield, Vt. In 1882 he was installed over the First Church in Greenfield, Mass., where he continued to labor until his death.

Oct. 20.—RAMSEUR, Maj.-Gen. STEPHEN D., an officer in the Confederate service, died of wounds received in the battles of Cedar Creek. He was commanding a division in Early's army.

Oct. 22.—WINSLOW, Rev. MYRON, D. D., LL.D. (See WINSLOW, MYRON.)

Oct. 25.—EELLS, MARCELLUS, a well-known citizen of New York, died at Parkersburg, Va. He was formerly one of the "Ten Governors" when that board was in existence, and at a later period occupied a position in the Custom-House.

Oct. 26.—COBB, LYMAN, author of numerous school-books, died at Colesburgh, Potter County, Pa., aged about 65 years. He was the author of "Just Standard for Pronouncing English Language," New York, 1825; "Spelling-book," New York, 1826; "Introduction to ditto," 1831; "Expositor to ditto," 1835; "Juvenile Reader," Nos. I, II, III., New York, 1831; "Sequel" to ditto, 1835; "North American Reader," 1835; "Abridgment of Walker's Pronouncing Dictionary," Hartford, 1829 (Ithica 1828, '29); a series of spelling-books, New York, 1848; "New Juvenile Reader," Nos. I, II, III., New York, 1848, '44; "New Speaker," New York, 1852; "New Pronouncing School Dictionary," New York, 1843; "New Dictionary of English Language," New York, 2d edition, 1838; "Miniature Lexicon of the English Language," New York, 1835, '54; "Arithmetical Rules and Tables," New York, 1835; "Cyphering Book," New York, 1835; "Explanatory Arithmetic," Nos. I, II., New York, 1832, '35.

Oct. 26.—FAGAN, Brig.-Gen. J., an officer in the Confederate service from Texas, killed in Kansas. He had been a prominent actor in most of the considerable Western battles, and distinguished himself for his bravery as commander of a regiment in the battle of Shiloh, and as a brigadier at the battle of Corinth.

Oct. 26.—NEWTON, EPHRAIM HOLLAND, D.D., an American clergyman and naturalist, born at New Fane, Vt., June 18th, 1787, died at Cambridge, Washington County, N. Y., October 26th, 1864. He graduated at Middlebury College in 1810, at Andover Theological Seminary in 1813, and was licensed by the Haverhill Association. He settled and was ordained in Marlboro, Vt., in 1814, as successor to Gershom O. Lyman, D.D., and during the following year married Huldah, daughter of Maj.-Gen. Timothy F. Chipman, a descendant of John Howland of the *May Flower*. In 1833 he dissolved connection with the congregation at Marlboro, and was installed in the Presbyterian Church at

Glens Falls, N. Y., which charge he resigned in 1837, and accepted a call to the First United Presbyterian Church in Cambridge, Washington County, N. Y., which he resigned in 1843, and has had no regular charge since. He was principal of Cambridge Washington Academy from July, 1843, to 1848. In 1857 he donated his valuable mineralogical and geological collection to Andover Theological Seminary, where he arranged it in suitable apartments provided by the trustees, and to which they awarded the title of "The Newton Cabinet." In 1863 he presented to Middlebury College his library, where it is arranged in an alcove bearing his name. He was a consistent and earnest laborer in the interests of education and progress, a patient and persevering investigator in natural science—ever ready to give agricultural interests, and the mechanical arts, the benefit of his scientific research and observation, seeking to promote and ennoble labor in all its varied departments, and harmonize it with Christian and civil duties.

Oct. 27.—CAHILL, Rev. D. W., D. D., an Irish Roman Catholic clergyman and orator, died in Boston, Mass., aged about 65 years. He had attained a high reputation in this country as a lecturer on astronomy, chemistry, and other subjects.

Oct. 27.—DEARING, Brig.-Gen. ———, an officer in the Confederate service, killed near Petersburg, Va.

Oct. 27.—KIDDOO, Col. ———, an officer of U. S. volunteers, died from wounds received in battle near Richmond. He was in command of the 22d regiment U. S. colored troops.

Oct. 28.—GREENLEAF, BENJAMIN, a teacher and author, died in Bradford, Mass., aged 78 years. He graduated at Dartmouth College in 1811. From 1820 to 1850 he was Principal of Bradford Academy, where he fitted thousands of young men for college. He was widely known as the author of a series of mathematical works, among which are "Mental Arithmetic for Beginners," Boston, 1845, '46, '51; "Mental Arithmetic for Schools," Boston, 1858, '59, '60, '61; ditto for "Primary Schools," 1860; "National Arithmetic," Boston, 1885, '47, '55, '60, with Key; "Elements of Algebra," Boston, 1862; "Practical Treatise on Algebra," Boston, 1853, '54, '55, '60; "Elements of Geometry," Boston, 1860; "Elements of Geometry and Trigonometry," Boston.

Oct. 29.—RANSOM, Brig.-Gen. T. E. G. (*See RANSOM, T. E. G.*)

Oct. 29.—ADAMS, Rev. SAMUEL W., a clergyman of the Baptist Church, died in Cleveland, Ohio, aged 49 years. He was born in Vernon, Oneida County, N. Y., graduated at Hamilton College, Clinton, N. Y., and at the Theological Seminary, Hamilton, N. Y., was pastor of the church in Vernon three years, and in 1846 removed to Cleveland and entered upon the pastoral relation which he held until his death.

Oct. 29.—PATE, Col. HENRY CLAY, an officer in the Confederate service, killed during the

engagement between Gens. Sheridan and Stuart's cavalry near Richmond, aged about 38 years. He was a native of Western Virginia, and was a speaker and writer of some distinction. He attained an unenviable notoriety as a "border ruffian" leader in the Kansas troubles of 1855-'58. On the breaking out of the war he raised a battalion of cavalry in Richmond, which was soon merged in the 5th Virginia cavalry, and being promoted to the rank of lieutenant-colonel, served through the principal battles in Virginia. He had but recently been made colonel.

Oct. 31.—HUNTINGTON, Rev. DANIEL, a clergyman of the Congregational Church, died at Hadley, Mass., aged 90 years. He was born in Lebanon, Conn., graduated at Yale College, the first scholar in the class of 1794, and was for some years a tutor both at Yale and Williams' Colleges. He was the predecessor of Rev. Dr. Beecher as pastor of the church in Litchfield, and afterwards had charge of a parish in Middletown, Conn. In 1816 he removed to Hadley, Mass., where he continued to reside until his death. He was the father of Rev. F. D. Huntington, D. D.

Oct. 31.—WINANS, Rev. B. F., a clergyman of the Methodist Episcopal Church, and presiding elder of the Indianapolis district of that society, was killed by a railroad accident near Lafayette, Indiana, while acting as agent of the Sanitary Commission.

Nov. 1.—CHASE, Rev. IRAH, D. D. (*See CHASE, IRAH, D. D.*)

Nov. 1.—THOMPSON, R. H., M. D., formerly Health Officer of the port of New York, died in Brooklyn, L. I., aged 47 years. He was a native of Rensselaer County, N. Y., practiced medicine in Albany for ten years, and removed to Staten Island in 1855, having received the appointment of Health Officer. During the Quarantine riots in 1858 his house, with all its contents, was burned by the rioters. Soon after he removed to Brooklyn and interested himself in various measures of public improvement, becoming President of the Brooklyn Central and Jamaica Railroad, Park Commissioner, and, in 1868, Quarantine Commissioner. To his skill as a physician, and his executive talent, the port of New York is largely indebted for its present immunity from the epidemics incident to emigration and foreign commerce.

Nov. 2.—SWAN, Hon. WILLIAM D., a teacher and author, died at his residence in Dorchester, Mass. He was the author of a series of Spellers and Readers for the use of schools.

Nov. 2.—TALLMADGE, Hon. N. P. (*See TALLMADGE, N. P.*)

Nov. 2.—WHITLOCK, Rev. G. C., LL.D., died in Albia, Iowa. He was for several years a teacher in the Genesee Wesleyan Seminary at Lima, N. Y., and more recently had been Professor of Natural Science in Victoria College, Coburg, Canada.

Nov. 3.—MAXWELL, Hon. THOMAS, was accidentally killed on the railroad at Elmira, N. Y.,

aged 78 years. He filled many positions of public trust during his life; was at one time a member of Congress, also Sheriff of Tioga County, and Postmaster of the village of Elmira.

Nov. 7.—MEDARY, SAM., an Ohio editor and politician, died at Columbus, Ohio. He was born in Ohio in 1801, and his early advantages of education were limited. Soon after arriving at man's estate he joined the Jackson party, and remained a faithful adherent to Gen. Jackson through his entire public career. He early became connected with the newspaper press, and was for many years editor of the *Ohio Statesman*; and his editorials, though lacking in polish, were full of vigor. He was for a long time one of the leading men of his party in Ohio. Though being a personal friend of Stephen A. Douglas, he separated from him when he opposed Buchanan. During Mr. Buchanan's administration he was appointed, and served for some time, as Governor of the Territory of Kansas. During the present war he had been a "Peace" Democrat, though having a son in the war of whom he was very proud. His death was attributed to the remains of the poison infused into his system at the National Hotel, Washington, in 1857.

Nov. 7.—TOLLE, COL. CORNELIUS W., Chief Quartermaster of Gen. Sheridan's Army, died at Winchester, Va., of wounds received from guerrillas Oct. 11th, in the 37th year of his age. He entered the service of the United States in May, 1861, as first lieutenant of the 18th regiment of infantry, and received his appointment of quartermaster August, 1862. He served constantly in the field, discharging the duties of his position with zeal and fidelity, winning the confidence and esteem of commanders and subordinates. His health having given way under his severe labors, he was temporarily placed on duty as inspector; but, upon his recovery, he was appointed Acting Chief Quartermaster of the Middle Military Division. While actively engaged in the duties of this position, he published some valuable contributions to military literature in the "United States Service Magazine," the "Army and Navy Journal," and elsewhere.

Nov. 10.—ELTON, HON. JOHN P., one of the Presidential Electors at large of Connecticut, and a distinguished manufacturer and citizen, died at Waterbury, in that State.

Nov. 11.—MORRIS, P. VAN NESS, M. D., died in Cambridge, N. Y., in the 69th year of his age. He was a native of Cambridge, graduated at Williams' College, Mass., before he was eighteen, and at twenty-one commenced the practice of medicine with his father, continuing it until within a few months of his death. He was a man of great liberality, devoting a stated portion of his income to charitable purposes beside the sum of \$10,000 to Williams' College, and made, during his last illness, large donations to religious objects.

Nov. 11.—STRAHNS, REV. JOHN, Rector of St. Peter's Church, Spottiswood N. J., died in

that village, aged 51 years. He was a native of New York City, was educated for a physician, but in 1847 was ordained Priest by Bishop Potter. He had charge of parishes in Oyster Bay, L. I., Brooklyn, N. Y., Stratford, Conn., and Pittsfield, Mass.

Nov. 13.—HAMMOND, HON. JAMES H. (See HAMMOND, JAMES H.)

Nov. 17.—PITMAN, HON. JOHN, Judge of the U. S. District Court of Rhode Island, died suddenly at Providence, aged 80 years. He had held the above position for forty years.

Nov. 19.—HOPKINS, LIEUT.-COL. JAMES A. P., an officer of U. S. volunteers, died in New York City. He entered the volunteer service with the 188d regiment N. Y. (2d Metropolitan), sharing with it in the siege of Port Hudson. He also fought with great bravery and skill in other engagements in the Department of Gen. Banks. During the latter part of his career at the South he was appointed Chief of Police in the city of New Orleans, and subsequently received a commission as Chief of the United States Detective Force of that city.

Nov. 20.—FAIRBANKS, HON. ERASTUS. (See FAIRBANKS, ERASTUS.)

Nov. 24.—SILLIMAN, BENJ., M. D., LL.D., (See SILLIMAN, BENJAMIN.)

Nov. 24.—TINSLEY, DR. BENJAMIN R., a surgeon in the U. S. Navy, died suddenly at his residence in Charlestown, Mass. He had been for more than forty years on duty, most of the time at sea, and his success, both as a surgeon and a practitioner of medicine, was remarkable.

Nov. 25.—PAINTE, MAJ. JOSEPH W., an officer of U. S. volunteers, died suddenly in New Orleans, La. He was a native of Boston, Mass., and for several years was an associate editor and publisher, with William Matthews, of the "Yankee Blade." More recently he was connected with several of the leading life insurance companies of New York City, but continued to contribute to some of the principal Boston and New York journals. In the summer of 1863 he entered into the volunteer service as first lieutenant of the 13th New York cavalry, and in 1864 was commissioned Major of the 4th U. S. colored cavalry, and at once proceeded to the Department of the Gulf. During the Red River campaign he did able and effective service, but in August was obliged to come North for the benefit of his health. While here he entered into the political campaign, supporting the Administration both with pen and voice. The second week in November he returned to New Orleans, before his health was sufficiently recruited, and died within a week of his arrival.

Sept. 30.—OLEBURN, MAJ.-GEN. PATRICK R., an officer of the Confederate service, and at the time of his death commander of a corps in Hood's army, killed at the battle of Franklin. He was a native of Ireland, but joined the Confederate army from Arkansas. He was very popular with his troops, and the Irishmen in the Confederate army were unwilling to

serve under any other commander. He had participated in most of the great battles of Gens. Bragg, Johnston, and Hood, and had a high reputation for personal courage and daring.

Dec. 1.—DAYTON, HON. WILLIAM L. (*See* DAYTON, WILLIAM L.)

Dec. 2.—BOARDMAN, HON. DAVID SHERMAN, died at New Milford, Conn., aged 96 years. He graduated at Yale College in 1793, was admitted to the bar in 1795, and speedily took rank among the foremost lawyers of Connecticut. For a few years he was Chief Justice of the Supreme Court.

Dec. 7.—RANNEY, MOSES H., M. D. (*See* RANNEY, MOSES H.)

Dec. 9.—SARGENT, Lieut.-Col. LUCIUS M., an officer of U. S. volunteers, killed near Meherrin River, Va. He was a son of Lucius M. Sargent, the well-known author. He was in command of the 1st Massachusetts cavalry.

Dec. 10.—SCHOOLCRAFT, HENRY R. (*See* SCHOOLCRAFT, HENRY R.)

Dec. 11.—KITCHING, COL. J. HOWARD, an officer of U. S. volunteers, formerly colonel of the 6th New York artillery, but of late in command of a provisional division in the army of the Shenandoah, died from the effects of a wound received in the battle of Cedar Creek, at his father's residence, Dobbs Ferry, N. Y. He was a native of New York, was well educated, and at the opening of the war enlisted as a private in the Lincoln cavalry. He was transferred soon after to the 2d N. Y. artillery, in which he soon rose to the rank of captain, and by diligent study and observation made himself an accomplished artist and thorough military scholar. He served in every battle in which the 6th corps was engaged during the Peninsular campaign, and in the autumn of 1862 became lieutenant-colonel of the 135th N. Y. volunteers, afterward the 6th N. Y. artillery, of which regiment he became the commander on the promotion of Colonel Morris to the brigadier-generalship. From the time of his receiving a commission as colonel he was almost constantly in command of a brigade, and repeatedly received the special commendation of his superior officers, especially that of Gen. Meade, for his extraordinary gallantry in the action of the 19th of May. In the battle of Cedar Creek, Oct. 19, his division bore the brunt of Early's attack, and fought with desperate valor. He was wounded in the ankle early in the action, but would not leave the field till the close of the battle; but erysipelas set in after the first operation, rendering a second necessary, under which he died.

Dec. 12.—LEONARD, Rev. LEVI W., D.D., a Congregational clergyman and author, died in Exeter, N. H., aged 75 years. He was a native of Bridgewater, Mass., graduated at Harvard College in 1815, studied theology at Cambridge, and in 1820 was ordained pastor of the First Congregational Church in Dublin, N. H., where he remained for more than thirty years. He was the author of a "Literary and Scien-

tific Class Book," the "North American Spelling Book," "Sequel to Easy Lessons," and superintended the compilation of the "History of Dublin," beside being an extensive contributor to the weekly religious and secular press.

Dec. 13.—SAVAGE, Rev. JOHN A., D.D. President of Carroll College, Wisconsin, died at Waukesha, Wis., aged 64 years. He was for more than twenty-three years pastor of the Presbyterian Church in Ogdensburg, N. Y.

Dec. 15.—FARNHAM, Mrs. ELIZA W., a well-known philanthropist and authoress, died in New York City, aged 49 years. She was a native of Rensselaerville, Albany Co., N. Y. Her family name was Burhans, and in 1836 she was married to Mr. Thomas J. Farnham, a traveller and writer of considerable note. After residing a few years in the State of Illinois she returned to New York, devoting herself mainly to works of benevolence and social reform. In 1844 she was appointed matron of the female department of Sing Sing State Prison, and while there published her first work "Life in the Prairie Land," and edited an edition of Sampson's "Criminal Jurisprudence." In 1848 she was connected with the Institution for the Blind in Boston, and in 1849 followed her husband to California, where she remained until 1856. Upon her return to New York she published a volume entitled "California Indoors and Out," and for the two years following devoted herself to the study of medicine. In 1859 she organized a society for the aid of emigrant women, large numbers of whom she accompanied at different times to the West and to California. She was also the author of "My Early Days" and the "Era of Women," a work upon which she had spent some years of preparation, and which had for its object the promotion of a social reform in the position and rights of women.

Dec. 16.—DE FOREST, Col. O., an officer of U. S. volunteers, died in New York. He was among the first to enter the army at the beginning of the rebellion, commanding the 5th N. Y. cavalry until a short time after the battle of Gettysburg. During the Maryland and Pennsylvania campaign he commanded the 5th brigade of Gen. Kilpatrick's cavalry division, and distinguished himself as an excellent officer.

Dec. 17.—HOOKER, HORACE, D.D., an American Congregational clergyman and author, died in Hartford, Conn., aged 71 years. He was a graduate of Yale College and of Andover Theological Seminary, and was remarkable for the elegance and purity of his style as a writer. Many years since, in connection with Rev. Thomas H. Gallaudet, LL.D., he undertook the preparation of some religious books for the young. Among these were the "Youth's Book of Natural Theology," in two parts, and a series of twelve volumes of "Bible History." Many thousands of these books have been sold. He was also associated with Mr. Gallaudet in the preparation of a popular spelling book and a definer. For a period of more than twenty

years he was the Secretary of the Connecticut Missionary Society, auxiliary to the American Home Missionary Society, and for several years also was chaplain of the Insane Retreat at Hartford. A modest, retiring man, he was greatly beloved by all who knew his worth.

Dec. 17.—**MINER**, Miss MYRTILLA, an American philanthropist, died in Washington, D. C., of consumption. She established a school for colored children in Washington, but was subjected to severe persecution in consequence. For many years she had devoted all her energies amid feeble health to the improvement and elevation of the people of color in the District of Columbia.

Dec. 19.—**McCLELLAND**, ALEXANDER, D. D., Professor of Biblical and Oriental Literature in the Theological Seminary, New Brunswick, N. J.; died there in the 69th year of his age. He was a native of Schenectady, N. Y., and a graduate of Union College in that city. He was for some years pastor of Rutgers Street Presbyterian Church, New York City, and while there was conspicuous among the preachers of the city for his learning and eloquence. Subsequently he held a professorship in Dickinson College, Carlisle, Pa. For the last nineteen years he had been connected with the Theological Seminary at New Brunswick.

Dec. 21.—**FRY**, WM. HENRY. (*See* **FRY**, WM. HENRY.)

Dec. 23.—**KESSLER**, Rev. JOHN, D. D., a distinguished clergyman of the German Reformed Church, died at Allentown, Pa.

Dec. 24.—**FOX**, JOHN LAWRENCE, M. D., Fleet-Surgeon U. S. Navy, died at his residence in Roxbury, Mass., aged 54 years. He was a native of Salem, Mass., graduated at Amherst College in 1831, and in 1837 entered the navy as assistant-surgeon. In 1847 he received a full commission. A few months previous to his death he was appointed Fleet-Surgeon upon the staff of Admiral Porter, and his death was doubtless the result of overtaxing his system by the severe duties of his department.

Dec. 24.—**MAY**, Col. CHARLES A., an officer of the U. S. Army, died in New York City, aged 46 years. He was a native of Washington, D. C., was appointed to a second lieutenantancy in the 2d regiment of dragoons, in 1836, and distinguished himself in the Florida war. At the beginning of the war with Mexico he joined the forces under Gen. Taylor, and assumed command of a squadron of his regiment. He took part in the battle of Palo Alto, and was breveted major for his gallantry on that occasion; distinguished himself at Resaca and Buena Vista, where he was promoted to a colonelcy, and in 1860 resigned his commission and took up his residence in New York City. For some years previous to his death he held the position of vice-president of the Eighth Avenue railroad.

Dec. 24.—**WOOD**, Hon. JOHN M., formerly member of Congress from Maine, died in Boston, aged 49 years. He was a native of Orange

County, N. Y., but removed to Maine, where he was elected to the Legislature, and afterwards to Congress for two terms, from 1854 to 1858, serving as a member of the Post Office Committee.

Dec. 25.—**FILLMORE**, Major JOHN S., paymaster U. S. Army, died at his residence in Denver City, Colorado Territory. He was a native of the State of New York; was appointed paymaster by the Governor of Colorado, in August, 1861, and was commissioned paymaster in the U. S. Army by the President, in November, 1862.

Dec. 25.—**NOYES**, WILLIAM CURTIS. (*See* **NOYES**, WILLIAM CURTIS.)

Dec. 25.—**WALLACK**, JAMES W. (*See* **WALLACK**, JAMES W.)

Dec. 27.—**COOKE**, Hon. ELEUTHEROS, died at his residence in Sandusky, Ohio, aged 77 years. He was born in Granville, N. Y., in 1787, the year in which the Constitution of the United States was framed by the General Convention, and his name was given in commemoration of that event. For nearly half a century Mr. Cooke had identified himself with numerous public enterprises and works of internal improvement, having for their object the development of the resources of the State of Ohio. He was the pioneer of railroad enterprise in the West, having been the originator and projector in the construction and early operation of the Mad River Railroad, now the Sandusky, Dayton, and Cincinnati Railroad. Mr. Cooke had served, at different times, and for many terms, in both branches of the Legislature of the State, and as a member of the Congress of the United States discharged his duties with faithfulness and acceptance to his constituents. As a lawyer and advocate he had few equals, and no superiors, in Ohio. He was father of Jay Cooke, the Government banker.

Dec. 28.—**ORTON**, Rev. AZARIAH G. D. D., a Presbyterian clergyman and theologian, died at Lisle, Broome County, N. Y., aged 75 years. He was a native of Tyngham, Mass.; studied at Lenox Academy, and graduated with the highest honors at Williams' College in 1818. In 1817 he entered the Theological Seminary at Princeton, and upon completing his course was commissioned by the Assembly's Board of Missions "to preach to destitute places in Georgia." He was ordained in 1822, and from that time until 1835 was pastor of the Presbyterian Church at Seneca Falls, N. Y. Subsequently he preached at Lisle, N. Y., and from 1838 to 1852 in the Congregational Church at Greene, N. Y., and again at Lisle until 1860, having held the pastoral office for thirty-eight years. In 1838 he published a reply to Prof. Stuart on the Constitution in its relation to slavery. In 1842 he prepared the Memorial of Chenango County to the Senate, praying that the O'Sullivan bill for the abolition of capital punishment might not pass, by the timely reception of which the final passage of the bill was prevented. He was also the author of ar

able article on the Scripture argument for capital punishment, portions of which were published in the "Genesee Evangelist" of 1849. In 1854 he delivered before the Literary Societies of Miami University an address on "Nature and Revelation," which was published. Dr. Orton was a man of profound scholarship, and no field of literature or science, of philosophy or theology, was left unexplored in his enthusiastic search after truth. A few of his poems have been published.

Dec. 31.—DALLAS, GEORGE MIFFLIN. (See DALLAS, GEORGE MIFFLIN.)

OBITUARIES, CANADIAN.—May 9.—LEITCH, WILLIAM, D.D., was born in the year 1814, in the town of Rothesay, a famous watering-place on the island of Bute, Scotland. Like most Scottish lads who have risen to distinction, the elements of his education were received in the parish school. His preparatory studies were completed in the grammar school of Greenock. In 1832, at the age of eighteen, he entered the University of Glasgow, where he graduated as a Master of Arts in 1836. During his Arts course, mathematical and physical science received his special attention, and in these departments he obtained the highest honors conferred by the University. While a student he also lectured in the University on astronomy, and for several years acted in the observatory connected with the college as assistant to the eminent astronomer, the late Professor Nichol. Ever afterwards he entertained an ardent love for astronomical pursuits. In proof of this may be mentioned the exceeding delight he took in advancing the character and usefulness of the Kingston (Canada) Observatory, which, from being founded by private subscription, was, chiefly through his influence, transferred in 1861 to Queen's University by a deed of the city corporation. An illustration to the same purpose is found in the publication, last year, of his latest and most carefully prepared work, "God's Glory in the Heavens; or, Contributions to Astro-theology," a work which contains the most recent astronomical discoveries, stated with special reference to theological questions, and which, at the time of its appearance, was most favorably noticed by the ablest reviewers. In 1838, after the usual curriculum of four years in the Divinity Hall of Glasgow, he was licensed as a preacher of the Gospel in the Church of Scotland by the Presbytery of Dunoon. In the year 1843 he received a presentation to the parish of Monimail from the Earl of Leven and Melville, and after the usual trials was ordained by the Presbytery of the bounds Oupar in Fife. Of this parish he continued minister until 1859, in which year the Rev. Dr. Barclay and Alex. Morris, Esq., M.P., a deputation of the trustees of Queen's University, sent to Scotland to obtain a Principal for the institution, selected and nominated him for that high office. The late Principal was well known throughout Scotland on account of his reputation as a man of science, the enlightened and active part he took in the

educational controversy which has long agitated that country, and the position of influence to which he was steadily rising in the councils of the General Assembly. For several years he acted as convener of the Assembly's Committee on Sabbath Schools, an office in the duties of which he took great delight. During his ministry in the parish of Monimail he devoted much attention to the connection of science and religion, and contributed largely to various periodical works. He is well known to have been the author of certain articles, in which, in a masterly manner, the views of the late Dr. Wardlaw, of Glasgow, on the subject of miracles, are controverted. These articles created great interest at the time of their appearance, and the subject came, in consequence, to have special attractions for their author. For several years he conducted a series of investigations on the subject of partheno-genesis and alternate generations, as illustrated by the phenomena of sexual development in hymenoptera. The result of these researches, which conflicts with that of the German physiologist, Siebold, in the same field, is given in the "Transactions of the British Association for the advancement of Science," and in the "Annals of the Botanical Society of Canada." Several separate publications also appeared from his pen on the subject of National Education in Scotland and India. On leaving Scotland for Canada, the University of Glasgow conferred on him the degree of D.D. On the 8th of Nov. 1860, he was formally installed to the principalship of Queen's University, in the Convocation Hall, the Hon. John Hamilton, chairman of the trustees, presiding, and a large and respectable assemblage of the citizens of Kingston being present. According to an ecclesiastical law, Principal Leitch's connection with the University gave him a seat in the Presbytery of Kingston, and by consequence in the Synod. Having visited Scotland in the summer of 1861, his first appearance in Synod was in the session of 1862, which year it met at Toronto, and then he was cordially and unanimously elected Moderator. His position also gave him a seat in the Senatus of the University of Toronto, and of that university he was appointed an examiner. His plan of University Reform was the broad and enlightened one of maintaining with the utmost efficiency a great Canadian university, with all properly organized and thoroughly equipped colleges in the country rallying around it, on such terms and according to such principles as would secure a collegiate education for the various sections of the country, and promote among the several sectional institutions complying with the conditions of affiliation a wholesome and generous rivalry. At the close of the University Session of 1863 it was apparent to the principal's friends that his health had become impaired. By authority of the Synod of that year he received a commission to attend the Synods of Nova Scotia and New Brunswick, in the character of a representative member. He fulfilled this ap-

pointment greatly to the satisfaction and benefit of these courts. He had not long, however, resumed his duties when sickness overtook him, and laid him aside. After some months of dreadful suffering, caused by disease of the heart, he expired in the forty-ninth year of his age.

May 11th.—BARBER, JONATHAN, Esq., M. D., was born in 1784, in England, and practised medicine there as a member of the Royal College of Surgeons, at Scarborough, and afterwards in London, very successfully, till about 1820, when he came to America and resided in the United States, chiefly from his health having been much impaired by devotion to his profession. Shortly after he gave up his profession, and devoted himself wholly to literary pursuits, and more especially to elocution, of which he was for the remainder of his life probably the best living teacher in America. As such he was occupied for several years in Yale and Harvard Universities. In 1832 he became intimate with Dr. Spurzheim, and adopted his views, with all his natural enthusiasm, as to phrenology and its kindred subjects of education, &c. After lecturing extensively on these subjects in the United States, he went to Montreal in 1836, where he became well known. Soon afterwards he returned to England, where he spent some years, returning to Canada in 1842. About this period his attention was drawn incidentally to homœopathy, and he became convinced by observation of its truth and importance. Impressed with this conviction, he resumed medical practice about 1845, and only abandoned it gradually under pressure of age and failing health. On giving up practice and resuming (from intuitive activity, so to speak, and for sake of occupation) the teaching of elocution and oratory, he was named professor of oratory in McGill University, Montreal, some few years ago, and withdrew from those duties only within the last two years, when he retired to the country, living with Mr. Dunkin, M. P. (his son-in-law) till his death.

May 14th.—BEGG, Mr. WILLIAM, died at the residence of Dr. Cole, on the Huron Road, Township of Goderich (Canada), aged about 70. Mr. Begg was the son of a sister (Isabella) of the illustrious Scottish poet, Robert Burns. His father, who was in business, intended that he should become a physician, and he accordingly pursued his medical studies for some time; but owing to the death of his father leaving the family in straitened circumstances, he did not take out his diploma, but devoted himself to teaching, to support his mother and sisters. About thirty years ago he went to the Huron Tract, under the auspices of the late Dr. Dunlop, and was for more than twenty years in the common schools of the Township of Goderich, until his health became too feeble for that pursuit. During the last nine or ten years of his life he had the good fortune to find a comfortable and congenial home in the household of Dr. Cole; at first in the capacity of tutor, and afterwards as a valued friend. He suffered for many

years from chronic rheumatism of a peculiarly painful character, which he endured with unvarying cheerfulness. He possessed all the natural intelligence and the goodness of heart which might have been expected from his parentage, with extensive literary acquirements and a pleasing talent for communicating information.

May 27th.—GRAHAM, Sir EDWARD, Bart., of Esk, County Cumberland, England, who died at Montreal, was the 9th baronet, and succeeded his father, Sir Robert Graham, in January, 1852. The first baronet was created in 1829, by king James I., but the family claims descent from the renowned Græme, who, anno 404, commanded the army of Fergus II., and was Governor of Scotland in the minority of his grandchild, Eugene II. From the time of this eminent man the Græmes are to be found in the record of Scotland enjoying the very highest influence. There are at present three baronetcies in the family. The Grahams of Esk; the Grahams of Morton Conyer, County of York; the Grahams of Netherby, County of Cumberland. The eighth baronet of Esk, father of the baronet last deceased, was one of the claimants to the earldom of Annandale and Hartfill, as descendant of Sir John Graham (2d Bart.) and Lady Mary Johnston. The title descends to Robert James Stuart, eldest son of the deceased, now Sir Robert Graham, tenth baronet, who was born in 1845.

June 17th.—KIRK, Maj. WILLIAM ALPHONSO, of the 57th N. Y. volunteers, who died in Virginia while serving in the Federal army, had formerly served in the British army, having held the rank of captain in Her Majesty's 16th regiment. He left the regiment at Quebec, but continued to reside there for several years, and was connected for some time with the city press. He was a man of considerable talent, and had many warm personal friends in that city. He had served in the Federal army since the breaking out of the civil war.

July 6th.—BENJAMIN, GEORGE, Esq., was born in the last year of the last century in England, and lived for some time in Liverpool, engaging there in commercial pursuits. He travelled in a business capacity through a great part of the continent, visiting Italy in the south and Russia in the north, and later in his early manhood came to New Orleans, where he resided for some time. While resident there he married a Charleston lady of English parentage. About the year 1830 he went to Canada, spending a short time in Toronto, and afterwards settling in Belleville, where he continued to reside until the time of his death. He for a considerable time conducted the "Intelligencer," the oldest paper in that town. On the introduction of municipal institutions by Lord Sydenham, he became Warden of Hastings, and continued to be so for many years. He was also for several years registrar of the county. In 1856, on the return of Mr. Murney to the Upper House, he succeeded him as member for North Hastings, sitting for that

constituency in that and the succeeding parliament, retiring at the last general election (1861). In 1848, having received all the degrees of the order in Liverpool, he was elected Grand Master of the Orangemen of British North America, and held that office for several years. At the time of the annexation movement he issued an able manifesto against the movement, warning all Orangemen that in countenancing it they broke their obligation. Mr. Benjamin was a staunch and zealous loyalist—an honest, sincere Canadian tory in the days when there were tories—as true a conservative in later days—and as little swayed by any unreasoning bigotry as any one in public life. He was singularly astute in his judgment of men and their springs of action, and wonderfully well informed respecting even the most secret negotiations among public men; one of the most useful and truest-hearted counsellors and assistants that any public men have ever had.

July 18th.—OGDEN, Mrs. C. R., died at the residence of her brother, Richard Clarke, Esq., at Compton, Surrey, England. She was the wife of the Hon. Charles Richard Ogden, formerly Her Majesty's attorney-general for Lower Canada, and a member of the Executive Council of the Province, and now of Liverpool, England. Mrs. Ogden was a native of Montreal, and daughter of the late Commissary-General Clarke, whose sister was the mother of the late Lord Lyndhurst, and was most highly esteemed and respected by a numerous circle of friends in Canada for her benevolence and many virtues.

August 5th.—BABY, FRANÇOIS M. L. O., was a descendant of the old French *noblesse*, which emigrated to Canada after Champlain had laid the foundation of a North American empire. Branches of the family are scattered over both sections of the province, where they are all recognized for their enterprise, industry, and skill. On the conquest of Canada by the English the Babys at once transferred their loyalty to Great Britain, and have ever since been consistent and active supporters of the British crown.

Few men after the term of life—after they pass two score years and ten of their existence—are possessed of energy sufficient to commence again life's battle; but so indomitable was Mr. Baby's perseverance, so zealously did he labor, so much impressed was he with the importance and value of improving the Lower St. Lawrence navigation, that he conceived all the great projects which have since been carried out, viz., the building of wharves, and improved system of light-houses, and the introduction of steam-tugs for the benefit of the commerce of that port. That he made errors of calculation, and that there was the very worst of management in the construction of these public works by which the Province was made to pay heavily, is beyond doubt. But what he did, he did well; the wharves are the best of their kind on the continent; the light-

houses are equal to any on the coasts of England or France; and the only objection that can be urged against the steam-tugs is that they are too costly.

Oct. 25.—ESTEN, Vice-Chancellor, was the grandson of a former Attorney-General of the Bermudas, and son of the late Chief Justice of the same islands, the duties of which office his father had discharged for twenty years. Mr. Esten was born in St. George's, Bermuda, on the 7th of November, 1805, and was educated at the Charter House School, in London. He was called to the bar in Lincoln's Inn, and for some time pursued the practice of his profession as a barrister in England. In the year 1837, on the establishment of the Court of Chancery in Canada, Mr. Esten, who, a short time previously, had removed with his family to Upper Canada, entered that court as a barrister, and immediately assumed at the bar the high position to which his great learning and talents assigned him. From the first he enjoyed a most extensive practice. He was one of the few men in the country who, on the opening of the new court, possessed any knowledge of equity law pleading or practice. A most diligent and accurate lawyer, possessed of qualifications which no Government could overlook, he was, in 1849, on the reconstruction of the court, raised to the bench as one of its judges. From that time till June, 1864, when disease compelled him to desist from his labors, he discharged unceasingly the important duties of his office with patience, zeal, honesty, and ability. Firm in the administration of justice, he possessed wonderful equanimity of temper, and an amiability of disposition which endeared him to all who had business in his court, or who enjoyed the pleasure of his society. During his fifteen years of service, Mr. Esten never was absent from his post, and for a couple of years during, and in consequence of, the illness of ex-Chancellor Blake, great additional labor was cast upon him and Mr. Vice-Chancellor Spragge. Mr. Esten died at Toronto.

Dec. 20.—TURCOTTE, JOSEPH E., who died at the city of Three Rivers, was eminently a representative politician. When the French Canadian population of Lower Canada struggled to obtain release from the oligarchical influences of the Colonial Office, with the view of securing fair treatment, Joseph Edouard Turcotte represented the feelings of a large section of that population. He was received at the bar of Lower Canada in 1834. From his earliest days he had looked upon a parliamentary career as the highest pitch of his ambition. When still young and inexperienced, he attempted an electoral contest against Monsieur Hebert, in his native place, the county of Nicolet, district of Three Rivers. He was defeated. By no means discouraged, he entered the lists on the North Shore of the St. Lawrence, and his memorable opposition to Gagy and Malhiot in the county of St. Maurice, and his

determination of character, as shown in his elections for St. Maurice, Champlain, Maskinongé, and Three Rivers, will long be remembered by the inhabitants of those counties. His eloquence was of a most forcible, logical, and convincing character. He literally controlled the electors by his piercing eye, his powerful and musical voice. Adversaries feared his proud, defiant, and severe glance. But he was kind, charitable, and generous. Sometimes considered too severe, he but too often relented, and in so doing sacrificed his own interests. After a long and successful career in Parliament, during which time he joined a ministry as solicitor-general, in spite of the animadversions to which he was subjected even by his own electors, a period arrived in the affairs of the district of Three Rivers which demanded prompt attention at the hands of its representatives. Mr. Turcotte ably seized the opportunity of connecting the city of Three Rivers with the Grand Trunk line of railway, which was then demanding assistance from the Legislature. He stipulated, in his place in the House, 1856-1857, that out of the Preferential Bonds the sum of £125,000 should be specially set apart for the construction of the Arthabaska Branch Railway. The road was commenced in 1859, with an energy worthy of the man who obtained it, and after years of mental labor, activity, and disappointment, Mr. Turcotte lived to see the road opened at the sacrifice of his life. Probably the excitement of its completion hastened the termination of his career. In 1862 he was elected Speaker of the Legislative Assembly of Canada. He was mainly instrumental in establishing the Radnor Iron Works, in the district of Three Rivers, which now furnish car wheels to all the railways of Canada. He had planned the construction of a railway to connect the Grandes Piles on the River St. Maurice with Three Rivers.

April 29.—GESNER, ABRAHAM, M. D., a chemist and geologist of Nova Scotia, born in that colony in 1797, died at Halifax, Nova Scotia. Dr. Gesner received his medical education in London, graduating M. D. in 1827, but soon abandoned his profession for the prosecution of natural science. In 1838 he was appointed provincial geologist of New Brunswick, and made extensive and thorough explorations in that province, and subsequently in Prince Edward's Island. The thorough acquaintance which he obtained by these surveys with the condition, products, and resources of the Lower provinces enabled him to prepare some works of great value on the colonies. Of these the principal were "Remarks on the Geology and Mineralogy of Nova Scotia;" "History of New Brunswick, with Notes for Emigrants;" "Industrial Resources of Nova Scotia;" "Geology of New Brunswick, Nova Scotia, and Prince Edward's Island;" "Fishes of the Provinces." The last named was completed just before his death, and is to be published by the Government of Nova Scotia.

He was the pioneer explorer of the wild regions of the Tobique and Madawaska Rivers. Being an excellent practical chemist, he early turned his attention to coal oils, asphaltum, naphtha, and petroleum, and discovered the best methods of using them for illuminating purposes. He made and burned oils refined from petroleum and the asphaltum of Trinidad as early as 1846. He was the discoverer and patentee of kerosene oil, and was the first to introduce coal oils into use in the United States. He published, some years since, "A Practical Treatise on Coal, Petroleum, and other distilled Oils," which has had a large circulation. In 1852 he removed to New York City, where he resided for some time as a professional chemist, but finally returned to his native colony.

O'BRIEN, WILLIAM SMITH, an Irish agitator, born in the County of Clare, October 17th, 1803, died in Bangor, North Wales, June 17th, 1864. He was of one of the most ancient families of Ireland, tracing his descent through the Marquises of Thomond and Barons Inchiquin to Brian Borohme. He was educated at Harrow school and at the University of Cambridge, and in 1827 entered Parliament for the borough of Ennis, County Clare. Subsequent to 1832 he represented Limerick. He first brought himself into notice during the "repeal" agitation of 1842-'3, and vehemently opposed the passage of the Irish arms act in the latter year. Associating himself thenceforth more closely with the repealers he became an adherent of O'Connell, an active member of the Repeal Association, and a violent debater on Irish topics. Upon refusing in 1846 to serve on committees of the House of Commons he was placed for several days in the custody of the sergeant-at-arms; and in the same year, in company with the "Young Ireland" party, he left the Repeal Association in disgust because John O'Connell, son of the Agitator, wished to introduce peace resolutions into that body. The revolutionary outbreaks in Continental Europe in 1848 excited him to an immoderate degree, and, after threatening from his seat in parliament to establish an independent republic in Ireland, he accompanied a delegation sent to Paris in April to request aid from the provisional government just established there in behalf of "the oppressed nationality of Ireland." The visit resulted in abundant expressions of sympathy, but in nothing of a more practical character, and in the succeeding May O'Brien and others were indicted for sedition, in trying to organize a national convention of the Irish people. They were acquitted, and emboldened by the apparent impunity with which they had hitherto escaped punishment, ventured to take up arms against the Government. In July O'Brien headed a band of repealers at Ballin-garry, in the South of Ireland, and attempted to raise the standard of revolt; but the movement was almost immediately suppressed, the insurgents scattered, and O'Brien himself arrested and brought to trial in Clonmel, on a charge of

high treason. He was sentenced to death, but the penalty having been commuted to banishment for life, he embarked in 1849 for Van Diemen's Land, where he remained until 1856. The revolutionary spirit having by this time subsided in Ireland, he was permitted to return to Europe, the indulgence being at first limited to the Continent. In 1858 he returned to Ireland, where for a number of years he lived in retirement. In 1859 he paid a visit to the United States. Upon the breaking out of the rebellion against the United States Government in 1861, he expressed open sympathy with the seceding States, and published an appeal to his countrymen to abstain from committing themselves in favor of the Union.

OHIO. The prosperity of this great State has continued, notwithstanding the severe demands of the war upon her. The receipts into the State Treasury, with the balance of the previous year, amounted in November to \$8,679,966, and the total disbursements were \$6,679,006; leaving a balance of \$2,000,960. The expenses of the State government proper were \$1,450,663, and the disbursements \$1,053,040, leaving a balance on November 15th of \$397,622. During the year, \$364,058 of the public debt has been redeemed, and a balance of \$719,836 remained to the sinking fund. The debt of the State, including a loan of 1864 for military purposes, consists of the

Foreign debt.....	\$12,515,212
Domestic debt.....	655,583
Total.....	\$13,500,730

The valuation of real estate in Ohio for 1864 was \$655,498,100; of personal property, \$1,006,696,116. In fourteen years the advance in the value of personal property has been 250 per cent.

The report of the Commissioner of Statistics presents some interesting facts relative to the effects of the war on banks, debts, and litigation. The result upon the State banks was shown in their returns from 1860 to 1863, as follows:

Decrease of capital.....	\$300,424
" of circulation.....	1,882,576
" of discounts.....	881,000
Increase of deposits.....	6,195,086

The total diminution of capital, circulation, and specie, was \$3,863,626. The deposits have more than doubled, being an actual increase of \$6,195,086.

In November, 1864, the account stood as follows, the number of banks being forty-seven:

Capital.....	\$4,408,839
Circulation.....	5,116,471
Deposits.....	11,115,819
Discounts.....	9,486,994
Specie.....	1,180,802

In addition to the two great facts exhibited by the bank returns, that deposits increased and debts diminished; there is another of equal importance, that litigation has diminished, or more properly that suits for the collection of debts have diminished.

During the year the Federal Government called upon the State for troops to be furnished within that period as follows:

February 1st, 1864.....	51,465
March 14th, ".....	20,598
July 18th, ".....	50,797
Total.....	122,857

By a revision of credits this quota was reduced to 102,653. To fill deficiencies under the two first calls, a draft was ordered in May, which produced 7,711 men; of whom 6,290 paid commutation amounting to \$1,887,000, and the remainder, 1,421, went into the service in person, or by substitutes. For the same purpose a draft was ordered under the last call, commencing in September; the deficiencies of the sub-districts amounted to 9,006. The draft more than filled the quota. On December 1st the excess amounted to 2,984 men. The voluntary absenteeism from the State of persons liable to military service, on the approach or during the pendency of the draft, was estimated to exceed twenty thousand. Those who were not drawn returned when the quotas of their districts were filled; and those who were drafted remained away, with a few exceptions where substitutes were procured. A large number left during the ten days allowed by law between draft and notification. To meet all these deficiencies supplementary drafts become necessary, and then the same process went on until, in some cases, there were not men enough left in the townships to fill the quota. Many men drafted in one section of the State went into other sections; many went into other States and the territories, and not a few fled to Canada. The number of men furnished by the State to the Federal service to December 31st, 1863, was 200,452.

In April the Governor tendered to the Federal Government the service of thirty thousand militia for one hundred days. At the same time the Governors of Indiana, Illinois, Iowa, and Wisconsin, tendered a proportionate quota. The reasons which induced this offer are thus stated by Governor Brough:

The policy of this movement did not admit of doubt or hesitancy. The summer campaigns were about to open in Virginia and Tennessee. Both of them must necessarily operate upon continually lengthening lines of communication, requiring large forces to protect them. At the same time it was necessary that the Virginia army should cover and protect the National Capital, and that of Tennessee hold safe the border. In previous campaigns we had suffered from this species of depletion to an extent that seriously impaired the value of our successes. At the time of considering this proposition a large body of hardy and veteran troops were engaged in garrison duty, and guarding lines of communication, which could be as well done by less experienced men. To relieve these, and throw them forward, was to give to each of our operating armies a large reserve force. The time before the opening of the campaigns was too short to admit of a call, with its attendant of a draft, even if the legislation of Congress, not then completed, had admitted of such a measure. The policy was, therefore, apparent, of supporting our

active armies by the militia, until legislation could be perfected, and an additional call be made.

The States of Ohio, Indiana, and Illinois, had another manifest interest in this movement. In order to save our southern borders from incursions and raids, it was evidently sound policy to so strengthen our main armies as to furnish full employment for the rebel forces in their own territory. In this particular the result fully justified the wisdom of the movement. But one raid was attempted during the season, and that was checked and overwhelmed in Kentucky before reaching the Ohio River.

The offer was at once accepted by the Federal Government. The National Guard of the State were called together at their respective rendezvous on May 2d. On that day, amid a storm of snow and rain, more than forty thousand met and reported for duty without question or reservation. From these were organized forty-one regiments and one battalion, with an aggregate strength of 85,982 men. Of these, one regiment and the battalion were reserved at Johnson's Island, one regiment at Camp Chase, one at Gallipolis, and two at Camp Dennison. The remaining thirty-six regiments, embracing an aggregate strength of 81,051 men, were sent out of the State into Virginia, Maryland, and the District of Columbia. Six of these regiments went to the front under General Butler; two of them were in the battle of Monocacy, where they suffered a loss of four killed and seven wounded, and a number of prisoners; one was stationed at Martinsburg, Virginia, where it suffered a loss of over two hundred prisoners; one regiment was with General Hunter in his severe march to Lynchburg and back, reporting the loss of only one man; other regiments were stationed at Baltimore and Washington, and saw active service in the raid upon the latter city. Of the force retained in the State, the 156th, 168th, and 171st, were all thrown into Kentucky to meet the raid of Morgan, where they did good service. In the fight near Cynthiana the 168th had nineteen wounded, of whom two died. The Colonel and Lieutenant-Colonel were both included in the list of wounded—the former very severely. In the surrender by General Hobson a large number of this regiment was included, but they were afterwards paroled, as the retreat of Morgan was necessarily so expeditious that he could not retain them.

The vote of the State at the Presidential election was 470,582, of which the soldiers' vote was 50,718. This vote was divided between the Presidential candidates as follows:

	Lincoln.	McClellan.
Home vote.....	224,008	198,811
Soldiers' vote.....	40,967	9,746
Total.....	264,975	208,557

Majority for Mr. Lincoln on the home vote, 28,197; majority on the soldiers' vote, 31,221. Total majority, 59,418.

A Secretary of State was chosen at the State election in October. The vote was as follows:

	Smith. Republican.	Ames. Democrat.
Home vote.....	204,459	177,540
Soldiers' vote.....	82,751	4,599
Total.....	287,210	182,139

Majority for Smith on the home vote, 26,619; majority on the soldiers' vote, 28,151. Total majority, 54,771. Of the members of Congress elected, 17 were republicans and 2 democrats.

The agriculture of the State has continued to advance, notwithstanding the reduction of the supply of labor. Less grain is raised than in former years, but in its place tobacco, sorghum, wool, &c. The corn crop of 1863 was an average one of twenty-seven bushels to the acre. This was a general reduction of seven bushels per acre in consequence of the drouth. The average wheat yield was about the same as in previous years. The number of acres planted was 1,811,278. The oat crop was less than an average one. The potato crop was sixty-four bushels to the acre. The average yield of tobacco was eight hundred pounds per acre, and 47,262 acres were planted. Hogs have decreased in number, but sheep have increased. The pork packing in Ohio, as compared with other States in 1864-'5, was as follows:

	1863-'4.	1864-'5.
Ohio.....	621,935	496,888
Iowa.....	847,431	174,997
Illinois.....	1,200,490	965,784
Kentucky.....	198,019	113,267
Indiana.....	399,197	251,287
Wisconsin.....	160,976	121,126
Missouri.....	888,786	270,654
Total.....	3,828,834	2,422,779
Decrease.....		906,105

This is equal to 27½ per cent.

The average weight of hogs and the yield of lard show a light average increase, though this was not uniform, for in Illinois and Missouri there is a falling off in these respects; but an increase in all the other States. The comparison, by States, is as follows:

STATES.	AVERAGE WEIGHT PER HOG.		YIELD OF LARD PER HOG.	
	1863-'4. Pounds.	1865. Pounds.	1863-'4. Pounds.	1865. Pounds.
Ohio.....	196 26.29	210 8.16	22½	26
Indiana.....	188 18.89	101½	19½	22½
Illinois.....	185 1.5	185 6.10	21½	26 1.16
Kentucky.....	182	208	21	23½
Missouri.....	182½	184½	23	20 6.97
Iowa.....	188 5.14	189½	22½	30½
Wisconsin.....	202		28	

The general average weight of hogs and yield of lard, for the whole West, are: of hogs, 196 8-16 lbs., and of lard 24 1-9 lbs., which compare with the general averages last season as follows:

1863-'4.....	188 26-29	23 1-7
1864-'5.....	195 8-16	24 1-9

The shipments to the eastern market were, in 1864-'5, over the New York and Erie Rail-

road, 26,705; over the Pennsylvania Central Railroad, 181,841.

The State has a Reform School, or schools, for juvenile offenders, established on a farm of several hundred acres, about six miles southwest of Lancaster, in Fairfield County. The institution is founded on the principle that it is better to prevent than to punish offences. It is under the charge of Commissioners. The farm is partitioned among several families, each family under the immediate charge of an Elder Brother, Mr. Carpenter being Elder Brother of the Muskingum Family; Mr. Coffey, Elder Brother of the Cuyahoga Family; Mr. Spear, Elder Brother of the Scioto Family, &c., &c.; the whole forming a community "dwelling together in unity." There were 126 boys admitted to the school in 1864. Their ages were:

Of 8 years.....	6	Of 15 years.....	11
9 ".....	12	16 ".....	9
10 ".....	13	17 ".....	3
11 ".....	22	18 ".....	1
12 ".....	17		
13 ".....	16	Total.....	126
14 ".....	14		

The offences for which they were committed to the school were as follows:

Grand larceny.....	19
Petit larceny.....	81
Burglary.....	14
Incorrigible.....	80
Vagrancy.....	18
Horse stealing.....	2
Shooting with intent to kill.....	1
Assault and battery.....	2
Arson.....	1
Total.....	126

The labor of the boys has been expended mostly on the farm, garden, and nursery; only a sufficient number have worked in the shops to manufacture the clothes and shoes required for the inmates. The system is so arranged that every boy can receive five hours schooling each secular day of the term. All the boys, excepting one class, labor during the entire morning. The class excepted has a morning session in school, and works in the afternoon. The other classes, after taking a short recreation on the playgrounds after dinner, wash and prepare for school, which continues until supper. Religious exercises are also connected with the institution, conducted by a chaplain. The institution is so successful in the training of wayward and refractory boys, that the Board recommend the establishment of a similar one for girls. The Commissioners mention with satisfaction several cases of young men, now occupying responsible positions, for which they have been qualified by the instruction imparted by this school.

The number of marriages in the State in 1864 was 20,861. The war has reduced the average number in three years one thousand. The number of naturalizations was 4,098. The whole number naturalized during the last seven years was 45,475. The number of indictments during 1864 was 2,859; convictions, 1,157.

The suits and judgments were less than one-half the number in 1860. The number of violent deaths was 495, and the proportion of suicides 14 per cent. The aggregate number of paupers in the State is 20,000, or one in 128 of the population.

The various educational and charitable institutions of the State are in a prosperous condition.

The following is a list of the Colleges in the State:

An order was issued in August by General Heintzelman, in command of the Department, forbidding the railroad companies to transport arms on their roads either in the form of merchandise or otherwise.

On October 27th great excitement was created at Cleveland by rumors of a raid by Confederates from Canada. The civil authorities, military, and the United States authorities, made great preparations to receive the raiders. General Hooker, in command of the Department, issued the following order:

HEADQUARTERS NORTHERN DEPARTMENT, }
CINCINNATI, October 27th, 1864. }
CIRCULAR.

The commander of this Department has received information that it is the intention of a large body of men on the northern frontier, on each side of the line, open on one side, and in disguise on the other, to so organize at the ensuing National Election as to interfere with the integrity of the election, and when in their power to cast illegal votes; in fact, in any way interfere with the honest expressions of the electors.

In view of the foregoing facts, it is made the duty of all officers of the Government, both civil and military, as well as loyal citizens, to guard well the integrity of the ballot-box.

All military officers, including Provost Marshals and their assistants, will be held to a strict accountability for the adoption of such measures within their districts or commands, as will not only prevent illegal voting, but to arrest and bring to justice all who attempt such voting, or endeavor to prevent the honest exercise of the elective franchise.

The citizens and civil authorities of the towns and cities on the northern frontier are particularly re-

* The German Department of Baldwin University, organized as a distinct College in June, 1864.

† Suspended temporarily at the close of the year.

quested to give any information they may have, or may from time to time receive, to the Provost Marshals or military authorities, whose duty it is to inform the nearest Provost Marshal General or other military authority, and to take measures to arrest and confine any and all connected with such organizations. The late raid on the Lakes and in New England are ample evidence that neither life nor property are safe.

All Provost Marshals and assistants, and all military commanders, will take measures to obtain and report at once any information that may lead to the prevention of this interference with the rights of the people, or aid in the arrest and punishment of the offenders; they from time to time will report by telegraph any new facts.

Local authorities will receive all the aid within the control of the military commander.

By command of Maj.-Gen. HOOKER.
[Official:]

C. H. PORTER, Ass't Adj't Gen.

ORDNANCE—PROJECTILES AND SMALL ARMS. In the *ANNUAL CYCLOPÆDIA* for 1863, the improvements in ordnance and projectiles which had become established up to that period, were very fully described. There has been since that time some further experience in the use of guns of large calibre which slightly modifies, though it does not materially change, the opinions there expressed of their merits, and some new inventions having important alleged advantages over the old, are gradually working their way into favor. The bombardment of the forts at Mobile, the naval battle between the Kearsarge and the Alabama, and the two attacks on Fort Fisher, as well as the numerous land conflicts in which artillery has played an important part, have afforded opportunities rarely found for testing the quality of ordnance and projectiles, as well as the armor of iron-clad vessels. General Gillmore, a man

of high authority in all matters appertaining to artillery service, and Mr. A. S. Holley, a civil engineer of good repute, who has made both ordnance and armor matters of special study, have both published treatises on these subjects during the past year.

General Gillmore and Rear Admiral Porter, while speaking in high terms of the 20 and 80-pounder Parrott guns, both complain of the tendency of the larger calibres (the 100, 200, and 800-pounders), to burst after a brief service. In the second attack on Fort Fisher, six of the 100-pounder Parrott rifles burst during the bombardment. Of twenty five guns burst or disabled in the siege of Charleston, sixteen were Parrott 100-pounders, six Parrott 8-inch, usually though incorrectly called 200-pounders, and one a Parrott 10-inch, usually called 800-pounder. The other two were a Parrott, which had been fired 4,606 times, and the other was a Whitworth 80-pounder, disabled at the 111th round by the breech starting back and closing the vent. Most of the Parrott 100-pounders had been fired only about 200 times, the range of their endurance being, with a single exception, from 86 to 500 rounds, while the 10-inch gun was fractured at the 27th round, and three of the 100-pounders at the 86th, 88th, and 87th rounds. The power of cast-iron to withstand the strain of a rifled projectile seems to decrease very rapidly with the increase of size.

It is but justice, however, to the Parrott gun, to give the following tables in reference to its use in the navy, which were appended to the report of the Board appointed by the Chief of the Ordnance Bureau to examine and report on rifled guns for the navy:

In addition to these, five 100-pounders were

reported as having burst at the attack on Fort Fisher—(Admiral Porter says six)—and thirteen others of different calibres elsewhere, but no particulars of details have been received. This table refers to the navy only. Those used by General Gillmore belonged to the army.

After a very careful and comprehensive examination of all the kinds of cannon in use, and statistical tables of the results of experiments either in battle or siege, or test-firing by the Ordnance Boards, Mr. Holley comes to the conclusion that "a steel tube, so tempered (probably by hardening in oil) as to have the greatest possible elongation within its elastic limits, and forced into (or otherwise com-

pressed within) a heavy cast-iron jacket of good shape, like the United States 15-inch hollow-cast navy gun (Rodman), with trunnions and cascabel cast on for cheapness—the slight initial compression of the steel being sufficient to compensate for its want of safe elongation—would appear to be the best system of fabricating strong, cheap, and trustworthy cannon of large calibre."

Elsewhere, after a full consideration of the effect of the two plans proposed of dealing with armored ships, viz.: by very heavy shot impelled by a low velocity, to exert a *smashing* force on the armor, and by shot and shell of smaller diameter, usually in the form of bolts or elon-

gated projectiles, to act as a *punching* force, Mr. Holley arrives at the following conclusions: "In the present state of the art of gun-making a 10 or 12-inch gun rifled so as to carry spheres without injury, to fire steel and cast-iron balls at short range, and light sub-calibre punching bolts and shells at high velocities, and long, heavy shells with large bursting charges, and small propelling charges, at long range, would appear to be the greatest concentration of offensive power. But if two kinds of naval guns are to be used—and this would appear to be the better system—a smaller gun would stand higher relative charges, and thus give higher velocities to punching shot, and a larger gun—perhaps a greater calibre than 20 inches—would most promptly and effectually smash in a ship's side, throw off her armor, and impair her sea-going as well as her defensive qualities, especially when her armor was riddled, or shattered and weakened at different points by smaller and swifter projectiles."

Experience has confirmed the justice of these conclusions. In the conflict between the fleet of Rear Admiral Farragut and the rebel forts and armored ships in Mobile Bay in August, 1864, the heavy projectile from the 15-inch gun of one of the monitors struck the armored ram Tennessee on the side, crushing in or smashing her armor, and produced some havoc by means of the splinters which were thrown off from the wood backing inside, while the wooden gunboats, though unable to do any thing more than cause her to list over by their attempts to ram her, yet pouring in their shot into her open portholes at close range from their cannon of lighter calibre, disabled a large portion of her crew and crippled her in some vital points.

On the subject of the best metal for ordnance, there has been hitherto great diversity of opinion. Cast-iron is liable to the objections of wanting in tenacity, elasticity, and ductility, but it is harder than bronze or wrought-iron,

and being homogeneous is more trustworthy and uniform than wrought-iron. The advantages of hollow casting and cooling from within, in preventing unequal cooling and consequent inability to bear the unequal tension induced by firing, have been already discussed in the article ORDNANCE in the ANNUAL CYCLOPEDIA for 1868. Wrought-iron, though highly ductile, considerably elastic and possessing more ultimate tenacity than cast-iron, is too soft and yields too much under pressure and friction, and possesses the additional disadvantage of being welded up from smaller pieces, and thus having no uniform tenacity. Bronze, or as it is called in Europe gun-metal, is too soft, not so homogeneous as cast-iron, and is injuriously affected in its intimate structure by the heat of high charges. Aluminium bronze, and phosphorus alloys with copper, though possessing many desirable qualities, are too expensive for general use. An alloy called *sterro-metal*, varying slightly in its proportions when made by different manufacturers, but composed generally of 60 per cent. of copper, from 42 to 46 per cent. of zinc, 1.94 of iron, and from .156 to .905 of one per cent. of tin, has many advantages for a gun metal, being dense, hard, tenacious, elastic, and considerably lower in price than bronze. It seems very well adapted for a lining-tube for cast-iron guns. For the purpose of lining-tubes, or for cannon entire, there appears to be, however, no other metal equal to the low steel, called also homogeneous iron, and homogeneous steel, now produced by casting in large masses, by Krupp's, Bessemer's, and other processes. Tenacious, elastic, hard, and at the same time sufficiently ductile and as nearly homogeneous as any large mass of metal can be, while by the present processes it is produced at a moderate cost, it is pre-eminently the material for all guns except the very largest, and should be employed for lining tubes for these. Krupp's steel guns made from this low steel have been tested in every way during the war, and have been found satisfactory. There are two or three guns made from wrought-iron, which deserve special notice. The first

* Burst in service.

† With Hotchkiss and Schenck's shell of 900 lbs.

is the *Phoenix Iron Company's gun*, which seems to be substantially the same as *Lynall Thomas's* (English) *7-inch gun*. These are made from boiler plate rolled over a central steel mandrel into a cylinder consisting of fourteen or fifteen layers, then hammered together at a welding heat, or pressed together by means of rollers. The barrel is then reamed out, and rifled or not as may be desired, and in Thomas's patent two hoops 18 inches long and 8 inches thick are shrunk over it. The Phoenix Company, have not found the hoops necessary. These guns have stood service well, and are quite popular. Thomas's 7-inch gun, made on this plan with the hoops, burst at the second round at Shoeburyness. The *new Ericsson guns* (18-inch), designed by the inventor as a part of the armament of the Puritan and Dictator iron-clads, differ in their construction from any other gun yet made. The gun is a solid wrought-iron barrel forged from very superior iron (specially tested for the purpose), the walls of which are $7\frac{1}{2}$ inches in thickness. This is reinforced with a series of washers cut out of $\frac{1}{4}$ inch boiler-iron, forced on with accurately determined tension by hydrostatic pressure. Upon the end of the breech is forged a solid flange, against which the washers abut. The washers extend forward eight feet to the middle of the chase, where a nut, embracing and screwed upon the chase, presses them against the solid flange and into close contact with each other. The total length of the guns is 12 feet 8 inches; the maximum diameter 3 feet 11 inches; diameter of muzzle, 1 foot 10 inches; diameter of bore, 18 inches; weight of each gun, 47,000 lbs. By agreement Captain Ericsson was to receive nothing for these guns unless they burned over 50 lbs. of powder. He was confident of being able to burn 100 lbs.

The *Ames wrought-iron gun*, made by Mr. Horatio Ames, of Salisbury, Conn., from the celebrated Salisbury iron, by a new process of his own, has been the subject of careful investigation by boards of Government officers during the past year. The method of making them is thus described by Mr. Holley in his "Ordnance and Armor:" "A slab ten inches square and six inches thick, piled and hammered in the usual way, and rounded and turned to form a short cylinder, receives a three-inch hole in the middle, and a welded ring six by six inches in section is shrunk upon the outside. The disk thus made is welded to a mass of iron forged on the end of the staff by a horizontal steam hammer, equivalent to an ordinary six ton hammer. Other disks are thus welded to the first, till the requisite length is attained. The gun is also hammered by an upright six-ton hammer. A pin is driven through the hole in each disk after it is welded on, into the corresponding hole in the next disk, to open and preserve the line of the bore. The forging is upset to two-thirds of its original length, and increased in diameter two inches. The shape of the gun is that of the Dahlgren 50-pounder. The

trunnions are put on with Dahlgren's breech-strap." The gun described is intended for 50-pounder. One of these guns was fired 1,680 times with a 37 lb. rifle shot and the usual service-charge, $3\frac{1}{4}$ lbs. of powder. Another gun of the same dimensions was bored out to an 8-inch calibre, and fired 488 times with the 80-pounder service charge, a 67 lb. rifle shot, and 5 lbs. of powder. The Navy Board authorized the inventor to make a 18-inch gun on this principle for testing the endurance of his guns, and fifteen 15-inch guns if the experimental gun showed satisfactory endurance. On trial the experimental gun was ruptured very early, at the line of the transverse weld nearest the breech. This transverse weld is, in his process of making his gun, the weakest point, but the gun might be protected from rupture there by the introduction of a lining tube of ferro-metal or low steel. Aside from this defect, the gun seems to possess more desirable qualities than most wrought-iron guns, but its high price is a serious objection to it.

The "Brooke" gun, which aside from the Armstrong and Whitworth guns imported from England, has been the principal rifled gun employed by the rebels, is a 7-inch cast-iron gun, made at the Tredegar Works, Richmond, and having a wrought-iron reinforce two inches thick. The particulars concerning it, as obtained by Mr. Holley, in London, were as follows: Total length, 146.05 inches; length of bore, 179.9 inches; length of wrought-iron reinforce, 80 inches; length from muzzle to centre of trunnions 80.5 inches; length from centre of trunnions to forward end of reinforce, 10.9 inches; diameter of bore, 7 inches; diameter of muzzle, 14.55 inches; diameter of cylindrical part of casting under reinforce, 27.2 inches; diameter over reinforce 31.2 inches. The rifling consists of 7 grooves 1-10 of an inch deep, very slightly rounded at the corners, with one turn in 40 feet. The grooves vanish as they approach the chamber.

The most eminent European artillerymen now advise the use, for siege purposes or in naval battles with iron-clad vessels, of the elongated shell, like the Whitworth shell made sufficiently strong to answer the purpose of punching the walls of a fortification or the sides of an armored ship nearly or quite as well as the solid elongated shot, and the charging this shell with gun-cotton closely packed. The projectile thus charged has an explosive force many times greater than gunpowder, and destroys with terrific energy any thing and every thing around it.

The gun-cotton, when enclosed in a strong iron box and fired by a fuse, is also of great service in making an opening through strong palisades, blowing-in the gates to fortifications, or destroying the strongest bridges, tearing the strongest and heaviest timbers into bundles of loose fibres, which have the appearance of having been chewed.

The improvements in the construction of small arms within the past few years, have

been even more remarkable than those which have been made in cannon. The old classification of breech and muzzle loaders is still maintained; but while, for the greatest possible accuracy in target-shooting, or that capacity for hitting with almost unerring certainty a small object at very long range, which has been displayed by some of our sharpshooters, the American target rifle, with its "telescopic sight," "false muzzle," and "starter," have no equal, the weapon is too heavy (weighing from 26 to 50 lbs.), and too delicately constructed, to answer for military service or for hunting, where it must be carried by the huntsman. The Springfield government rifle, a muzzle loading weapon without the adjuncts named, to insure perfect accuracy, is nevertheless as good a muzzle-loading rifle as can be made for military use, where weight, facility of carriage, and ease of handling are concerned.

It is worthy of note, however, that all the improvements in the rifle which have been made within ten years past have been confined to the breech-loading weapon. Breech-loading guns may be divided into two general classes, the first including those which may be loaded with loose powder and ball, or a paper, linen, or metal cartridge requiring a cap for its ignition, and the second those which use a metallic cartridge, having the fulminating composition in its base, which is fired by a blow of the hammer directly upon the cartridge itself. This last class may be further subdivided into those which use only a single metallic cartridge, and require reloading after each shot, and the magazine, or repeating rifle, in which a number of cartridges are inserted in a receptacle prepared for them, and which may then be fired in rapid succession till the magazine is emptied.

The metallic cartridge certainly possesses

some advantages over the ordinary paper or linen cartridge, or over the method of loading with loose powder and ball. It is water-proof, avoids the difficulty of loading in the ordinary way. Where, in the excitement of battle, the bullet is often put in before the powder, obviates the necessity of measuring the charge, does away with the ramrod, the priming wire, and the percussion cap, and enables the soldier to deliver his fire with great rapidity, without sacrificing precision or aim. The principal and most serious objections to them are their liability to premature explosion in the hands of the gunner (which seems to be obviated in some of the rifles using this cartridge), and the danger of their explosion from concussion, as by a serious blow on the cartridge-box of the soldier, or its being struck by a bullet or a fragment of shell.

The first of the breech-loading rifles which have come into very general use was SHARPS', a very simple but effective weapon, using ordinarily a patent cartridge with a conical ball, the cartridge enclosed in stout linen, but capable of being used effectually also with loose powder and ball. It may be fitted with Sharps' or Maynard's primer, or with a percussion cap. The rifle is small, light, and has a very long range, and is thus an excellent weapon for cavalry service, for which purpose it has been largely used.

The MERRILL rifle, the invention of a Baltimorean, belongs to the same class as Sharps', and like it uses the prepared paper cartridge and conical ball, or the ordinary round ball with loose powder. It is fired with the common percussion-cap. It is said not to be liable to fouling or to the escape of gas at the breach, and to possess a range fully equal to the Sharps'. It is so simple in its construction that muzzle-loading rifles of any pattern can be easily and without weakening transformed into breech-loaders, on its plan, and the Government have caused large numbers of rifles to be thus changed with great advantage. Two drawings are subjoined (see previous page), showing the construction of the military rifle and the sporting-rifle complete. The cavalry carbine of the Merrill patent weighs but 6½ lbs. and the infantry rifle but 9 lbs.

ASHKROFT's rifle, another new weapon belonging to the same class, is highly commended by Mr. H. W. S. Cleveland, author of "Hints to Riflemen," and decidedly one of the highest authorities in this country on the subject of rifles for military or sporting use. "The breech block of this rifle is constructed with a cylindrical gas-check, which enters the breech of the barrel and shuts against a shoulder; and this gas-check being slightly concave in its external form, the effect of the explosion is to strengthen and thereby to lengthen it, so as to press it against the shoulder, and effectually to prevent the slightest escape of gas. The proof that it does so is afforded by the fact that it has been fired eight hundred times in succession without cleaning, and the working of the parts was as

easy at the last as at the first, and the gas-check itself remained as bright and unsullied as before it was used, which would not have been the case had there been any escape of gas." . . . "The whole arrangement of the working parts is admirably simple and effective, and no breech-piece of solid metal could be more safe and unyielding than this when fixed in position; and by a very simple arrangement, it is impossible to fire the gun till this position is attained." Mr. Cleveland made a thorough experiment of the powers of this rifle, in comparison with several others, as to the penetration of the shot at thirty yards. The target was made of inch pine boards, free from knots and of even grain, and it exceeded all others except the Greene rifle, of which we shall speak presently, which was a much longer weapon, and used a heavier bullet and a much larger charge of powder. As compared with the Sharps' rifle of the same length and using the same cartridge, its average penetration was found to be one inch greater.

GREENE's rifle, patented by Lieut. Col. J. Durell Greene, United States Army, in 1857, and now manufactured at Worcester, Mass., is a weapon of great merit. Though a breech-loader, its construction is entirely different from any other rifle in the market. It has been introduced into the French and Russian service, and is regarded with great favor in both. This is the only rifle manufactured in this country on the Lancaster system of rifling, that is, with an elliptic instead of a grooved bore, which imparts the rotary motion by giving the longest diameter of the ellipse a turn of three-fourths in the length of the barrel. The bullet is round, but assumes the elliptic shape on entering the barrel, though the variation from a sphere is but slight. The peculiarities in the construction of the gun are as follows: a cylinder of iron containing a breech-plug, which slides backward and forward within it, is inserted at the breech of the barrel, and moved forward by a projecting knob, which moves in a slot on the top of the barrel till it closes the breech, when it is turned to the right and secured in place by shoulders. The knob is held by a catch, which may be loosened by pressing a pin at the breech of the barrel. The hammer is on the under side, in front of the guard, and the nipple is so arranged that the fire is first communicated at the forward end of the cartridge, thus insuring the ignition of all of the powder. The cartridge has the bullet in its base, with a greased wad between it and the powder, which, with the bullet, packs the joint perfectly at every discharge, and prevents the slightest escape of gas. After each discharge this bullet is pushed forward by the breech plug to the end of the chamber, the cylinder is then drawn back, and the cartridge inserted in the slot which is thus opened. The cylinder is then pushed forward, pressing the cartridge before it, and the knob being turned to the side and the nipple capped, the

gun is ready to fire. The movements are perfectly simple, and all the parts are strong and well adapted to stand the rough usage of military service. The Greene rifle is made with a 36-inch barrel, and this size carries a bullet weighing 575 grains or $1\frac{1}{4}$ ounces, and requires a charge of 88 grains of powder. With this charge its power of penetration is greater at thirty yards than any other of the modern rifles with the possible exception of the Whitworth, in which a leaden bolt, not a ball, is used. In Mr. Cleveland's experiments with ten different rifles, this penetrated his target of pine boards thirteen inches, while the Ashcroft penetrated eleven inches, and the others ranged from six to ten inches. It is fair to say, however, that the others had all shorter barrels, ranging from twenty to thirty-one inches, and carried smaller bullets, the charge of powder being also less.

The MAYNARD rifle, invented in 1851 by Dr. Edward Maynard, of Washington, D. C., but since that time considerably improved, is a most ingenious instrument, and for efficiency, strength, and simplicity has hardly been equalled. It is remarkably compact, and without any sacrifice of strength. The barrel can be disconnected from the stock by the removal of a single pin, and the whole gun can then be packed in a case $20 \times 6 \times 1$ inch. Barrels of different calibre, either for shot or rifled, may be fitted to the same stock and changed in a

few seconds. Springs, bolts, and catches are not used in this rifle, but the ends required are attained by the careful adjustment and excellent finish of the several parts, which work with mathematical precision, and give it the solidity of a mass of steel, which is not affected by any strain to which it can be exposed. The ammunition is contained in a metallic cartridge, having an aperture in the base through which the fire is communicated from the cap. These cartridges are so constructed that when charged, by means of a very simple implement which accompanies every gun, the ball is not only of necessity mathematically exact in its position, but is held, without compressing the cartridge (as is done in the self-exploding cartridges) simply by being fitted to it, so firmly that it cannot be moved after being placed in the chamber (which is enough larger than the calibre to admit of the presence of the cartridge), in any direction except with a perfectly true delivery through the calibre. The cartridges can be used over and over again for an indefinite period, being loaded by the gunner himself. There is also an arrangement for using loose ammunition, the ball being first inserted at the breech, and followed by a cartridge or charger, which is simply filled from the flask at each shot. By a recent improvement the empty cartridge after firing is started from its place by the act of raising the breech for reloading, so that it may easily be withdrawn.

MAYNARD RIFLE—Fig. 1. Showing Rifle loaded, cocked, and with breech raised.

MAYNARD RIFLE—Fig. 2. Showing Rifle in position to receive the cartridge, and with the magazine also opened, showing the primer.

The Maynard primer, used in connection with this rifle, and invented for it by Dr. Maynard, consists of a narrow strip of varnished paper of double thickness, having deposits of fulminating powder in cells between the two, at equal distances apart. Each strip contains three dozen of these cells, equivalent to the same number of caps. The strip is coiled in a magazine concealed beneath the lock-plate, and brought up by the motion of a wheel in the act of cocking, so as to bring a cell directly upon the top of the nipple. The fall of the hammer explodes it and at the same time cuts off the paper behind, so that it is not seen again till the gun is again cocked. Mr. Cleveland, after long experience, prefers the smaller sized barrel ($\frac{1}{2}$ inch calibre) to the larger, which is of half inch calibre, as being better adapted to its charge. He says of this smaller calibre, "In accuracy and force I have never seen it surpassed by any gun fit for field service." We subjoin two cuts of this rifle, one showing it loaded, cocked, and with back sight raised; the other in position to receive the cartridge, and with the magazine opened, showing the primer.

The SMITH'S patent breech-loading rifle, manufactured by Poultney & Trimble of Baltimore, is another very simple, yet accurate and effective rifle. The cuts show its construction as completely as any description. There is nothing about it which can get out of order. Its range is 2,000 yards or more, and it can be fired ten times a minute. The cartridge used for this rifle is a metallic one, but the case collapses after firing, and can be withdrawn by a single motion of the finger. It has not the fulminating powder, but uses an ordinary percussion cap.

The BURNSIDE rifle belongs to the same class. It is now manufactured by the Burnside Rifle Co. in Providence, and is a breech-loader, having a breech-piece of wrought iron morticed to receive the chamber and movable breech-pin. The upper end of this breech-piece is screwed to the lower end of the barrel, which is of cast-steel and rifled with a gain-twist. The opening and closing the guard and its attachments are analogous to those of opening and closing a door by a thumb-latch and catch. The cartridge is similar to that of the Smith rifle; but by a slight peculiarity in its construction, and that of the chamber and perforated platinum case which fits to it, it is water and air-tight when loaded. It is fired with a common percussion cap.

Of the rifles using the self-exploding metallic cartridge, two only have much reputation, among those which are not repeating guns, and must be recharged for every shot. These are F. Wesson's and Ballard's. The Wesson rifle is light, the 24-inch barrel weighing only six pounds, and the 28 and 34-inch barrels not over seven and eight pounds respectively. Dr. I. J. Wetherbee, of Boston, an experienced and skilful shot, gives the result of extensive trials of this rifle with others, and gives it the pref-

erence over all others in accuracy, penetration, and range, and thinks it equal in rapidity of firing to most others. The 28 and 34-inch barrels he regards as preferable to the 24-inch. At the Massachusetts State trial of breech-loading arms at Readville, the Wesson rifle placed twenty successive shots in the target at 200 yards, and 50 shots were fired from it in less than five minutes. The annexed cuts repre-

sent it in position for loading, and ready to fire. In loading, the breech is elevated by a movement somewhat like that of the Maynard. The empty cartridge is then withdrawn by hand, a new one inserted, and the barrel re-stored to its place, in which it is held by a

catch, which is loosened by a trigger in front of the one by which the piece is discharged. The hammer cannot be drawn back beyond half-cock till this catch has secured the barrel in its place. The piece is remarkable for elegance of form and perfection of mechanical finish.

The BALLARD military rifle is so arranged

Wesson's Rifle in position for loading.

Wesson's Rifle ready to fire.

that it may be used with the metallic cartridge or with the ordinary soldiers' cartridge, to be fired with a cap. The breech of the rifle is opened for the insertion of the cartridge, by drawing down the guard, when the breech-

block sinks perpendicularly, carrying the hammer with it, and throwing it back to half-cock. The empty cartridge is then removed by means of a finger-piece under the barrel, attached to a slide, which pushes out the cartridge by

pressing against its flange, and is then restored to its place by a spring. The rifle shoots with great accuracy, putting every shot into a six-inch ring at four or five hundred yards, in the hands of a good marksman. The velocity of its shot is somewhat less than that of the Wesson, Maynard, or Colt rifles.

There are three models of repeating arms which have gained a high reputation: Colt's revolving rifles, and the Henry and Spencer repeating rifles.

The Colt's rifle is constructed on the same general principle as his pistols. A revolving chamber, fitted either for five or six shots, receives the charges, which may be either loose powder and ball or cartridges; a rammer, which

is moved by a lever, insures their being sent home perfectly true, and the balls fit so exactly to the bore of the chambers as to close them hermetically. The calibre of the barrel being .02 of an inch less than that of the chambers, the ball is necessarily forced to fit itself exactly to the grooves, which are seven in number, and cut with a gain twist (that is, revolving more rapidly toward the muzzle than toward the breech of the gun.) The charge is fired with a cap, and the working of all the parts is simple and exact. Like all of the weapons from this famous manufactory, the excellence of the material and workmanship are not surpassed. The annexed cuts give an idea of the construction of this rifle:

Mr. Cleveland states that he has with open sights placed ten successive shots from this rifle in a nine-inch ring at two hundred yards, and Lieutenant Hans Busk, of the Victoria Rifles, placed forty-six out of forty-eight shots inside a twenty-four-inch ring at four hundred yards, and the other two less than an inch outside, while eighteen of the forty-eight were inside a ring eight inches in diameter. He says: "For efficiency and strength of shooting nothing can beat it." General Marcy, U. S. A., pronounces it the most reliable and certain weapon to fire that he has ever used, and says, that if he were alone upon the prairie, and expected an attack from a body of Indians, he is not acquainted with any arm he would as soon have in his hands as this. The objections to it are, that it takes longer to load than any of the other breech-loaders; but when loaded, its five or six shots can be delivered with great rapidity; it is not so easy to clean as the metallic cartridge rifles, and is liable to be affected by dirt and rust in its working parts to an extent which would be objectionable to its military use. For hunting purposes it is admirable.

The SPENCER repeating rifle is a comparatively new arm, having been patented in 1840. It uses the metallic self-exploding cartridge, and has a magazine in the breech of the gun securely protected from all danger of accidental explosion, containing, in the army and navy rifle seven, and in the sporting rifle nine, cartridges, which are fed successively to the chamber by means of a spiral spring, and with such precision as to avoid the possibility of their not taking the grooves properly. An ordinarily skilled marksman can discharge the seven loads in twelve seconds, and whole platoons of soldiers waiting for the word of command can fire with good aim once in three seconds. When the seven charges are fired, the rifle is held with the muzzle pointing downward, and a tube being withdrawn, which contains the spiral spring which pushes the cartridges forward, they are dropped into the magazine and the tube replaced. The operation requires but a very short time, and the soldier or sportsman is ready to fire his seven shots again. The gun is not liable to foul or to get out of order,

Colt's Rifle.

and its range and force are good. It will throw a ball two thousand yards, and will seldom miss its mark at from seven hundred to a thousand. At a distance of from thirty to fifty yards, it will penetrate a pine target to a depth of from nine to thirteen inches. It was used with terrible effect by the Union troops at Gettysburg and Chickamanga, and in some other battles of the war. At Gettysburg, it was said by eye-witnesses that the head of the column (opposed to the troops armed with this weapon), as it was pushed on by those behind, appeared

to melt away or sink into the earth, for though continually moving it got no nearer. Acting Brigadier-General John T. Wilder, of the Army of the Cumberland, in command of a brigade of mounted infantry armed with this rifle, wrote on the 28th of November, 1863, that at Hoover's Gap, June 24th, 1863, one of his regiments defeated a rebel brigade of five regiments, killing and wounding over five hundred, while their own loss was only forty-seven; and that from April to November his command had captured over 2,800 officers and men, losing as prisoners

Section of carbine, showing cartridges in magazine, with lever down and breech open.

Spencer Rifle.

in the same period only six men. The subjoined cuts exhibit fully the mechanism of the magazine and lock.

HENRY's repeating rifle is a still later invention, patented, we believe, in 1861. The principal novelty in this gun is the magazine and the manner of loading from it. It consists of a metal tube under the barrel, extending its entire

length, of sufficient diameter to admit the cartridges freely. A section of this tube near the muzzle contains a spiral spring to throw the cartridges upon a carrier-block in the rear, and by means of a metallic sleeve five inches in length, embracing the barrel of the gun at this point, can be revolved upon the axis of the bore so as to open the magazine, and admit the

introduction of the cartridges, of which it holds fifteen. Upon closing it, after filling, the spring throws a cartridge upon the carrier-block, which, by a forward movement of the trigger-guard, is raised to a level with the chamber, the hammer, by the same movement, being carried to a full cock. A reverse movement of the guard, bringing it to its place again, forces the cartridge into the chamber, and the gun is ready to fire. The ammunition is fixed, metal cased, with fulminate or cap in the rear. The hammer, upon falling, strikes a rod, or breech-pin, upon the front of which are two sharp points, which are driven into the rear of the cartridge, thus exploding it. The weight of the gun complete is about 10 pounds; it has six shallow grooves, each $\frac{1}{8}$ of an inch in width, with a gaining twist. The cartridge weighs 295 grains. In an experiment at the Ordnance Department, Washington, 120 shots were fired in five minutes fifteen seconds, including the time spent in reloading.

The following cuts show the construction of the rifle. The little projecting piece on the under side, in the first cut, directly in front of the shoulder, at the breech of the barrel, is the finger-piece connected with the follower on the end of the spiral spring. To load the magazine this finger-piece is drawn up to the lower end of the sleeve, which is then turned far enough to allow the follower to rest on the edge of the magazine, where it is held in place till the cartridges are dropped in.

This gun is not remarkable for accuracy at long distances, but at one hundred yards or thereabouts it is a very effective weapon. The sudden reduction of half the thickness of the barrel for five inches from the muzzle probably impairs its accuracy at long range. Its magazine, being in a thin metallic tube under the barrel, is liable to be indented by a shot or accidental blow, which would prevent the cartridges from sliding down, and as they cannot be easily introduced into the barrel in any other way, this would render the gun nearly useless. The necessity of leaving an open slit for the finger-piece to slide in exposes the contents of the magazine to the influence of dust and wet, which would tend to clog the passage and rust the spiral spring. Still this weapon has many excellent points, and in its method of loading, the capacity of its magazine, and its rapidity of firing, it surpasses any other repeating rifle. It is stated on

Henry's Repeating Rifle.

good authority that Col. Nelter, while raising a

Sectional view of working parts, showing the operation of removing the empty cartridge and cocking the hammer.

regiment of Kentucky volunteers at Owensboro', Kentucky, sent out fifteen of his men armed with this rifle on a scout. They were attacked by a rebel force of two hundred and forty soldiers in an open lane where there was no shelter, and owing to their capacity to main-

tain a rapid and continuous fire, they successfully repulsed and drove from the field the entire rebel force. Capt. James M. Wilson, Co. M, 12th Kentucky cavalry, was attacked in his own house by seven mounted guerrillas armed with Colt's revolvers. He sprang for a log cabin

Sectional view of working parts, with guard restored to place, and ready to fire.

across the street where he had his Henry rifle, Colt's revolver, etc., and though his clothing was riddled by their shot, gained it without a wound, and seizing his Henry's rifle, killed five

Muzzle of the gun, with sleeve turned aside and magazine opened to receive the cartridge

of his assailants with five shots; the other two sprung for their horses, one of these he disabled with his sixth shot, and killed with the seventh; the other he killed with the eighth. The State of Kentucky, in consequence of this feat, armed his company with this rifle.

The WHITWORTH rifle, which is manufactured either as a breech or muzzle-loader, is the only English rifle which fairly competes with our American breech-loaders. As a breech-loading rifle it has been manufactured only by Westley Richards. It has a hexagonal bore and fires a hexagonal bolt an inch and a half in length, though only $\frac{1}{4}$ of an inch in diameter. This bolt weighs 517 grains. The bore is constructed with a complete turn in 20 inches, or one and a half turns in the length of the barrel, which is 30 inches. The charge of powder is 76 grains. It is a very efficient weapon of great range, though lacking somewhat in precision, is not liable to foul, but its cartridge, which is made of paper, is so long and narrow as to be liable to burst on the march.

OREGON. The area of this extreme north-western State is estimated at 95,248 square miles, and its population in 1860 was 52,465. It was estimated in 1864 to be 70,000. The Governor of the State is Addison O. Gibbs; Secretary of State, Samuel E. May; Treasurer, Edwin N. Cooke. Their terms of office expire on the second Monday of September, 1866. Their full term of office is four years. The election for State and county officers is held on the first Monday of June, biennially, except for the officers above mentioned. The last State election was held on June 6, 1864. The Legislature assembles biennially at Salem, on the second Monday in September. The Senate is composed of eighteen members elected for four years, and the House of thirty-eight members elected for two years. There are twenty counties in the State, containing about 14,718 voters in 1864, the taxable property of which was estimated in 1862 at \$23,886.95. At the election in June, 1864, for member of Congress, J. H. D. Henderson received 8,728 votes, and J. K. Kelly 6,098; majority for Henderson, 2,635. Each house of the Legislature chosen at this election contains a Republican majority.

At the Presidential election the vote of the State was as follows: Lincoln, 9,888; McClellan, 8,457; majority for Mr. Lincoln, 1,431.

There are eleven newspapers published in the State, two of which are daily, one daily and weekly, and the others are weeklies.

P

PATENTS. During the years 1868-'4 the business of the Patent Office nearly recovered from the injurious effects which the breaking out of the rebellion in this country had upon all branches of arts and sciences.

During the year 1861 there were three thousand less applications than in 1860, and the expenses of the Department were \$84,000 more than its receipts.

During the years 1862-'3 and '4 there was

again an increase over the year 1861, until the end of 1864 showed that the receipts and number of applications were greater than ever before. The number of patents granted during the year 1864 were 4,688, being almost equal to the number granted in the year 1860.

HORSE POWERS.—The horse-powers heretofore manufactured, in which the horse stands upon a travelling chain or platform upon an inclined railway, have been liable to unequal wear and injury in consequence of the small wheels at the sides of this travelling platform not being sustained on both sides, but rotating on the ends of transverse rods projecting beyond the wood platform.

The invention represented in the annexed cut overcomes the aforesaid difficulty, and consists in a metal end-piece set upon the ends of each section of the platform, and made so as to

support the wheels in bearings taking the cast-steel journals of the wheels. These are stronger, and run with less friction than those formerly made. The invention was patented by Seth Wheeler, of Albany, June 2d, 1863.

POTATO PLOUGH OR DRIGER, patented Feb. 17, 1863.—The illustration given below of this implement, will give a general idea of its character. The wheels in the front roll along

the ground as the plough is drawn forward; the projecting nose goes under the row of potatoes loosening them; the vines are held up by the curved bar extending from the nose to the main standard, so that the vines do not clog the plough, or become buried. The mould boards, at the base of the main standard, raise the potatoes and earth, and deliver them upon the set of fingers behind; these are vibrated by a connection to a toothed cam-wheel on the shaft of the wheels, so that the earth is sifted through the fingers, and the potatoes left on the surface of the earth, from which they are easily picked up.

This plough has been successfully employed, and leaves the earth finely pulverized, almost ready for another crop. S. S. Hickok, Buffalo, New York, is the inventor of this improvement.

CLASP, OR HOLDER FOR BANK BILLS, NAPKINS, &c., patented Aug. 9th, 1864, by Charles Perley.—A strip of sheet steel is bent into the shape of a flattened ellipse, the ends of the strip being formed as a pair of hooks, cut in the sheet metal and holding the clasp together, but allowing of its being opened by pressing the hooks apart sideways. These clasps make very neat and durable napkin holders, and they are

being manufactured with the names of the battle-fields of the present rebellion etched into their surface, in place of being numbered as napkin rings usually are, and they are plated both in silver and gold, making a very durable and handsome article, suitable for general use, and they carry with them reminiscences of the struggle through which this country has been passing.

SHIP MACHINERY.—Sailors are very slow in changing their notions; any new device on board of a vessel in former years was looked upon with disfavor, and Jack Tar desired only to use the same implements that he always had employed; hence the introduction of any improvements in ship machinery would not likely be adopted except in view of its intrinsic merit. Travellers on vessels doubtless have noticed that within the past fifteen years the large cumbersome wooden capstans and windlasses have given place to neat metallic ones, and that winches and heavers of various kinds are employed to do with ease, what in former years required all hands to be mustered and the assistance of passengers often employed. In this section of country no person has contributed more to the improvement of ship machinery than Charles Perley, of New York City; and

his name would become familiar to travellers if they inspected these metallic winches, windlasses, heavers, &c.

During the years 1868-'4 there were five patents granted to him for devices connected with vessels.

Vertical Windlass, patented May 5, 1868.—This consists in a capstan and two chain-wheels placed in a triangular position on a hollow iron base. The capstan can be revolved by handspikes, as usual, for drawing upon any rope or chain of the rigging, or it can be made to revolve (through the medium of gearing in the hollow base) either or both of the chain-wheels to draw in or let out the main chain cable of the anchor. These chain-wheels are formed with a groove or recess around them, notched to take the links of the chain, so that the chain cable does not require to be wound around several times as with the old horizontal windlass, but has only to pass about half around, coming aft on one side, going around the chain-wheel, and forward again to the opening in the deck, through which the cable passes to the chain locker below. This style of windlass is received with great favor.

Cathead Stopper (extended April 2d, 1864).—This invention, originally patented in 1850, has been of great value to vessels. It consists in a peculiar lock that holds a ring on the end of a short chain, which chain goes through the ring of the anchor. When the anchor is to be dropped, this lock is lifted—a child could do it—and the chain that held up the anchor is liberated in an instant. How different from the lashing by a rope formerly employed that passed five or six times through the ring of the anchor and over the cat-head, which was generally cut by the blow of an axe, as it was not safe to attempt to untie the rope with the weight of the anchor hanging upon it.

Windlass and Heaving Socket, patented November 13, 1849; extended November 18, 1863, and reissued January 12, 1864.—This invention allows for the removal of the cast-iron windlass head if accidentally broken, and the replacing, by the sailors, of a new one; and the socket that takes the handspike is at the inner or larger end, and out of the way in passing the rope or chain around the windlass, instead of being at the outer end of the windlass as usual before this invention.

Both the devices last named have been of so much value to the public, and so generally adopted, that the patents were extended seven years from the expiration of the first term.

Stoppers for Hawse-Pipes, patented August 9, 1864.—The introduction of vessels of war, almost submerged, as is the case with monitors and some of the gunboats in the navy of this country, has been attended with difficulty, because the chain cables to the anchors have in many instances to pass out below the water, the inner end of the chain or hawse-pipe as it rises, is but little above water line, and in a sea, or when in motion, the water flows into the

vessel through these hawse-pipes. The invention above named prevents this difficulty. A cone made in two pieces is provided, large enough to fit the inner end of the hawse-pipe, and the flat surfaces, where the two parts of the cone come together, are cut out to receive the links of the chain, so that by this conical stopper the end of the hawse-pipe can be closed perfectly water-tight around the chain. This invention has been already adopted on several vessels.

Naval Ram, patented November 14, 1864.—Vessels of war heretofore built have been protected by armor plates above the water-line, while below water the hulls are comparatively weak. This invention consists in a ram or horn fitted at the bows of a vessel, so that it can be drawn in or protruded, gates being provided to close the orifice when the ram is drawn in for loading a cannon that is employed on its end. This horn can be run into an enemy's vessel below the water-line, the cannon discharged to increase the hole, so that she will sink. The ram can then be drawn in, and the cannon at its end reloaded for an attack upon another vessel.

This invention will be mainly useful in protecting harbors against foreign war vessels.

UMBRELLAS—Tempering the Steel Ribs.—Almost all good umbrellas and parasols are now made with steel ribs in place of the whalebone formerly used. The durability of these ribs depends upon the tempering. The ribs are first hardened by heating them to a bright red heat and plunging them in oil; this renders them very hard and brittle, and to heat these long ribs uniformly, so that they will become a perfect spring from end to end and not liable to snap or to stay bent, is very difficult. A. S. Black, July 14, 1863, patented an apparatus that has been extensively and successfully employed for tempering these ribs. It consists of a cast-iron bar, in the surface of which grooves are planed lengthwise of the bar, and deep enough to receive the ribs; upon this bar a second one with a flat surface is bolted; thereby holes are left through this double bar, and this bar is placed through a small soapstone enclosure and heated by gas burners. When the bar is hot enough the ribs are passed endwise through the holes in said bar, and remain long enough to be tempered, then those previously introduced are pressed directly through and out of this tempering bar by the introduction of other ribs.

PIPES—Lead lined with Tin.—In former years attention was directed to the poisonous effects of lead pipe upon water passing through it, and many efforts were made to coat the inside with tin. It was, however, found that the coating was imperfect and of but little use. A patent was granted, March 10, 1863, to William A. Shaw, of New York, for an improvement in making this kind of pipe, that insures a perfect lining of tin. An ingot of tin is cast with a hole through it that fits over the mandrel employed

in making pipe by a hydraulic ram. The ingot of tin is introduced into the cylinder over said mandrel, and then melted lead is cast around the tin in the cylinder and the hydraulic press set to work as usual, to force out the metal between the mandrel and a round hole or die, to make the pipe. The lead and tin come out together in the form of a pipe, the tin forming a complete thin lining to the lead pipe, and when in use no portion of the lead is exposed to the action of the water, and the water remains free from mineral poisons produced by the lead.

LAMPS.—The introduction of petroleum has stimulated the inventive faculty to devise improvements that would allow of the universal use of this material in place of sperm, lard oil, camphene, etc. The large preponderance of carbon in petroleum has rendered it very difficult to burn without smoke, and any sudden motion of the lamp, or currents of air, cause flickering and smoke, and sometimes extinguish the light. To construct a kerosene lamp that would burn steady in a railroad car, regardless of agitation, has been the study of many inventors.

Among the large number of patents in this class may be named that granted April 14, 1863, to C. B. Lashar, of New York City, and which has gone into extensive use on the city railroads. The wick sets into a case made in the reservoir, there being but a small hole from the reservoir into this case, so that the oil shall always remain quiescent around the wick and not be agitated by the swaying about of the oil in the reservoir caused by the motion of the car; this insures steadiness of supply to the flame, and prevents the motion of the oil forcing the vapors in the lamp out through the wick and rendering the flame unsteady. The ram action of the oil as it sways about in the reservoir is apt to cause leakage at the supply plug; this is prevented by the use of a stationary feeding tube attached to the reservoir and passing down into the oil almost to the bottom of the reservoir, so that the agitation does not reach the plug that is inserted at the upper end of this tube. The air hole or vent on the upper part of the reservoir is formed with a conical cap soldered over it, having a small hole in its upper end, so that any jet driven out of the vents by the swaying of the oil, will be received in the conical cap and run back into the reservoir.

Various other improvements in lamps have been introduced, many of which were patented prior to 1863. The cone or deflector made of glass in place of metal, so as not to obstruct light, is now extensively used, and burners that do not require glass chimneys are manufactured in large quantities.

Several patents on lamps were granted during 1863-'4, to parties connected with Holmes, Booth, and Hayden's establishment, at Waterbury, Conn. One of these patents is for a lamp in which the deflector is made with a long slot over a round wick, so that the flame, instead of being round,

is spread out flat and much more perfect combustion produced.

Hinges are now extensively employed for connecting the burner and metal ring holding the chimney, so that the chimney can be turned back for lighting the lamp. It is important that the chimney should be sustained nearly horizontal, so that its upper end may not fall down against the table. L. J. Atwood, March 1, 1864, obtained a patent for a small wire rod or brace extending from the burner to the ring holding the chimney; this does not prevent the said ring being turned down to its place, but holds the ring and chimney from turning back too far when opened for lighting or trimming.

POINTING WIRE FOR PINS, NAILS, &c.—It has been usual heretofore, in pointing pins, needles, nails, and other small articles, to grind or file away the metal. This produces considerable loss of metal, besides which the points are generally soft and easily become blunt; Messrs. Orin Hopson, and Heman P. Brooks, of Waterbury, Conn., have invented a machine that compresses the points perfectly true, sharp, and smooth. A revolving shaft is fitted at its end with a divided die, the opening in which is of the shape of the point to be formed, and is on the central line or axis of said shaft; one-half of the die is stationary, the other is set in a jaw that can be opened slightly; around the end of this revolving shaft is a stationary ring carrying adjustable toes or cams; the wire to be pointed is entered between said dies, and as the shaft revolves, the dies are pressed together and released in rapid succession, by the moving jaw taking the stationary toes or cams. The action of this machine is very rapid and accurate; the jaws coming together reduce the wire and form a point; at the same time the metal is smoothed, compressed, and consolidated, so as to be much stiffer, and the point more durable, and there is no waste of metal. Letters patent for this invention were granted Aug. 9, 1864.

FORGE HAMMER, ATMOSPHERIC.—An air cylinder is reciprocated in slides, by means of a crank and pitman; in the cylinder is a piston, the rod of which connects to the hammer moving also in slides over an anvil; when moved slowly, the blow is light, but when reciprocated rapidly, the blow is powerful; this arises from the fact that the hammer is lifted by the air-spring formed under the piston in the reciprocating cylinder, and thrown down by the air cushion at the other end. If, therefore, the movement be rapid, the momentum causes the hammer to rise farther, and the increased compression of the air brings said hammer down with increased velocity and force. A small hole in the reciprocating cylinder near the middle, allows air to pass in and supply the place of any that may have been expelled by the piston near either end of its stroke in consequence of leakage.

These atmospheric forge hammers are in practical and successful operation for forging a variety of wrought-iron articles, and are particu-

larly adapted to drawing down, swaging, and welding.

The original invention was made by Bennet Hotchkiss, and patented in 1859, and improvements on the same were patented by him, July 2, 1863, and May 8, 1864.

LARD.—Improvement in the manufacture of. It is a common practice to extract the fatty matters from refuse and scraps by a steam digester, but it is found that lard or tallow produced in this way, is not as pure and marketable as when extracted by fire heat in an open pan. George B. Turrell of New York City, has invented and patented, June 23, 1864, an apparatus for treating lard, tallow, &c., which renders steam-tried fats as pure and marketable as those tried out by fire heat; this apparatus consists in a range of horizontal pipes, one above another; the upper pipes of this range are heated by steam, while the lower pipes are cooled by a stream of water passing through them. The lard or tallow flows from the edge of a trough upon the top pipe of the range, and from one to another until it reaches the bottom. The heat of the upper pipes in this range of pipes, drives off impurities, and the air comes in contact with the thin stratum of heated fat for its purification; the lard is cooled by passing over the pipes in the lower portion of the apparatus,

and is received into a trough at the bottom ready for packing.

AMALGAMATOR FOR GOLD ORE.—One of the most common amalgamators is an iron pan into which the pulverized ore and water pass, and in this pan a pair of mullers travel around to rub and grind the fine particles of gold so that they may amalgamate with the mercury in the bottom of the pan. The revolution of these mullers produces a centrifugal action in the water, causing it to be highest at the outer edge, and hence the heavier metallic particles are more liable to escape with the tailings. Joseph Kington, of Black Hawk, Colorado, has invented an amalgamator which was patented July 19, 1864, and of which the cut below is a representation. The mullers are set on arms from shafts, upon which are pinions, taking the teeth of a stationary gear-wheel, so that the mullers are revolved upon their own shafts as these shafts are carried around by a revolving cross head. This apparatus is in practical operation to advantage in Colorado, and it is found that the mullers travelling in a cycloidal curve counteract the centrifugal action on the water, so that the metallic particles are not thrown off, and the amalgamation is rendered much more perfect than in the amalgamators heretofore employed.

PÉLISSIER, AMABLE JEAN JACQUES, Duke of Malakoff and a Marshal of France, born at Maromme, near Rouen, November 6, 1794, died in Algeria, May 22, 1864. He was the son of a tradesman, and was educated at the military schools of La Flèche and St. Cyr. Shortly before the return of Napoleon from Elba he was commissioned a lieutenant in a regiment of the line, and four years later he succeeded, after a severe examination, in securing a position on the staff of the Corps d'Etat Major. He first saw active service during the Spanish campaign of 1823, where he gained the Cross of the Legion of Honor, and in 1826 he was promoted to a captaincy. After serving with distinction in the expeditionary corps in Greece in 1828, he went in 1830 to Algiers in the suite of Gen. Bourmont, and during the next two years saw much hard fighting. Returning to France on account of ill health in 1832, he went back to Algeria in 1839 with the rank of lieutenant-colonel, and for upward of sixteen years was incessantly engaged in the tedious and bloody campaigns which ended in establishing the French supremacy in the province. In 1843 he was promoted to a colonelcy, and during the insurrection of the Kabyles in 1845 he acquired an unenviable notoriety over Europe by suffocating six hundred of the Ouled Riah tribe of Arabs in a cavern at Dahra. The press of France and Marshal Soult, then Minister of War, condemned the act in strong terms, but Péliissier was in the end sustained by his Government, and the *Moniteur Algerien* of July 22, 1845, officially declared that he simply carried out the positive orders of his commander-in-chief, Marshal Bugeaud, who justified the act as a "necessity of war." In 1846 he became *Maréchal-de-Camp*, in 1848 Major-General and Commandant of the province of Oran, and in 1850 General of Division. For his brilliant daring in storming the desert fortress of Laghuat he was decorated by Napoleon with the Grand Cross of the Legion of Honor, and soon after the arrival of the allied English and French forces in the Crimea, was appointed to command the first corps under Gen. Canrobert. In May, 1855, the latter resigned his command in favor of Péliissier, who signalized himself by the capture of the Mamelon Vert, by his efficient coöperation at the battle of the Tchernaya, and finally by the capture of the Malakoff, September 8th, which practically decided the fate of Sebastopol. For these services he was made Marshal of France and Duke of Malakoff, and received from Queen Victoria the Order of G. O. B. He was also voted by the Corps Législatif a pension of 100,000 francs. He replaced Count Persigny as minister to England in April, 1858, but a year later was recalled to France to take command of the army of observation which was stationed at Nancy to guard against demonstrations from Germany during the Italian campaign of that year. In 1862 he was appointed Governor General of Algeria, the scene of his early career, where he managed

affairs with great skill and success until his death. He had previously been appointed a Member of the Privy Council, Vice-President of the Senate, and Grand Chancellor of the Legion of Honor. Péliissier was a good specimen of the soldier, honest, straightforward, and courageous, but ruthless when necessity imposed a severe task upon him, coarse and brusque in manners, and vain to excess. He made a poor figure as a diplomatist or courtier, and was only thoroughly at home in the camp or on the march.

PENNSYLVANIA. The uniform prosperity of this wealthy State experienced no change during the year except the destruction occasioned by the enemy in some of the Southern counties. Agriculture was prosperous and industry well rewarded. The internal system of improvements undertaken by the State some years ago created a heavy debt, the burden of which still continues. On Dec. 1st, 1864, it was as follows:

Amount of public debt of Pennsylvania, as it stood on the 1st day of December, 1863.....		\$39,496,526 73
Deduct amount redeemed at the State Treasury during the fiscal year ending with November 30th, 1864, viz.:		
Five per cent. stocks.....	\$104,732 78	
Four and a half per cent. stocks.....	10,000 00	
Interest certificates.....	2,270 11	116,992 84
Public debt Dec. 1st, 1864.....		\$39,379,608 94
Funded debt, viz.:		
Six per cent. loans, ordinary.....	\$400,630 00	
Five per cent. loans, ordinary.....	85,906,298 72	
Four and a half per cent. loans, ordinary.....	258,900 00	\$36,264,086 72
Unfunded debt, viz.:		
Relief notes in circulation.....	97,251 00	
Interest certificates outstanding.....	13,086 52	
Interest certificates unclaimed.....	4,443 88	
Domestic creditors' certificates.....	724 82	115,510 22
Military loan, per act 15th, May, 1861.....		\$36,379,608 94
Total public debt December 1st, 1864.....		3,090,000 00
		\$39,379,608 94

The State holds bonds received from the sale of the public works, amounting to ten million three hundred thousand dollars. These bonds in the sinking fund reduce the public debt to \$29,079,603.

Some dissatisfaction was created among the holders of the State bonds by the refusal to pay the interest due upon them in specie. This is the second occasion upon which the State has considered it necessary to adopt this course. The embarrassments which the country experienced in 1837 caused a suspension of payment in specie by Pennsylvania; but in June, 1840, the Legislature passed an act which appropriated sufficient money to reimburse the bondholders for the difference in value between specie and suspended bank currency, and then declared by resolution "that hereafter the interest falling due on Pennsylvania stocks, shall always be paid in specie or its equivalent."

Upon this pledge the existing loans were made, and mostly at the low rate of five per cent. interest. A correspondence upon the subject took place between the State Treasurer and one of the English bondholders, Sir Henry Holland, in December, in which the Treasurer states his views of the necessity as follows:

The Legislature last year saw fit to alter that policy, and our interest is now paid in United States notes.

This action of our Legislature was induced by the extraordinary circumstances in which the nation was placed, and I am free to give it as my opinion that, although the United States have made their notes a legal tender in all transactions, and we have no State revenue in coin to meet our interest, that our justification in a departure from paying it in coin can only be found in one of those State necessities which vindicate a nation in temporarily postponing its obligations, in order to preserve the power to discharge them at a future day.

I am also free to say, that my feelings of sympathy for the holders of our securities in your country have been very much weakened by the action of your people since the expression of my opinion to the Legislature to which I have called your attention.

For four years our National Government has been struggling to put down a most wicked and causeless rebellion upon the part of some of the States of this Union, and the enormous expenses incident upon this war in which we have been engaged to preserve the life of the nation, must be met by the various States of the Union, and the amount of those expenses which has thus been thrown upon the citizens of our State would have paid the entire amount of our debt more than four times over.

In this struggle we looked for no assistance whatever from your people or your Government, and desired none; but we did hope and believe, and had a right so to believe, that your people and your Government would give no countenance or assistance to the rebels who were in arms against our Government and its authority. In this we have been disappointed; and I believe that but for the granting of belligerent rights to the rebels by Great Britain, and the assistance and countenance which they have received from her people, we should have long since put down this rebellion, and you would have had no occasion to "protest" against what you term "a repudiation of the obligations of a State."

It is true we have no positive evidence that the holders of our bonds in your country are among those who have given aid or countenance to our enemy, but it is also true that all the public expressions of sympathy in your country for our nation in this its hour of trial have come, with a few noble exceptions, from that class in your midst who are unable, from their position in life, to own public securities of any kind.

We have looked in vain for any openly-expressed sympathy for our nation from that class in your country who represent its wealth and official position, with the few exceptions I have before admitted, while we do know that our enemy has received so much aid, assistance, and sympathy from this class of your people, and protection in many instances from your Government, that it has needlessly prolonged this rebellion, and added hundreds of millions to the expenses necessarily incurred by the State in its suppression, besides largely increasing the sacrifice of life and the sufferings of the people.

While I do not offer these facts as an excuse for our State for the action she has taken, as she needs no excuse at my hands, I do allude to them as reasons why the holders of her securities in your country have much less cause for complaint than they otherwise would have, and why your protest does not carry that weight and force which, in my opinion, it would possess did these facts not exist.

The receipts of the Treasury during the fiscal year, ending Nov. 30th, together with the balance of the preceding year, were \$6,880,644. The payments during the same period were \$4,988,441; leaving a balance of \$1,942,208. The revenue derived from a tax on banks during the year was \$589,606. So many of them are now becoming National Banks, that this source of revenue may now be considered as substantially extinguished.

The contribution of the State to the military service of the United States has been as follows:

Troops sent into service during 1864:	
Organizations for three years' term.....	9,887
Organizations for one hundred days' term.....	7,676
Organizations for one year's term.....	16,094
Volunteer recruits.....	26,567
Drafted men and substitutes.....	10,651
Recruits for regular army.....	2,974
Reenlistments of Pennsylvania volunteers:	
Infantry.....	12,862
Cavalry.....	2,884
Artillery.....	799
Accredited to other States.....	889
	<hr/> 17,876

91,704

Troops sent into the service of the United States since the commencement of the rebellion, including the ninety days' militia in the Departments of the Monongahela and Susquehanna in 1863:

During the year 1861.....	130,594
" " 1862.....	71,100
" " 1863.....	43,046
" " 1864.....	78,898
Reenlistment of Pennsylvania volunteers.....	17,876

886,441

The twenty-five thousand militia of 1862 are not included in this statement.

The system of bounties to volunteers was attended with serious evils in some parts of the State. In some counties and townships the bounty tax during the year is estimated to have exceeded the average income derived from the land. The large sums offered in some places in the competition for men have demoralized many of the people, and the most atrocious frauds connected with the system have become common. The men of some of the poorer counties have been nearly exhausted by their volunteers being credited to richer counties which paid higher bounties. Of the number of men to whom bounties have been paid, it is believed that not one-fourth have been actually placed in the ranks of the army, and even those who have joined it have probably not, on an average, received for their own use one-half of the bounty paid for them. The quota of the State under the call for 300,000 in December, 1864, was 66,999. The opinion of the Supreme Court of the State, declaring the conscription act unconstitutional, was by a change in the judges reversed. The question came up on a motion to dissolve an injunction granted at the time of the first decision.

An act was passed by the Legislature at its special session in August to enable the soldiers in the field to vote at elections. The first requisite for a voter, if a soldier, was that he should be assessed and pay a tax of ten cents in the township in which he belonged. This

tax was in lieu of all other personal taxes. The place of such election was thus designated :

A poll shall be opened in each company, composed, in whole or in part, of Pennsylvania soldiers, at the quarters of the captain, or other officer thereof, and all electors, belonging to such company, who shall be within one mile of such quarters on the day of election, and not prevented by order of their commanders, or proximity of the enemy, from returning to their company quarters, shall vote at such poll, and at no other place; officers other than those of a company, and other voters, detached and absent from their companies, or in any military or naval hospital, or in any vessel or navy yard, may vote at such polls as may be most convenient for them, and when there shall be ten or more voters at any place, who shall be unable to attend any company poll, or their proper place of election, as aforesaid, the electors present may open a poll, at such place as they may select, and certify in the poll-book, which shall be a record of the proceedings at said election, substantially in manner and form as hereinafter directed.

The officers of the election were to be chosen by the persons present, and the election was to be conducted as within the State, so far as relates to ballots, poll-books, challenges, &c., &c. The result, with the poll-book, was then to be sent to the prothonotary of the county where the voters belonged. Officers and soldiers on detached service, in numbers less than ten, were authorized to send their votes to a friend to be deposited by them on the day of election.

The entire vote of the State, at the Presidential election, was 572,702, which was given as follows:

	Lincoln.	McClellan.
Home vote.....	269,879	268,967
Soldiers' vote.....	24,713	12,849
	294,591	276,816

Majority for Mr. Lincoln on the home vote, 5,712; do. on the soldiers' vote, 14,863. Total, 20,075.

Of the members of Congress chosen at the election in October, 18 were Republicans and 8 Democrats.

The Legislature chosen at the election in October was divided as follows:

	Senate.	House.
Republicans.....	20	64
Democrats.....	18	36
Republican majority.....	7	28

On July 3d a force of the enemy moved up the Shenandoah valley to invade Maryland. At that time Pennsylvania was called upon for volunteers to be mustered into the Federal service for a hundred days. Six regiments were thus organized in Pennsylvania, Maryland, and Washington and its vicinity, and a battalion of six companies. In the latter part of the month the regiments were withdrawn to Washington, and only the battalion remained.

On Friday, the 29th of July, the Confederate brigades of Johnson and McCausland, consisting of from 2,500 to 3,000 mounted men, with six guns, crossed the Potomac at Clear Spring Ford. They commenced crossing at ten o'clock, A. M., and marched directly on Mercersburg. There were but forty-five men picketed in

that direction, under command of Lieutenant McLean, U. S. A., and as the enemy succeeded in cutting the telegraph communication, which from that point had to pass west by way of Bedford, no information could be sent to Gen. Couch, by telegraph, who was then at Chambersburg. The head of this column reached Chambersburg at three o'clock A. M. on Saturday, the 30th.

The brigades of Vaughn and Jackson, numbering about 3,000 mounted men, crossed the Potomac at about the same time, at or near Williamsport; part of the command advanced on Hagerstown; the main body moved on the road leading from Williamsport to Greencastle. Another column of infantry and artillery crossed the Potomac simultaneously at Shepardsstown, and moved toward Leitersburg. Gen. Averill, who commanded a force reduced to about 2,600 men, was at Hagerstown, and being threatened in front by Vaughn and Jackson, on his right by McCausland and Johnson, who also threatened his rear, and on his left by the column which crossed at Shepards-town, he therefore fell back upon Greencastle.

Gen. Averill, it is understood, was under the orders of Gen. Hunter, but was kept as fully advised by Gen. Couch as was possible, of the enemy's movements on his right and to his rear. Gen. Couch was in Chambersburg, where his entire force consisted of 60 infantry, 45 cavalry, and a section of a battery of artillery; in all less than 150 men. The six companies of men enlisted for one hundred days remaining in the State, and two companies of cavalry, had, unders from Washington, joined Gen. Averill. The town of Chambersburg was held until daylight, by the small force under Gen. Couch, during which time the Government stores and trains were saved. Two batteries were then planted by the enemy commanding the town, and it was invested by the whole command of Johnson and McCausland. At 7 o'clock, A. M., six companies of dismounted men, commanded by Sweeny, entered the town, followed by mounted men under Gilmore. The main force in line of battle, a demand was made for \$100,000 in gold, or \$500,000 in Government funds, as ransom, and a number of citizens were arrested and held as hostages for its payment. No offer of money was made by the citizens of the town, and even if they had any intention of paying a ransom, no time was allowed, as the enemy commenced immediately to burn and pillage the town, disregarding the appeals of women and children, the aged and infirm. Gen. Couch withdrew his command, and did not himself leave until the enemy were actually in the town. General Averill's command being within nine miles of Chambersburg, efforts were made during the night to communicate with him. In the mean time, the small force of Gen. Couch held the enemy at bay. Gen. Averill marched on Chambersburg, but did not arrive until after the town was burned and the enemy had re-

ursued and overtook them at g, in Fulton County, in time to ce from pillage and destruction. engaged and defeated them, driv- Hancock and across the Potomac. 5th the Department of Mononga- eed to that of the Susquehanna. N. Couch assumed command of

ulties occurred in Clearfield Coun- persons who had refused to respond to the draft and the officers who were sent to apprehend them. One or two persons were killed. Recruiting agents from nearly every county in the State were appointed by Governor Curtin to obtain men from the insurrectionary States to fill the State quota.

The amount of hard and soft coal mined and sent to market within the limits of the State during 1864, is estimated as exceeding fourteen millions of tons. At seven dollars per ton, this staple brought ninety-eight millions of dollars. For the details relative to the development of petroleum, *see* PETROLEUM.

The question whether the law making United States Treasury notes a legal tender for debts, was applicable to the discharge of money due for ground-rents on a stipulation to pay the amount in coin, was several times before the courts of Pennsylvania, and was differently decided. In April a decision was rendered in the District Court of Philadelphia, in the case of *Mervine vs. Sailor*—being an action to recover damages for a breach of covenant. Defendant had covenanted to pay a yearly ground rent of \$570 "lawful silver money of the United States, each dollar weighing seventeen pennyweights and six grains at least." When the July rent became due, the defendant tendered the amount in United States Treasury notes, which plaintiff refused to receive, demanding silver dollars. Suit was brought, and the defendant pleaded tender as aforesaid. To this plea the plaintiff filed a replication averring that the defendant did not tender in silver dollars, etc., but in promissory notes or paper money of the United States, of the nominal value of \$285, but of 40 per cent. less exchangeable value. To this the defendant filed a special demurrer, averring that the promissory notes so tendered were lawful money of the United States and a legal tender in payment of all debts. The opinion of the court was delivered by Judge Hare, rendering judgment on the demurrer for the defendant, thus deciding that the treasury notes are a legal tender and should have been received in payment of the rent. Judge Sharswood delivered a dissenting opinion.

In May, Judge Agnew, of the Supreme Court, delivered an important opinion in the case of *Shallenberger vs. Brinton*, in which he decides that a ground-rent is a debt, and payable in legal tenders, in a case where the covenant was to pay the interest in "lawful silver money," and the clause of extinguishment stipulated for

the principal of the ground-rent in lawful money as aforesaid. Judge Agnew decided differently from Judge Allison in two similar cases in which he had delivered opinions.

In November, in the United States Circuit Court for the Eastern District of Pennsylvania—Judges Grier and Cadwallader on the bench—an opinion was delivered in the case of the *Philadelphia & Reading Railroad Company vs. Chas. Moulson et al.*, which was before the court in the shape of a bill in equity to compel the defendants to accept in extinguishment of the principal of certain ground rents, to the amount of \$800,000, the legal tender notes of the United States. The opinion of Judge Grier was as follows:

Coined money, in modern times, forms but a very small portion of the current money used in commercial transactions. Paper money representing credit has long been used as current and lawful money. But no one could be compelled to accept the promise of a bank to pay money instead of the coin itself. The notes of the Bank of the United States, issued under the authority of the Government, were current money, and lawful money, because issued by such authority, but were never made a legal tender for the payment of debt.

A contract made in the United States for the payment of a certain number of dollars would be construed as meaning, not Prussian dollars or Spanish milled dollars, but lawful coin of the United States. The addition of the description "lawful money of the United States" is entirely superfluous, and does not change the nature of the obligation. The statutes of Congress always make a distinction between a lawful or current money and that which shall be a tender for payment of debts. Hence, we find that when such is the intention, the language is, "And shall be a legal tender," etc.

Some coins of the Government are a legal tender below a certain amount, but not beyond. Thus, by act of 9th February, 1793, after the expiration of three years all foreign coins except Spanish milled dollars shall cease to be a legal tender. By act of April, 1806, "foreign gold and silver coins shall pass current as money within the United States," and be a legal tender for the payment of all debts, etc., at the several and respective rates following, etc. Again, by act of 28th June, 1834, "the following gold coins shall pass as current money, and be receivable in all payments by weight at the following rates," etc.

Hence we find that in all cases where other money than the coinage of the United States ordered to be received as current or lawful money, the statute carefully provides the rate and conditions under which they are made a legal tender for payment of debts. It is clear, therefore, that Congress has always observed the distinction between current and lawful money which may be received in payment of debts, if the creditor sees fit to accept it, and that which he may be compelled to accept as a legal tender. It is clear, also; that if Congress make any other thing than their own coin a legal tender, it may be used as such. Thus, in the act authorizing the National Banks, their notes are made a legal tender for certain debts due to the Government for taxes, etc., but not for debts due from one citizen to another.

The Treasury notes are made lawful or current money "and a legal tender for debts," etc., as between individuals. As this is the first act in which this high prerogative of sovereignty has been exercised, it should be construed strictly. It is doubtful in policy and dangerous as a precedent.

The only question then is whether this case comes within the letter of the statute. Is the money which

may be paid to extinguish a ground-rent within the category of the act? Is it a debt? The owner of the land is not bound to pay it. The owner of the rent cannot compel him to pay it. There is no obligation as between the parties. It cannot be converted into an obligation by the election of one of the parties without the consent of the other. A man may execute his bond to me voluntarily, but unless I accept it he does not become my debtor.

These ground-rents, in the nature of a rent service, are somewhat peculiar to Pennsylvania, and little known in other States. But the Supreme Court of the State has clearly settled and determined their nature. The cases are too well known to the legal profession to need a quotation. "A rent service (say the Court in *Bosler vs. Kuhn—8 Watts & Sergeant, 136*) is not a debt, and a covenant to pay it is not a covenant to pay a debt. The annual payments spring into existence, and for the first time become debts when they are demandable."

I am of opinion, therefore, that the tender offered by the bill in this case is not authorized by the statute, and that the respondents cannot be compelled to extinguish their estate in the land by such a tender as that now made. The bill must, therefore, be dismissed.

PERIT, PELATIAH, an American merchant, born in Norwich, Conn., June 23, 1785, died at New Haven, Conn., March 8, 1864. He was descended from a Huguenot family which sought a refuge in this country at an early period in the colonial history. His maternal grandfather was the well-known Pelatiah Webster, of Philadelphia, author of various financial essays which were published at the time of the formation of our National Government, and in his family the subject of our notice found an early home upon the death of his father. His preparation for college was made in Philadelphia and New Haven, and he graduated from Yale College in the class of 1802, spending the following year in teaching a private school in his native town, while considering the question of devoting himself to the ministry.

A weakness of his voice deterred him from this course, and he entered upon a life of business in Philadelphia. In 1809, choosing a commercial career, Mr. Perit removed to New York City, where he soon rose to eminence. In 1817 he became one of the partners in the well-known firm of Messrs. Goodhue & Co., shipping merchants extensively engaged in foreign commerce, and continued in that firm until its dissolution in 1863. From 1853 to 1863 he was President of the Chamber of Commerce of the State of New York, and in that capacity took a prominent part in the public affairs of the commercial metropolis. His life was not devoted to business alone, throughout its whole course he was an active supporter of the institutions of Christian benevolence. The American Board, the American Tract Society, the Bible Society, the Seamen's Friend Society, the Sailor's Snug Harbor, and the New York Orphan Asylum, were among the objects to which he devoted his special attention. He was also at one time a trustee of the New York University, and of the Union Theological Seminary. His philanthropic sympathies were strong and deep. During the terrible epidemic of cholera which

swept the city in 1832, and thousands were flying from danger, he saw the difficulty of filling the ward committees for the distribution of public charity, and sought, himself, a place among the number.

Residing in the Sixth Ward, the section which fell to his care bordered on the "Five Points," one of the most deadly portions of the city. Here he faithfully performed his work of love, relieving the distressed, ministering to the sick, and offering spiritual consolation to the dying. His characteristic sympathy for the poor and suffering led him to take an earnest and prominent part in the repeated movements in New York for the starving population of Ireland.

At the time of his death Mr. Perit was engaged in the preparation of a work for the Government on the Commerce of the United States, which was nearly completed.

PERU, a republic in South America. Its area is estimated at 508,986 square miles, and the population (in 1860) at 2,865,000; the majority of the inhabitants are descendants of Spaniards mixed with Indians.

The executive power is entrusted to a President, assisted by a Vice-President, both elected by the people for a term of six years. The Senate, in 1864, was composed of 36 members, and the House of Representatives of 86. The president of the Republic is at present General Don Miguel Anthony Pezet, elected Vice-President of the republic in April, 1862; succeeded to the presidency at the death of President San Ramon, April 3d, 1863.

The revenue of the republic, in 1861, amounted to \$21,245,832, about three-fourths of which (\$16,921,751) were derived from the sale of guano. It is calculated that the deposits on the guano islands, particularly the Chincha and Lobos Islands, contain about 16,000,000 tons, of the estimated value of eighty millions sterling. The amount of guano exported from the Chincha Islands in 1863, was 313,479 tons. The total amount of exports, in 1863, was \$32,598,610. The public debt on December 31st, 1863, amounted to \$34,288,243.

The army, in 1864, was composed as follows:

Infantry, 12 battalions of 700 men each.....	8,400
Cavalry, 4 regiments of 300 men each.....	1,200
Artillery, one regiment of infantry and one of cavalry, 1,000	
Gendarmerie (infantry 4,380, cavalry 1,028).....	5,408
Total.....	14,008

The fleet, in 1864, consisted of eight steamers and ten sailing vessels, together carrying ninety guns.

A highly-important discovery was made by the Peruvian steamer *Morano*, sent to explore the Amazon. It safely arrived at the Port Mayo, having solved the problem of the navigation of the grand pathway which unites the Atlantic with the Virgin and very rich mountains of Peru, and which opens a route for direct communication between Peru, Europe, and the eastern coast of the continent. Mayo is situated ninety-five leagues from Lima. The *Morano* draws seven feet of water, and from Nauta

to the mouth of the Pichio, where a port is to be established, the navigation is from eight to ten days, judging, however, with only an imperfect knowledge of the rivers explored. These eight or ten days are employed in going up rivers and only five in going down. Small steamers may easily go higher than Mayro. It has thus been established that vessels of considerable size have been able to penetrate the American continent to the foot of the Andes, at a distance of ninety-five leagues from the coast of the Pacific. The Morano, after having crossed the Atlantic from England, ascended seven hundred leagues of the great river Amazon, and two hundred leagues more of the Ucayli and the Pichitea, rivers which, until now, have never been navigated, save by the canoes of the Indians. The banks of these rivers are inhabited by tribes of savages, who may be easily conciliated by the adoption of proper measures to that end. As regards the mountains explored, they are rich beyond conception.

In March, the Peruvian Government became involved in a very serious difficulty with Spain. The Cabinet of Madrid sent Señor Mazarredo to Lima, in order to arrange with the Peruvian Government certain questions arising out of claims of Spanish residents against Peru. According to the Lima papers the claims of the Spanish Government originated in a local dispute at Talambo between some Peruvian landowners and some colonists whom they had imported from the Basque provinces of Spain, leading to violence, in which two persons were killed, and four wounded. The important point to be noted is that the Spanish Government interfered while the Peruvian courts of justice were still occupied with the matter. There was no pretence for accusing Peruvian justice of needless delay, as the conflict at Talambo only took place in August, 1868, and there had been a rapid succession of judgments and appeals, and the highest judicial authority had still to pronounce final sentence, when the Spanish Admiral Pinzon and Señor Mazarredo interfered in the name of Spain.

As soon as Mazarredo arrived in Lima, he claimed that the Peruvian Government should recognize his character of Commissioner with which he was invested. The Peruvian Government offered to assist the Commissioner in the fulfilment of his mission with all the means in their power; but at the same time, in order to avoid farther difficulties, it declared that it would be convenient to define the sense of the word Commissioner, as the international law does not recognize amongst diplomatic functionaries Royal Commissioners, a title which until now has been given to agents appointed by the Spanish Government to arrange a certain class of affairs in their colonies. To admit Mr. Mazarredo in the character of Commissioner seemed to admit that Peru was a colony of Spain. In order, however, that this demand should not be interpreted as a refusal

to enter into relations with the Spanish Commissioner, the Government of Peru declared that it would recognize Señor Mazarredo as Confidential Agent. This did not satisfy Señor Mazarredo, who retired from Lima, addressing to the representatives of the foreign powers a memorandum, in which the charges of Spain against Peru were summed up. On the 12th Señor Mazarredo left Callao in the Covadonga, and arrived at the Chincha Islands on the 14th in the morning, exactly at the same hour when the frigates Resolucion and Triunfo arrived from Valparaíso at the islands.

On the 16th the Spanish squadron appeared at the port of Callao with the intention to seize the Peruvian squadron which, not being in condition to accept the combat for want of munitions, put itself under shelter of the batteries of the fort "del Puente." Admiral Pinzon sent a despatch to the Minister of Foreign Affairs, in which he declared that the conduct of the Peruvian Government toward Spain had obliged him to take possession of the Chincha Islands until further orders arrived from the cabinet of Madrid, and furthermore that he retained as hostages several officers of the Peruvian navy to be answerable for any injury inflicted upon Spanish subjects. To this note was added a declaration, in which, after stating that truce only continued between Spain and Peru, the independence of Peru not being recognized, and that right of property to the Chincha Islands could be revindicated by Spain, Messrs. Pinzon and Mazarredo signified that they had resolved to take possession of all the islands and vessels of war of Peru.

Pinzon and Mazarredo having agreed together, and the Spanish vessels having anchored at the Chincha Islands, they summoned the Governor and the Commander of the transport Iquique to surrender, allowing them a term of fifteen minutes, and threatening to bombard the island in case of resistance. The Peruvian force on the islands amounted only to 150 men charged to guard 200 convict prisoners. The Governor protested in the name of the Government and the Republic against such an abuse of power, and the Spaniards landed to the number of 400 to 500, taking possession of the islands, hoisting the colors of Spain, and arresting the governor, the captain of the port, and the commander and officers of the Iquique.

The report of these outrages produced an extraordinary excitement throughout Peru. In Lima the different officers of State, the scientific bodies, the colleges, the societies of all kinds, the corporations of all trades, all classes of society, offered to Government their lives and properties in defence of their fatherland. The municipality and the functionaries of the courts of justice equally protested, and offered their services for the defence of the country. The Archbishop of Lima, the ecclesiastical Chapter, the regular and secular clergy, also gave proofs of great patriotism, offering their moral, and if

necessary, physical coöperation for the same purpose. All the religious communities made similar manifestations, and several of them placed their revenues at the disposal of the Government.

The foreign residents in Lima were equally unanimous in the manifestation of their sympathy. The citizens of the United States residing at Lima and Callao, met on April 27th, in the Cabildo of Lima, and unanimously passed the following resolutions:

1. *Resolved*, That the seizure of the islands, vessels, and citizens of Peru, by the naval forces of Spain, is a flagrant act of perfidy, a grievous outrage on the rights and sovereignty of Peru, and a gross violation of the rules of international law observed by civilized nations.

2. *Resolved*, That we regard the guano islands as a trust held by Peru, to be administered in the general interest of mankind, and that their possession by any strong maritime power involves the danger of an oppressive and uncontrollable monopoly, injurious to the agricultural world, against which it is the duty of industrial nations to protest, and, if necessary, interfere.

3. *Resolved*, That we see in this new act of aggression only another development of that unholy conspiracy against popular freedom, which not content with repressing the peoples of Europe, has fostered civil war at home, given up Santo Domingo to the cruelties of Spain, plunged Mexico into the horrors of war, and seeks to impose on her a monarchical form of government, in hostility to the wishes and welfare of her people, and which has, for its final and cherished object, the destruction of Republican institutions and the subversion and absorption of the American Republics.

4. *Resolved*, That past aggressions and impending dangers impose on the American Republics the duty of immediately combining in an effective union for mutual defence and protection, and for the preservation of the institutions bequeathed to them by a Washington and a Bolivar.

5. *Resolved*, That we deeply sympathize with the people of Peru in this the hour of their trial, and that while we commend to them the glorious example of the patriots of Santo Domingo, we cordially extend to them all the aid and assistance in our power compatible with our international obligations.

6. *Resolved*, That in the recognition of the *Monroe doctrine* consists the safeguard and only defence of the sister republics of this Continent; and that whilst the true policy of each of them is to throw open its ports to foreign emigration, that he who casts his future in a foreign land should be content to be governed by the same laws, and should, in times of public danger, hold himself liable to the same sacrifices, as those who by birth or their own free election have become citizens.

The British subjects of Lima and Callao met at the house of the British Chargé d'Affaires, and resolved to petition their Government for immediate intervention, in order to secure a speedy adjustment of the existing difficulties. Similar resolutions were passed by a meeting of French residents. The Italians and Germans were still more emphatic in their protest against the Spanish aggression, and organized companies of volunteers who placed themselves at the disposal of the Government. At a meeting of the Spanish residents, it was

Resolved, 1. To appoint a commission to ask of

Admiral Pinzon the deliverance of the Peruvians taken as hostages. 2. To express their gratitude to the authorities of Peru and to Peruvian society in general, for their noble and generous conduct toward them under the present circumstances. 3. To send a commission to Spain in order to present to Queen Isabella a statement declaring that the Spaniards residing in Peru are enjoying the most ample guarantees.

The Minister of Foreign Affairs as soon as he received the news of the seizure of the islands, addressed a note to the Diplomatic body, protesting before all civilized nations against the violent spoliation inflicted upon Peru, declaring, besides, that such a depredation argued nothing against the political personality of Peru, nor against her rights as a free and sovereign nation.

The foreign Ministers forming the Diplomatic body, taking into consideration the reasons adduced by the Minister of Foreign Affairs, and the declaration issued by Messrs. Pinzon and Mazarredo, met on the 20th with their senior, the Honorable Christopher Robinson, Esq., Envoy Extraordinary and Minister Plenipotentiary of the United States in the chair, and declared their regret that the Commissioner and Commander General had not been guided in their proceedings by international law, and that they did not accept the right of revindication invoked as one of the motives of the occupation, but would consider the islands as belonging to Peru.

In order to meet the necessities of the situation, the Government applied to the Permanent Commission of Congress, asking for authority to raise a loan of twelve millions of dollars, increase the navy up to twenty vessels of war, and the army to the strength that might be necessary. The Permanent Commission voted unanimously to authorize the Executive to raise a loan of fifty millions, augment the army to thirty thousand men, and the navy to twenty vessels, with the obligation to give an account of the use made of this authority to the ordinary Congress in July.

In virtue of this authority, the Government gave the order that every battalion of infantry and of marines be increased to the number of one thousand men, the regiments of cavalry to five hundred, and the corps of gendarmes to such a number as seemed necessary, calling all Peruvians wanting to take an active part in the national defence, to a voluntary enrolment. Active measures were taken to put the navy on a war footing.

The Government also ordered the organization of the National Guard all over the Republic, excepting from service only the individuals belonging to the army, navy, and gendarmes. At the same time the Government opened a subscription for a National Loan (*Emprestito Nacional*) for ten millions of dollars.

The excitement produced in the other republics of South America was equally intense, and on all sides offers of aid were made to the Peruvian Government. This was especially so in Chile, the Government of which republic

forbade the Spanish war vessels to coal in the ports of the Republic.

The Peruvian Congress met in July, and had a stormy debate on the Spanish question. After twenty days' discussion it passed the following law:

ART. 1. The Executive shall make use of every ordinary and extraordinary means and resources which are legally within its powers, to defend, by force, the integrity of the National territory against all aggression or usurpation already consummated, or which in future may be attempted to be consummated.

ART. 2. Congress resolves that the Executive power do make war against the Spanish government ("Haga la guerra al Gobierno de España"), as a last resource to obtain the most complete and honorable satisfaction for the injuries done by her agents to the Republic, in case the Chincha Islands are not disoccupied and the National Flag saluted—the Executive being empowered to employ, in conformity with its constitutional attributions, every means allowed by the "Law of Nations" for entering into official relations with the above-mentioned Government.

The Government promulgated this law on September 7. The Ministry failed, however, to give satisfaction to Congress, and were replaced by another. The new Minister of Foreign Affairs, Señor Calderon, addressed a circular to the Diplomatic Corps, which more directly pointed to the commencement of hostilities. He thus interpreted the law of September 7:

That law is both for war and for peace; it is for war, because it requires the revindication of our property and the chastisement of the aggressors as soon as the Executive shall be ready for action and in possession of the necessary materials of war; it is not opposed to peace, disposing terminantly the settling of the pending difficulties in a peaceable way, in case it may be obtained upon favorable terms, before or after the commencement of hostilities.

Soon the Congress, however, found out that the new ministry hesitated as much to go to war as its predecessor. Accordingly the following resolutions were passed on November 26th by a unanimous vote: 1. The Executive shall at once give the necessary orders for the removal of the Spanish forces from the Chincha Islands, and shall report to Congress within eight days. 2. The Executive Power shall not be authorized to treat with the Cabinet of Madrid until the recovery of the Chincha Islands shall have been effected.

In the meanwhile Spain had sent a new envoy to Peru, Gen. Pareja, who was the bearer of an ultimatum, in which the Spanish Government asked from that of Peru a prompt and complete satisfaction for all its grievances, threatening, at the same time, that if this demand should not be complied with, the Spanish squadron would take possession of the principal ports of the republic and destroy the Peruvian squadron.

The Peruvian Government, in this plight, sought counsel and aid from a Congress of South American republics, which met at Lima on November 16, and was composed of the representatives of Peru, Bolivia, Chile, the Argentine Republic, Ecuador, the United States of Colombia, and Venezuela. The proceedings

of this Congress were to be secret, but it was generally known that the first business taken up by the Congress was the difficulty between Spain and Peru, and that it was resolved to notify the Spanish admiral, that in case of a war, the other republics would make the cause of Peru their own. To this communication the admiral replied that he did not know a South American Congress, and could not recognize its authority to interfere in the matter between his country and Peru. Of the subsequent proceedings of the Congress nothing was divulged.

Negotiations were then again opened. Gen. Vivanco was despatched in the Peruvian steamer Chulaco on Dec. 29 to the Chinchas. He asked and obtained full powers from his Government to treat and terminate the difficulty, and it was understood that he agreed to most of the Spanish demands, receiving, on the other hand, the promise that the Spanish forces would evacuate the Chincha Islands, and the Spanish Government recognize the independence of Peru.

PETROLEUM, or ROCK OIL, is the name given in a general way to all the varieties of mineral or earth-produced oils: that is, to all those liquid or semi-fluid oily substances which, in various regions of the world, are found saturating or exuding from the soil or rocks, or rising in the manner of springs at the earth's surface, or are reached and procured by sinking wells, that pierce the cavities or porous strata within which, as in reservoirs, the oils have during some previous period become accumulated. The word *petroleum* (Lat., *petra* and *oleum*), signifies *rock oil*; and to the native oils in question have also been given such names as *earth oil* (*oleum terra*), *naphtha*, *bank oil*, *carbon oil*, *coal oil*, and as obtained from particular localities or for particular uses, *Seneca oil*, *oleum Gabianum* (that obtained at Gabian, in Languedoc, called also red petroleum), &c.

Nature and Relations of Petroleum: General View.—The mineral or earth oils are invariably of mixed or complex character, and usually such in very high degree; since, apart from intermixed permanent gases, and from water, or other incidental foreign matters, each of them consists in the main of a collection of several distinct *hydrocarbons*. According to Mr. B. H. Paul, the most important and largest part of their material is a series of hydrocarbons homologous with *marsh-gas* (i. e., light carburetted hydrogen, or hydride of methyle, C, H₄), and of which series this gas is at once the first member and the type. This collection of hydrocarbons may be called the *marsh-gas series* of constituents of petroleum. It is exhibited in the following table, which is slightly abridged from one contained in the paper of Mr. Paul, on the subject of "Artificial Light and Lighting Materials," read before the British Association for the Advancement of Science, 1864:

MARSH-GAS SERIES OF CONSTITUENTS OF PETROLEUM.

SUBSTANCES.	Chemical composition.	Condition at ordinary temperatures.	Specific gravities.	Boiling points.	Vapor densities.	Proportion of Carbon in equal volumes of vapor.
1. Methyl-hydride, .	$C_1 H_4$	Gas.554
2. Ethyl-hydride, . .	$C_2 H_6$	"	1.04
3. Propyl-hydride, . .	$C_3 H_8$	Gas or vapor.	1.52
4. Butyl-hydride, . .	$C_4 H_{10}$	Vapor.	(about) $82^{\circ} F.$	2.01
5. Amyl-hydride, . .	$C_5 H_{12}$	Liquid.	.628	(at) 86°	2.49	2.5
6. Hexyl-hydride, . .	$C_6 H_{14}$	"	.669	158°	2.97	3.
7. Heptyl-hydride, . .	$C_7 H_{16}$	"	.699	198°	3.46	3.5
8. Octyl-hydride, . .	$C_8 H_{18}$	"	.726	248°	3.94	4.
9. Nonyl-hydride, . .	$C_9 H_{20}$	"	.747	278°	4.5
10.	$C_{10} H_{22}$	"	.757	321°	5.
11.	$C_{11} H_{24}$	"	.766	359°	5.5
12.	$C_{12} H_{26}$	"	.776	408°	6.
13.	$C_{13} H_{28}$	"	.792	428°	6.5
14.	$C_{14} H_{30}$	"	.800	460°	6.85	7.
15.	$C_{15} H_{32}$	"	496°	7.5
16. Octyl-hydride, . .	$C_{16} H_{34}$	"	527°	7.825	8.
17.	$C_{17} H_{36}$	"	.825	8.37	8.5
18.	$C_{18} H_{38}$	9.
19.	$C_{19} H_{40}$	9.5
20.	$C_{20} H_{42}$	10.
21.	$C_{21} H_{44}$	10.5
25. Candle paraffine (?),	$C_{26} H_{54}$	Solid.	.870	Melting points. $180^{\circ} F.$	12.19	12.5
27. Ceryl-hydride, . .	$C_{28} H_{58}$	"	186°	13.5
30. Myricyl-hydride, .	$C_{30} H_{62}$	"	.890	143°	14.61	15.
Olefiant gas (ethylene),	$C_2 H_4$	Gas.	0.97	1.

Of the hydrocarbons given in the table, the first is an extremely incondensable, or permanent gas; the next two in order are either permanent gases or possibly condensable by cold and pressure; and the fourth is, at ordinary temperatures and when free to volatilize, a vapor, liquefying at a little above the freezing point of water. Then follow a long succession of components that are liquid at common temperatures, i. e., oils. Of these, it will be observed, the boiling points stand successively higher and higher; and their densities, either in the liquid or vaporous form (calculated, of course, at a standard temperature), at the same time progressively increase. Finally, at its (chemically) higher extremity, the series terminates in solids resembling spermaceti or wax, and of which *paraffine* is the most important.

The term *paraffine*, however, is frequently used as a general designation for the total of the solid hydrocarbons of petroleum. The melting point of coal-tar paraffine is stated by Regnault at $116^{\circ}.6$; that of petroleum paraffine, by Ure, at 140° . Hydrocarbons belonging to other than the marsh-gas series, have been detected in some rock oils, in variable proportions; and in less amount, and more rarely, oxygenated oils also, which are more or less analogous to creasote. So small, however, is the entire proportion of oxygen in any rock oil, that chemists agree in regarding pure crude petro-

leum generally as consisting of two elements only—its approximate composition as a whole being $C_{11} H_{22}$. The rock oils generally contain also more or less of pitch-like matter or bitumen, which is held in solution or suspension, and to which in many cases their naturally dark color is owing. In those oils which are got by distillation from coal, peat, and wood, the oxygenated component oils are present in greater quantity. Of some of the oils in the series above, from the fifth to the eighth inclusive, M. Schorlemmer gives the boiling points somewhat higher—ranging from 102° to $248^{\circ} F.$ The question of the presence of the benzole series of oils in petroleum will receive notice in the section on *Refining of Petroleum, &c.*

It is not to be supposed that all the constituents of petroleum now referred to are present in every crude or native oil of the kind. Some of them will be wanting from one rock oil, others from another. From the lightest of these oils especially, known as (native) *naphtha*, the higher members generally of the marsh-gas series will usually be nearly, if not altogether, wanting. It will hereafter be more clearly seen how close is the connection between marsh-gas and petroleum—such, indeed, that in nature the oil almost invariably contains, and in its various locations is almost invariably accompanied with, the gas. Petroleum, as freshly discharged from the wells of Oil Creek,

Pa., and usually wherever it is of the lighter or less dense sorts, at once gives off considerable quantities of vapors of its extreme rarer components. Mixed with such vapors are commonly, doubtless, portions of the *first* and *second* members of the marsh-gas series, present as gases: while it may be considered equally certain that the vapors themselves are mainly those of the *third* and *fourth* members, with usually some part of the *fifth* also, of that series. The regular ascent of the degrees of temperature at which the more and more dense oily and solid constituents of crude petroleum boil, is availed of in the practice of distilling the oil, in the way of separating the latter roughly into certain portions such as are suitable for different and special uses; the method being, in fact, one of fractional distillation.

In their general chemical character, the crude rock oils are closely allied to the soft-solid and solid *bitumens*. The latter, as met with under somewhat differing forms, or in different places, have received a variety of other names, such as *natural* or *mineral tar*, *mineral pitch*, *Barbadoes tar*, *mineral caoutchouc* (elastic *bitumen*), and *asphaltum*, or *asphalt*. Of course the oils are thus closely related also to the bitumen which exists in solidified condition in the bituminous, including the cannel, coals, and to that which is infiltrated through, or collected within small cavities in, certain forms of rock. The name *bitumen*, indeed, correctly includes not only all the matters just indicated, but also the rock oils, the latter being, in such case, distinguished as the "liquid bitumens." The composite oils distilled from cannel coals, from peat, from bituminous shales, and from native bitumen or asphalt, or obtained by redistilling from the coal tar which results during the manufacture of coal gas, and in a less degree that afforded by distillation of wood, are nearly analogous to the crude rock oils, being like the latter severally composed in the main of series of hydrocarbons, liquid and solid; though to what extent the components of the former classes of oils are respectively identical with those of the latter, appears to be not yet fully determined.

As met with in different oil-yielding regions, and often as obtained from springs or wells near to each other in a given district, the various native or mineral oils passing under the name of *petroleum*, present a very great diversity, in color and general appearance, in consistency, and even in odor. In density or specific gravity they exhibit a wide range of variation.

To the very light and comparatively pure rock oils found in some parts of the earth, as in some of the springs in Georgia, near the Caspian Sea, and which evidently consist chiefly of the lower members of the hydrocarbon series, the Greek name *naphtha* is, for distinction's sake, still applied. It will be observed that native *naphtha* is here spoken of. Almost any form of petroleum, however, yields, when distilled, as

do the oils artificially procured from coal, wood, &c., when redistilled, and below a temperature taken by different operators at from 140° to 212° F., a mixture of lighter oils that, according to their source, may be distinguished as *coal naphtha*, *wood naphtha*, &c. The light oil thus separated from petroleum rarely takes any distinguishing name, save when termed "spirits of petroleum," being in commerce usually known as "crude naphtha." From it native *naphtha* would differ but little, and chiefly in the fact of containing some small percentage of the denser hydrocarbons. When the crude *naphtha* is distilled and properly rectified, it affords, and to the extent of a large portion of its entire volume, the pure or "refined *naphtha*." This is also known, though with less propriety, as *benzole*, or *benzine*. Of native *naphtha* the specific gravity may vary between about .700 and .850, water being 1. Quotations of refined *naphtha* in the New York market are for densities ranging between 60° and 68° of Baumé's areometer, *i. e.*, specific gravities of .745 to .784.

In the various forms of the areometer named, designed for liquids lighter than water, the density of water, 1, is indicated by 10°, and the ascending degrees of the scale from this point show densities which are continually less; so that, for example, 35° B. answers to sp. gr. .854, and 60° B., as just seen, to sp. gr. .745. As a consequence of the general use of these scales in testing densities of coal and rock oils, &c., the expression "high gravity" has come—in describing such oils—to signify their rarity, *i. e.*, in fact, *low* density or specific gravity; and "low gravity," on the other hand, to signify comparative heaviness, *i. e.*, high density or specific gravity.

The rock oils commonly met with in various parts of North America, and in some other parts of the earth, differ very obviously from such as would take the name of *naphtha* (native), in being generally darker in color, and always thicker and heavier. Their increased density is, of course, due to the circumstance of their containing proportionally less of the lighter component oils, and more of the heavier, and of dissolved solid hydrocarbons. But both the several oils and the solids which enter into petroleum proper, when pure, are quite devoid of color, the former as much so as pure water, the latter as pure spermaceti. Hence, a yellow, reddish, brown, greenish, or black color in petroleum always depends on and indicates foreign intermixtures or impurities of some sort. The completely purified and the purer native petroleum have the somewhat resinous, aromatic and agreeable odor now familiarly known in good refined burning oil and in benzine; but certain impurities in the crude oil, whether affecting its color or not, may quite change its odor, and sometimes render the oil highly offensive. Among the intermixed or foreign substances which may impart color or odor, or both, to crude petroleum, are, besides

the intermixed pitchy material already alluded to, and perhaps, in certain cases, imperfectly bituminized organic matters, sometimes also compounds of sulphur, as well as finely-divided carbon, sand, clay, &c. Owing to varying proportions of the light and heavy component oils, and of solids, which they contain, different specimens of crude petroleum will be found to have every degree of consistency, from that bordering on naphtha on the one hand, to that which approximates the condition of tar or soft bitumen, on the other. Density alone, however, is not an absolute criterion of the value of crude oils; although short of analysis or actual distillation, it is that which must be, and in practice is, chiefly relied on. The extreme range of density of the crude oils may be stated as from about 52° to 20° B., corresponding to specific gravities of from about .776 to .986. Among the gases contained in or associated with crude petroleum, as it exists in the natural reservoirs in the earth, and in addition to the methyle and ethyle hydrides, sulphydric acid gas (giving the sulphurous odor) is sometimes found; and olefiant gas, carbonic acid, and others, may probably also be present in certain cases.

It has already been seen, that when the rock oils first come to the surface of the earth they begin to set free both the gases and the vapors of their more volatile components; and these changes go on to a considerable extent if the oil is long exposed to the air, the evaporation in particular becoming very great in summer, and under exposure to a hot sun. The effect of these changes is first to render the oil more dense and thick, while its volume diminishes. But in the longer exposure that follows when the rock oils rise in springs, or escape from crevices in rocks, and flow out upon the surface of the earth, a further change sets in; the oils which do not evaporate, to some extent (according to Prof. T. S. Hunt) absorbing oxygen from the air; and they appear thus to acquire more nearly the nature of resins, or of pitch. Through the threefold change now indicated, the naphthas and petroleums of all countries, under the circumstances named, become converted into the more solid (surface) bitumens; and it would appear that, by a continuance of the same process, aided in some cases doubtless by the pressure of strata subsequently deposited above them, they may in time be changed to the hardest asphalt. Still, among the qualities distinguishing the materials now named from all the sorts of coal proper are, that the former only are almost completely fusible at a heat of from about 212° to 220° , and soluble in benzole and bisulphide of carbon. Among remarkable examples of the occurrence of bitumen or asphalt, may be named the viscous petroleum, or mineral tar, of the island of Barbadoes; the bitumen forming upon the waters and shores of the Dead Sea (*bitumen Judaicum*, or "Jews' pitch"); that of Pitch Lakes, the largest known being in the island of Trinidad; the *chapapote* of Cuba; and the vertical seam of asphalt found

in Ritchie Co., Va., near to the village of Cairo and to Cave Run, the waters of which flow into the north fork of Hughes River—an unstratified, black, and very hard bituminous mass, about four feet in thickness, and reaching to an unknown depth, and which yields upon distillation from 80 to 90 per cent. of oil.

For the statement of many points in connection with the history of discoveries and uses of rock oils, the mode of distilling and purifying as now practised, the modes of burning refined illuminating oils of this and similar character, precautions required in their use, &c., the reader is referred to the articles COAL PRODUCTS, NAPHTHA, and PETROLEUM, in the NEW AMERICAN CYCLOPEDIA, and to sections of the articles on ILLUMINATION, in the volumes of this CYCLOPEDIA for 1862 and 1863. See also ANILINE COLORS, in this volume.

Historical Items, with reference especially to the use of Rock Oils for Illumination.—As early as 1880, works for distilling oils from bituminous materials were established in France, and these are still in operation. In the extension of this manufacture, started somewhat later in England and other parts of Europe, one of the most influential pioneers was Mr. James Young, of Glasgow, who commenced in the year 1847 distilling the petroleum of a spring in Derbyshire, and, when this ceased to flow, turned his attention, about the year 1850, to the distillation of peats, lignites, shales, &c., and especially of the so-called "Boghead cannel," and whose works are probably still the first in Great Britain.

At a date much earlier, however, crude petroleum was to some extent burned in lamps by the settlers along the Little Muskingum River, in the State of Ohio, the oil being obtained from a well bored for salt near that river. In 1819, Professor S. P. Hildreth, of Marietta, found the oil so in use; and in an article upon the subject written in that year, but published as late as 1826, he predicted that this oil would yet be valuable for lighting the street lamps of the future cities of Ohio! But it was the new element (practically speaking) of *distillation*, then being, or soon to be, introduced elsewhere, that petroleum required, in order to render it generally serviceable for illumination, and for want of which it had in the main continued to be a waste article for so many centuries.

In the year 1854, although to some extent previously carried on here, the business of distilling coal and shale oils was in this country inaugurated on a large and highly successful scale by the "New York Kerosene Oil Co.," the works of which, in the outskirts of Brooklyn (Eastern District), are still among the first of the kind in the United States.

The first deep well bored with a view to test the existence of petroleum in strata below, in sections where oil appears at the earth's surface, was that undertaken by Col. E. L. Drake, on Oil Creek, about one and a-half miles from

Titusville, in Crawford Co., Pa., and in sinking which he "struck oil" on the 26th of August, 1859, at a depth of about 71 feet. This well at once yielded several barrels of oil daily; and under improved pumping arrangements the quantity was increased. Before the close of 1860, there were 2,000 wells opened, 74 of which were alone yielding 46,600 gallons of oil daily. While, also, many refineries at once sprang up in towns in or adjacent to the newly developed oil territory, the year 1860 not only witnessed the opening of a large export trade in the crude and refined oils from New York and other ports of the country, but before its close showed that the importation and distilling of American petroleum had already become important items with European manufacturers and dealers. Many of the deeper borings completed in the course of the year 1861 struck upon reservoirs of oil and gas, from which the pressure of the latter at first for a time caused the oil to be ejected with great force, and in some instances to a height of many feet above the surface; and the wells of this character, known as "spouting" or "flowing," in distinction from "pumping" wells, resulted in rapidly increasing the total yield of oil; while they have, even up to the present time, considerably modified the course of the oil-business, at least in the northwestern Pennsylvania region.

North American Oil Regions.—The most important of such regions are those of Pennsylvania, northwestern part of the State; West Virginia, northern and westerly portion; Ohio, chiefly the southeastern part; Canada West, in the peninsula lying north of Lake Erie; and southern California. Petroleum has long been found in New York, in the southern counties of its western portion; in parts of Mexico and Texas, and in Canada East, near Gaspé Bay. More recently, it has attracted attention, or has been newly discovered, in Kentucky, Michigan, Indiana, Colorado, and Oregon, and from some late statements it would appear, also, in Tennessee, Illinois, Missouri, and Montana.

PENNSYLVANIA.—Venango County is the heart of the most important oil region of this State. Oil Creek, along which the wells were first sunk, received its name from the appearance of mineral oil at points along its course and upon its waters. The creek flows in a generally southerly course through the eastern part of Crawford County, and south and south-west through the middle of about the northern half of Venango, emptying into the Alleghany at a point a little to the east of a line due north from Pittsburgh. On the right bank of this creek, at its mouth, Oil City has lately sprung into existence.

Venango County is, on the north, separated from the southern line of New York by Warren County (eastward) and Crawford County (westward), while north of the latter, again, Erie County extends from it to Lake Erie. To

the west of Venango County, Crawford and Mercer Counties reach from it to the Ohio line; and nearest to Mercer and Venango Counties on the south are Lawrence, Butler, Armstrong, and Clarion Counties. Within the counties now named, with the exception perhaps of Butler, the principal part of the great oil territory of the State, as now worked and in course of development, is situated; though it appears that recently the borings for oil are being extended into the more easterly counties of Forest, Elk, and Jefferson; and that as a portion of the same general territory must be reckoned the district, of much less extent, which makes its appearance in the adjoining counties of Trumbull and Mahoning, in north-eastern Ohio. In the great northwestern Pennsylvania oil regions, the borings are as yet chiefly confined to the low lands bordering the course of streams.

Of course a certain proportion (and sometimes a large one) of the wells bored are finally abandoned, from the fact of their proving unproductive, or yielding so little as not at any time to afford a profit on their working. The most important of the wells of Oil Creek which have been or are now "flowing," have discharged each from 500 to 2,000, and in one case 3,000 barrels of oil daily. They are situated within a stretch of the valley, extending from about four to nearly ten miles above the mouth of the creek.

Of flowing wells, the yield, as a rule, undergoes a great diminution with time; and while some wells never produce, others which are pumped fail sooner or later; and still others which would yield have, at least up to a quite recent period, not been pumped, on account of the abundant supply of the flowing wells and its effect on the price of the oil. It appears that in 1861 and 1862 the total yield of the northwestern Pennsylvania oil region amounted to an average of nearly 8,000 barrels a day. From this point considerable diminution occurred; the total yield was generally stated at between 5,000 and 6,000 barrels daily; but during the summer of 1864, it fell to 4,000 barrels, or less. Since that time the yield has again augmented, and it is now nearly 6,000 barrels daily, though still, notwithstanding the great increase in the number of wells, in reality no greater than it was two years ago.

WEST VIRGINIA.—The oil territory of this State is much more extensive than that of northwestern Pennsylvania, and, in fact, with the immediately adjacent districts of southeastern Ohio, along the opposite shore of the Ohio River, constitutes but one great oil region, and, so far as yet positively known, the largest on the continent. The proximity of the northeastern extreme of this region, in Wetzel Co., Va., to Greene and Fayette Counties, Pa., would suggest that possibly the oil lands in the latter constitute but an outlying portion of this great oil-basin. The chief commercial focus of the West Virginia oil region is the city of Parkers-

burg, the county seat of Wood Co., situated at the junction of the Little Kanawha with the Ohio River.

Wood County stretches along the Ohio above and below Parkersburg. To the northeast from it lie along the river, in succession, Pleasants, Tyler, and Wetzel Counties. East from Pleasants and Wood are Doddridge and Ritchie Counties; while to the southeast of Wood, and like it divided by the Little Kanawha, is Wirt County, in which the celebrated "Burning Spring Run"—the original centre of the oil interest in this State, as was Oil Creek in Pennsylvania—flows from the north into the river just named. In all the counties thus far mentioned, with the exception, perhaps, of Doddridge, petroleum is obtained; while, to the south and southwest from these, it is found also in at least the counties of Kanawha, on the Great Kanawha River, and Cabell, south of that river on the Ohio, and perhaps in many or all the intervening counties of Putnam, Mason, Jackson, Roane, and Calhoun, as it has lately been declared to be also in the more eastwardly counties of Gilmer and Braxton.

Burning Spring Run was so named from the existence along it, in former years, of one or more gas-springs, yielding a stream of gas sufficient to maintain a constant flame. The oil district upon this and on the river just below it is small, being only about one mile square; and the part of the State out of this district, in which thus far the productive borings, and those in process of sinking, are most numerous, is a strip of variable width stretching north from the springs to the Ohio River at the Horse Neck district, a distance of about forty miles. From the Burning Springs, if not from points still farther south, a line of upheaval of strata is easily traced, its course being nearly due north. This is the middle line of what is called the "great oil-belt" of the State, and which is by some estimated as about thirty miles in width. Thus far, however, no portion of the State has equalled in production that of the best parts of the northwestern Pennsylvania oil region.

OHIO.—The Virginia line of upheaval, and the oil-bearing territory extending to greater or less width on both sides of it, alike reappear on the northern side of the Ohio River, the latter being found along the bottom-lands of many creeks and rivers tributary to the Ohio, from about Pomeroy, in Meigs County, on that river, up to, if not beyond, the Little Muskingum, in Washington and Monroe Counties. Marietta, at the mouth of the Muskingum River, and about twenty miles above Parkersburg, is the commercial centre of the Ohio oil territory. Washington County, of which it is the county seat, and which stretches along the Ohio opposite Wood and Pleasants, in Virginia, produces probably more largely than any other part of the State, among its most important districts, not yet named, being those on the Ohio, near Marietta, and those of the Paw-Paw, Long,

Morse, Eight-Mile, Fifteen-Mile and Cow Run. Oil is found around Washington County, in those also of Monroe, Noble, Morgan, Guernsey, and Athens, and south of the latter in Meigs. In Morgan County, oil is found about McConnellsville, forty miles above Marietta, on McConnell's and Doudas's Runs; and also on Wolf, Federal, and Sandy Creeks. The considerable extent of the oil region to the northwest, along the Muskingum, and to the south along the Ohio, while the line of upheaval already referred to crosses into the eastern part of Washington County, suffices to show that in this State, as in West Virginia, the oil-producing lands do not constitute strictly a "belt," but in fact a territory of quite irregular form. Indeed, indications of petroleum have been found and borings commenced in many counties of the State other than those just named.

The yield of the principal Ohio region has at no time been near as large as that of the northwestern Pennsylvania region; but the Ohio oil, like that of West Virginia, averages a much greater density than the latter, and commands, as the rule, a higher price.

CANADA WEST.—The oil supply in this province seems also to have relation to a line of upheaval, and which here runs nearly east and west through the peninsula lying north of Lake Erie. The most productive oil districts, thus far, are found in a southeasterly direction from Sarnia, or Port Sarnia, which is near the foot of Lake Huron, on the St. Clair River. They are not far from the Thames River, and lie principally in the township of Enniskillen, and in that of Bothwell. In Enniskillen occurs a small surface deposit or lake of bitumen. A large number of wells have been sunk in the southern part of Enniskillen, along Black Creek, and about ten miles further north, on Bear Creek. One account states that in Nov., 1862, the supply of oil obtained from the wells in this section amounted to 3,000 barrels a week. In the Bothwell district, up to a recent date, about thirty wells had been sunk, and some of these with success, into the strata of high bluffs. The oil product here, up to near the close of 1864, is stated at 7,714 barrels, the largest daily yield from a single well being from forty to fifty barrels. Wells are quite recently being sunk in Barton, south of Hamilton.

The petroleum district of Canada East is on and near St. John's River, above Douglastown, and not far from Gaspé Bay.

CALIFORNIA.—Springs and large surface wells of rock oil (often or usually of thick and tarry character), and which are frequently accompanied with surface collections of asphaltum, are found in many sections of this State; these, chiefly confined to the coast range and adjacent valleys, to some extent appear in the northern part, but are more extensive in the southern, and especially so in the counties of Santa Barbara and San Luis Obispo. A very remarkable region of the kind alluded to is that near Buenaventura, Santa Barbara County, about

320 miles southwardly from San Francisco. The range of bituminous shales in which the oil-springs near Buenaventura occur, extend at intervals for 150 miles farther south, and also at intervals to the north as far as into Santa Clara County, eighty miles from San Francisco.

The most productive district here is included within one immense estate of 18,000 acres, known as the Ojai Ranch. It is situated on the northern slope, and in the valley adjacent to it, of a mountain ridge, lying ten miles north of Buenaventura, its greatest height being about 2,000 feet, its length thirteen miles, and its course nearly east and west.

Among the natural oil wells on it, the largest is thirty feet in diameter, full of tarry oil, and boiling with the escape of marsh-gas. This and several less points of outflow are in the midst of a very large expanse of asphaltum, doubtless resulting from evaporation of the oil so long escaping here, and which is estimated as equal in entire volume to a mass one mile square and one yard in depth. The large well was foul with the decomposition of numerous cattle that had been mired and drowned in the petroleum—an accident said frequently to occur in the dry season when the animals are parched with thirst. It has recently been questioned to what extent the rock oils of California are identical with the petroleum of the more easterly regions. (See REFINING OF PETROLEUM, etc.)

NEW YORK.—Oil and gas springs, and other appearances now regarded as indications of the existence of subterranean collections of petroleum, have long been known, and in a few instances still exist in parts of this State, chiefly within the counties of Chatauqua and Cattaraugus, and to some extent in those of Erie, Allegany, Ontario, etc. The work of boring for oil has lately been begun on Cattaraugus Creek, in Ontario County, and at some other points.

KENTUCKY.—Of the principal oil region in this State, portions lie in Cumberland County, and, it would appear, in others adjoining and not far from this, as about Scottsville, in Allen County. This oil territory is said also to be connected with a line of disturbance, which stretches northwest from Cumberland, through Russell, Casey, and Lincoln Counties. It thus lies in the southern part of the State, and but little east of its middle portion.

In Michigan, gas springs and other indications of oil, have for some time been known in St. Clair County—a district which would appear to be part of the same one which has been longer worked on the opposite side of the St. Clair River, in Enniskillen. In Indiana, oil and tar springs have, it is said, been known for many years in Crawford County, near the middle of the southern tier, on the Ohio River. Wells have here been commenced on some of the tributaries of Little Blue River, especially on West Fork and Otto Fork. An oil spring, yielding about a barrel of oil a day, and other indications, have been found near Cañon City, in

Colorado. In Oregon, oil is said to be found in the vicinity of Astoria. Besides occurring so abundantly in the island of Trinidad as to have formed the great Pitch Lake, or natural deposit of bitumen there found, and in Barbadoes, petroleum is found near Havana and at many other points in the island of Cuba, and in fact also in many other of the West India islands.

Geological Relations of Petroleum.—Nearly, if not quite all the series of stratified rocks, as well as volcanic and metamorphic formations, are found in some parts of the world to discharge mineral oil, or to be charged with this oil, or with the allied solid bitumen. The following simple table will show the general order of succession of the stratified rocks:

STRATIFIED ROCKS—FROM THE MOST RECENT, DOWNWARD.

1. Recent (alluvium).	} <i>Post-Tertiary, or Quaternary.</i>
2. Post-Pliocene.	
3. Newer Pliocene.	
4. Older Pliocene.	
5. Miocene.	} <i>Tertiary, or Cainozoic.</i>
6. Eocene.	
7. Cretaceous.	
8. Jurassic.	} <i>Secondary, or Mesozoic.</i>
9. Triassic.	
10. Permian.	
11. Carboniferous.	} <i>Primary, or Palæozoic.</i>
12. Devonian.	
13. Silurian.	
14. Cambrian.	

Although petroleum and bitumen are in Europe and Asia sometimes found in the lower stratified or palæozoic rocks, yet throughout those continents they are for the most part confined to the strata of newer secondary, or even of tertiary age—the latter, it is stated, in the Bakoo region, in Georgia, on the west coast of the Caspian Sea; and also in Italy, and in the Rangoon district. The bitumen of Trinidad, and of Venezuela are said also to be found in connection with tertiary strata, and not lower than the miocene. Prof. Silliman speaks of the oil-bearing beds of the coast of California, as being pretty certainly “cretaceous or tertiary.” The strata composing the mountain ridge on which the Ojai Ranch is situated are very regular, and all stand at an angle of from 10° to 20° with the vertical. The oil-bearing strata—bituminous shales and schists—are at the surface usually weathered whitish, or are red or yellow, from presence of iron or sulphur; but under the hammer they break black, like coal shales.

With the exception of that of the California region, there does not appear to be any precise statement as to the character of the strata within which petroleum is found, in the more westerly oil regions of the continent. In respect to the more easterly oil regions of the United States and those of Canada, it is certain that the oil strata are those situated low in the series, and of palæozoic age, being probably in no case higher than the horizon of about the middle of the *carboniferous* series. This is distinctly true of the three great oil territories thus far chiefly developed; namely, that of West Virginia and south-eastern Ohio, which stands highest in the order

of strata; that of northwestern Pennsylvania, which stands next in order; and that of Canada West, which has a still lower place; though even the last named is not so low in the entire series as the geological position of certain single springs or limited oil districts. In fact, the three great oil territories of the eastern part of the continent lie, in succession, within the coal measures, and below them as far down as nearly or quite to the lower devonian. Their place in the general

series of strata is thus seen at a glance [table of stratified rocks, preceding]; but the more special relations which they severally bear to the strata and groups making up the two series of the carboniferous and devonian, that contain them, will be better understood by aid of the following table, extracted from the more extensive one given in the *NEW AMERICAN CYCLOPEDIA*, and embracing the particular series under consideration:

PRIMARY OR PALEOZOIC ROCKS—FROM THE SUMMIT, DOWN THROUGH THE DEVONIAN.

<i>Permian.</i>	Magnesian limestone.	Found in southeastern Illinois, Iowa, north-eastern Kansas, &c.	[Prof. Rogers's Series.]
<i>Carboniferous.</i>	Coal measures.	The anthracite and bituminous coal-fields, except those of Richmond, Va., and N. Carolina.	} Seral.
	Millstone grit, or conglomerate.	The floor of the eastern coal-measures.	
	Carboniferous limestone.	Sub-carboniferous limestone and red shales.	
	Upper. Grey sandstone. Red sandstone. Chemung group. Portage group.	Catakill group. [Sandstones and shales.]	
<i>Devonian.</i>	Middle. [Upper Hol. subser.]	Genesee shale. Moscow " Marcellus " [Devonian limestone.]	} Cadent. Post-meridian
	Lower. Schoharie grit. Canda-gall grit. Oriskany sandstone.		
<i>Silurian (upper).</i>	Ludlow and Wenlock beds.	Nine strata or groups, mostly limestones.	Meridian. Pre-meridian and Scalent.

In West Virginia and southeastern Ohio, petroleum is found in the carboniferous strata, and it would appear, to greater or less extent in the coal measures. Upon these, in fact, the oil-producing counties of Ohio are located; while many parts of the oil region in the former State, show veins of bituminous and of cannel coal. According to Mr. Richardson's statements, in Virginia, the coal seams commonly lie above the oil-bearing rocks. The same writer states also that where dry splint coal—the bituminous constituents of which are partly eliminated—is most abundant below water-level, there, in the shales beneath the coal, oil is most extensively diffused.

Prof. Andrews, speaking of the oil region now considered, divides its rocks into three classes: those nearly horizontal, those which have a dip of from 15 to 40 feet in a mile, and those which are broken and dislocated by upheaval. From the Ohio River at Parkersburg, up the Little Kanawha, to within a few miles of the great oil wells, the strata are nearly horizontal, and probably contain few fissures, except those due to shrinking; and there appear to be no productive wells in this region. But on the Great Kanawha, and also about Pomeroy and in Washington County, Ohio, as well as in the counties around the latter already named as yielding petroleum, the rocks have more or less dip; and in these sections they probably also, as a result of the uplifting force, contain many fissures. Prof. Andrews had traced the line of upheaval and dislocation already referred to, from the eastern part of Washington County, Ohio, to beyond the Little Kanawha at Burning Springs, its direction being nearly north and south, and making with the general course of

the Alleghanies an angle of about 40°. In Ohio, the anticlinal axis is generally well marked.

The important part which vertical cleavage planes, or fissures in the strata, are likely to play in connection with the oil supply and discoveries of it, will be understood when it is recollected that, through the variety of their forms, branches, and communications, such openings could receive, and in case of such parts of them as were closed below, so as to act as "pockets," retain the oil, whether it entered them as a liquid at or from above their own level, or whether it ascended as a vapor from strata lower down, and which held the bituminous or organic matters that were its source. But besides fissures or rents through strata, there may obviously be cavities of other sorts also, and of greater or less size. Such, in particular cases, could be formed either by the wearing or the solvent action of water, or perhaps in some instances by the greater or less horizontal separation of disturbed strata; and, as produced through any of these or similar agencies, cavities of the nature of small caverns, such as are known to exist in the rocks in multitudes of cases, can readily be supposed to be among those which are pierced by the successful wells of oil districts.

Whatever the origin or character of oil-containing cavities, it appears that they must often be more or less vertically situated, and that usually they are not of great horizontal extent. For neighboring wells seldom strike oil at the same depth, either in horizontal or inclined strata; while the oil from wells near together may be of very different qualities; and it is only in a certain proportion of cases that even

wells near together interfere in the way of drawing the one from the other. "It is," says Prof. Evans, "one chance out of many to strike oil at all, even in the neighborhoods where it exists in abundance. The drill, as it enters the cavity, sinks variously from four or five inches to as many feet, sometimes sticking fast, as if between the oblique sides of a narrow fissure. But there are facts connected with the history of oil wells, particularly in their intermittent action, and their interference with one another, which serve to show the existence, in many cases, of systems of cavities connected together by channels of communication more or less free, running sometimes along the strata, and sometimes across them. The productiveness of a well depends on its entering either one of the main reservoirs, or some one of its important connections."

Speaking generally, the contents of oil-containing fissures or other cavities, and whether single or communicating, will be, *water* at the bottom, *oil* floating upon the water, and *gas* filling the space above the oil, the three standing thus in the order of their specific gravities. By natural outlets to the surface, from one or other of these parts, there may result either a gas or an oil spring, or one of mixed water and oil. In sinking wells, a more or less vertical fissure may be struck at any point, the well entering the portion filled either with gas, oil, or water. In the first case, gas is at first discharged, and, if it has been subjected to great pressure, with proportionate violence; while, if water from communicating crevices below then rapidly enters the fissure, the oil may next be forced into the lower end of the tubing and be pumped out; and later, oil and water mixed will be obtained. If the well enters the part of the fissure holding oil, this, by the pressure of the gas above it, may be raised toward the mouth of the well, or projected into the air, and sometimes to a height of many feet; but this action of the gas after a time becomes exhausted; and the flow is then, of course, no longer maintained. After the flow of oil from such a well has ceased, and the pump is resorted to, it is likely sooner or later to bring up a mixture of oil and water. If the well directly enters the water, unless the gas has sufficient tension to force out the water, and then oil, the latter can only be obtained by pumping out so much water as, if possible, to lower the water-surface to the point at which the boring enters the fissure, when, usually, oil and water mixed will be obtained. It is probable the wells may be intermittent from several causes, connected with the gradual accumulation of gas, oil, or even water, in the fissures pierced; but with pumping wells the most common cause must be supposed to be the time required for oil to collect from surrounding porous rock, or small crevices.

Any pressure, as of gas, air, or a head of water, will raise oil to a height as much greater than that to which water would be raised, as

the specific gravity of the former is less; i. e., in round numbers to a height comparing with that of a water column under like circumstances nearly as 5 to 4. While the oil wells thus far vary in depth from 50 to near 800 feet, it is stated that the deepest are as likely to raise water to the surface as the shallowest. By the occurrence of rains, the production of some wells is increased, while that of others, with less gas, is impaired. The very large quantities of oil in some cases delivered, the fact that borings near together may reach oil at very different depths, and other facts, go to show that the somewhat popular idea of an "oil rock" to be reached is a mistaken one; and, although the supply of oil is sometimes, and in some districts to a greater extent than in others, contained in pores, or very small cavities in the rock, it is more commonly doubtless found in cavities of larger size, single or communicating.

Not only is the supply of oil, geologically speaking, higher in West Virginia and southeastern Ohio than in the northwestern Pennsylvania region; but thus far, at least, most of the wells in the former region go to much less depth than in the latter. The wells in Ritchie County are said to be usually from 150 to 200 feet deep; those of Bull Creek, 75 to 250 feet; and particular ones on and near Horse Neck Run, from 160 to 380 feet in depth. It has been supposed that a gain in production might be secured by sinking wells in parts of West Virginia to from 850 to 500 feet. In southeastern Ohio the wells are usually no more than from 150 to 300 feet deep: but the fact that two wells lately sunk, on Duck Creek and Cow Run, to depths of more than 700 feet, have each struck a good quality of oil, has led to the opinion that in this region deep as well as surface supplies of oil exist.

The transition from the region last considered to that of northwestern Pennsylvania and northeastern Ohio is, in a geological point of view, a transition only from the carboniferous strata to some of the higher members of the devonian, which lie next below. The Catskill group of sandstones may be said to be confined to more eastern parts of the State of New York; and in eastern Ohio and northwestern Pennsylvania, both these and the strata known as carboniferous limestone are wanting; so that, in the parts of the country last named, the conglomerate of the coal measures comes very nearly, if not in fact directly, over the Chemung and Portage groups of sandstones. Some beds of coal from the great Pennsylvania coal-fields come out on the hill-tops some miles to the southward of parts of the Alleghany River along which there are now productive oil wells, and some of more limited extent are found on hills even in the oil region. In the higher country of this region, in fact, the surface rocks are still mostly carboniferous; and on the hills near to some of the oil-producing valleys, the conglomerate floor of the coal meas-

ures lies in some cases 100 feet thick. The rocks of the valleys here, however, are devonian, and are those of the Chemung and Portage groups. The beds of these rocks lying along and beneath the course of Oil Creek dip at a small angle to southward, but so that they pass 500 to 600 feet below the coal measures. In fact, the outcrop of strata from under the great Pennsylvania coal-basin spreads out toward the west and north somewhat in fan shape; and the eastern or inner line of the outcrop of the Chemung and Portage sandstones (known in the Ohio reports as the Waverley sandstones) is traced in a general way from Portsmouth, on the Ohio, by Cuyahoga Falls, whence, taking a more easterly course, it passes through the southern part of Crawford County, Pa. Thus, northeastern Ohio and northwestern Pennsylvania, north of this line, and a portion of southwestern and southern New York, in some parts as far north as the southern border of Genesee County, have altogether or mainly the Chemung and Portage sandstones as their surface rocks.

The strata now in question have been described as "compact, close-grained white and gray flaggy sandstones, alternating with red and olive-colored argillaceous shales." Drillers have for convenience numbered the beds of sandstones 1, 2, 3, &c., beginning in the bottom-land on Oil Creek, below Titusville. Prof. Ridgway estimates the total mass of oil-bearing strata as 1,200 feet in thickness, extending from the overlying conglomerate down to the Genesee slates. It has already been seen that the outcrop of these rocks to northward extends over all the southern counties of western New York, and to the northwest beyond Trumbull County, Ohio. The Mahoning Valley region, lying to the southward of the limits already named, is in fact within the outcrop of the coal measures; though here the oil is found also in the underlying Chemung and Portage sandstones. The lowest oil-bearing sand-rock comes to the surface in the town of Waterford, Erie County, Pa. Unlike those of the Ohio River region, these rocks have been but little disturbed from their nearly horizontal position; though, according to Prof. Ridgway, some miles north of Titusville the inclination becomes as great as 10° to the south, while under that town occurs a synclinal trough, farther on near the Stackpole farm, $2\frac{1}{2}$ miles down, an anticlinal roll, and from this to the mouth of Oil Creek a series of small undulations and crimps in the strata.

In the borings along Oil Creek, and generally where the surface strata are similar, the "first sand-rock," a whitish sandstone, is met with at a depth of from 70 to 200 feet; and it is stated that the wells penetrating only this bed yield generally a thick oil. From 100 to 200 feet below this, after passing through soap-stone and perhaps slate, lies the "second sand-rock," of similar aspect to the first; and in or beneath this oil is again obtained, also heavy, though

less so than the former. From this rock proceed nearly all the wells of the Alleghany River; while, with few exceptions, the wells of French Creek descend only to the first rock. From 100 to 200 feet again below the second, there is a "third sand-rock;" and wells penetrating this more commonly yield a light and purer oil. To this rock descend most of the flowing wells; and in fact, most of the wells more recently sunk along Oil Creek. Though the wells have thus far been sunk chiefly in the valleys, there appears no reason why oil should not also be reached through the higher land, by boring proportionally deeper. So far as the oil supply of wells is that which slowly collects from porous rocks, or those filled with fine cavities, it should certainly be found under the hills as well as the valleys, and so far as it exists in large fissures or chasms, these too must probably to some extent underlie the hills. To the foregoing statements, and which substantially agree with those of a notice in the "American Journal of Science" for Jan., 1865, it should perhaps be added, that to the extent to which fissures of irregular position and height, and penetrating one or several successive layers of rock, serve as the reservoirs of petroleum, it cannot of course be intended to assert that entire invariableness of the quality of the oil at different levels, and of the depths at which it is found, which the statements as made would appear to imply. Further, so far as the wells of the northwestern Pennsylvania region receive their supply from such fissures, remarks similar to those already made respecting the wells of West Virginia will apply to them.

In whichever sand-rock the borings terminate, the southern dip of the strata requires that the wells shall go deeper in the same direction. The depth of the early wells of Mecca, Ohio, was from 80 to 200 feet; while along Oil Creek, from near Shaeffer's to its mouth, wells reaching the third sand-rock are of depths increasing from about 500 feet to 700 feet or more; and the depth of wells on the Alleghany below Franklin are also quite various, ranging from 360 to 750 feet.

As, proceeding northward, the Chemung and Portage groups of sandstones run out, the Hamilton group, next below, comes to or near the surface. The black inflammable shales of the devonian series in western Canada, and which over some parts of it appear highest, are considered as belonging to the base of the former, while the argillaceous shales and limestones underlying belong to the Hamilton group. The low broad anticlinal axis running nearly east and west through the peninsula north of Lake Erie, brings these shales and limestones in the township of Enniskillen nearly to the surface. At the base of the group occur the Marcellus slates or shales, which, as well as those at its summit, contain petroleum inclosed in very small cavities. Immediately below the group in question is the cor-

niferous limestone, also specially named "devonian limestone." The wells of the Enniskillen region, which reach oil at the depth of 120 feet and more, would appear to pass below the Hamilton group toward or into the devonian limestone, in which latter, in such case, the supply of oil in this region must be considered to be found. The devonian or corniferous limestones, in fact, at points where they come to the surface, both in Canada and New York, are found to be very generally impregnated with petroleum, or to contain it in small cavities (as is the case at "Black Rock," on the Niagara River), and sometimes also, it appears, to be charged with bituminous matter in the solid state. To reach these limestones, or the equivalent slates or shales, south of Lake Erie and in northwestern Pennsylvania, supposing such strata to be there continued, and to be as at many other points charged with petroleum, would of course require wells of far greater depth than any yet attempted in the last-named region, though probably not greater than that of some artesian wells already in existence. It is questionable, however, whether the corniferous limestone is continued beneath the regions mentioned; and if it be so, or not, whether in that part of its distribution also petroleum would still be found. The producing wells of the Bothwell (Canada) district are of a depth of 270 feet and upward; and some that were in process of being sunk in 1864 had already reached depths of from 850 to 500 feet.

In the cliff limestone (devonian) of Ohio, as well as in the corniferous limestone at Black Rock, petroleum occurs in cavities, generally in the cells of fossil corals. The Niagara limestone (silurian) in Monroe County, New York, contains bitumen. Still farther down in the series, almost all the lower silurian rocks are found, where exposed, to contain petroleum. The oil is either infiltrated in small quantity through the rock, or fills small cavities in it, as is seen in parts of Canada; or it makes its appearance at certain points in springs, as in case of the long known petroleum spring of the town of Guilderland, near Albany, and that on Great Manitoulin Island.

In respect to the *origin* of petroleum, space will here allow of nothing further than the statement that, undoubtedly, like all the varieties of coal, the oil has in all cases had its source in the bituminous transformation of collections of preëxisting organic matters—these, in case of the oil, having usually been of vegetable, but sometimes, perhaps, of animal character; while the direct production of the oil has probably taken place sometimes from the resulting bitumen as appearing in coal-beds, and sometimes from the allied bitumen infiltrated through or collected in certain rock strata.

Indications of Petroleum.—As the most important of the natural indications or "signs," in any section, of the existence of rock oil beneath the surface—should be named the following: *gas-springs*; *oil-springs*, the oil either flowing

pure or mixed with water; *appearance of oil* on the surface of the ground, of rocks, or of pools, creeks, etc.; surface collections of *bitumen*; the so-called "*show of oil*," from strata through which wells are being sunk, or on the water raised from them; *salt-water wells* or *springs*, in some cases perhaps, and especially where oil or gas also appears; and in a geological point of view, the fact of *lines of disturbance* in strata not far below the surface, affording increased probability of numerous cavities within the rocks, as well as also, in certain instances, the *nature* of the strata that come next below the surface—as, whether they are such as have elsewhere yielded oil, or such as are in immediate proximity to bituminous strata, which appear at some other points to have been the source of oil in large quantity. Among the indications named, the least fallacious of all, it would appear, should be those of free-yielding oil-springs and the surface bitumen which they sometimes deposit, as the former was shown in the early history of the western New York and northwestern Pennsylvania regions, and as both have appeared in those of Canada and California.

One among the surest signs of subterranean collections of oil, nevertheless, is afforded by *gas-springs* or *jets*, the gas coming up from an opening in the surface, or through the water of a spring, or escaping from fissures in rocks. Springs of unflammable gas, however, as carbonic acid—and Mr. Richardson states that such are numerous in the boggy bottom-lands which he examined in West Virginia—could so seldom be supposed to have their origin in connection with supplies of oil, if even they ever did so, that they would be of no real value as indications. An inflammable gas will doubtless invariably consist of or contain *marsh-gas*; and this, from its intimate relation in composition and in origin with petroleum (as previously shown), is the valuable criterion. Prof. Andrews states that, in our bituminous coal-measures, a gas-spring without doubt indicates petroleum, and he adds, "in the rocks below;" but Mr. Richardson argues that gas may sometimes travel to a considerable distance laterally, along horizontal or irregular fissures. When it does so, the gas-spring can show no more than that oil is somewhere in the vicinity. Hence, instead of sinking a well directly at or near the vent, the explorer should endeavor first to ascertain the nature, position and peculiarities of the subjacent and surrounding rocks, so as to determine the probable place of the oil fissures or basins. The greater buoyancy of the gas, however, and its elasticity and consequent upward pressure, while the oil can only flow at its level, render the former the less likely of the two to wander very far laterally before finding an exit to the surface. But again, Prof. Hunt, speaking of the Enniskillen wells, says: "The inflammable gas which issues from the wells is not necessarily connected with the petroleum, inasmuch as it is an almost constant

product of the decomposition of organic matters, and is copiously evolved from rocks which are destitute of bitumen. It is similar to the gas of marshes and to the fire-damp of coal mines." Accepting this view, even an inflammable gas would not show beyond question the existence of petroleum; and especially in marshy places such a gas may arise only from the bottom of the pools in which it appears. Still further, a well may penetrate a fissure and release from it a large volume of gas, when the oil is contained in a lower one to one side, and is not reached by the same well. But while it is thus always necessary to examine into the character and source of gas-springs, in order to determine their value as a sign of oil, it is well known that in some of the great oil regions of both hemispheres where inflammable gas-springs are most abundant, there petroleum is likewise so. To the examples of the Alleghany region, and those of West Virginia and Canada, in this country, it seems that we should add that of western New York. As to the last-named, however, since the surface oil was there long since mainly exhausted, while some of the gas-vents have been kept supplied to a recent date or to the present, the inference would seem warranted that there are supplies of oil in strata deeper than those yet penetrated in or near that region—perhaps entirely beneath the Chemung and Portage sandstones. Finally, to quote again from Prof. Andrews: "The great majority of these gas-springs are unknown, since they are seldom discovered, except when they appear in streams; and," he continues, "probably the same may be true of oil-springs, since the soil would absorb the oil, and in only a few cases would it be detected."

Little further need be said in regard to *oil-springs*, with or without water, and the *surface bitumen* which shows the former or present place of such springs. These are, indeed, unquestionable signs of the past or present existence, as the case may be, of accumulations of oil somewhere beneath the surface, and usually not very far removed from the place of outflow. The important questions in these cases are, the direction, and the probable depth, from which the supply may come. A little oil on the surface of a spring may prove a deceptive sign; for the water feeding the spring may have borne the oil to a great distance from its hidden reservoir; or again, such oil may be the last drainage of long standing oil-cavities. But continued gas-jets, on the other hand, if connected with oil supplies, quite certainly indicate that the quantity of oil is large at the time, though it has been suggested that they may show only a greater depth of the oil.

Surface oil, exuding upon rocks, or in the soil, or on pools or streams, is a sign quite generally regarded as trustworthy, and one that is much sought. It was one of the marked signs in all the great oil regions of this continent that have, so far, been developed; as in the

Oil Creek and surrounding districts, in Ennis-killen, on Hughes River, and elsewhere; and it is said to be now abundantly met with, at least at some seasons, on the waters of parts of the Great Kanawha and Elk Rivers, and of some of their tributaries. As to the exact promise, however, of particular spots or locations, this sign may prove wholly fallacious. Thus, the oil on pools or streams, where it may appear either as an oily scum or as a thin film of oil, and often reflecting the prismatic colors, may be the slow washings from alluvium or cavities in which little of it finally remains. The Rev. Mr. Eaton states that some of the most unsuccessful operations in the whole Oil Creek valley have been in the midst of the ancient pits there found, though undoubtedly these were at some past time dug with profit for the oil that then filled the very surface earth where they were made. Again, petroleum on the surface or in crevices of rocks may, as previously seen, indicate no more than its presence in small cavities within the rock, or even simply that the rock is itself bituminous. An instance of the former kind is the oozing of petroleum from broken surfaces of the dark-colored limestone at Black Rock; and examples of the latter kind, it appears, are found in its appearance upon sandstones quarried in Erie County, Pa., and limestones in Monroe County, N. Y., and in Canada.

The "*show of oil*" sometimes obtained in the course of wells going down, is not so much as formerly considered decisive as to a successful result. A good show of oil near the surface or still lower may disappoint, since the oil so found may be from small fissures or veins that are not with any certainty in the course to, or connected with, the large collections of it; and on the other hand, productive wells have been obtained with no intermediate "*show*." The value of this show as a sign, however, according to Prof. Evans, increases with the depth at which it occurs.

Salt water, in springs or wells, taken alone, has little value as a sign of petroleum; since the salt may be from seams or deposits of that material, and, as in springs and wells, generally, it may emerge or be struck at some distance from its source. One of the earliest facts in the course of discovery of rock oil in this country was its very frequent appearance on the water of wells bored for salt, and often to so great an extent as to be regarded as a nuisance, or even to lead to the abandonment of such borings. It was thus found on the water of salt wells, on the Great Kanawha, and on numerous tributaries of the Alleghany and Ohio Rivers within and near the limits of the present oil regions. And in any case, salt water becomes a more important sign when it occurs in the vicinity of gas-springs or surface oil.

Finally, it appears that no infallible criteria or rules as to whether petroleum is or is not present in remunerative quantities in the strata beneath any district, can yet be laid down.

Evidently, the prospector will be aided by a knowledge of the geology of, and the history of explorations in, the various oil regions, as well as by experience. Almost any of the signs already named may be considered as affording, where met with, a *presumption*, more or less strong, of the existence of oil deposits; and the supposition thence arising requires then to be tested by examination with reference to the other indications.

The Sinking of Oil Wells.—The processes involved in the sinking of wells for oil, and which, with the exception usually of some feet depth of superficial alluvium, must penetrate mainly or altogether in the way of drilling through rock, are substantially those resorted to in the case of artesian wells generally. The place for a well having been fixed upon, a derrick of some thirty to sixty feet height—its frame being chiefly four strong upright posts, standing some ten feet apart below and about five feet above—is erected over the spot. The distance from the surface to the rock is at the present time usually traversed by driving down into the earth a strong cast-iron pipe, of an internal diameter of about five to seven inches. This is forced down in the manner of pile-driving. The power for this purpose, and for the subsequent operations, including those of drilling and pumping, is now commonly that furnished by a steam-engine of some eight to twelve horse-power. The cast-iron pipe is in sections of a few feet length, which are successively jointed on above as required, till the rock is reached. Drilling tools may be used to loosen up the earth within the pipe; and the water entering it from above converts this mass, as it penetrates it, into a paste or mud: a "sand-pump"—a three to five-inch copper tube, six feet long, with a simple valve in the lower end, opening upward—is then let down into the muddy water, agitated until it fills, and raised; and these operations are repeated until the whole depth is cleared.

Of the complete drilling apparatus, consisting essentially of the rope socket, of two heavy intermediate links, or "jars," the purpose of which is to jar the tools loose when they might otherwise stick fast in the rock, and of a "sinker bar" and "auger stem," to the lower end of which last is finally attached the "centre bit," for cutting, or the slightly larger "reamer," which is blunt and used for rounding and finishing the opening made by the former, the total weight is commonly not less than from seven hundred to nine hundred pounds. By the socket above the apparatus is attached to the rope, which again is now commonly made to receive its motion from that of one end of a working-beam suitably erected near the spot, having a stroke of thirty to thirty-six inches, and actuated by the steam engine. The centre-bit has an edge of about three to three and a half inches, and the reamer somewhat larger, brings the boring to near the calibre of the pipe above; the drilling is with both performed sim-

ply by the force with which the tools are let fall. As often as the boring has been carried down a few inches, so that the *débris* would clog the tools, these are withdrawn, and a somewhat smaller sand-pump is used to clear out the comminuted rock by aid of the water which is always present in the boring. It is said that in gravelly or shaly formations a progress of from three to ten feet a day is made; in rock, of from one to three feet. Judicious operators commonly keep a record of the strata passed through, their thickness, the place of veins of water or oil, etc. Among the difficulties in the way of sinking the iron pipe, are the meeting of boulders, which then usually have to be drilled through, the fracturing of the pipe, etc.; and in the way of drilling, the breaking of the bits, or rarely, their sticking so that they cannot be removed, etc.; and from causes of this sort the borings, even when far advanced, must sometimes be abandoned altogether. And again, wells which have consumed months of labor, may in the end prove unsuccessful.

In ordinary wells, as soon as the boring has struck oil, and in flowing wells, so soon as the flow so far remits as to allow of the process, the tubing of the well is to be performed. Sections of a copper or iron tube, two to three inches in diameter, are screwed together to the required length, a pump-barrel containing two valves always forming the lowermost joint; and the tube so formed is lowered within the larger pipe and boring, so as to enter the liquid in the subterranean cavity. A long jointed pump-rod is inserted within the tube, having at its lower end a metallic valve-box, with its valve opening upward. The pumping of the oil or water from the well is effected, subject to the control of the operator, by connecting the rod with the working-beam or other device for imparting motion to it. In order to arrest the downward flow around the tubing, and into the oil cavity, of water from veins pierced in boring the well, a sort of packing is made use of, in form of what is known as a "seed-bag." This, a leathern tube some eighteen inches long, partly filled with flaxseed, and closed at the ends, is, before sinking the tubing, bound about it near the lower end: once in place, the water soon swells the flaxseed so as to close the space about the tube, and thus the further access of water from above is prevented. The upper end of the coiled seed-bag being more slightly tied, this readily ruptures whenever an effort is made, from any cause requiring it, to raise the tubing. When two or more wells belonging to different owners enter the same oil cavity, or are in any way connected below, the drawing of the tubing of one of the wells, allowing as it does the water to flow freely down into the oil reservoirs, floods the connected wells also, usually rendering them quite worthless for the time. In this way the proprietors of one well have, in some instances, compelled those of others near, and more profitably yielding, to come to their terms,

either to purchase or dispose, wholly or in part. Against undue advantages of this sort, and for some other points connected with oil mining, it has been supposed that some new legislation will probably yet be required.

In case of a few of the flowing wells it appears that the tubing has been made so to extend above the surface as to accommodate the force of the discharge, and to allow the oil to flow into elevated tanks. As the oil can flow spontaneously only in consequence of the pressure of a head of liquid or of a body of gas, it has lately been attempted, and it appears with success in some cases, to aid a failing gas pressure, or to establish (independently of such action) an upward current, by passing down a second tube outside that for oil, and forcing down air by means of a powerful air-pump, worked by the engine. The added tube is turned up at its lower end so as just to enter the oil-tube, and the force with which the injected air rises—the pump sometimes being worked under a pressure of 200 to 400 lbs. to the square inch—brings up also the oil and water entering the tube. It is anticipated that this method may also restore the productiveness of some wells which have ceased to be pumped with profit. In some cases in which the tubing or the opening into the oil-cavity has become clogged by paraffine, the former being likely to occur during the cold months, a jet of steam forced down the tube for a sufficient length of time, is said to have removed the difficulty. In order to cheapen and facilitate the boring of the rocks, it has been proposed to bring the "diamond drill" into use. This drill is in tube form, its edge being set with a sort of cheap or "block" diamonds; and being caused to revolve, it somewhat rapidly cuts a "core" into the rock to a certain depth, which could then be broken off and hoisted out, and the process repeated. An invention of still more recent date than the last, and unlike it, designed expressly for oil-boring, is that of Col. E. A. L. Roberts, of New York, and known as the petroleum torpedo. It appears intended for use, when necessary, to clear the borings from paraffine and sediment, but more particularly to fracture the rock laterally about the place of its explosion, so as to open up communications with surrounding oil cavities, which often, though very near, are completely shut off by the compact and unbroken condition of the surrounding rock. A cylindrical tube, four feet in length, and made to fit the bore of a well, is filled with gunpowder, and suitably closed, and this is lowered by a wire into a well to be operated on, to any desired point. It can then be exploded either by percussion, as by a weight let fall along the wire, or in other ways. It is anticipated that by its action wells previously unproductive may in many cases at once be brought to yield abundantly.

Oil wells are at present (beginning of 1865) sunk in the sandstones of the N. W. Pennsylvania region, by contract, at \$3 per foot. To

this item of the cost of sinking a well, amounting, for a depth of 600 feet, to \$1,800, must be added many other outlays; as, at present prices, for an engine of ten horse-power, delivered, about \$2,000; derrick, working-beam, and appurtenances, \$150; band-wheel, belting, &c., \$100; set of tools, \$400; 1½ inch hawser and small rope, \$100; 600 feet tubing, at \$1.10, \$660; 50 feet driving pipe, \$350; 500 bushels of coal, \$380; pump-barrel and valves, \$37; wrenches, clamp, &c., \$40. These may be regarded as approximately correct estimates of expenses, at the time, in currency, incidentals not being included. To their total, \$6,017, however, at least 25 per cent. should be added for unforeseen and contingent expenses.

Qualities of Crude Petroleum.—The oil at first appears as a dirty or muddy stream, in which, along with petroleum, earth or sand, and often water, are mixed. If, later, other intermixture ceases, water commonly continues to be brought up with the oil, perhaps in increasing proportion. The mixed liquid is discharged or conveyed from the pumps into tanks, of capacities of from 80 to more than 1,000 barrels, and allowed to stand for some time. The water, being heavier, now mainly separates, and sand if present—these sinking to the bottom of the tank. The crude oil thus becomes collected by itself, floating upon the water, and acquires its characteristic appearance. That of the Oil Creek region has commonly a greenish hue, sometimes, it is said, changing in the lighter qualities to reddish. It is stated to be generally of different gravities according to depth, the deeper wells giving the lighter and purer oils. The oils of the bituminous coal-fields are generally of a brown color. This is commonly the color of the oils of West Virginia and S. E. Ohio, and to some extent, though not invariably, also of those of Canada West. Most of the last named possess a strong odor of sulphur-compounds; and they have generally proved very difficult of refining.

To a great extent the oils of the West Virginia and S. E. Ohio region, as were those of the Mecca district, are of the distinctly low gravity sort known as (crude) "lubricating" oils; and, whenever not unusually impure, such are as yet commercially more valuable than the very light oils, such as those of most of the wells of Oil Creek and some other parts of the N. W. Pennsylvania region. Some oils of the latter region, however, as those of French Creek, are also of low gravity, and are prized accordingly. The most abundantly yielding wells of Oil Creek (*i. e.*, those reaching the third rock), afford the lightest oil; and the rule is, in fact, a general one. On the other hand, the wells affording a heavy oil, are almost without exception those the yield of which is comparatively limited. Indeed, the higher price which the heavy oils command, may be said to depend on the fact that as yet they do not in quantity so nearly meet the existing demand growing out of the purposes they serve, as is the case with

the oils of higher gravity. On Duck Creek, O., wells very near each other sometimes show a difference of 10° B. in the gravity of the oils they afford; and this fact is of course paralleled in many other locations.

General statements place the crude oil of Oil Creek, as the rule, at gravities of from 40° up to 47°, and sometimes 50° B. (sp. gr., .829 to .785); about Franklin, at 80° to 82° (sp. gr., .879 to .869); of Burning Spring Run, at 83° to 41° (sp. gr., .864 to .825); about Horse Neck Run, at 28° to 42° (sp. gr., .890 to .820); about Cow Run, O., at 40° to 41°; at Meoca, O., at 26° to 28° (sp. gr., .901 to .890). Prof. Andrews states that oil from the coal measures may vary in gravity from 20° to 52° B. (sp. gr., .986 to .777). He also speaks of a crude oil from near Pomeroy, O., which shows 51° B. (.781), and burns freely and with a brilliant flame, without refining.

The temperature fixed by custom as the standard for testing the gravity of rock and coal oils, crude and refined, is 60° F. As at temperatures below this the density of the oil is increased, while at those above it becomes more rare, it is necessary, in testing oils at other temperatures than 60°, either to make allowance for the difference, or to bring a sample to the standard temperature. Buyers now require that a fair sample of any tank or lot of crude petroleum in question shall be brought to the standard temperature before testing.

As among the important chemical properties of petroleum, it may be remarked that the oil—crude or refined—does not unite or properly blend with water, though it imparts to the latter its peculiar smell and taste. It combines in all proportions, however, with strong alcohol, with ether, and with common oils, both the essential and the unctuous. It dissolves sulphur, phosphorus, iodine, camphor, most resins, wax, and fats, and softens rubber into a glairy varnish. These qualities serve to explain some of its uses yet to be named. (Ure's Dictionary.)

Refining of Petroleum: Separation into Distinct Products.—While standing in tanks, the crude oil loses much of the gas it may have held as brought up from the wells. It also loses by evaporation, and to a greater extent as it is allowed to stand longer, portions of its lower or most volatile constituent hydrocarbons. Where the oil is raised by pumping, the jet of gas is often visible as it shoots out horizontally from the pump, with each discharge of oil; and over the tanks into which oil just raised has been run, it is not uncommon to see a sort of tremulous or glimmering appearance, like that sometimes observed where heated air is rising, and due to the presence of a scarcely visible cloud of escaped oil-vapors. In consequence of the rapidity with which the evaporation sometimes goes on from light oils when first raised, the remaining body of such oil is, in some cases, cooled almost or quite to freezing. Almost any crude oil, however, will still retain some portion of gas and of the lightest con-

stituents, as well as usually some water, and of course, other impurities.

To free the crude oil from remaining admixtures such as those already named, is one object of the refining process; another is, at the same time, to separate from one another—though not in an exact and perfect manner—certain groups of the entire series of component hydrocarbons, each group intended to contain such of these as are suited to some particular use or uses. The groups so separated constitute so many complex materials, somewhat differing in their composition, and in certain of their sensible qualities. The means of such separation are afforded in the successively higher boiling points of the component oils, and in the circumstance that some of the constituent hydrocarbons are in reality solids, and which the oily components merely hold in solution.

Thus, in order to obtain from petroleum a suitable burning oil, it is necessary to cut off both the extremes of the hydrocarbon series. The points of separation in the series could be determined by the *density* of the oil as it is carried over from the still, or perhaps by *temperatures*. In refining and separating the burning oil, in this country, the points of cutting off are usually determined, the lower by the *density*, and the higher by the same, or by the *color* of the oil flowing from the still. Thus, as the heat imparted to the crude petroleum placed in the still is gradually raised, the portion which at first distills over, and above a point of gravity which different refiners take variously at from about 65° down to 58° B.—as tested, of course, by bringing samples to 60° F.—is set aside, and constitutes the *crude naphtha*. It is most common to cut off the naphtha at some point in a range of from 68° to 59° B. Many refiners separate first of all the lightest naphtha, down to about 80° B.; to this the name of *gasolene* has been given. In the first refining of petroleum, the practice in determining the point of cutting off at last, *i. e.*, from the heavier components, is perhaps still more various. It appears that in some refineries a separation is at once made between the burning oil proper and a denser or lubricating oil; and those who desire to produce a refined petroleum of the best qualities, collect the oil for such purpose toward the last no longer than it continues to run "light," or, at farthest, a (whiter) "light straw;" or, when determined by density, to about 42° to 35° B. If beyond such point the distillation be kept up, and the product separately collected, this will consist of a lubricating oil, but which also holds some *paraffine*. Here, again, the distillation may be stopped while the thicker residue in the still, and which is commonly known as the *residuum*, is yet only of the consistency of very thick oil or of a fluid tar; and in such case, the residuum will still contain much paraffine and some lubricating oil. In other cases, the first distillation in refining petroleum is kept up so long as any dark and heavy oil continues to go over; and the only residuum at the last is then the hard and

compact mass known—somewhat improperly—as *coke*, and which, largely composed of earthy matters and of carbon, is nearly or quite combustible.

At refineries in the oil regions it is a quite common practice not to separate a lubricating oil, but to run off into one receptacle the entire product obtained below a certain gravity at the outset; while it appears that at some of these the oil is cut off at about 42°, and the residue then mixed with crude oil and re-distilled. Hence, from circumstances which have now been indicated, it is often true that a refined petroleum contains yet constituents both too light and too heavy for use in burning, and so requires to be refined again. If, upon testing a refined oil with the coal-oil pyrometer, its vapor would explode below 110°, it was for some time customary to pronounce such oil unsafe for burning. At present, however, many dealers and consumers regard as safe oils of which the explosive point, correctly found, is as low as 100°. If a refined oil yields vapor in quantities which readily explode below this point, it is beyond question not suited for general use as an illuminant, but requires redistilling, a further portion of naphtha being separated. According as its naphtha has been cut off at points ranging from 65° to 58° B., a refined oil will show an explosive point of from about 90° F. up to 115°, or even to 120° or more. The lower the point at which the naphtha is cut off, the higher is the explosive point, and up to a certain degree the greater the safety of the oil, while the density of the latter and its illuminating value are at the same time increased. Again, if at first the petroleum was distilled well-nigh or completely down to a heavy residuum or to coke, more or less of lubricating oil may then also be separated at the last, in a second distillation.

Through variations in the comparative purity of different crude oils, and in the care of refining and the point to which the distillation is pushed, it results that the refined petroleum reaching the markets is of many grades of quality and value. It is evident that where much heavy oil, quite or nearly colorless, can be obtained, this will allow of retaining more of the naphtha, and may yet show about a usual density; and, indeed, naphtha and heavy oil are sometimes so mixed as to afford an oil having the density of that of the best quality, while the oil actually of such quality would have its constituents more nearly in the middle of the hydrocarbon series. It will thus be seen that, for the quality of refined oils, density alone is not a sure criterion; as it is not, further, of their safety. Thus, dealers at present depend, for determining the quality and value of refined oils, almost entirely upon their color, and the indications of the fire-test; while, for crude oil, they are left to be guided in the main by density alone, and for naphtha, by density in connection with odor and color. Of refined oils, the best quality is that known as "prime

white," and which under the fire-test shows from 115° to 120° or upward; while after this in order follow "standard white," "light straw to white," "light straw," "straw," "lemon," etc. These varieties of color, taken alone, are not, as has already appeared, positive tests of density, of safety, or of illuminating value. The fire-test now generally required in refined oils for exportation, is 110° and upward; in those for home consumption, it may be stated at from 100° to 110°.

The burning oil obtained from petroleum has in this country become generally known as *kerosene*, although this is properly the name (as originally applied by Dr. Gesner) of the analogous burning oil separated from crude shale or coal oil. So far as burning oils are obtained from petroleum, the term *kerosene* applied to them must be regarded merely as a trade-mark, the proper name, as yet, being refined petroleum. Of course, in the separation of this product, no rule as to the proportion which will be set aside in form of the lighter and heavier constituents, can be laid down for oils generally; and the practice of different refiners being, as already seen, quite various, considerable differences will exist in different burning oils in the respects of density and the total quantity of light they can afford. It has been stated that the proportion of the limpid, merchantable illuminating oil, in different specimens of the crude, will vary from about 80 up to 90 per cent. Mr. Paul states that from crude coal and shale oils not more than from 5 to 15 per cent. requires to be separated; from Canadian petroleum not more than 10 per cent.; and from American petroleum (the writer having in view, perhaps, the lighter oils from the Oil Creek region) 20 to 25 per cent. He further states that burning oil from coal and shales has usually a specific gravity of about .825, i. e., 41° B., while those from petroleum have rarely a specific gravity of above .800 (about 46° B.), and sometimes stand as low as .780 (51° B.). It is still a question, however, whether by retaining (so far as is safe) the lighter constituents, and so getting an oil of less density but in greater volume, the total quantity of light, and so, the total value obtainable from a crude petroleum, is not increased. Prof. Silliman quotes Mr. Gilbert as putting the loss in refining of crude California petroleum at 10 to 15 per cent., and as giving the following statement of the products of distillation: Naphtha, 5 per cent., at 65° B.; burning oil, .50, at 30° to 32° B. (much too low); light machine oil, .20, at 25°; heavy oil and paraffine, .25, at 18° B.

Professors Brewer, of Yale College, and Whitney, of California, appear to insist upon a radical distinction between the petroleum of the eastern oil regions and the thick oil or mineral tar of the natural wells of California; and the former, at least, doubts whether this tarry oil will afford good illuminating and lubricating oils. Writers in California journals also have

recently declared that no illuminating oil comparable with that of the east has been, beyond question, produced from the wells of that State. On the contrary, besides Prof. Silliman, Prof. A. K. Eaton and other chemists have found the California oil examined by them to be petroleum, and to yield fair percentages of both illuminating and lubricating oils. The great evaporation due to a hot climate would doubtless render the more surface oils of less value than such as might be obtained by deep borings. The question of value for distillation of the California asphaltum can be determined only by actual experiment.

As to the process of refining, it may be said briefly that where this and the separation of the products are effected in the same course, the naphtha is first run off into one receptacle, and the illuminating oil next conveyed into another, while the heavier products which follow may be discharged together into a third, or separated into lighter and heavier lubricating oils. Having been run into the large tanks intended to receive it, the burning oil is purified by agitating successively with sulphuric acid, with water, with alkali, and then with water again; and it is then by suitable treatment further decolorized, and, as it is termed, deodorized—the latter expression, however, implying chiefly the removal of odors due to foreign admixtures remaining in the oil, and not altogether of its own specific odor. It is important that the oil should be wholly freed from the chemicals employed in its purification, as otherwise it is liable to grow darker, and at the least to lose in market value, with age. The heavier oil is sometimes by itself redistilled, yielding a further portion of burning oil; this latter is then often mixed with naphtha, producing a burning oil of inferior grade. But whether redistilled or not, the heavy oils being finally left to stand in vats, deposit in solid form a considerable quantity of paraffine. This, taken up from the vats, is freed from intermixed oil by pressure, much in the same manner in which the separation of the solid from the fluid fats is carried on in case of lard, tallow, &c.; and the impure solid paraffine, as thus procured, is subsequently remelted by itself, and purified. The crude naphtha is also commonly refined and deodorized. Within the stills there remains at the close of the process a dark, thick, tarry residuum, which still contains paraffine; or, if the process has been carried to the extreme, as before shown, only the hard cake or mass of coke, which is quite worthless. (See PETROLEUM, in the NEW AMERICAN CYCLOPÆDIA.)

When the change from the distillation of crude coal oil to that of rock oil had once been made, it soon became general, the very low price at the time, at least in this country, of the latter oil, crude, serving wholly to exclude for the time, from competition with it, those obtained from coal, asphaltum, &c. The works of the New York Kerosene Oil Co., on Long

Island, established for the refining of coal oil, were among the first to be devoted to the working of the new material.

In some cases, the heavy crude or natural lubricating oils are not distilled, but are purified by applying heat and by the use of chemical agents, the purpose of which is to remove from them the grit, &c., including sometimes certain impurities of a gummy character, and which would tend to destroy their value as lubricants. The same unfavorable effect, indeed, would be exerted by paraffine, if left in very considerable quantity in the oils; and this must further be in part removed, as is accomplished by chilling the oils with ice, and then pressing them through porous materials. The city of Cleveland has thus far been one of the chief centres of manufacture, from petroleum, of lubricating oils.

In connection with the attempts now being made to produce many of the new dyes, hitherto known as the "coal-tar colors," or at least dyes closely resembling them, from petroleum, it becomes a very important practical question whether American rock oils, or at least some varieties of them, do or do not contain as constituents, the distinct chemical principles known as *benzole* and *toluole*; since it is from a combination of these, primarily, with nitrous acid, that aniline, the basis of many of the most valuable among the new dyes, is obtained. M. Schorlemmer has recently declared that in American petroleum he finds, to some extent, both benzole and toluole; but MM. Pelouze and Cahours, agreeing with Mansfield and other early authorities, explicitly contradict this conclusion; and in the views of the latter some chemists in New York coincide. Finally, Messrs. De la Rue and Muller, for some time engaged in an examination of the Rangoon petroleum, intimate that in it they find not only the series of hydrides already presented (see TABLE), but also the *benzole* series, as benzole (C_6H_6), toluole (C_7H_8), &c. In like manner it is still undecided whether petroleum contains to some extent *aniline* itself, though this also is doubtful, or *naphthaline*, or other constituents, light or heavy, which, for the color-manufacture, may serve as equivalents for the principles already named. (See ANILINE COLORS, in this volume.)

Through a combination of causes, a great and well-nigh unparalleled excitement has arisen in the money market, in connection with the subjects of oil lands and prospects, and with the value and transfers of property of the various companies, established and newly forming.

According to statements in an editorial article in the "New York World," of Jan. 11, 1865, there were at that time in the city of New York alone 112 petroleum companies (known) in existence and forming, their combined nominal capital being as stated in the subjoined table, which presents the known petroleum investments of the ten (in this respect) leading cities of the United States:

Philadelphia...	\$168,715,000	Baltimore.....	\$1,750,000
New York.....	184,045,000	Chicago.....	1,000,000
Pittsburg.....	15,740,000	Cincinnati.....	750,000
Titusville.....	4,000,000	Washington.....	700,000
Boston.....	2,800,000		
Cleveland.....	2,200,000	Total.....	\$326,200,000

It is also stated, that to this aggregate probably \$100,000,000 should be added for capital in like manner invested, in the same cities and elsewhere, in other companies and in private enterprises, but in amounts not publicly or not definitely known.

Uses of Petroleum and its Products.—The refined petroleum, of a gravity of 43° to 46° B., or higher, is the oil which is burned for illumination. As ordinarily burned, in suitable lamps, it affords a light superior in power and in quality to that of coal-gas flames of like size, the oil-flame being the more solid, soft, and through effect of the chimney, steady, as well as exceedingly white. According to Prof. Frankland's estimates, based on the relative cost of the various materials named in England, the light of coal or cannel-gas is cheaper than that of refined petroleum; but the latter, again, costs less than one-third as much as an equal quantity of light from sperm oil, in a yet lower ratio when compared with that from tallow or paraffine candles, and less than one-twelfth the cost of that from spermaceti or wax. (See ANNUAL CYCLOPEDIA, 1863.) When, however, the relatively higher cost in this country of coal and coal-gas is taken into the account, it becomes quite certain that here petroleum affords a cheaper illuminant even than gas. Its economy for general use, and particularly where gas cannot be had, is thus obvious; although its convenience of use is somewhat less than that of sperm-oil.

The lubricating oil, of a gravity usually of about 28° to 33° B., stands next in general importance. As a lubricator, this oil is superior to most, if not all others, in the circumstances that it does not readily oxidize, so as to form a gummy or tenacious deposit upon axles and the surface of bearings to which it is applied, and that, if properly purified in the outset, it need not contain any such adhesive matters; so that it hence works free and smooth. In practice, in order (as it is termed) to give it "body," the heavy petroleum is very commonly mixed with a portion of sperm or other oils. It is stated that the heavy oil is also used as a polish for furniture, and as an ingredient in a paint oil, being in this way employed in mixture as a partial substitute for linseed oil. Its want of a marked oxidizing tendency, and hence of "drying" property, however, unfits the heavy refined petroleum for use except for comparatively rough or cheap work.

The paraffine obtained from petroleum is without doubt, to some extent, a different material from that afforded by the tar from coal, shales, peat, &c. As already seen, this paraffine can be obtained directly from many crude oils, especially the heavier, by chilling them so as to congeal and solidify it, and then pressing

through porous materials, which allow only the oil to escape, as well as also by treating the ordinary residuum in the like manner, or perhaps by chemical agents, and from the deposits at the bottom of the vats into which refined oils are run. When purified, the paraffine is a whitish, tasteless, and inodorous substance, somewhat resembling spermaceti, and of a specific gravity of about .870. It appears to be used as yet, chiefly as a hardening ingredient with tallow, spermaceti, &c., in the making of candles; and it is stated also, to some extent, in mixture with beeswax and spermaceti, for the purposes answered by those materials.

Naphtha, or benzine, which when crude may range in gravity from about 58° to 65° B., or upwards, and which, after refining, is quoted at 60° to 63°, has been put to a variety of uses, to prevent its being a waste material, though it is not in all of these yet made to serve to the best advantage. It appears to be an excellent article for cleansing wool, and when refined, also for cleaning soiled fabrics or garments, and without impairing their colors. It has been employed as a solvent of various gum-resins, and particularly of India-rubber. In the preparation of varnishes and of paints, it has been to some extent used as a substitute for spirits of turpentine; but the latter article being in fair supply, and being as yet preferred, the naphtha has not come into the general use for these purposes that had been anticipated for it. ("Shipping List" annual review, 1864.) The lighter oils have been to some extent also burned in vapor lamps, the oil being contained in a reservoir to which heat must first be applied, to commence its evaporation. It may be remarked that with some refiners, and perhaps to some extent among dealers, it is customary to make a distinction between the lighter and heavier naphtha; but such distinction has not become general.

An oil is prepared from petroleum for curriers' use, in finishing leather, and which is said to be preferable for such purpose to the fish and neats-foot oil hitherto commonly employed. Soaps for toilet use have been to some extent prepared, in which, along with the fat or oil and alkali, refined petroleum is incorporated. Such petrolized soap has been said to have some advantages, as in protecting and favoring a healthful condition of the skin; but among the difficulties in the way of the manufacture has been that of securing a petroleum sufficiently free from odor, and this application of the oil can scarcely yet be said to be successfully carried out. To the subject of ANILINE COLORS, reference has already been made. A process has been patented in New York, for producing from some of the dyes recently obtained from petroleum a set of inks, for the printing in colors of show-bills, &c.

The residuum, besides being sometimes made to yield paraffine and to some extent the material for dyes, has been employed with success in the manufacture of illuminating gas (see pre-

ceding volume); and it has already been to some extent turned to account in this country as a fuel, being thus used under the refining stills. It is probable that for both these purposes this material, as well as some sorts of crude petroleum, may yet be in considerable demand. So soon as suitable apparatus shall have been invented for their consumption, and, in case of the crude oils, wherever the cost of these shall be relatively less than that of coal, the economy both of space and material, and the convenience of employment of fuels of this sort, must lead to their extensive adoption in practice, and especially as a source of heat for the boilers of locomotives, in ocean steam navigation, etc. Both as a fuel and as material for lighting gas, the supplies of petroleum and bitumen on the Pacific coast, where coal is very costly, and steam fuel of any kind for marine use extremely scarce, are likely to prove of great importance. It is stated that at the Downer refinery, in Corry, both the residuum and naphtha have been experimented with by use of a new apparatus intended for their consumption, and that they have thus afforded a heat as powerful and regular as that from bituminous or anthracite coal. Finally, it has recently been found that an oil of low gravity still remains in the residuum as usually left; and certain parties in New York and Brooklyn have distilled from it an excellent lubricating oil of a density of 28° to 30°.

The principal uses to which varieties of crude petroleum have been put, or for which some of them obviously promise to be largely useful, the former including the direct use of some pure light oils for burning, the employment of the oil from many particular locations as a remedial agent, and that both for internal and external use, etc., and the latter including especially the office of fuel, and of a material for gas manufacture, have already been incidentally alluded to. The applications, however, of petroleum and its products are still constantly extending; and of some of their minor uses, or such as are yet only in course of development, it is not necessary here to speak.

Duties on Petroleum.—The Government tax of twenty cents per gallon on refined petroleum, and the same on naphtha, went into effect July 1st, 1864; but the full influence of the tax upon the prices of bonded and free oils was not reached until December.

Commerce of Petroleum.—The New York wholesale prices, per gallon, of crude petroleum, of refined—free, and in bond—and of refined naphtha, in the first weeks of January, April, July, and October, 1863 and 1864, with the averages for those two years, and the prices in the first weeks of January and March, 1865, were as below. The qualities of oil quoted are of crude, gravity of 40° to 47° B.; of refined, "light straw" to "white"; of refined naphtha, gravity of 60° to 63° B. Very high or very low gravity crude, or "prime white" or "straw" refined, would vary from the rates given.

The following exhibit presents the total quantities received of crude and refined petroleum, at New York, in 1863 (nearly accurate), and 1864:

Stock on hand, Jan. 1, 1863, in all the yards.....	165,100 bbla.
Received in 1863, as reported.....	683,360
Probable additions required, for commissions, &c.....	84,500
Total receipts.....	720,760
Total supply.....	885,860
Deduct export from N. Y., in 1863.....	483,690
Stock on hand, Jan. 1, 1864.....	83,709—571,899
Remainder, taken for consumption from New York in 1863, including shipments to California.....	814,461 bbla.
Equal to an average per month, of.....	26,305 "
Stock on hand, Jan. 1, 1864, of all kinds.....	82,709 bbla.
Received in 1864.....	720,100
Total supply.....	802,809 bbla.
Deduct export from N. Y., in 1864.....	588,894
Stock on hand, Jan. 1, 1865.....	97,223—560,693
Remainder taken for consumption from New York, in 1864.....	942,167 bbla.
Equal to an average per month, of.....	20,182½ "

The Question of Durability of the Oil Supplies.—The natural accumulation of petroleum in each given region, and that of the bitumen in any given stratum which may have been its source, being of course some limited and (at any given time) definite quantity, and the rate at which—if at all—fresh supplies of the oil can be evolved, being very slow, it must follow that, by working any region, its available oil-supplies will be gradually and steadily exhausted. But the duration of the commercial supply of the world will be greatly protracted by the discovery of new regions, and by the development of such as are remote and yet neglected; perhaps also in some cases by sinking wells into collections of oil in strata deeper than those which in the same districts have yet been penetrated. These presumptive conclusions appear to be sustained both by general facts in the history of petroleum regions, and by some special facts already noted in course of working the regionsthe most fully developed on this continent.

The yield of oil from the numerous springs of the Rangoon district, on the Irrawaddy, has become greatly reduced in quantity. The oil springs of Agrigentum, in Sicily, and of Derbyshire, England, have nearly ceased to flow.

The large and wide-spread surface supply of petroleum of a past age over northwestern Pennsylvania and the southern part of western New York has long since, save at a few points, disappeared. It is stated that few, if any, of the old salt wells of the Sandy, Kanawha, Alleghany, Muskingum, and other valleys in which these have been worked, have been kept at a good yield, except by deepening them from time to time; and that, at such times, usually new supplies of gas and oil, as well as of brine, have made their appearance. It is already noted that along Oil Creek fewer of the new borings afford spouting wells than was the case in 1861 and '62; while, further, the most violent blowing and spouting wells of that period have become comparatively quiet. It may be added, that generally the flow of the best flowing wells has not continued more than about eighteen months. Though in a good proportion of cases the pumping wells of the Oil Creek and contiguous districts are quite regular in their yield for a long time, yet very many such that once yielded largely have finally given out. Indeed it is found that, as a general rule, all the older wells, flowing or pumping, have tended gradually to a greatly diminished yield of oil, while many, as just intimated, in time fail altogether. In some instances, productive wells suddenly cease to afford oil.

It appears safe to state that, as a rule, the value of oil-producing property is materially impaired by any causes which lead to the consumption or discharge of large quantities of the imprisoned gas, or which, as in the case of the inflow down abandoned wells, allow of the free introduction of water into the oil reservoirs.

In addition to authorities already named, some information upon many points touched on in this article, has been derived from the volume entitled "All about Petroleum" (New York, 1864), and some also from other sources.

PHYSICAL FORCES. The investigation into the nature and relations of the physical forces continues with unabated and increasing earnestness. It seems to be generally agreed that the *dynamical* aspect of natural phenomena is the one to be mainly considered in future. Facts of force and power have been long and closely observed; they now require to be *combined*. The need is felt for a philosophy of energy sufficiently valid and comprehensive to explain the connections of the forces, and reach propositions of sufficient universality to cover all the cases of the exercise of power.

The general problem may be conveniently considered in a twofold aspect: *first*, respecting those movements of the minute portions of matter in which all molecular force is now believed to consist; and, *second*, the relations among the radiant forces.

As respects heat, it may now be regarded as well established that it does not consist in a peculiar fluid, but in the movements of the atoms or minuter portions of matter. Nothing needed to be added to the original and decisive

experiments of Count Rumford to show the complete futility of the old view, and fix the conviction that heat is precisely what he called it, a *mode of motion*. The conception of heat as a caloric fluid was abundantly adequate in the earlier stages of science, while yet material ideas were dominant, and the physicist held that his chief work was to determine the qualities and quantities of *matter*. But when conceptions of force had gradually grown into prominence, and from considering the characteristic properties of the various forms of energy the investigation advanced to questions of quantity, to the quantitative relations and equivalences of power, the whole subject assumed a new aspect, and the utter deficiency of the old hypotheses was at once apparent. Rumford's experiments were, no doubt, completely conclusive, but they have been reinforced by a train of varied and extended investigations through the last half century, which places the whole subject in a new and most interesting attitude. Having abandoned the idea that heat is a peculiar substantive *thing*, a view which cuts off all rational possibility of linking it to other dynamic agencies, the physicist holds that it consists essentially in atomic movements, and that all its phenomena are to be accounted for on this principle. *Thermotica*, in fact, or the science of heat, is at once but a branch of the greater science of molecular dynamics; as heat, like any other force, is never known, except through material movement. As its various efforts all resolve themselves simply into expansions or contractions, it certainly seems the most natural view to dispense entirely with the machinery of hypothetical fluids, and define it as simply a mode of motion in the matter which manifests it. Exactly what those atomic motions are in which heat essentially consists, cannot be considered as yet determined. The prevailing opinion, however, among scientific men is, that it consists in the simple oscillations of the atoms. It is more universally held that material atoms are never in absolute contact; that they are set at distances from each other, with comparatively large interspaces, which admit of free motion. Heating a body, then, would consist of imparting to it additional molecular motion, by which the atoms would be made to vibrate through larger distances, causing expansion of the mass. Cooling would be a loss of this vibratile motion by which the body contracts; while the communicability of heat in its various modes and conditions, is but the communicability of molecular motion.

It has long been held that *light* is but a mode of motion, as is shown by the universal acceptance of the undulatory hypothesis. Whether, as is commonly done, an ether be assumed as the medium of the undulatory movement, or whether, in accordance with the views of some, the conception of an ether be held as unwarrantable, and the undulations are assumed to take place in ordinary matter, it seems to be substantially

the same thing; light is resolved simply into a vibration, or an undulation of the particles of a medium. Of course the rejection of an ether implies the assumption of universal matter, which is maintained by Prof. Groves, who denies that there is any support for the notion of a universal vacuum in the celestial spaces.

But if heat and light are thus *modes of motion*, and science has undertaken to state what kinds of motion they are, it becomes obvious that all the allied forces are of a kindred nature; and the question arises, What are the several kinds of motion which constitute these various energies? This is the grand dynamical problem of the future, which it will require the coöperating scientific intellect of the world to solve. Nevertheless year by year progress is being made, and we may here call attention to an able and ingenious attempt in this direction which has been recently put forth. Herbert Spencer has put the question, "What is the particular mode of motion which constitutes electricity?" and favored us with his answer, which is so important as to have commanded extensive scientific approval. We condense his views.

That electricity is some kind of molecular vibration, different from the molecular vibrations which luminous bodies give off, must be generally admitted. Beyond those oscillations of molecules from which light and heat result, many would suspect that there will, in some cases, arise compound oscillations. Let us consider whether the conditions under which electricity arises are not such as to generate *compound oscillations*, and whether the phenomena of electricity are not such as to result from compound oscillations.

The universal antecedent to the production of electricity is the contact of heterogeneous substances. If, then, electricity is some mode of molecular motion, and if, whenever it is produced, the contact of substances having unlike molecules is the antecedent, there seems thrust upon us the conclusion, that electricity results from some mutual action of molecules, whose motions are unlike. What must this mutual action be? The answer to this question does not seem difficult to reach, if we take the simplest case—the case of contact electricity. When two pieces of metal of the same kind and of the same temperature are applied to one another, there is no electrical excitation; but if the metals applied to one another be of different kinds, there is a genesis of electricity. This, which has been regarded as an anomalous fact, a fact so anomalous that it has been much disputed, because apparently at variance with every hypothesis, is a fact to which an interpretation is at once supplied by the hypothesis, that electricity results from the mutual disturbance of unlike molecular motions. For if, on the one hand, we have homogeneous metals in contact, their respective molecules oscillating simultaneously, will give and take any forces which they impress on one another without producing

an oscillation of a new order. But if, on the other hand, the molecules of the one mass have periods of oscillation different from those of the other mass, then their mutual impacts will not agree with the period of oscillation of either, but will generate a new system, differing from and much slower than that of either. The production of what are called beats in acoustics will best illustrate this. It is a familiar fact that two strings, vibrating at different rates, for a time concur in sending off aerial waves in the same direction at the same instant; that their vibrations getting more and more out of correspondence, they send off their aerial waves in the same direction at exactly intermediate instants; and presently, coming once more into correspondence, they again generate coinciding waves; so that, when their periods of vibration differ but little, and when, consequently, it takes an appreciable time to complete their alternations of agreement and disagreement, there results an audible alternation in the sound—a succession of pulses of louder and feebler sound. In other words, besides the primary simple and rapid series of waves constituting the two sounds themselves, there is a series of compound waves resulting from their repeated conflicts and concurrences.

Now, if instead of the two strings communicating their vibrations to the air, each communicated its vibrations to the other, we should have just the same alternation of concurrent and conflicting pulses. And if each of the two strings was combined with an aggregate of others like itself, in such a way that it communicated to its neighbors both its normal and its abnormal vibrations, it is clear that through each aggregate of strings there would be propagated one of these compound masses of oscillations, in addition to this simple rapid oscillation.

This illustration will make it manifest, that where a mass of molecules, which have a certain period of vibration, is placed in contact with a mass of molecules which have *another* period of vibration, there must result an alternation of coincidences and antagonisms in the molecular motions, such as will make the molecules alternately increase and decrease one another's motions. There will be instants at which they are moving in the same direction, and intervening instants at which they are moving in opposite directions; whence will arise periods of greatest and least deviations from their ordinary motions. And these greatest and least deviations being communicated to neighboring molecules, and passed on by them to the next, will result in waves of perturbation propagated throughout each mass.

Let us now ask what will be the mutual relations of three waves? Action and reaction being equal and opposite, it must happen that whatever effect a molecule of the mass A produces upon an adjacent molecule of the mass B, must be accompanied by an equivalent reverse effect upon itself. If a molecule of the mass A

is at any instant moving in such a way as to impress on a molecule of the mass B an additional momentum in any given direction, then the momentum of the molecule of B in that direction will be diminished to an equal amount. That is to say, to any mass of increased motion propagated through the molecules of B, there must be a reactive wave of decreased motion propagated in the opposite direction through the molecules of A. See, then, the two significant facts, any *addition* of motion which at one of these alternate periods is given by the molecules of A to the molecules of B, must be propagated through the molecules of B in a direction *away from A*; and, simultaneously, there must be a *subtraction* from the motion of the molecules of A, which will be propagated through them in a direction *away from B*. To every wave of *excess* sent through one mass, there will be a corresponding wave of *defect* sent through the other; and these *positive* and *negative* masses will be exactly coincident in their times and exactly equal in their amounts. Whence it obviously follows, that if these waves proceeding from the surface of contact through the two masses in contrary directions are brought into relation, they will neutralize each other. Action and reaction being equal and opposite, these *plus* and *minus* molecular motions will cancel one another if they are added together, and there will be a restoration of equilibrium.

These positive and negative waves of perturbation will travel through the two masses of molecules with great facility. It is now an established truth, that molecules absorb, in the increase of their own vibrations, those rythmical impulses as waves which have periodic times the same as their own; but that they cannot thus absorb successive impulses that have periodic times different from their own. Hence those differential undulations being very long undulations in comparison with those of the molecules themselves, will readily pass through the masses of molecules or be *conducted* by them. Further observe, that if the two masses of molecules continue joined, these positive and negative differential masses, travelling away from the surface of contact in opposite directions, and mutually arriving at the outer surfaces of the two masses, will be flected from these; and, travelling back again toward the surface of contact will there meet and neutralize one another. Hence no current will be produced along a wire joining the outer surfaces of the masses, since neutralization will be more readily effected by this return of the waves through the masses themselves. But though no external current arises, the masses will continue in what we call opposite electrical states; as a delicate electrometer shows that they do. And further, if they are parted, the positive and negative waves which have the instant before been propagated through them respectively remaining neutralized, the masses will display their opposite electrical states in a

more conspicuous way. The residual positive and negative waves will then neutralize each other along any conductor that is placed between them; seeing that the *plus waves* communicated from the one mass to the conductor, meeting with the *minus waves* communicated from the other, each being mutually cancelled as they meet, the conductor will become a line of least resistance to the waves of each mass.

Carrying out this view with great ingenuity in the case of thermo-electricity and reaching by it an explanation of the thermo-electric pile, Mr. Spencer thus sums up the argument: May it not be said, that by some such action alone can the phenomena of electricity be explained, and that some such action must inevitably arise under the conditions? On the one hand, electricity being a mode of motion, implies the transformation of some preëxisting motion—implies, also, a transformation, such that there are two new kinds of motion simultaneously generated, equal and opposite in their directions—implies, further, that these differ in being *plus* and *minus*, and being therefore capable of neutralizing each other. On the other hand, in the above cases, molecular motion is the only source of motion that may be assigned; and this molecular motion must, under the circumstances, produce effects of the kind witnessed. Molecules vibrating at different rates cannot be brought in proximity without affecting one another's motions. They must affect one another's motions by periodically adding to or deducting from one another's motions; and any excess of motion which those of one order may receive, must be accompanied by an equivalent defect of motion in those of the other order. When such molecules are units of aggregates placed in contact, they must pass on those perturbations to their neighbors. And so from the surface of contact, there must be waves of excessive and defective molecular motion, equal in their amounts and opposite in their directions—waves which must exactly compensate one another when brought into relation. The cause alleged must certainly work some such effects as those described. In this discussion it will be seen that Mr. Spencer deals only with electrical phenomena, of the simplest kind; he, however, promises in future to show how this hypothesis furnishes interpretations of other forms of electricity.

Interesting results have also been reached during the past year in the field of radiation on the connection of the radiants. We are so accustomed to associate the word *ray* with the idea of light, that the terms dark, invisible, or obscure rays are not easy to realize in the mind. Yet much the larger portion of the sun's rays are of this invisible character, as was discovered by Sir Wm. Herschel sixty-five years ago. By passing a delicate thermometer through the solar spectrum, he determined the relative heating power, which he found to increase from the violet to the red, and to his surprise he also found that the dark space

beyond the red was hotter than the colored region. He hence concluded that beside the visible sunshine there is a vast outflow of perfectly invisible rays proceeding from the sun, and that, measured by their thermal power, the energy of these invisible radiations is greater than that of all the visible rays taken together. Forty years later these results were modified and extended by the son of the discoverer, Sir John Herschel, by a different method of inquiry.

The inquiry was taken up and pursued with remarkable success by Melloni. He achieved his admirable results first by the adoption of the thermo-electric pile as an instrument of research far more sensitive and perfect than the most delicate thermometer; and second, by the discovery that rock-salt is in a super-eminent degree pervious to the dark rays; it permits almost the whole of them to pass, and was hence termed the *glass* of heat. By the use of rock-salt prisms he showed that the dark heating rays, which are known as the ultra-red or Herschellian rays, formed an invisible spectrum at least as long as the visible one. He found, also, that the maximum of radiant thermal power lies as far on one side the red as the green light of the spectrum on the other.

Prof. Tyndall has pursued these researches at intervals during the last ten years, employing the thermo-electric pile and the spectrum of the electric light, produced by using the electric lamp of Dubosq. He finds that the augmentation of temperature beyond the red in the spectrum of the electric light is sudden and enormous. Representing the thermal intensities by lines of proportional lengths, and erecting these lines as perpendiculars at the places to which they correspond, when we pass beyond the red these perpendiculars suddenly and greatly increase in length, reach a maximum, and then fall somewhat more suddenly on the opposite side of the maximum. When the ends of these perpendiculars are united, the curve beyond the red representing the dark radiation, rises in a steep and massive peak, which quite dwarfs by its magnitude the radiation of the luminous portions of the spectrum. Interposing suitable substances in the path of the beam this peak may be in part cut away. Water, in certain thicknesses, does this very effectually. The vapor of water would do the same, and this fact enables us to account for the difference between the distribution of heat in the solar and in the electric spectrum. The peak in the spectrum of the electric light is much higher than in the solar spectrum; the latter having, probably, been cut down by the aqueous vapor of the atmosphere.

But how may these dark radiations be separated from the others? A portion of them may obviously be isolated by interposing an opaque screen so as to cut off the luminous portion of the spectrum—the dark remainder being still subject to reflection, refraction, and condensation. The attention of scientific men, however, from Sir W. Herschel to the present time, has been

directed to the discovery of some medium which should be opaque to light but transparent to heat—something which might strain or sift the ray of its luminous elements, while the thermal stream is allowed freely to pass. Dark-colored glasses were much used for this purpose, and latterly a perfectly black glass.

Prof. Tyndall's researches on the relations of radiant heat to various gases led him to the discovery that elementary gases were in a high degree transparent to the dark rays, while the compound gases, on the other hand, were in a great degree opaque to them. Starting with this clue, Prof. Tyndall was led to inquire into the behavior of various elements for this purpose. He found that sulphur dissolved in bisulphide of carbon, and also bromine, were eminently transparent to the ultra-red rays. He finally tried a solution of iodine in bisulphide of carbon, and arrived at the extraordinary result that a quantity of dissolved iodine sufficiently opaque to cut off the light of the mid-day sun was, within the limits of experiment, absolutely transparent to invisible radiant heat.

Concentrating by a small glass mirror silvered in front, the rays emitted by the carbon points of the electric lamp, a convergent cone of light is obtained. Interposing in the path of this concentrated beam a cell containing the opaque solution of iodine, the light of the cone is utterly destroyed, while its invisible rays are scarcely disturbed. These converge to a focus at which though nothing can be seen, even in the darkest room the following effects are produced: paper and wood are set on fire, cigars lit, charcoal ignited, and a mixture of hydrogen and oxygen exploded. Metals, as zinc and magnesium, are burned; and plates of charcoal or of copper, silver, or platinum with tarnished surfaces, are raised to incandescence. A plate of platinized platinum in the invisible focus is made white hot, and when looked at through a prism, its light yields a brilliant-colored spectrum. In this case there is an immediate and direct conversion of heat into light.

Some thirteen years ago Prof. Stokes published the important discovery that by the agency of sulphate of quinine and various other substances the dark ultra-violet or active rays of the spectrum could be rendered visible. These invisible rays of high refrangibility, falling upon a proper medium, are believed to cause the molecules of that medium to oscillate in slower periods than those of the incident waves. But in that experiment with heat there is a reverse effect. The dark thermal undulations consist of slower vibrations than the luminous. When these, therefore, fall upon a plate of platinum and raise it to incandescence, their periods of vibration are changed. But while in Prof. Stokes' experiment the invisible rays became visible by *lowering* their refrangibility, in Tyndall's experiment the dark rays became visible by *raising* their refrangibility. To the first Prof. Stokes has given the name Fluorescence,

and for the second Prof. Tyndall proposes that of Calorescence. Dr. Aikin claims the honor of first proposing the experiments which Prof. Tyndall has first successfully executed.

PNEUMATIC RAILWAY. The Crystal Palace grounds, at Sydenham, England, were, during August, 1864, the scene of a very interesting experiment. A series of trial trips on the model Pneumatic Railway, constructed there, under the superintendence of Mr. Rammell, C.E., took place. A brickwork tunnel, about ten feet high by nine feet wide, and capable of admitting the largest carriages used on the Great Western Railway, had been laid with a single line of rails, fitted with opening and closing valves at either extremity, and supplied with all the other requisite apparatus for propelling passenger trains on the pneumatic principle. The tunnel or tube extends from the Sydenham entrance of the grounds to the Armoury, near the Penge-gate, a distance of nearly six hundred yards. The object of laying down this experimental line was to afford, both to the scientific world and the travelling public, a practical demonstration of the applicability to passenger traffic of the motive power already employed by the Pneumatic Despatch Company in the conveyance of letters and parcels. The pneumatic principle of propulsion is very simple. The train is driven along in one direction by a strong blast of air, and drawn back again in the opposite direction by the exhaustion of the air in front of it. The train may be said, in fact, to be blown through the tube on the down journey, and sucked through it on the return journey. It must not, however, be supposed that the passengers are deposited at their destination with a sudden jerk. Such an inconvenience is entirely obviated by the mechanical arrangements employed. The motion is throughout smooth, easy, and agreeable, and the stoppages are effected gently and gradually. Indeed, when it is considered that the curve in the tunnel is unusually sharp, being of eight chains radius, and that the gradients are as high as one in fifteen (those of Holborn Hill being only one in eighteen), it is surprising that the motion should be so much steadier and pleasanter than ordinary railway travelling. The journey of six hundred yards was performed either way in about fifty seconds, with an atmospheric pressure of only two and a half ounces to the square inch; but a higher rate of speed, if desirable, can easily be obtained consistently with safety. Indeed, one great incidental advantage of this species of locomotion is that it excludes all risk of the collisions occasionally attendant on railway travelling; for it is plain that no two trains could ever run against each other where all the propelling force is expended in one direction at one time. The worst mishap which it is said could well happen is that, owing to some sudden failure in the machinery, the train might be abruptly brought to a dead stop in the middle of the tunnel, when the passengers would have to alight

from the carriages and grope their way as best they could out of the tube. Such a predicament certainly would not be enviable, but it might be more ludicrous than dangerous. Whether in such a contingency there is any possibility of another train being started before they had safely made their exit, or any risk of their sharing the fate of frogs placed under an exhausted air-pump, we do not venture to assert; but probably the scientific engineer could guarantee the traveller against any such novel peril. The train used consisted of one very long, roomy, and comfortable carriage, resembling an elongated omnibus, and capable of accommodating some thirty or thirty-five passengers. Passengers enter this carriage at either end, and the entrances are closed with sliding glass doors. Fixed behind the carriage there is a framework of the same form, and nearly the same dimensions, as the sectional area of the tunnel; and attached to the outer edge of this frame is a fringe of bristles forming a thick brush. As the carriage moves along through the tunnel the brush comes into close contact with the arched brickwork, so as to prevent the escape of the air. With this elastic collar round it, the carriage forms a close fitting piston, against which the propulsive force is directed. The motive power is supplied in this way:—At the departure station a large fan-wheel, with an iron disc, concave in surface and twenty-two feet in diameter, is made to revolve by the aid of a small stationary engine at such speed as may be required, the pressure of air increasing, of course, according to the rapidity of the revolutions, and thus generating the force necessary to send the heavy carriage up a steeper incline than is to be found upon any existing railway. The disc gyrates in an iron case resembling that of a huge paddlewheel; and from its broad periphery the particles of air stream off in strong currents. When driving the air into the upper end of the tunnel to propel the down-train fresh quantities rush to the surface of the disc to supply the partial vacuum thus created; and, on the other hand, when the disc is exhausting the air in the tunnel with the view of drawing back the up-train, the air rushes out like an artificial hurricane from the escape valves of the disc case, making the adjacent trees shake like reeds and almost blowing off his feet any incautious spectator who approaches too near it.

When the down journey is to be performed the breaks are taken off the wheels, and the carriage moves by its own momentum into the mouth of the tube, passing in its course over a deep air-well in the floor, covered with an iron grating. Up this opening a gust of wind is sent by the disc, when a valve, formed by a pair of iron doors, hung like lock-gates, immediately closes firmly over the entrance of the tunnel, confining the increasing atmospheric pressure between the valve and the rear of the carriage. The force being thus brought to bear upon the end of the train, the latter, shut up within the

tube, glides smoothly along toward its destination, the revolving disc keeping up the motive power until it reaches the steep incline, whence its own momentum again suffices to carry it the rest of the distance. The return journey, as above indicated, is effected by the aid of the exhausting process. At a given signal a valve is opened, and the disc-wheel set to work in withdrawing the air from the tube. Near the upper end of the tube there is a large aperture, or side-vault, which forms the throat through which the air is, so to speak, exhaled, the iron doors at the upper terminus still being kept shut. In a second or two the train posted at the lower terminus, yielding to the exhausting process going on in its front, and urged by the ordinary pressure of the atmosphere from behind, moves off on its upward journey, and rapidly ascending the incline, approaches the iron gates, which fly open to receive it, and it emerges at once into daylight. Such is the mode in which the system works, and it seems capable of being adapted to railway communication within the metropolis and other large towns, or wherever tunnelled lines with steep gradients exist. The chief obstacles encountered in practically working the atmospheric railway, introduced some fifteen years ago, are considered to have been effectually overcome by the present modification of the principle. Under the former system the tube was of very small size, and fixed upon the ground; a longitudinal or continuous valve opening at the top, along which a rod, connecting the piston with the carriages, passed, and the valve closing behind the rod as it moved onward. The amount of atmospheric pressure required to be exerted where the area of the tube was so small, was enormous, being from seven pounds to ten pounds per square inch; whereas upon Mr. Rammell's principle the pressure is only two and a half ounces per square inch, and, moreover, the great leakage and waste of power which rendered the old atmospheric system so costly in working are here in a great measure avoided. It need hardly be added that the worst drawbacks to travelling through tunnels—viz., the smoke and sulphurous vapors emitted from the locomotive, and the close, unwholesome atmosphere of the tunnels themselves—are in this case got rid of. Every train, in fact, carries its own supply of fresh air along with it, and also expels the foul air before it.

POLK, LEONIDAS, a bishop of the Protestant Episcopal Church, and General in the Confederate service, born in Raleigh, N. C., in 1806, died near Marietta, Ga., June 14, 1864. He was graduated at West Point in 1827, and appointed a brevet second lieutenant of artillery; but having, through the influence of Bishop McIlvaine, then chaplain at West Point, been induced to study for the ministry, he resigned his commission in December, 1827, and three years later was ordained a deacon in the Protestant Episcopal Church. From 1831 to 1838 he officiated at various places in the South, and

in the latter year he was consecrated Missionary Bishop of Arkansas and the Indian territory south of 36° 30', with provisional charge of the dioceses of Alabama, Mississippi, and Louisiana, and the missions in the republic of Texas. In 1841 he resigned these charges, with the exception of the diocese of Louisiana, of which he remained bishop until the close of his life. The outbreak of the rebellion found him a strong sympathizer with the doctrine of secession. His education and associations were strongly southern, and his property, which was very considerable in lands and slaves, helped to identify him with the project for establishing a Southern confederacy. His familiarity with the Valley of the Mississippi prompted him to urge upon Jefferson Davis and the rebel authorities the importance of fortifying and holding its strategical points, and amidst the excitement of the time the influence of his old military training became uppermost in his mind. Under these circumstances the offer of a major-generalship by Davis was regarded not unfavorably, in spite of the sacred calling which he had followed during thirty years. He applied to Bishop Meade, of Virginia, for advice, who declined to give it, but referred him to Gen. Robert E. Lee, as one to whose judgment he might safely defer. Lee unhesitatingly advised him to accept the commission, and he at once did so. His first command extended from the mouth of the Arkansas River, on both sides of the Mississippi, to Paducah, on the Ohio, his headquarters being at Memphis; and his first general order, issued July 18th, declared that the invasion of the South by the Federal armies "comes bringing with it a contempt for constitutional liberty, and the withering influence of the infidelity of New England and Germany combined." It was under his general direction that the extensive works at Forts Donelson and Henry, Columbus, Ky., Island No. Ten, Memphis, and other points were constructed, and the skill with which they were selected for defence testified to his thorough military training. He held this command until the spring of 1862, when, in consequence of the signal Federal successes in that part of the country, he was relieved and ordered to join Johnston's and Beauregard's army at Corinth. As commander of a corps he participated in the battle of Shiloh, and in the subsequent operations ending with the evacuation of Corinth. He afterwards held a command in the army of Gen. Bragg, took part in the battle of Perryville during the invasion of Kentucky in the autumn of 1862, and saw much hard fighting at the stubbornly contested battle of Murfreesboro. Still serving under Bragg, he fell back with him beyond Chattanooga before the steady advance of Gen. Rosecrans in the campaign of 1863, and had a share in the victory of Chickamauga. For disobedience of orders in this battle, whereby, as was asserted by Gen. Bragg in his official report, the Federal army was alone saved from annihilation, he was relieved

from his command and ordered to Atlanta under arrest. He was soon after appointed to command the camp of rebel prisoners paroled at Vicksburg and Port Hudson, and in the winter and spring of 1864 had temporary charge of the Department of the Mississippi. By skilful dispositions of his troops he prevented the junction of the Federal cavalry column under Gen. Smith with Gen. Sherman's army in southern Mississippi, and caused the campaign undertaken by the latter in February to result in no permanent advantage. His prestige being thus restored, he received command of one of the three corps of Gen. Johnston's army, which in the spring of 1864 attempted to withstand the advance of Gen. Sherman toward Atlanta. After participating in the chief engagements previous to the middle of June, he was killed by a cannon shot while reconnoitring on Pine Mountain, a few miles north of Marietta. About a year and a half before this he had been commissioned a lieutenant-general in the Rebel army. Gen. Polk never resigned his diocese, and, it was said, intended at the close of the war to resume his Episcopal functions. He had labored zealously in behalf of religious interests previous to the rebellion, and was described by his friends as of manly bearing, frank and cordial manners, and impressible and easily kindled temperament. He never held a high rank among the Confederate generals, being more appreciated for his ecclesiastical influence than for his military talents, and is said not to have been generally popular with his soldiers.
